The country was zoned and the Government distributed the product. All through the year 1918 the domestic producers of sugar were compelled to sell their product on one side of an imaginary line for less than the Cuban product was allowed to be sold on the other side of the same line. In other words, beet sugar producers were compelled to sell their product in Youngstown, Ohio, for considerably less money than the refiners got for their Cuban sugar in Pittsburgh.

In 1919, to secure a supply of raw material, the beet sugar manufacturers were obliged to raise the price of beets nearly $3 per ton and were compelled by the Food Administration

to market their product at not to exceed 8.82 cents per pound. All opportunity to reap more than a minimum profit was denied them.

GOVERNMENT PURCHASE OF CUBAN SUGAR.

Meanwhile our Government purchased the 1918–19 Cuban crop of sugar at 1.94 cents per pound above the 1914 Cuban price and their 1919–20 crop at 2.94 cents above their 1914 price, the Cuban producers thus reaping enormous profits. New areas were planted to cane, new mills were erected, old ones were reequipped with new machinery, and the output of the island was increased by more than 50 per cent.

With the scarcity of sugar in the world's markets in 1919 the Cubans began to mark up the price, which reached 12½ cents by the end of the year and a few months later it rose to 24 cents.

REGULATION OF PRICE OF BEET SUGAR IN 1920.

Notwithstanding the fact that since 1914 the average price of beets in the United States had gone from $5.45 to $11.74 per ton, our Government compelled domestic beet sugar to be sold at not to exceed 10¼ cents and later at not exceeding 12 cents less 2 per cent, during which period Cuban sugar was allowed to be sold at any price the producers could exact, and did sell in our markets at twice as much per pound as did domestic sugar. As a result the Cuban producers waxed rich beyond the dreams of avarice, while American producers were compelled to sell at or near cost.

DOMESTIC PRODUCTION DECREASES.

During the entire period while the American Government was enriching the sugar producers of foreign countries not one act of encouragement was extended to its domestic producers. On the contrary, so drastic were the restrictions placed upon them that instead of expanding and thus helping to fill the gap the domestic crop of beet sugar declined from 874,000 tons in 1915–16 to 726,000 tons in 1919–20.

CUBA FORMED POOL TO EXACT 24 CENTS FOR HER SUGAR.

The average f. o. b. New York price of 96° raw sugar in 1914 was 2.74 cents per pound, equal to 2.56 cents f. o. b. Cuba. In 1917 the United States and the Allies purchased the 1917–18 Cuban crop at 4½ cents per pound f. o. b. Cuba, an advance of 75 per cent above the average price they received in 1914.

In 1918 the United States Government purchased the Cuban 1918–19 crop at 5.5 cents per pound, an advance of 114 per cent above the price they received in 1914.

In 1919 the best offer the Cubans would make was 6½ cents per pound, or an advance of 153 per cent above the average price they received in 1914, and the United States Government declined to pay this price. What a horrible condition resulted from the refusal to produce!

In 1920 the price of raw sugar rapidly rose and by the middle of June reached 18½ to 19 cents, or six times the average price the Cubans received for their 1914 crop. But so rapacious were they that with a million tons of sugar on hand, and believing we were unable to secure sugar from any other country, the Cuban producers met on June 30 and formed a pool under the terms of which they agreed not to sell us or anyone else a pound of sugar under 24 cents, an advance of 837 per cent above the average price they sold their crop for in 1914. During the period of extortionate sugar prices there was no domestic beet sugar on the market, and had there been, under the regulations of the Attorney General, it could not have been marketed above 12 cents less 2 per cent, or 11¾ cents per pound, or less than one-half the price of refined sugar that the Cubans charged for raw sugar f. o. b. Cuba.

UNITED STATES GOVERNMENT BREAKS CUBAN POOL.

The United States Government scoured the world for sugar, and 800,000 tons were brought in at 15 to 18 cents per pound, or 50 per cent more per pound than domestic producers were allowed to charge for their product a few months before. As a result of these imports, sugar prices went to smash, the Cuban pool dissolved, and Cuba was left with a million and a half tons of unsold sugar. The further result has been that with this extra 800,000 tons of sugar brought in from all over the world and with a surplus in Cuba hanging over the market, the price of sugar has been from 1 to 2 cents per pound below the domestic cost of production.

COST OF CUBA'S SUGAR POOL.

Cuba's 1920 sugar pool cost the American people several hundred extra millions of dollars. Our purchases of sugar in that island alone in 1920 cost us an average of 11.6 cents per pound, or a total of $669,000,000, and in addition to this our sugars from other countries cost us $340,000,000, or over a billion dollars paid to foreign countries for this one article of food which can and should be produced at home.

CUBA DEFEATS OBJECT OF EMERGENCY TARIFF.

With the collapse of the pool sugar fell to unprecedentedly low prices. In an effort to prevent the utter ruin of American sugar producers Congress in the emergency tariff bill of May, 1921, raised the duty on sugar from 1¼ cents to 2 cents, which, under the 20 per cent reciprocity treaty, gave Cuba a rate of 1.60, as compared with 1 cent, and raised her differential from 25 cents to 40 cents per 100 pounds.

But anxious to dispose of their surplus stock and determined to deprive the domestic sugar industry of the relief intended, the American producers of sugar in Cuba and the seaboard refiners so reduced their price and their margin that their average price for 60 days after the bill went into effect was $1.35 per hundred less than it was for 60 days prior to the passage of the bill that increased the duty 59 cents per hundred. Whether it be in increasing the price of sugar 800 per cent above normal when only the Cubans have sugar to sell, or in decreasing the price to a point below the cost of production in order to ruin the United States domestic sugar industry, the American producers of sugar in Cuba and our seaboard refiners are equally conscienceless.

The operating losses of the domestic beet-sugar companies last year were stupendous, as is shown by their annual reports. That of the American Beet Sugar Co. shows an operating loss of $2,157,875.86; of the Amalgamated Sugar Co.—referred to as a company which "wanted a little more milk"—$5,129,507.18. If I had the time I could tell of the struggle they had to keep out of the hands of a receiver. At a meeting held one night it was decided that unless action could be had through a certain New York banker, whose name I will not mention, that company would go into the hands of a receiver the next day. And now the Senator from Mississippi thinks it "wants a little more milk." The annual report of the Utah-Idaho Sugar Co. shows a loss of $5,862,765.96; of the Michigan Sugar Co., $423,319.17; and so on down the line. Surpluses have been used up, working capital has disappeared, and they have borrowed to the limit from local and far-away banks. Some have managed to float bond issues of from half a million to several million dollars. Several were prevented from going into the hands of receivers by borrowing some $9,996,000 from the War Finance Corporation. Several have gone into the hands of receivers, and the owners will lose their investments. Some have not yet made final payment on their last year's beet crop.

These are the financial conditions which represent all but a very few of the domestic beet-sugar companies. In the face of this, how is the present industry to revive and how can new capital be expected to flow into the expansion of the industry unless an adequate rate of duty be provided in the forthcoming tariff bill?

Beets are a competitive crop and unless the price of sugar during the marketing season is high enough to enable the factories to pay a sufficient price to the farmers to induce them to supply the necessary beet acreage the factories can not operate to capacity, if at all. A recent report of the Department of Agriculture shows that our farmers have planted 176,400 less acres to beets in 1922 than they planted in 1921, and they estimate that instead of producing a million tons of beet sugar, as we did last year, we will produce only 657,000 tons—a falling off of 343,000 tons. Two more years of equal decrease in production and the domestic beet-sugar industry would cease to exist.

Mr. President, I have heard it often stated upon the floor that the duty placed upon sugar immediately was passed on to the consumer of the country in the amount of the added duty. Is that so? Let us take the facts—not windjamming but the facts.

We will begin with the Wilson-Gorman law. It was effective in imposing a duty on sugar of 40 per cent ad valorem on August 28, 1894. Up until August 23 sugar was free. On August 28, five days afterwards, when the Wilson law imposed upon sugar a duty of 40 per cent ad valorem, what happened? New York in-bond price of raw sugar per hundred pounds on the 23d of August was $3.55 a hundred. On August 28, the day that the 40 per cent ad valorem rate of duty went into effect, the New York in-bond price of raw sugar per hundred pounds was $2.68, not $3.75. The New York duty-paid price of raw sugar per hundred pounds was $3.75. The refiner's margin was 85 cents. The New York wholesale price of granulated sugar per hundred pounds was $4.60.

On August 30, 1894, the New York in-bond price of raw sugar per hundred pounds was $2.68; United States duty per hundred pounds, being 40 per cent, was $1.05; New York duty-paid price of raw sugar per hundred pounds $3.75. The refiners' margin was 97 cents.

The New York wholesale price of granulated sugar was $4.72, being 12 cents more than $4.60, and the refiners took 8 cents of that in profits for refining.

Now I have taken two months preceding and two months following the enactment of the Wilson law imposing a 40 per cent duty upon sugar. What was the result? The average for the whole two months was as follows: New York in-bond price of raw sugar per hundred pounds $3.27; United States duty per hundred pounds, nothing; United States duty-paid raw sugar per hundred pounds $3.27; refiners' margin 98 cents; New York wholesale price of granulated sugar $4.25.

When the 40 per cent ad valorem duty was imposed, during the next two months the averages were as follows: New York in-bond price of raw sugar per hundred pounds $2.64; United States duty per hundred pounds $1.05; New York duty-paid price of raw sugar $3.69; refiners' margin 81 cents; New York wholesale price of granulated sugar $4.50 or 25 cents higher on the average than the two months preceding when sugar was free.

Next we come to the Dingley Tariff Act. In 1897 the Dingley Act became effective on July 24, imposing a duty of 96° sugar of $1.685 per hundred pounds. Now let us see what happened. On May 27, 1897, the New York in-bond price of raw sugar per hundred pounds was $2.32; United States duty per hundred pounds 92 cents; United States duty-paid price of raw sugar $3.25; refiners' margin 98 cents; New York wholesale price of granulated sugar per hundred pounds $4.23.

On July 22, the day the prices were quoted before the enactment of the Dingley law in which there was an increase, it will be found that the New York in-bond price of raw sugar per hundred pounds was $2.58; United States duty per hundred pounds $1.03; United States duty-paid price of raw sugar $3.62; refiners' margin $1.03; New York wholesale price of granulated sugar per hundred pounds $4.66.

Then the duty was raised to $1.68½ per hundred pounds, and what happened? Five days following that the price of raw sugar in New York in bond was $2.06, not $2.58. The duty was $1.68, not $1.03. The New York duty-paid price of raw sugar per hundred pounds was $3.75, where previously it had been $3.62½. Now we begin to see where the profits are. The refiners' margin was $1.03 then, where the refiners' margin previously had been 97 cents. The New York wholesale price of granulated sugar per hundred pounds was $4.66. The Dingley law, under the increase in duty from 40 per cent to $1.68½ per hundred pounds, brought the price up to $4.72, or 6 cents higher than it had been the week before.

Taking the averages, what do we find? During the whole two months preceding and the whole two months following the difference in the wholesale price of granulated sugar per hundred pounds was the difference between $4.46 and $4.75, or 29 cents per hundred pounds.

But let us not stop at that. The Underwood law became effective on March 4, 1914, reducing the duty on Cuban sugar from $1.384 to $1.01 per hundred pounds. What was the result? On February 26, 1914, the New York in-bond price of raw sugar per hundred pounds was $2.04; United States duty per hundred pounds, $1.34; New York duty-paid price of raw sugar per hundred pounds $3.39; refiners' margin, 53 cents. Just notice that, Mr. President—53 cents. As soon as the Underwood law was enacted, it went to 91 cents within a week. The New York wholesale price of granulated sugar per hundred pounds was $3.92.

Now, what was it on March 5? On that day the New York in-bond price of raw sugar per hundred pounds was $2; United States duty per hundred pounds, $1.01; New York duty-paid price of raw sugar per hundred pounds, $3.01; refiners' margin, 91 cents; New York wholesale price of granulated sugar per hundred pounds, $3.92. Who got the difference? Did the consumer get it?

The PRESIDENT pro tempore. The Chair desires to make an announcement. The Senator's hour has expired. The Chair probably should have made the suggestion or the decision he is about to make before the Senator from Utah began, but the Chair will make it now.

Under a ruling made by a former President of the Senate in the case of a unanimous-consent agreement, which limited the time upon an amendment and also the time upon the bill itself, the President of the Senate at that time ruled that when an amendment is pending a Senator may not take the time allotted to him for a discussion of the bill itself.

The Chair finds it utterly impossible to apply that rule to the provisions of the unanimous-consent agreement under which we are now acting contained in lines 18 to 22 of page 2 of the agreement, and the Chair will hold that a Senator may address the Senate upon any of the paragraphs mentioned in the unanimous-consent agreement at any time he desires to do so while that paragraph is under consideration.

It is perfectly obvious that the Senator from Utah has been addressing himself to the paragraph and not to the amendment which is pending. His hour has expired upon the paragraph and the Chair feels that it is due to the Senate to make the announcement that the Senator from Utah may continue for another hour, but he must confine himself to the amendment which is pending.

Mr. SMOOT. I ask unanimous consent that I may be given another hour to speak as I wish.

The PRESIDENT pro tempore. Is there objection?

Mr. HARRISON. I have no desire to object, I will say to the Senator from Utah, but I should like to get the parliamentary situation. What amendment is now pending?

The PRESIDENT pro tempore. The amendment offered by the Senator from Louisiana [Mr. BROUSSARD].

Mr. BROUSSARD. That amendment, I submit, covers the entire question. I think it changes every rate in the paragraph. I do not think the Senator from Utah should be limited as to the latitude of his talk so long as he talks about the rates on sugar.

Mr. SMOOT. I ask unanimous consent that I may proceed.

The PRESIDENT pro tempore. The Senator from Utah asks unanimous consent to discuss the pending paragraph for how long?

Mr. SMOOT. I shall try to get through in an hour.

The PRESIDENT pro tempore. Is there objection?

Mr. GERRY. Reserving the right to object, I should like to make a parliamentary inquiry. I want to know if I understood the Chair correctly. Does the Chair rule that the Senator from Utah has spoken one hour on the pending paragraph and not on the amendment, and that only one hour is allowed on the pending paragraph?

The PRESIDENT pro tempore. He has spoken one hour on the paragraph but not on the amendment.

Mr. GERRY. Then the Senator from Utah is allowed one hour on the paragraph and one hour on the amendment. Is that correct?

The PRESIDENT pro tempore. That is correct. The unanimous-consent agreement so provides.

Mr. SMOOT. I have asked unanimous consent of the Senate that I might proceed. I think I can get through in an hour or a little longer.

The PRESIDENT pro tempore. The Senator from Utah asks unanimous consent that he may proceed with the discussion of the paragraph for one additional hour.

Mr. GERRY. That will give the Senator from Utah three hours.

The PRESIDENT pro tempore. If the Senator from Utah desires thereafter to discuss the amendment, he would be permitted to discuss it for an hour.

Mr. SMOOT. I think I can get through in an hour.

The PRESIDENT pro tempore. Is there objection?

Mr. JONES of New Mexico. May I inquire if the Senator from Utah could now use one hour of the time allotted for the discussion of the bill?

Mr. SMOOT. No. I am discussing the paragraph, I will say to the Senator.

The PRESIDENT pro tempore. The unanimous-consent agreement, as the Chair has suggested, for the consideration of the Senate, relates to the paragraph and not to the bill as a whole.

Mr. SMOOT. It relates to the paragraph.

Mr. JONES of New Mexico. I was just wondering if, under the unanimous-consent agreement, the Senator from Utah might consume one hour upon the bill?

Mr. SMOOT. I do not want to consume one hour on the bill.

Mr. JONES of New Mexico. I should like to inquire if an additional hour might not be allotted to the Senator from Utah in that way?

Mr. SMOOT. That would not be in accordance with the unanimous-consent agreement.

The PRESIDENT pro tempore. The Senator from Utah, under the unanimous-consent agreement, may not discuss the bill at this time at all.

Mr. SMOOT. No; I am required under the agreement to discuss the pending paragraph.

Mr. JONES of New Mexico. I am perfectly willing to grant unanimous consent for the Senator from Utah to proceed, for he is discussing a very interesting subject, and I want to hear him.

Mr. SMOOT. I thank the Senator from New Mexico.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Utah for unanimous consent to

continue his discussion of the paragraph for one hour? The Chair hears none, and the time of the Senator from Utah for the discussion of the paragraph is extended for one hour.

Mr. SMOOT. Now let me proceed to show the effect on the price of sugar of the ratification of the reciprocity treaty.

On December 24, 1903, the New York in-bond price of raw sugar was $1.87½; United States duty per hundred pounds $1.68½; the New York price, duty paid, on raw sugar per hundred pounds was $3.56; the refiners' margin was 80 cents.

Mark how the price rose immediately following the going into effect of the Cuban reciprocity treaty. The New York wholesale price of granulated sugar per hundred pounds was $4.36.

Mr. POMERENE. Mr. President, I should like to ask the source of the Senator's figures.

Mr. SMOOT. The figures are taken from the published statements of Willett & Gray, which are furnished to all the world. On December 23, 1903, the Cuban reciprocity arrangement became effective reducing the duty on 96° sugar to $1.348 per hundred pounds, and on December 31, one week after the quotations above, after the Cuban reciprocity treaty had gone into effect, the New York in-bond price of raw sugar was $2.12, not $1.87½; United States duty per hundred pounds was $1.348, not $1.68½; the New York price duty paid on raw sugar per hundred pounds was $3.47, and not $3.56. The refiner's margin was 84 cents, not 80 cents.

The New York wholesale price of granulated sugar per hundred was $4.31 instead or $4.36, or 5 cents a hundred pounds difference. Who got it? Did the American consumer? We all know that he did not.

So, Mr. President, all of our tariff bills and the changes in the tariff rates on sugar prove beyond question that wherever a duty is raised the price of Cuban sugar declines and wherever the rate is reduced the price of Cuban sugar increases. When I say increases or declines, the difference all goes back, directly or indirectly, to the refiner. Do not think that the American consumer is going to get it. History proves otherwise.

Mr. President, I have here a petition addressed to the Congress of the United States, signed by the Utah State Farm Bureau. I do not wish to take the time to read it, but I ask that it may be printed in the RECORD without reading.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The petition referred to is as follows:

MAY 11, 1922.

To the Congress of the United States of America:

The undersigned, representing the majority of the sugar-beet growers of Utah, earnestly appeal to your honorable body for a tariff of at least 2 cents per pound on imported sugar from Cuba in order that the beet-growing industry might be preserved.

BEET-SUGAR MAKING—AN AGRICULTURAL INDUSTRY.

In considering the importance to Utah, as well as Idaho, Colorado, and other beet-producing States, of an adequate tariff on sugar, it should be borne constantly in mind that the beet-sugar industry is essentially an agricultural one; that the farmers are the class most vitally concerned in its welfare; that the growers of beets are the real producers of the Nation's supply of this domestic product. As pioneers in the introduction of the beet-sugar industry in the United States, the farmers of these Western States have learned from experience the economic value of the sugar-beet crop.

The issue is perfectly clear. For the beet-sugar industry to continue its important service to the farmers and to the consuming public of the United States it is imperative that such tariff protection be provided as will permit the domestic industry to meet the competition of foreign sugars produced at extremely low cost under conditions of labor which no enlightened citizen of this country would for any length of time endure.

THE FARMERS' CASE.

The position of the operators of the beet-sugar factories and of the domestic cane interests has been presented to the Senate Finance Committee in the hearings on the sugar schedule. But the interests of the farmers in the matter have been but barely touched upon. It is the case of the farmers that most concerns us here.

Upwards of 10,000 farmers are engaged in the production of sugar beets in Utah alone. Their income from the beets they produced in 1921 was $6,341,000. The United States Department of Agriculture reports show that Utah produced 155,755 tons of sugar made from 1,152,000 tons of beets ground by 18 factories—the largest number operating in any one State in the Union.

BEETS AND THE WESTERN FARMS.

The money paid to the farmers for their beets is but one part of their income from this crop. We Utah farmers know from experience the truth of the statement made to the Senate committee by W. D. Lippitt, general manager of the Great Western Sugar Co., in which he declared, in substance:

"It is of vital importance to the Western States that the foodstuffs they produce be transported in concentrated form. Huge quantities of western farm products can be economically marketed in the food-consuming centers of the East only by being transformed into live-stock products.

"An average acre of sugar beets produces 2,500 pounds of pure, white granulated sugar, constituting a human food 100 per cent of which is digestible. Utilizable on the farm and constituting excellent food for live stock are the plant tops, the residual pulp, and the molasses.

"Properly fed to live stock in a balanced ration, the mere by-products from an average acre of sugar beets will produce approximately 300 pounds of meat in addition to the production of a ton and a quarter of sugar from the same acre. The by-products alone of an acre of sugar beets will produce as much human food in the form of meat as will the entire product of an acre of corn.

"Many exhaustive and careful investigations have shown convincingly that there is no other crop grown on a commercial scale in the United States that produces the surplus food per acre that the sugar beet does, taking into account both the sugar and the various by-products properly utilized.

"This is a startling and comprehensive statement, but the fact has long been, and is to-day, recognized and taken advantage of by Germany and other countries of continental Europe. The value and adaptability of the sugar beet crop to American agriculture must be obvious to anyone. It is almost inconceivable that the American Government will fail to shape its tariff policy to protect the industry in the present crisis."

BY-PRODUCTS ARE VITAL.

The proper use of beet by-products enters into the farm economy and fertilization of all our beet-growing districts. It is one of the most valuable assets of the dairy and live-stock business in these States.

To western farmers, especially those on irrigated lands, the sugar beet crop is their most important product. And even the western farmer who, though remote from the seat of tariff making in Washington, has watched the precarious downward course of the industry for the past two years knows full well that this vital part of his agricultural economics is doomed without adequate protection.

SUGAR'S SOCIAL CONTRIBUTION.

The charge of selfishness is made by certain interests against the plea of our people for protection. But we have "our all" in our farms, and we have given to these farms years of toil that mean much to us. The beet-sugar industry has aided materially in building up communities that are models of American life that other parts of the country might well pattern after. And in building up this industry we have created one of the most important phases, not only of western agriculture, but of western commerce.

JUSTICE ONLY IS ASKED.

We believe that Congress will recognize these facts; that they will listen to the voice of the western farmer in this crisis and will see to it that a tariff is imposed upon imported sugar sufficiently high to insure the manufacturers of domestic beet sugar a selling price for their product which will enable them to pay the farmers a reasonable price for the beets grown, based on the selling price of sugar, which is the form of contract we now grow beets under—a price which will return to the farmer a fair compensation for his labor, and an American wage for the extra labor which he is compelled to hire in the production of this crop.

Respectfully submitted.

UTAH STATE FARM BUREAU,
By EPHRAIM BERGESON, *President.*

Mr. SMOOT. I wish I had the time to read the petition, for the picture it presents is perfect as to the effect the decrease in the duty or even the maintenance of the present rate of duty will have upon the homes and communities which have been built up around the domestic sugar industry. They plead to Congress for a 2-cent rate of duty against Cuban sugar; and I say now to the Senate that unless that rate is given the sugar industry can not grow. It may live; the Great Western Co., of Colorado, whose stockholders own more stock in Cuban sugar than they do in the Great Western, can live, but the great bulk of the sugar plants in the United States will not be able to live; and there will be little chance for the cane-sugar producers to exist.

I plead with the Senate to take this great industry out of the hands of the refiners and give the sugar producers a rate which will prevent the refiners killing them off; for, just as sure as the sun rises to-morrow morning, unless we do, the refiners in the end are going to destroy or control this domestic industry, all of the companies engaged in the domestic sugar industry being financially weak.

I wish to say to the Senator from Mississippi [Mr. HARRISON] that I am not pleading for this duty because I own 440 shares of Utah Co. stock. The offer for that stock on the Salt Lake City market to-day is $3 a share. Is there anyone in all the United States who will think because I have $1,300 in sugar stock that my action will be in any way controlled by that fact?

Great stress was laid upon the profits being made by the domestic sugar factories on Saturday last by the Senator from Mississippi. He said that the dividends of the Great Western Co. amounted to $300,000, but when the Senator from South Dakota asked him what rate of interest that represented upon its capital he said 6 per cent. I have some figures, Mr. President, over which the Senator from Mississippi could roll his tongue. They begin with the profits made by the American Sugar Refining Co. Let us see how they run in that instance. That company makes a greater profit in the interest on loans and deposits than any sugar factory in the United States makes all told. In 1913 they made $4,184,988.71; in 1914, $6,139,389.96; in 1915, $6,184,720.69; in 1916, $13,703,443.56; in 1917, $14,212,789.21; in 1918, the year in which the war closed, they made $12,589,486.85; in 1919 they made $15,250,519.12. I have not the time to give the figures as to all of the refiners, but they disclose that the profits which have been made by the most profitable sugar manufacturing company in the United States look like a half pint of cold water in comparison with a bucket of milk, and not a drop, as the Senator from Mississippi suggested on Saturday.

The Senator from Mississippi is very solicitous about the beet grower, not that he cares anything about him, but it was for political effect. He says that the beet grower is not dissatisfied; that the beet grower will not get any more; that it will all go to the sugar manufacturer. Mr. President, I have a copy of a sugar-beet contract entered into by beet growers and a sugar company, and, as I stated the other day, the price which they get for their beets is based upon the price which sugar brings in the New York market. The American beet grower is at the absolute mercy of the refiner. He tells the producer of sugar every day what he shall sell his sugar for, and not only that but he has compelled a trade arrangement under which cane sugar sells for 20 cents per 100 pounds more than beet sugar. Senators may ask why does the beet-sugar manufacturer agree to such an arrangement. It is because he is helpless. We know that that power can destroy the industry; it is in their hands; and unless we get the rate of duty of 2 cents against Cuban sugar, I wish to say now that I doubt very much whether anyone is going to risk any more money in the extension of the sugar business in this country.

Mr. President, if every sugar plant in the United States were closed to-morrow, within two months the American consumer would pay more on account of the advance in price of sugar than the cost in the beginning of the sugar plants and the profits which they have made. There is no telling how much further it would go; but I know that the price would go just as high as the people of this country who purchase sugar would stand.

We are pleaded with that we ought to have a love for Cuba, our little sister. I think that we ought to treat Cuba right; I think that we ought to treat every country right. We have given Cuba a preferential rate of 20 per cent, but at the very first opportunity Cuba had to show her love for America she raised the price of her sugar 889 per cent.

The first time that she had a chance to show her appreciation for what we have given her—namely, we gave her the American market for all of her sugar, cutting out every other country in the world—she laid tribute, together with the refiners of this country, of over $600,000,000 annually upon the sugar consumers of the United States.

Mr. President, I have here a statement showing the prices at the different dates, and the increases that were made during the war period. I have not the time to read it. I ask that it be printed with my remarks without reading.

There being no objection, the statement referred to was ordered to be printed in the RECORD, as follows:

RANGE OF CANE-SUGAR PRICES IN 1920.

On September 23, 1919, the United States Government relinquished its control of the price of foreign raw sugar. Up to that time the refiners had been paying $7.28 per hundred for Cuban raws, duty paid, and the selling price of the refined product made therefrom was $8.82 per hundred pounds net cash. All of the crop of Cuban sugar harvested the preceding season was under contract and there was no raw sugar to be purchased by the refiners for prompt delivery when they were permitted to enter the open market on September 23, 1919. They, however, very promptly began to buy futures for delivery after the Cubans began making their crop about December 15, 1919. Though this crop had been offered to the United States Government the preceding summer (July, 1919) at 7 cents per pound, the Cubans did not hesitate to advance the price of their raws even before they began to manufacture the same in December, 1919. By January 15, 1920, the duty-paid price of Cuban raws had advanced to $13.04 per hundred pounds. By April 1 the price was $14.04 per hundred pounds. By April 15, $19.06 per hundred pounds. By the middle of May it had advanced to $20.06 per hundred pounds. The peak price was reached May 19, 1920, when the Cubans sold at $23.07 per hundred pounds. These exorbitant prices led our Government to undertake the purchase of full duty-paying raw sugar wherever it could find it in the markets of the world. By this means the corner in Cuban raws was broken with the Cubans still having some 500,000 tons raws, which they were holding for $30 per hundred pounds. By the middle of June the duty-paid price of raws had dropped in New York to $18.06 per hundred pounds. By the last of July there was a further decline to $16.30 per hundred pounds. By the last of August the price had dropped to $12.04 per hundred pounds. And when beet sugar came on the market the middle of October the duty-paid price of raw sugars in New York had dropped to $7.75 per hundred pounds, since which time there has been a steady decline in the price of raw sugar until it reached the bottom early in January, 1922, when the duty-paid price of Cuban raws was $3.35 per hundred, or $1.75 per hundred pounds delivered in bond at New York.

Coincident with the fluctuation in the price of raw sugar during the year 1920, there was a corresponding fluctuation in the price of refined sugar made from such imported foreign raws. The middle of January the refiners' price of refined sugar was from 15 cents to 16 cents per pound. By the latter part of April it had advanced so that the quotations were from 16 cents to 22¾ cents per pound. The peak price of refined sugar was in the latter part of May, 1920, when it was quoted as high as 26½ cents a pound by one of the eastern refiners. The New York prices of refined sugar ranged from 21 cents to 22½ cents per pound from the latter part of May until the latter part of August. Many buyers by that time had become loaded up with imported raw sugar which the consumer was using in the raw state, and this sugar was thrown onto the market and offered as second-hand sugar at considerably below the refiners' price. This forced the refiners to steadily drop their prices until, when beet sugar came on the market the middle of October, 1920, they were quoting refined at from 11 cents to 12 cents per pound. Within the next month it had dropped to 9½ cents per pound. There was a further steady decline until by January, 1922, cane sugar was offered freely at from $4.80 to $4.90, New York base price.

The beet-sugar manufacturers did not participate in any of the high prices prevailing during 1920. The Government continued to regulate the price of beet sugar until August 26, 1920, the prices ranging from 10 cents a pound to a maximum of 12 cents a pound, the ultimate consumer buying such beet sugar at 15 cents per pound. The entire crop of beet sugar made east of the Missouri River went into consumption by April 1, 1920. The factories in the Rocky Mountain States retained enough of their sugar for their local consumption until midsummer of 1920, but sold their output at not to exceed 12 cents per pound.

The injustice to the beet-sugar manufacturer did not merely extend to the limitation of his prices for the output of sugar made from the beets harvested the fall of 1919. While the control over beet sugar was being maintained by the United States Food Administration until August 26, 1920, it was necessary to determine the terms of the beet contract which the beet-sugar companies should offer to the farmer in the winter of 1919–1920. The Government took a hand in fixing the price to be paid for beets to be planted in the spring of 1920, and the price then determined, largely through the Government's activities, was the highest price ever paid for beets either in this country or abroad. Under it beet-sugar companies paid the farmers from $12 to $12.50 per ton for the beets planted the spring of 1920 and harvested the fall of that year. The sugar made from these high-priced beets was marketed during the season beginning October, 1920, long after the Government had ceased to control the price of either foreign or domestic sugar. The beet-sugar factories received an average of only about 6 cents per pound for the sugar made from the $12 to $12.50 beets grown the summer of 1920. Considerable of that sugar was carried over into the late summer and early fall of 1921 and netted the factories only about $4 per hundred pounds.

Mr. SMOOT. When the Cuban representative was before the Finance Committee pleading that the rate on sugar should not exceed 1 cent per pound it developed that in Cuba the wage paid to men was 65 cents a day—not 8 hours a day, but 12 hours a day; not in cash, not a dollar of cash. It was in store pay; and the poor fellow, after receiving his 65 cents a day, has to go to the store and purchase goods upon which God only knows what profit was made; and we are asked now that our American laboring men and women shall compete with such conditions as those. Our labor costs are higher, our taxes are higher, our fuel and other supplies are higher, our freights are higher. When the refiners ship their sugar from New York to Chicago they have to pay but 63 cents a hundred pounds. When Utah ships her product to Chicago she has to pay 77 cents a hundred pounds; so we are discriminated against all along the line.

Mr. LODGE. Mr. President, may I ask the Senator a question?

Mr. SMOOT. Yes.

Mr. LODGE. Does Cuba sell her whole crop here?

Mr. SMOOT. Ordinarily she sells it all here; but during the last war years her product was so huge that she increased it until she raised 3,900,000 tons of sugar, and if she had sold her sugar at a reasonable price at the time the Cuban pool was organized she never would have had 1,200,000 tons hang over; but she forced the United States to go to all parts of the world to get sugar. We broke the Cuban pool, and that was the only way to do it. We imported into this country over 800,000 tons of sugar and left that amount of sugar in the hands of the Cuban producers.

Mr. LODGE. Do they sell anything now elsewhere?

Mr. SMOOT. They are doing so at this time; and when I reach that part of the subject I will take it up.

Mr. LODGE. I wanted to know what price they were getting abroad—whether they were selling below the New York rate, or above it.

Mr. SMOOT. They are refining it in bond, and, of course, they do not have to pay duty. In my letter to General Crowder I referred to that subject, and I want to say that I have done everything I could and I am willing to do everything I can to encourage the exportation of Cuban sugar to foreign countries. As far as I am concerned I am willing to repeal that part of our law requiring the rebate of all but 1 per cent of duty paid on Cuban sugar that comes into this country for refining, to be exported. I am willing that it shall be financed, and that the Government shall assist in doing it, and in my letter to General Crowder I covered that point exactly.

Mr. LODGE. Did the Senator cover the point of the price at which it is sold in other markets?

Mr. SMOOT. No; I have not covered that in my letter; I say the question of assistance.

Mr. LODGE. I want to know whether Cuba sold at a lower or a higher price in foreign markets.

Mr. SMOOT. I do not think she does.

Mr. LODGE. She does not do what? Does the Senator mean that she sells at the same price?

Mr. SMOOT. I think it is about the same price.

I now want to call the attention of the Senate to the rates of duty imposed upon sugar by foreign countries. Senators, I want you to listen to these rates:

Argentina, $3.36 per hundred pounds of refined sugar.
Australia, $1.30 per hundred pounds.
Belgium, $3.50 per hundred pounds.
Brazil, $6.61 per hundred pounds.
Canada, our neighbor of the north, $2.39 per hundred pounds.
Czechoslovakia, $2.39 per hundred pounds.
Denmark, $1.22 per hundred pounds.
France, $8.64 per hundred pounds.
Greece, $4.10 per hundred pounds.
Italy, $2.68 per hundred pounds.
Japan, $2.79 per hundred pounds.
Mexico, $3.39 per hundred pounds.
Spain, $15.75 per hundred pounds.
Sweden, $1.22 per hundred pounds.
United Kingdom, $5.58 per hundred pounds.

Ah, Mr. President, Great Britain during this war has passed through an experience that she is going to correct for the future. But a few days ago she repealed her excise tax of 57 cents a hundred pounds upon sugar, but she still keeps a duty of $5 per hundred pounds upon sugar coming into England. Not only that, the English Government but a short time ago gave $250,000 toward the establishment of a beet-sugar factory in Great Britain. That factory is located at Kelham, and the policy of the British Government from now on is going to be not only to impose upon sugar a duty of $5 a hundred pounds but the Government itself is going to assist Englishmen to build factories so that they can produce sugar and not be at the mercy of sugar-producing countries in time of war as she was during the recent war.

Mr. President, on Saturday the Senator from Mississippi made this statement:

> Then he went to the Cuban authorities with a letter which he had received and which evidently was an official letter, according to all the reports, although I do not know as to that. The letter, however, to General Crowder was from one high up in the legislative councils of this country, one who, after March 4, will occupy the highest position in this Chamber, so far as committee assignments are concerned, one who has been the champion of the imposition of sugar duties for many years upon the floor of the Senate, one who in a debate said he owned 430 shares of Utah-Idaho Sugar Co. stock, one who was the most influential personage and character in the writing of the pending tariff bill.

Further he said:

> I say to the absent Senators, however, that they should be here and they should inform themselves about what has been happening in connection with the sugar question. One of the blackest pages that has been written in our relationship with Cuba has been written touching the sugar schedule. It is a proposition which calls for explanation, and the American people will not be satisfied until explanation is forthcoming.

Mr. President, the Senator from Mississippi had reference to myself. I have nothing whatever to conceal. The whole world may know every action that I have taken and every word that I have written. I have no apology to offer, and I want to say to the Senate now that if circumstances and conditions in the future were the same as then, I would do again the same thing that I did then; and I want now to state briefly to the Senate what those conditions were.

The great banks of New York had advanced to the Cuban growers, I am informed, 2 cents per pound on all of their prospective production of sugar.

Mr. DILLINGHAM. When was that?

Mr. SMOOT. In the fall of 1920. Sugar began to drop, and when the domestic sugar crop produced from contracted beets came on the refiners, knowing the financial condition of the sugar companies of the United States, deliberately went about to destroy the American industry.

The price of sugar declined until it reached $1.67 a hundred. The bankers sent a committee to Cuba, headed by Mr. Morrow, the representative of the Morgan interests in New York, to investigate the whole sugar situation. It was reported that there were 1,200,000 tons of sugar carried over; that the crop for this year would be 3,500,000 tons. The banks had advanced 2 cents a pound upon it. The sugar delivered in New York was less by far than they had advanced on it. Mr. Morrow reported to the bankers that the best way to clean the whole business up was to throw the 1,200,000 tons of sugar on the market and let it bring whatever it would.

I knew, as every other man who was acquainted with the sugar industry knew, that such action would carry that sugar to at least a cent a pound. All of the beet-sugar interests had to pay for their sugar beets at that time. They had gone to the War Finance Corporation. They had borrowed $9,900,000 to pay the farmers for the beets, or $4 a hundred pounds of sugar placed in their warehouses. They had borrowed all they could; individuals had put up all the security they had; organizations had pledged their credit for what they had borrowed to meet the losses of the year preceding, and the money powers of Wall Street, the refiners, saw a chance to give a deathblow to the sugar producers of this country.

Men saw all they had about to be swept out of existence. They could not pay for the beets they had contracted for. They appealed to me and asked if I would not assist them in securing assistance from the War Finance Corporation, and I did so, and all honor to the War Finance Corporation; they did everything in their power and ran a great chance of never getting the money back. They never would have gotten their money back if there had not been a move made which resulted in stopping the movement to throw 1,200,000 tons of sugar upon this market.

Señor Portuondo and General Crowder called at my office on January 24, 1922. I never asked the señor to come to my office. I know of nobody who ever asked him to come to the United States. He did not intimate to me that anyone had. I met him but once in my life, and that was in my office, on January 24, 1922, with General Crowder. He stated to me that the Cuban situation was desperate; that something had to be done in order to save the small Cuban planters. Ah, the refiners were then taken care of. He was the first man from Cuba who said aught to me about it, and he said he thought the thing to do was to restrict the Cuban crop to 2,500,000 tons. He said he did not know whether his Government would do it or not; he could not say; but something had to be done.

I told him I was not only interested in seeing that the small planter in Cuba was not destroyed—for I knew the power that was back of this whole thing—but I was interested to see that the sugar industry of the United States should not be wiped out entirely. I knew what it meant. It meant destruction not only to the sugar industry in my State, it meant absolute ruin to nearly every bank in the State. It meant that we would have to start all over again in the western country. No blow could have been directed which, if carried out, would have had more dire results, and if it had been carried out there would not have been a single sugar-producing concern in the United States which would have survived, not one.

Mr. HARRISON. Mr. President, I do not want to interrupt the Senator——

Mr. SMOOT. Please do not. Let me go on. I have only a little more to say. I have nothing to tell but the simple story. I am not talking for politics. I am not standing here upon the floor appealing for political advantages or anything else. I want the truth, the whole truth, and nothing more.

Mr. HARRISON. May I say to the Senator—and if he does not wish to be interrupted, I do not want to interrupt him——

Mr. SMOOT. If I had more time——

Mr. HARRISON. I will ask unanimous consent that the Senator may have just as long as he wants.

Mr. SMOOT. The señor said, "We think that the emergency tariff rate is too high. We do not object to the rate if you will only increase the 20 per cent preferential to 30 per cent. What we want more than anything else is that the preferential be increased from 20 per cent to 30 per cent." How cunning these refiners are. Of course, if they can get the preferential up to 30 per cent, that is just 10 per cent more they would put in their coffers.

I told him that, as far as I was concerned, that was out of the question, that I would oppose it and fight it as long as I had power to do so. Remember, Mr. President, never in any conversation or in any letter have I pledged anyone but myself to do anything.

When we finished the discussion of the increase in the preferential, and he became convinced that there was no use whatever in carrying on the conversation on that subject further, the question of the rate came up. I told him I knew the situation. I told him I felt that there was a sword hanging over the head of the sugar industry of this country, and I knew there was a power which could clip the cord at any time, and death would come to the industry.

I was willing to do anything for temporary relief. Sugar was selling at about $1.67. If the Senator from Mississippi had seen every industry in his State likely to be destroyed, I wonder if he would have done less than I did.

The señor then said, "Can we not, then, have a reduction to $1.35?" I said, "No." He said, "What about $1.40? The industry can not get along with that rate. Then there is nothing to be done. I guess we will have to let things take their course. I suppose we can stand it if you can, and we can not say anything more."

General Crowder discussed the question, and we were not there more than three-quarters of an hour, all told. I told General Crowder that on account of the critical condition in which

we found ourselves, if Cuba—as the señor had proposed—would limit her crop to 2,500,000 tons I knew the price of sugar would immediately rise, and I would take chances to save the industry, even though temporarily, in the United States, and that I would support a $1.40 rate on Cuban sugar.

It was one chance for the industry. It was one more chance for the people of the West, and I had absolute confidence that Congress would act later if it became absolutely necessary. But in order to meet that crisis at the time, I did say this to General Crowder:

DEAR GENERAL CROWDER: I hope that you will lay before the President of Cuba my attitude toward the sugar industry both of Cuba and of the United States.

Mr. Babst, of the American Sugar Refining Co., is doing all he can to arrange matters so as to export at least 500,000 tons of sugar to Europe. I have agreed to do all in my power to secure the passage of a joint resolution authorizing Cuban sugar to come into the United States without a cent for duty, providing it is refined in bond and shipped to any country outside of the United States. This will do away with the financing of sugar in bond and assist the refiners greatly in securing a foreign market for Cuban sugars.

I am sure that the limitation of the Cuban crop of sugar for the present year to 2,500,000 tons will be the solution of the problem, not only for Cuba but for the United States as well. So sure am I of this that I think that it would be wise to have incorporated into the pending tariff bill a rate of duty of 1⅞ cents per pound, which would make the duty on Cuban sugar 1.4 cents per pound.

I am sure that Hon. Eugene Meyer, of the War Finance Corporation, is ready to assist in financing the sugar refiners in their exportation of sugar to foreign countries.

I shall be delighted to hear from you as quickly as possible after your arrival in Cuba, advising me of the result of your conference with the President. I have had the sugar schedule in the pending tariff bill passed over until I hear definitely from you.

Yours sincerely,

———— ————.

Mr. POMERENE. Mr. President, may I ask the date of the letter?

Mr. SMOOT. January 30, 1922. Mr. President, the Senator from Mississippi is perfectly willing to read newspaper clippings. He referred to one here on Saturday. In the same identical issue was published a denial by the President of Cuba of any effort on the part of anybody to bind the Government of the United States upon any question. Here is the statement of the President of Cuba, published in the same paper, almost alongside of the statement to which the Senator referred on Saturday, but he did not call attention to this:

CUBA'S PRESIDENT MAKES SUGAR DENIAL.

HABANA, April 30.—A statement given out at the palace last evening bearing the signature of President Zayas declares that the Cuban Government never has received any official suggestion from the United States Government with regard to a proposal involving the reduction of the Cuban sugar crop in return for a lower tariff rate on Cuban sugar entering the United States.

Any move the Cuban Chief Executive made to better the Cuban sugar industry, the statement continues, was made voluntarily and not in response to foreign suggestion.

The proposition never came from us. The proposition came from Cuba. God forbid that I should ever try to blacken the name or character of an individual even for political reasons.

Why, Mr. President, at that time when General Crowder was here we had an unparalleled surplus of some 1,200,000 tons unsold old crop sugar which had accumulated in the hands of the old Cuban syndicate while the arrival of the new crop was at hand. This surplus had been financed with some 400 different banks on notes coming due, whose margins had mostly run off. Finance for the Cuban producers during their harvest in January to April was disorganized by the financial collapse in Cuba the previous summer. The wholesale traders in the United States, together with the European buyers, were delaying purchase in expectation of collapse and liquidation. Prices fell at one moment to 1.67 cents per pound c. i. f., and threatened to go lower. This was below the cost of producing 60 per cent of the world's sugar, and, if continued, meant a decrease in production and famine prices in 1923. All this came just at the moment when contracts had to be arranged for the sugar then ready to harvest, both domestic and Cuban. Thus not only was our own agriculture jeopardized, but also hundreds of small Cuban and Porto Rican producers were about to be pushed to the wall.

Mr. President, if I saved the industry to this country, if I even had a small fraction of a part in doing so, I thank God for it. Yet, "This is one of the blackest pages in the history of our country," said the Senator from Mississippi. Following that statement the Senator from Mississippi said there was a still blacker page.

Mr. HARRISON. May I ask the Senator, before he proceeds, if Mr. Herbert Hoover also signed that letter which the Senator had?

Mr. SMOOT. He did not.

Now, Mr. President, let us see that blacker page and see what there is in it. To save time I am going to ask to have printed in the RECORD without reading the statement made by the Senator from Mississippi on Saturday, the part that I have marked.

The PRESIDING OFFICER (Mr. TOWNSEND in the chair). Without objection it is so ordered.

The matter referred to is as follows:

In a little while, however, the Government of the United States appointed General Crowder to go to Cuba in order to help Cuba solve its economic problems. He worked among them, it is said, and the question of sugar was one of the problems which he took up. Then he went to the Cuban authorities with a letter which he had received and which evidently was an official letter, according to all the reports, although I do not know as to that. The letter, however, to General Crowder was from one high up in the legislative councils of this country, one who, after March 4, will occupy the highest position in this Chamber, so far as committee assignments are concerned, one who has been the champion of the imposition of sugar duties for many years upon the floor of the Senate, one who in a debate said he owned 430 shares of Utah-Idaho Sugar Co. stock, one who was the most influential personage and character in the writing of the pending tariff bill.

* * * * * * *

I say to the absent Senators, however, that they should be here, and they should inform themselves about what has been happening in connection with the sugar question. One of the blackest pages that has been written in our relationship with Cuba has been written touching the sugar schedule. It is a proposition which calls for explanation, and the American people will not be satisfied until explanation is forthcoming.

Mr. SMOOT. Now, who is Mr. Alfred Grover? The Senator from Mississippi should have known. He saw what the New York World said. He quoted from the World. He knew that the Baltimore Sun had made a statement in relation to this scheme that he called so black. He knew that the New York Times on May 2 had an article headed "$32,000,000 sugar plan repudiated." He knows that in the Journal of Commerce on May 3 there were headlines "Refiners repudiate sugar syndicate." He knows that other papers of the United States made statements repudiating it. In the Baltimore Sun the headlines were as follows:

Carey belittles sugar scheme—Says price-fixing plan is vagary of economic madman—Knows nothing of sponsor—Sponsor of proposition spent several weeks in Washington without result.

After the Senator had made his statement I telephoned to Mr. Palmer, representing all the American beet-sugar growers, and asked if he knew a person by the name of Alfred Grover. He said: "Yes he came into my office once. After talking with him I thought that he was a little off. He wanted me to present to the beet-sugar producers of the country a pool proposition. I told him I would not even think of presenting it, that I had no time to waste with him, and I invited him out of my office." The representative of the cane-sugar producers of the country had a similar experience with him. Oh, Mr. President, to what will we descend for political purposes?

Mr. HARRISON. Mr. President, may I ask the Senator why he objects, then, to an investigation under my resolution which will repudiate all these facts?

Mr. SMOOT. There is nobody, Mr. President, not even the Senator from Mississippi, who believes that story. What is the use of spending the time of Senators and the money of the Government to laud some madman and help him get his name in print? It is silly.

The statement quoted by me was made in the Senate last Saturday by the self-appointed collector of sensational newspaper reports, presenting them to the Senate without knowing whether there was one word of truth in them, for the purpose of blackening the characters of public-spirited men who have been the means of establishing a great industry in this country, and through that industry thousands upon thousands of happy homes have been established, waste lands made productive, thriving towns, with their schools, churches, and public buildings, created.

Mr. President, wind-jamming, whether in the Senate or elsewhere, never created a happy home; political demagoguery never gave a day's work to a laboring man. Shame on the Senator presenting to the Senate a scheme of some dreamer or stock-jobbing schemer that was never considered favorably for one moment by any American sugar producer, but, on the contrary, was turned down most emphatically and promptly. The New York papers published statements to this effect, but the Senator from Mississippi evidently did not take notice of them, for to do so would not have served his purpose and would have prevented him from making a sensational speech in the Senate and claiming as a basis for it a report printed in a great metropolitan newspaper. It would have forever robbed him of being the distinguished Senator who discovered the scheme that formed what he designated "the blackest pages in our country's history." If the Senator

lived a thousand years, and each day made a speech similar to that he delivered last Saturday, it would not create a happy home, redeem one acre of waste land, erect one public building, nor make one person the better for having heard or read it.

Senator, for the future turn your powers and abilities to something better. There is more real pleasure and happiness in creating, building, helping, than in carping criticism, tearing down, and knocking.

Mr. HARRISON. Mr. President, whose advice is that?

Mr. SMOOT. That is my advice to the Senator from Mississippi.

Mr. President, I ask unanimous consent that the diagrams on the wall, to which I have referred in the course of my discussion, may be printed in the RECORD as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The tables referred to are as follows:

The Wilson tariff and the price of sugar.

	New York in bond price of raw sugar per 100 pounds.	United States duty per 100 pounds.	New York duty-paid price of raw sugar per 100 pounds.	Refiners' margin.	New York wholesale price of granulated sugar per 100 pounds.
June 28, 1894	$3.125		$3.125	$0.855	$3.98
July 5, 1894[1]	3.125		3.125	.855	3.98
July 12, 1894	3.180		3.180	.800	3.98
July 19, 1894	3.125		3.125	1.105	4.23

[1] July 24, 1897, Dingley bill effective, imposing duty on 96° sugar at $1.86½ per 100 pounds.

DISTRIBUTION OF 69.1 CENTS ADDITIONAL DUTY.

After increasing the duty 69.1 cents per hundred, the New York wholesale price of granulated sugar increased only 29 cents per 100, 40.3 cents per hundred, or 58.3 per cent of the entire duty, being absorbed by the foreign producers and American refiners.

[1] Dec. 27, 1903, Cuban reciprocity effective, reducing duty on 96° sugar to $1.348 per 100 pounds.

DISTRIBUTION OF 33.7 CENTS REMISSION OF DUTY.

After lowering the duty 33.7 cents per 100, the New York wholesale price of granulated sugar declined only 13 cents per 100, 20.7 cents per 100, or 61.4 per cent of the entire reduction, being appropriated by American refiners.

Mr. McCUMBER. Mr. President, I shall condense into five minutes the one-hour speech which would be allotted to me, if Senators will allow me to do so now. There is not a pound of sugar produced in my State. The sugar industry is a very important industry in several States of the Union. I feel, therefore, under the unanimous-consent agreement, that the time which is allotted to the discussion of the sugar schedule should be given, as far as possible, to those Senators representing the States in which the sugar industry is an important factor in their industrial life. But, Mr. President, I think I would be derelict in my duty as chairman of the Finance Committee if I failed to take notice of the remarks of the Senator from Mississippi [Mr. HARRISON], and especially to

note some of the matters which were printed by him in the RECORD the other day.

I do no injustice to any member of the Committee on Finance when I say that the Senator from Utah [Mr. SMOOT] has a greater practical and technical knowledge of the more important schedules of the tariff bill, and especially of the cotton, the woolen, and the chemical schedules, than any other Senator upon the committee or of any other Senator in this body. As an indefatigable worker, as a studious Senator, one who works every minute for long hours every day, I think I but speak the voice and express the sentiment of every Senator upon the committee when I say that the Senator from Utah has no peer in the United States Senate. His sterling integrity in the presentation and consideration of the various items of the tariff bill, his candor and fairness and honesty in the discussion of them, will be acknowledged by every member of the committee, Democrat and Republican alike; and I know that every member of the Committee on Finance agrees with me that any insinuation or suggestion coming from any source which challenges the honesty or the integrity or the fairness of the Senator from Utah demands condemnation from all those who know him.

Mr. President, I know the situation that faced the sugar industry in Utah in the year 1920; I realize the situation that was then faced by the Senator from Utah. He saw a great industry, one of the most important in his State, being driven into bankruptcy; he saw every bank in that State threatened with the necessity of closing its doors; he saw the trail of misery which he keenly understood would follow the consummation of the purpose to destroy the beet-sugar industry in the State of Utah and the result which would ensue to the banks that had been giving that industry credit. It was, therefore, but natural that, as a representative of that great State and its interests, he should lend an ear to any honorable suggestion coming from Cuba or elsewhere, the result of which would be to save his State from ruin. I think any of us would have done likewise had we seen and understood the situation as he saw and understood it.

I think the Senator from Utah has explained honorably, fairly, and fully every insinuation and every charge made against him in the press; and I know I voice the sentiment of those Senators who have worked with him for many years in defending him against any challenge of his honesty or his integrity or his fairness in dealing with this or any other great national question.

Mr. HARRISON. Mr. President, I am sure that the Senator from North Dakota would not put me in the attitude of questioning the honesty or integrity of the distinguished Senator from Utah [Mr. SMOOT]. I know of no Senator for whom I have a greater degree of fondness. I like him very, very much. I appreciate his sterling qualities. I know that he is very industrious, most able, and because of his long experience he is a most valuable Member of the Senate. However, Mr. President, we are here considering a proposition of laying a duty of 2 cents a pound upon sugar imported from Cuba, that being, as I understand, the amendment to be offered by the Senator from Louisiana [Mr. BROUSSARD].

Then, too, we are to vote as to whether or not we shall retain the 1.6 cents a pound as carried in the House bill, which is incorporated in this paragraph. There will also be amendments offered to reduce the duty to 1.4 cents a pound and to 1 cent a pound. I was discussing those propositions so that the country might know and Senators might have the facts before them as to the attitude of the coming chairman of the Finance Committee, who will succeed the distinguished Senator from North Dakota on the 4th of March next year, and what he thought of the proposition of placing a duty of 1.4 cents a pound on Cuban sugar in the permanent tariff law. He stood for it; he said that he would use his good offices in having it placed in the permanent tariff law.

The condition, it is quite true, was that Cuba for this year was to produce only 2,500,000 tons of sugar; but the agreement said nothing about what was to be done this coming year and the year following; in other words, for one year, namely, this year, it was agreed that if Cuba should cut her production to 2,500,000 tons there would be written into the permanent tariff law a duty of 1.4 cents a pound on raw sugar coming in from Cuba. That was to be the permanent duty. So I was discussing the question as to whether or not the Senator from Utah would have ever suggested such a proposition if he had not thought that rate had been sufficient in the years to come to protect the sugar-beet interests of this country.

All I did on last Saturday was to show these facts. I did not have the letter and I have never been able to see the letter nor to hear it read until to-day. I called for it a month or six weeks ago. The Senator from Utah, however, was very courteous and kind. He said he would not let me have it that day, but that in the course of time we should all know what the contents of the letter were. I had heard that the letter proposed to the Cuban producers through General Crowder that if Cuba would restrict her crop to 2,500,000 tons this year the Senator from Utah would use his good offices to make the rate 1.4 cents a pound. The Senator from Utah to-day in reading the letter reaffirms everything that I stated on last Saturday touching the letter. So there is nothing in conflict about it, there is little difference between us, except that I did not know the letter contained the further proposition that he would try to see that legislation was passed by Congress permitting sugar to come in from Cuba in bond, so that it might be shipped right out to Germany or England or somewhere else with the 99 per cent drawback. I presume, although I do not know—and that is why I wanted to ask the Senator a question when he was speaking—that he introduced a bill to carry out that proposition. I am wondering now if the Senator from North Dakota, the chairman of the committee, knows whether any bill to that effect has been introduced and referred to the committee.

Mr. McCUMBER. Mr. President, I will state that it is not necessary to introduce such a bill, because that may now be done under the present law.

Mr. HARRISON. It may be done under the present law. The Senator from Utah was mistaken, then, when he thought that it would take additional legislation, because the letter, as I heard it read, said that he would try to secure the enactment of legislation by Congress to carry out that suggestion. So, Mr. President, in the Senator's letter he reaffirms everything that I stated last Saturday touching its contents.

I know that the Senator from Utah is greatly interested in his people, who are interested in sugar and in beet production—I do not mean personally; I care nothing about that—but it was a strange admission which the Senator from Utah made this morning in his speech. He said that the industry was in such dire distress that when its representatives came to see him he went with them to see Eugene Meyer, jr., head of the War Finance Corporation, and used his influence to get Mr. Meyer to loan over $7,000,000 to these interests; but he said then that he felt the Government might lose it unless some legislation could be enacted or some agreement entered into which would protect them against the sugar that would come in from Cuba. That is a pretty strong admission.

The Senator from Utah says that it was not officially done. However, Mr. President, General Crowder is the representative of this Government to Cuba, sent there to aid and assist Cuba in working out her economic problems. He came here and saw the Senator from Utah, so the Senator from Utah says, conferred with him, and finally got him to write the letter.

The Senator also said that the letter contained the statement, "I have the sugar schedule in charge as a member of the Finance Committee, and I will hold it up until I hear from you, after you have consulted with the President of Cuba."

Mr. President, thus is the chapter written, and I shall leave it. If Senators want to vote for a tariff rate of 2 cents a pound on sugar, if they want to vote for a rate of 1.6 cents a pound on sugar, let them do so; but I say to them when they do it they are voting in the teeth of the statement by the Senator from Utah [Mr. SMOOT] that a rate of 1.4 cents would be written in the permanent law or that it would be in the permanent law if it was in his power to bring it about, provided that the production of Cuban sugar were restricted to two and a half million tons this year.

So far as the Grover letter is concerned, I stated in my speech on last Saturday that it was published in the newspapers. I read a copy of the whole instrument; I said I did not know anything about Grover, but I gave his address. I do no know anything about the outcome of the scheme, but I said then it was a damnable scheme, and I doubted if he could get anybody to go into it. However, the thing that struck me in it was that he said that there was a "congressional arrangement" to back it up, and so I offered the resolution.

The Senator from Massachusetts [Mr. LODGE], the leader on the other side, and the Senator from Utah [Mr. SMOOT] and other Senators over there promised me that if I would offer a resolution providing for an investigation so that the country could have the facts, so that if anything smeared their names it might be cleared away, but, notwithstanding that promise, when I offered the resolution last Saturday objection came from the other side, and when this morning as soon as the Senate convened I again offered the resolution for an investigation, the Senator from Utah himself made the objection. I now offer the resolution again and ask for its immediate consideration.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll and the following Senators answered to their names:

Ashurst	Hale	Moses	Smoot
Ball	Harris	New	Spencer
Borah	Harrison	Nicholson	Stanfield
Brandegee	Heflin	Oddie	Sterling
Broussard	Jones, N. Mex.	Overman	Sutherland
Bursum	Jones, Wash.	Pepper	Swanson
Calder	Kendrick	Phipps	Townsend
Cameron	Keyes	Pittman	Trammell
Capper	Ladd	Pomerene	Underwood
Caraway	Lenroot	Ransdell	Wadsworth
Curtis	Lodge	Rawson	Walsh, Mont.
Dillingham	McCormick	Reed	Warren
Fletcher	McCumber	Sheppard	Watson, Ga.
Frelinghuysen	McKinley	Shortridge	Willis
Gerry	McLean	Simmons	
Gooding	McNary	Smith	

The PRESIDING OFFICER. Sixty-two Senators having answered to their names, a quorum is present. The question is on the unanimous-consent request of the Senator from Mississippi [Mr. HARRISON].

Mr. CURTIS. Mr. President, at the request of the Senator from Utah [Mr. SMOOT] I object.

The PRESIDING OFFICER. Objection is made.

Mr. GERRY. Mr. President, I intend to show that the duties fixed under the bill on this schedule were fixed at a time when there was an entirely different condition in the sugar market and that the conditions now are not what the beet-sugar industry expected them to be for the summer of 1922.

I shall first take up and give the different duties.

Under the Dingley and Payne-Aldrich bills the duty on sugar was 1.68 cents per pound. Upon the Cuban sugar that would equal 1.34 cents per pound, as Cuba, under her treaty with us, has a 20 per cent differential in her favor. In other words, Cuban sugar comes into this market 20 per cent cheaper than sugar from any other foreign country. Under the Underwood bill the duty was 1.25 cents a pound on full-duty sugars, and on the Cuban sugar it was 1 cent. Under the Fordney bill, which is the one now under consideration, the Senate committee made no changes in the rates fixed in this schedule and assess a duty of 2 cents per pound, which on Cuban sugar would be 1.6 cents per pound.

The Senator from Louisiana [Mr. BROUSSARD] has offered an amendment, which I understand is the amendment pending before the Senate, making the duty 2½ cents per pound. This would mean that the Cuban sugar would have to pay 2 cents per pound, a very large increase over the rate carried by the pending bill.

Mr. President, I intend now to take up briefly the amount of sugar consumed in this country and where it comes from.

It used to be estimated that the United States consumed 4,500,000 tons of sugar annually. That amount has been increased until the United States this year is consuming at least 5,000,000 tons. Of that amount, the Tariff Commission estimates for the year 1921–22 are to the effect that Louisiana would produce 238,393 tons.

Mr. BROUSSARD. Mr. President, is that for 1920 or 1921?

Mr. GERRY. For 1921–22.

Mr. BROUSSARD. I will ask the Senator if that estimate was not made before the end of the year?

Mr. GERRY. When does the Senator mean—before when?

Mr. BROUSSARD. I mean, before the crop was harvested.

Mr. GERRY. Before July 1?

Mr. BROUSSARD. We harvest from October 15 to the 1st of January, approximately. If it was made during this year, it was merely an estimate.

Mr. GERRY. I can only state that the estimate I have is dated May 9, 1922. Exactly when the sugar is coming in I do not know; but I will say to the Senator that after I have given my figures it is my intention to state—and I think probably the Senator will agree with me—that these estimates, in my opinion, are too large.

Mr. BROUSSARD. They are too small in the case of my State. I shall get the proper figures and produce them here.

Mr. GERRY. I shall be very glad if the Senator will put them in. I tried to get correct estimates, but for some of the countries I think that they are too large.

Mr. President, Texas furnishes 2,920 tons. The beet industry is estimated here at 911,190 tons. This would make a total for domestic sugar of 1,397,313 tons. Besides the domestic sugar that I have mentioned there are certain other sugars that come in from other countries free of duty—Porto Rico, 395 tons; the Hawaiian Islands, 480,000 tons; the Virgin Islands, 5,000 tons; and the Philippines, 276,000 tons. These estimates are all given in long tons, and the total is 2,308,503 tons.

From further information that I have received I believe that the beet-sugar industry in the United States will produce probably nearer 800,000 than 900,000 tons; but in any case, roughly speaking, the United States will produce less than half of the sugar that it will consume. It will import something like 2,700,000 tons in order to make up the deficit.

Whatever can be said about a duty not being effective on a commodity, I do not believe it can be contended for one moment that a duty is not effective in raising prices if the commodity is one which the home market can not supply the demand for. I think the tables presented to-day by the Senator from Utah are interesting, as showing conclusively that when the sugar duties were lowered the price of sugar went down, and I intend later to say a few words about the theory which he propounded this morning on that subject.

The beet-sugar interests of this country have always contended, and I think quite naturally, for a protective tariff on sugar. They claimed, first, that it was an infant industry. Probably when they started making that claim it was, and their contention was sound; but that can not be said of it now.

The first beet-sugar factory in this country was started by a man called Edward Lee Church, at Northhampton, Mass., in 1838. The State of New York at one time gave bounties, and the industry was then started there, but when it ceased to give bounties the industry died.

The beet-sugar industry has grown from small beginnings, when Doctor Wiley took an interest in it, in the nineties, until to-day it is a very large industry, producing something less than one-fifth of the sugar we consume. It is located in something like 17 States of the Union and has large factories in California, Nevada, Utah, Colorado, Idaho, Michigan, and other States.

When it was first suggested that sugar should come in from the Hawaiian Islands and the Philippine Islands free of duty there was a hue and cry by the beet-sugar interests that it would kill that industry in this country. The same argument was used in regard to Porto Rican sugar. But it did not happen. Hawaiian, Porto Rican, Philippine, and Virgin Island sugar comes in free of duty, and it has not injured the beet-sugar industry here.

Hawaiian and Philippine sugar is marketed on the Pacific coast, and comes in closer competition with the beet-sugar industry than any other sugar, and yet it has had practically no effect in injuring the industry.

Mr. President, when the sugar schedule was being considered the beet-sugar people came before the Finance Committee and contended that they would have to meet a 2-cent raw Cuban sugar; that the then quoted price on beet sugar was $4.80, and that if the Cuban sugar came in at 2 cents it would drop to $3.80; that the average cost of producing beet sugar from this crop was estimated at 16 of the largest factories at $5.19 a hundred pounds for the territory west of the Missouri River. For the territory east of the Missouri River the cost might be a little higher. I am quoting from page 2279 of the hearings held by the Finance Committee. At the present time, according to the last quotation I have, dated July 27, Cuban sugar is not selling at 2 cents, but the 96° centrifugal is 3.75 cents c. i. f. The centrifugal, duty paid, is 5.36, and the refined granulated is 6.90 to 7.

The average total cost of production for the factory, as estimated by themselves—and we know they are not giving themselves the worst of the argument—is 5.42 cents per pound on the average. If we take the 6.90 minus the usual 2 per cent trade discount, it would leave 6.78. Deduct from that 5.42, the factory cost of production, and we have 1.34, the margin which the factory now has over their cost of production. If from that 1.34 we deduct 0.6 of a cent, we get 0.74 of a cent, or the margin which the beet-sugar people would have under the Underwood rate. Instead of their having to meet in competition sugar selling for 2 cents a pound, they are meeting granulated sugar which is selling at 6.90 or 7 cents a pound.

These figures I have given of the cost of production of the beet-sugar industry are entirely figures of the factory, of the manufacturers themselves, as I have already stated.

The committee did not attempt in any way to examine into the cost of production. There is nothing in the hearings at all to show really accurately what the cost of production was. They simply called in a manufacturer and asked him what it cost him to manufacture sugar, and he gave them his estimate. They did not go into the capitalization of the corporations, they did not go into the amortization that was being made, or the surplus that was being built up, or the wages that were being

paid to labor. So I think that when I state these figures, 5.42, as the cost of production for the beet-sugar industry, I am certainly not doing the industry any injustice, and probably the actual cost of production is a great deal lower.

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER (Mr. ODDIE in the chair). Does the Senator from Rhode Island yield to the Senator from Louisiana?

Mr. GERRY. I would like to finish the statement, then I will yield.

Mr. BROUSSARD. Just along this line.

Mr. GERRY. Very well; I yield.

Mr. BROUSSARD. I call the Senator's attention to the fact that on Saturday I furnished estimates of the cost of production here and in Cuba from the War Industries Board, the Department of Commerce, Miscellaneous Section No. 53, from Doctor Wright, of the Tariff Commission, and from the Times of Cuba, one of the leading papers there. That shows an average of over 2¼ cents difference in the cost of production in favor of Cuba according to these various departments.

Mr. GERRY. I do not think the Senator's statement is any answer to my argument whatsoever. I am quoting figures as to what the sugar is selling for on the market in the United States to-day, and I have shown that the price is above what the beet-sugar people claim they can manufacture sugar for.

Mr. BROUSSARD. If the Senator will permit, that occurs every year. Just as soon as Louisiana sugars and the beet sugars are sold out the American Sugar Refining Co., being the only people who can sell sugar here, raise their prices, and so it is to-day; but if you put this tariff duty on it would not affect the price at all.

Mr. GERRY. The Senator interrupted me before I had an opportunity to go further into this matter, and I will have more to say about it. I know the Senator's argument, that a tariff does not raise the price of sugar, but I also know that the Senator from Louisiana is as much in favor of increasing the price of sugar as is the Senator from Utah. He is in favor of a 2.5-cent rate on sugar instead of the 2-cent rate fixed under the bill.

I will now go on with the testimony before the committee in regard to the beet-sugar industry. It developed in the hearings that a ton of beets—and the Senator from Utah [Mr. SMOOT] is my authority for this statement—would produce 233 pounds of sugar, and that they were paying a minimum price of $6 a ton for the beets. It develops that since the time of the hearing the factories are no longer paying $6 a ton for the beets, but that the minimum price has in many cases dropped to $5 a ton. This means that the beet cost in the manufacture of sugar would be 2.14 instead of 2.57 cents per pound of sugar. This in some degree accounts for the figures which I have just given and which I understand were very carefully ascertained by the Tariff Commission, showing that the beet-sugar industry can produce at 5.42, as the cost of the beet is 55 per cent of the cost of production.

Mr. President, when the beet-sugar producers and manufacturers were coming before the committee and clamoring for this tariff they were figuring on a tremendous surplus of sugar. They figured that Cuba had carried over from the preceding crop at least 1,400,000 tons and the crop of 1921–22 was estimated at 3,600,000 long tons, and after allowing for Cuban consumption this would leave 4,850,000 tons.

The beet sugar and Louisiana cane sugar crop expected to be remaining at the beginning of January was approximately 750,000 long tons. The crops of Hawaii, Porto Rico, and the Virgin Islands were estimated at 825,000 tons. The proportion of the Philippine crop likely to come into this market was placed at 100,000 tons. This makes a total from domestic sources of 1,675,000 tons. In addition there was a proportion of the 1922–23 crop of Louisiana and of beet sugar to be counted as available for consumption before the end of the year, estimated at somewhere near 500,000 tons. This made a grand total of about 7,000,000 tons theoretically available in the United States market during the coming year.

On the basis of the probable consumption of 4,500,000 tons, this forecast indicated a possible surplus at the end of the year of 2,500,000 tons, less whatever amount Cuba might be able to sell in other countries. Naturally, being faced with this surplus, the sugar interests in the country became panicky and wished to place a tariff on the statute books that could protect them. They succeeded in getting a 1.6-cent duty in the emergency tariff law, which is the same as proposed in the pending bill. I am speaking now of the Cuban duty. They were demanding very urgently that this was not enough and that it ought to be a 2-cent duty, and they are still asking for it. They were not satisfied to leave it as a temporary tariff to meet a temporary condition. They insisted that it should go into a permanent law, so that it should not only protect them now but that they should reap that rich harvest in the future. The Finance Committee of the majority on the other side of the Chamber very graciously acquiesced in their demands.

Now, Mr. President, let us see what the actual conditions are. I am quoting now from a publication known as Facts About Sugar, which is published weekly by the Domestic Sugar Producers (Inc.), and which therefore can not be considered partisanly in favor of any proposition that would decrease the cost of sugar in this country.

The Cuban crop was found to be 200,000 tons more than was originally figured. In other words, the 1921–22 crop was 3,800,000 tons instead of 3,600,000 tons. Up to the 1st of July Cuba had shipped to this country a trifle less than 2,650,000 long tons and had shipped to markets other than the United States nearly 1,000,000 long tons of raw sugar, while the United States had shipped to foreign countries the equivalent of over 650,000 tons of Cuban raws in the form of refined. Cuba's balance, therefore, can be hardly more than 1,200,000 long tons of sugar on hand. Within the same period more than two-thirds of the season's production in Hawaii and Porto Rico has been brought to the mainland and passed into distribution and over 100,000 tons of Philippine and full-duty sugars have been marketed here. For the remainder of the year we may expect to receive from Hawaii and Porto Rico 165,000 long tons and from the Philippines 60,000 long tons. To this may possibly be added 25,000 tons from the next Hawaiian crop, making the receipts from these sources 250,000 tons. On the basis of the acreage sown, the beet sugar during the next campaign is not likely to exceed 700,000 long tons, of which possibly one-half will become available before the end of September. If growing conditions in Louisiana remain favorable, 200,000 tons may be contributed from that source. This would bring the total domestic supply to 900,000 tons. In other words, the United States has been consuming sugar, taking into account the amount that is refined and shipped abroad, at the rate of 600,000 tons a month. For the remaining six months of the year only 275,000 tons a month, which is less than the consumption for the corresponding period in recent years, will be necessary in order to use up the entire available supply.

I quote from this publication in conclusion:

> It means that the sugar production is back on a stable and profitable basis much earlier than could have been anticipated six months ago and that it gives every promise of continued activity and sustained prosperity for the next several seasons at least.

Mr. President, the sugar situation has righted itself without any artificial stimulation. The great surplus of sugar which was terrifying the domestic manufacturers is rapidly disappearing, and it looks, from what I have just read, as if the supply would not be able to meet the demand in the next six months, taking into consideration the fact that in the summer time great quantities of sugar are used for canning, soft drinks, and other purposes of that sort.

When the Senator from Utah [Mr. SMOOT] was so anxious about the condition of the sugar market and was consulting, as he stated to-day, with General Crowder and Mr. Meyer, hoping that Cuba would limit her output to 2,500,000 tons, it was fortunate indeed that the plan did not go through, for it is perfectly apparent now that if it had been adopted there would have been a tremendous deficiency in the sugar market, and we would have gone back to the excessively high prices of sugar which existed in 1920. We would have gone back to those conditions, and the poor people of the country would have had another burden placed upon them, another increased cost added to the already high cost of living, and on one of the commodities which they all must use.

Mr. President, if we study the world sugar conditions it seems rather extraordinary that the sugar producers in this country should have been quite so scary as they appeared to be. The total production of cane sugar in 1913–14 was 9,831,536 long tons, and of beet sugar 8,634,992 long tons, making an aggregate production of 18,436,478 long tons; in other words, in 1913–14 the world was consuming, roughly, one and a half million more tons of sugar than was produced in 1921–22, for the estimates for that period indicate that the world's production will only be 16,916,270 tons.

Mr. President, it seems to me that anybody who studies the conditions as they actually exist will come to the conclusion that the beet-sugar industry is able to produce profitably not only under the present duty but under the duty which was provided by the Underwood-Simmons law.

I have here a statement which I shall review briefly, and then I shall ask unanimous consent that it may be printed in the RECORD, showing the profits of some of the large beet-sugar companies as bearing on the question how much they really need protection.

Mr. President, the contention when the emergency tariff act was passed, and when the pending bill was passed in the other House, and taken up by the Finance Committee of the Senate, was that the beet-sugar industry was suffering from very hard times and that Congress must do something in order to save its life. That also was the contention of the Senator from Utah [Mr. SMOOT] to-day. I think, however, I have demonstrated that, in spite of the dark prophecies, the condition of that industry is such that it has nothing to fear but increased dividends. The American Beet Sugar Co. in 1915 had net earnings of one million four hundred and twenty-four and odd thousand dollars; its preferred stock paid a dividend of 28 per cent, and its common stock paid a dividend of 7 per cent. I am quoting now from Moody's Analyses of Investments. In 1916 the net earnings had increased to $2,445,000; in 1919 they were $1,200,000 and over; in 1920 the net earnings were $2,425,000; in 1918 they paid 62 per cent on the preferred stock and 18 per cent on the common stock; in 1920 they paid 48 per cent on the preferred stock and 14 per cent on the common stock; yet, after corporations making these large profits for the last five or six years, the beet-sugar people claim that they must have the proposed high rates of duty if these poor weaklings are to survive, although the American Beet Sugar Co. have a capitalization of $5,000,000 preferred stock and $15,000,000 of common stock. The Utah-Idaho Sugar Co.'s net earnings in 1915 were $1,129,000; in 1916 they were six million four hundred and forty-five and odd thousand dollars. In 1920 the company did not report their net earnings, but the rate of dividends paid in 1915 was 11 per cent; in 1916 it was 12 per cent; and in many other years it was 9 per cent.

On May 17, 1917, however, a stock dividend of 150 per cent was paid on the capital stock of $10,000,000, and the present outstanding capital stock is $23,730,000.

The Great Western Sugar Co. has a capital of $13,630,000 preferred stock and $15,000,000 common stock. Its net earnings are not reported, but its preferred dividends have been 7 per cent and its common dividends 5 per cent, 7 per cent, and so on. The Amalgamated Sugar Co. has a capital of four million eight hundred and odd thousand dollars preferred stock and over $6,000,000 common stock, making a total capital stock of over $10.000,000. Its net earnings in 1916 were $1,857,000, and in 1917 they were $2,680,000. It has paid 12 and 13 per cent dividends. Prior to 1919 its outstanding stock was $5,824,400 of common. Since that time the common stock has been increased to $6,824,400 and $4,833,300 of preferred stock was issued. Apparently as the net earnings increased the capital stock was increased.

The Holly Sugar Co. has a capital stock of $3.300,000, and the Union Sugar Co. a capital of $2,530,000. I ask unanimous consent that the statement from which I have quoted may be printed in the RECORD in connection with my remarks.

The PRESIDING OFFICER. Without objection, the statement will be printed in the RECORD.

The matter referred to is as follows:

Statement showing profits and dividends of certain beet-sugar companies west of Mississippi River.

AMERICAN BEET SUGAR CO.

(Owns and operates six beet-sugar factories in Colorado, California, and Nebraska.)

Capital stock:
Preferred $5,000,000
Common 15,000,000

Year.	Net earnings.	Amount of dividends paid.		Earned on stock.	
		Preferred.	Common.	Preferred.	Common.
				Per ct.	*Per ct.*
1915	$1,424,654	$300,000		28	7
1916	2,445,190	300,000	$900,000	48	14
1917	4,882,980	300,000	3,000,000	97	30
1918	3,135,188	300,000	1,200,000	62	18

Calculated from rate of dividends paid. (Moody's Analyses of Investment, 1921, p. 210.)

AMALGAMATED SUGAR CO.

(Owns and operates eight beet-sugar factories in Utah and Idaho.)

Capital stock:
Preferred (issued July, 1919) $4,833,300
Common 6,284,400

Year.	Net earnings.	Amount of dividends paid.	Rate of dividends paid, common.
			Per cent.
1916	$1,857,566	$665,172	13
1917	2,680,755	698,928	12
1918	1,423,214	698,928	12
1919	389,267	204,732	3
1920	329,633	386,664	[1]8

[1] Preferred.

Calculated from rate of dividends paid. (Moody's Analyses of Investments, 1921, pp. 1412–1413.)

Prior to 1919 the only outstanding stock was $5,824,400 common. At that time this was increased to $6,824,400, and $4,833,300 preferred was issued.

UNION SUGAR CO.

(Operates one factory at Batteravia, Calif. Outstanding capital stock, $2,530,000.)

Year.	Net earnings.	Dividends paid.
		Per cent.
1915	$413,525	8
1916	912,586	11
1917	944,977	24
1918	494,857	24
1919	626,414	16.8
1920	926,887	16.8

Mr. BROUSSARD. Mr. President——

Mr. GERRY. I yield to the Senator from Louisiana.

Mr. BROUSSARD. I know nothing of the beet-sugar companies; but I should like to ask the Senator whether any of the corporations to which he has referred have any accumulated surplus or undivided profits? If they have, of course, it would reduce the percentage of dividends.

Mr. GERRY. I know no more than what I have stated. All I did was to go to Moody's Manual for the facts which I have stated. The committee absolutely did nothing to ascertain the financial condition of these companies. As I have already said,

they did not try to determine what the cost of production was; they simply, according to the testimony in the record, accepted the statements of the men interested in beet-sugar manufacture. It also seems apparent that as the net earnings, as I have said, increased, they promptly increased their capital stock.

Mr. BROUSSARD. Which means that they permitted the profits to be reinvested.

Mr. GERRY. Possibly so, or they paid them in stock dividends.

Mr. BROUSSARD. Mr. President, I was moved to ask the question for the reason that I have in mind a small bank in my little town, which has a capital of $50,000, a surplus of $500,000, and undivided profits of $137,000. They have been passing by their dividends and permitting the accumulation of the surplus and undivided profits, but notwithstanding the value of the stock it is difficult to sell it on the market, although it declares 70 per cent dividends on the $50,000 capital, and which is less than the average man is satisfied to receive for the $1,400 it costs. Those who control the bank, however, have passed up the dividend for years, until they have accumulated the profit I have indicated. So that the percentage of dividend does not indicate anything, unless the capital, the undivided profits, and surplus are also stated.

Mr. GERRY. As I said before, if the committee had gone into the matter in the way I wish they had, we probably would have had a great deal more light on the subject, but not having any other information I simply took the figures furnished by Moody's manual.

Mr. President, these corporations that I have referred to are very successful, and they are to be congratulated on being so. Everybody, I feel sure, is glad of the success of their industry, but what the public objects to is their continual contention that they can not carry on their industry without a high protective duty and that they will be on the verge of bankruptcy unless this proposed duty be granted to them.

I submit that the figures I have just put in the RECORD prove that this is not the case. This industry has been painted as a great industry for the farmer as doing much for western lands and doing much for the little homesteader—in other words, as being of great value to the small American family—and naturally everybody is kindly disposed toward anything that helps out the small family in making a living. Unfortunately, however, from my studies of this industry I find that those rosy pictures painted by those interested in the beet-sugar industry are not entirely correct. In many fields where the best is harvested, foreign labor is employed; Mexicans and Russians are brought in; much of the labor is transient. Many do not make homes, and those that do are not making them altogether under the best conditions.

The Children's Bureau has a very interesting pamphlet showing the school conditions that existed in certain counties in Colorado, where it was found that children were not attending the schools properly; that out of 930 children from 9 to 16 years of age, 40 per cent were from one to seven years below the normal grades of their age. The report shows an average of 9 to 10 hours and even more as a working day for children between the ages of 8 and 13 years; that the children are employed in thinning the beets; that their parents reaped quite a profit from their industry, with the result that they kept their children away from school. The school statistics were appalling; as soon as the beet season commenced these children were dragged away from school and employed by their parents in the field; that if a man had a large family of children he was able to take sometimes as many as 20 or 25 acres of beets to cultivate, and that the children were growing up with very little education.

That is not all, however, Mr. President. These children, on an examination by one of the child-labor committees, were found to be physically injured by this very heavy work of topping and attending to the beets and the very long hours that they worked. They suffered from postural deformities and malpositions, apparently due to strain, and that was shown to be the case with 70 per cent of more than a thousand children who were examined by a physician. This was caused, it was thought, by the lifting of heavy weights and the stooping required in topping. Thus not only were these children kept from school but they were also physically injured.

I have here some photographs, if any Senator cares to see them, of the children working in the beet fields. I know that no Senator would be in favor of any such use of children as that.

Mr. SMOOT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Rhode Island yield to the Senator from Utah?

Mr. GERRY. In a minute. I feel sure that in the States in which this occurs some legislation ought to be passed in order to prevent it.

Now I yield to the Senator from Utah.

Mr. SMOOT. I have seen those photographs, and one of them shows the children pulling up the beets. Of course, the Senator knows that nobody pulls the beets—men or anybody else. They are plowed. Nobody could pull the beets, and whoever took those photographs had a special occasion arranged for the purpose of taking them. I want to assure the Senator from Rhode Island that they are untrue. They do not show the practice in the beet fields in the West.

The only work that a child does in a beet field, and very few of those, is to thin the beets. They do not have to stoop over. They have overalls, and they walk on their knees. A child can do it much easier than a man and better than a man. A child can thin a row of beets quicker and better than a man or a woman can. They are not hurt at all. It is the easiest sort of work, and it has been a godsend to lots of those children to keep them off the street outside of school hours. They have had a way of making a little money, and I know of hundreds and thousands of them who have started bank accounts who never would have had a cent to their names otherwise. If there is nothing else in the beet industry, that one thing has had a wonderful influence in giving employment to the children for about one month in the year—not to exceed a month in the year, and not all day, but only a few hours each day—in thinning the rows of beets.

That is all that a child does in the beet fields; I care not what photographs may be taken to show alleged conditions existing. Those photographs, purporting to show a condition that does not exist, must have been prepared for the occasion.

The PRESIDING OFFICER. The Chair will announce that the Senator's hour has expired.

Mr. GERRY. The Senator from Rhode Island is talking on the amendment of the Senator from Louisiana [Mr. BROUSSARD]. I understand that a Senator has one hour on the schedule and one hour on the amendment.

Mr. President, the Senator from Rhode Island did not base his statement entirely on the photographs. The Senator from Utah very likely knows conditions in Utah, but the fact remains that I hold in my hand here a child-labor bulletin, published by the National Child Labor Committee, showing conditions in the beet industry. It states, and I think accurately—it gave the statistics—that children were employed for long hours in Colorado, and not only that but their school attendance was extremely poor, and that, as I have already stated, the children were years behind their grades in school. I do not believe that the National Child Labor Committee was engaged in a propaganda without foundation. I believe they were trying to do good, and I do not think there is a question, and I do not think it can be disputed, that in certain States child labor is employed in the beet industry in a way that is detrimental to future citizens and in a way that should be remedied by State legislation.

There is another feature of the sugar duty. I refer to our relationship with Cuba, and what it means to us both politically and commercially.

After the Spanish-American War we entered into a treaty with Cuba, as I have already stated, by which Cuban sugar received the benefit of a 20 per cent differential in the duty. At the present time the United States receives the benefit of a 30 per cent differential on the commodities that we ship to Cuba, and Cuban imports from this country have grown to a tremendous degree. She was our largest purchaser of hogs, lard compounds, canned sausages, rice, potatoes, beans, onions, brass pipe and fittings, railway passenger cars, cement, calcium carbide, medicinal and pharmaceutical preparations, shoes, harness, saddles, etc. She ranked second in the purchase of cattle, horses, mules, pickled pork, sausage other than canned, poultry, cheese, sweetened condensed milk, cocoa, prepared chocolate, corn, manufactures of asbestos, commercial automobiles and parts, railway freight cars, lubricating greases, automobile tires, electrical machinery, office furniture, railway car wheels and axles, locomotives, boiler tubes, pumps, builders' hardware, galvanized sheets, and so forth.

In 1920 we sold $515,000,000 in commodities in Cuba and bought $720,000,000 from her. The balance of trade is not as much against us as it looks, for a great part of that is offset by the freight and the payment from Cuban industries to American stockholders.

In 1920 the truck-garden products which Cuba bought from the United States amounted to $85,000,000, the dairy products to $15,000,000, over $60,000,000 worth of meat products, and

$93,000,000 of cotton. If we try to strangle Cuba's buying power by putting excessive duties on her main industry, the raising of sugar, we will not only unstabilize conditions in the island, we will not only create financial havoc and unrest among the people—and there are no people in the world we want to be friendlier with or for whom we have more sentimental attachments—but we will also be cutting off our own noses, in a financial way, and dealing a great blow at the farming industry, other than that interested in sugar. In 1919 the United States furnished 78 per cent of all Cuban imports. Last year Cuba rose from seventh to fourth place among our customers.

In regard to the Louisiana sugar, where producers always are demanding a heavy duty, which is so strongly advocated by my colleagues from that State, my contention is—and I am going to be quite frank about it—that the Louisiana sugar industry is practically a hothouse industry; that sugar in order to mature properly really requires 24 months, and very often in Louisiana, on account of the climate, it can not get 12 months, so much of the crop is lost. I believe it would be cheaper for the American people to take Senator Thomas's advice and do what he said in a speech delivered in the Senate in connection with the emergency tariff bill, which I quote. He said:

> I want to say, as I have already said, that it has cost the people of the United States, since the beginning of the sugar industry in Louisiana, many times more than the value of the entire product. We have been protecting it for nearly a century, and when we have not protected it we have paid it a bounty, and still it is about to be ruined; and it will always be in that condition so long as it is possible to secure from the Government of the United States the levy of duties upon the consumer to keep it alive. To my mind it would be better to-day if the United States Government should pay to the people of Louisiana interested in the sugar business the value of their land and their crops, plus 10 per cent, and abandon the business than to continue this constant exaction on the consumers of millions upon millions of dollars from their pockets to the end that it may continue.

That was also practically the idea of former President McKinley when he was in favor of a bounty upon sugar instead of a duty.

I wish now to refer to what these Fordney duties will cost the American consumer and discuss that question very briefly. The total consumption of sugar in the United States at the present time, as I have already shown, is more than 5,000,000 tons annually. The cost to the people of the United States by the increased duty of 1 cent over that of the Underwood law—in other words, the cost to the American people that the Broussard amendment would entail, would be $110,000,000, without the usual pyramiding which always occurs. This would add $100,000,000 more.

If the House provision is sustained the additional cost to the American people will be something over $66,000,000.

If the beet production of the United States, figured at 900,000 tons, received the advantage of this 1-cent duty provided by the Broussard amendment it would have an advantage of $20,000,000, and if the Fordney rate were agreed to it would have an advantage of $12,000,000.

The per capita consumption of sugar is about 100 pounds. That is, an increase of 1 cent per pound in the duty is an additional tax of about $1 per annum for every person in the United States and a total tax of $2 per capita per annum.

We will have to decide whether we want to vote to-morrow to place this heavy burden on the people of the country, when they are already suffering from the bad financial conditions which now exist. We will be increasing a burden upon one of the greatest necessities of life, and one which hits every man, woman, and child, and we will be doing it in spite of the fact that the industry at the present time needs no such change.

I have already shown that it can exist on sugar selling at 5.42 cents; that the present price of granulated sugar is 6.90 to 7 cents; that even with the Underwood-Simmons duty they would have a sufficient margin of profit; and with the conditions which exist in the sugar market to-day, the decreasing surplus and the increasing demand, sugar will undoubtedly go higher, and more and more of a burden will be placed on the backs of the people.

An additional increase of six-tenths of 1 per cent, as I have already stated, means adding over $60,000,000 to the high cost of living. If you make it 2 cents, it will be $110,000,000, and even the figures the Senator from Utah has given are in answer to the argument that an increase of duty does not increase the price of the commodity. The Senator from Utah argued this morning that while a lowering of the duty lowered the cost of the commodity, it did not lower it as much as the amount of the duty.

I submit that if we can lower the cost of living by lowering any duty on a commodity, such as sugar, even a small amount, we will have done much, and that if it is not lowered the full amount of the duty on account of some combination—and that, I infer, was the suggestion hinted at by the Senator from Utah—then we should investigate those conditions.

I know that in my own State, Rhode Island, and in fact throughout New England, the people in great numbers are out of work; there has been a disastrous strike going on; many of them are in want, and at a time like this, to increase their burdens seems to me absolutely indefensible.

It will not, I contend, destroy the beet-sugar industry of the West if the Underwood-Simmons rate is reenacted, but it should give relief to the people of this country. It is for that reason that I am so strongly advocating the amendment that I send to the desk. I ask to have the amendment printed and pending, so that I can call it up at the proper time.

The PRESIDING OFFICER. The amendment will be printed and lie on the table.

Mr. GERRY. I will state that the amendment is simply to substitute the rates in the Underwood-Simmons law for those now proposed by the committee.

Mr. TOWNSEND obtained the floor.

Mr. WATSON of Indiana. Mr. President, will the Senator yield to me for a moment, not to take the Senator's time?

Mr. TOWNSEND. If it does not come out of my time, I yield.

Mr. WATSON of Indiana. May I ask unanimous consent, without coming out of the time of the Senator from Michigan, for the present consideration of a resolution which I wish to report from the Committee on Interstate Commerce?

The PRESIDING OFFICER. Is there objection to the request of the Senator from Indiana?

Mr. SIMMONS. What is the resolution?

Mr. JONES of Washington. Mr. President, I want to suggest that the Senator can not yield for that purpose under the rules.

Mr. WATSON of Indiana. If that be the ruling of the Chair, I want to know about it. This is a resolution from the Interstate Commerce Committee with reference to the investigation of the condition of the engines of the country, but I do not want to take the Senator from Michigan off the floor nor interfere with his speech. If that be the ruling of the Chair, of course I shall abide by it.

The PRESIDING OFFICER. The Chair recognizes the Senator from Michigan.

Mr. WATSON of Indiana. Very well.

Mr. BROUSSARD. Mr. President, will the Senator yield to me? I want to put in the RECORD a figure with reference to the production of Louisiana sugar in 1921.

Mr. TOWNSEND. I am coming to that subject myself, and the Senator could put it in at that time, but I have no objection to his asking to have something inserted in the RECORD now.

Mr. BROUSSARD. I just want to state that the production in Louisiana in 1921, according to the figures given out by the Department of Commerce, was 324,421 tons, which was not high.

Mr. GERRY. The estimates I gave were for the year 1921–22.

Mr. BROUSSARD. This is for the season of 1921–22.

Mr. McCUMBER. Mr. President, I make the point of order that under the unanimous-consent agreement the Senator from Michigan can not yield the floor in this way.

The PRESIDING OFFICER. The Senator from Michigan has the floor and will proceed.

Mr. TOWNSEND. Mr. President, I am a protectionist believing in the theory that those things which can and ought to be produced in the United States should be encouraged to such production by a duty which measures at least the difference in the cost of production here and abroad. To me there is no better example of the needs and benefits of a protective-tariff duty than sugar. It is a necessity. The late war showed that the United States was practically helpless to supply the sugar wants of the people, and hundreds of millions of dollars were extorted from American citizens for even a limited amount of this life essential. It is my contention, sir, that the United States has the land and the facilities for producing all of the sugar that we need here. It has been clearly demonstrated that this can be done. It is my further contention that it is the part of wisdom and patriotism that our people should produce the sugar that they need. The very life of a nation may depend upon its ability to get sugar and in time of war it may not be able to obtain it outside its own confines, hence the imperative necessity that a nation be self-sufficient to its needs for sugar.

I propose briefly and within the hour which is allotted me to give my reasons for the imposition of a rate of 2 cents per pound on 96° Cuban sugar.

THE MOBILIZATION AND DEMOBILIZATION OF THE SUGAR INDUSTRY.

In the fall of 1917 the United States Government, acting through Food Administrator Hoover, assumed the control of the marketing and distribution of sugar in the United States.

As far as the foreign sugar was concerned this was accomplished by negotiations with Cuba, the principal source of such supply. Under the terms agreed upon the Allies purchased the entire output of Cuban sugar at a fixed price and distributed the crop under regulations determined by a joint commission of the allied powers. In the United States the Food Administration controlled not merely the price which was to be paid for raw sugar but also allotted such sugar to the different refiners and regulated the charge which the refiners could make for turning the raw sugar into refined sugar. The Food Administration also regulated the gross profit which the wholesaler and retailer might charge for their services, thus determining directly the price which the ultimate consumer should pay for the finished product. A little later in the war the Food Administration also determined the sugar ration which each individual was permitted to use.

In the matter of control of the domestic sugar and more particularly the beet sugar, the Food Administration fixed the price which the beet-sugar manufacturer should charge for his finished product (granulated sugar), the areas in which such sugar should be marketed, and the customer to whom it should be sold. The beet-sugar manufacturer was not permitted to ship sugar except upon orders received by the Government officials, which orders specified the name of the purchaser, the amount to be shipped, the price to be charged, and the routing by which the shipment was to be made.

This complete control of the domestic product lasted during the beet-sugar season beginning in the fall of 1917 and the season beginning in the fall of 1918. In the season beginning with the fall of 1919 the control of the beet-sugar crop was modified to this extent: Mr. Hoover had resigned as food administrator and the Attorney General had assumed his duties as food administrator. Acting under the law governing profiteering the Attorney General still fixed the price at which sugar could be sold and determined, by request, the territory in which it should be marketed. He did not, however, select the customers to whom it should be sold.

As a direct corollary to the control of the price and distribution of beet sugar the Government exercised, although somewhat indirectly, control over the price which the beet-sugar manufacturer should pay the farmer for his beets. This could not be done with the beets harvested in the fall of 1917, as the beet price had been determined the winter before. The control was, however, complete in this respect concerning the beets planted in the spring of 1918 and the spring of 1919.

When the Government assumed the control of the sugar industry in the fall of 1917 the price fixed for beet sugar was $7.25 per 100 pounds. A little later in the season the price was raised to $7.35 per 100 pounds. At that time the price of cane sugar was about $9 per 100 pounds. The usual difference between cane and beet sugar is from 10 cents to 20 cents per 100 pounds. During the season beginning the fall of 1918 the price fixed for domestic sugar was $9 per 100 pounds, which price was maintained during the season. During the season beginning the fall of 1919 the price fixed for beet sugar early in the season was $10 per 100 pounds. It was afterwards changed to $10.50 per 100 pounds, then to $11 per 100 pounds, and finally, in the latter part of the season, to $12 per 100 pounds. All beet sugar made during the first two years was sold at the price fixed by the Government. During the third season there were a few instances where beet-sugar manufacturers broke over the regulations and sold a portion of their product at more nearly the current market price. The amount of beet sugar thus sold at a higher price was not even 1 per cent of the beet-sugar output and such infractions were dealt with by the Attorney General under the profiteering law. The excuse for such infractions of regulations during the third year of Government control was that while the Attorney General, acting as food administrator, was holding the price of beet sugar at from 10 to 12 cents per pound he was permitting the Louisiana cane sugar to be sold at 17 cents and 18 cents per pound. Further, that foreign sugar was being brought into the country and sold, first hand, at approximately 25 cents per pound.

In the summer of 1919 the Cuban planters tendered to the United States, acting through our Sugar Equalization Board, the crop of Cuban sugar to be manufactured the winter of 1919–20 at 7 cents per pound. The majority of the Equalization Board recommended that the sugar be purchased at this price. The administration did not, however, accept the offer, and it was subsequently withdrawn, whereupon, in September, 1919, the United States Government relinquished all control of foreign raw sugar and advised the American refiners that they were free to purchase their raw sugar in the markets of the world without restriction as to price. The Government still continued its attempt to regulate the refining charge which the refiners might make, and also the gross profits of the jobber and retailer, but this was, however, unsuccessful, as the price of raw sugar steadily rose and it was impossible to trace the identity of raw sugar through the refining process and subsequent marketing transactions. Very soon the price of foreign sugar increased enormously and by the late spring of 1920 the Cubans were charging the American refiners 23 cents per pound for their sugar. To break this price the Food Administration undertook to bring into the country full duty paying sugar, and raw sugar was brought in from 41 different countries, with the result that the Cuban price was broken, but not before the ultimate consumer was paying from 30 to 35 cents per pound for his sugar made from imported raws.

Cuba was left with some 500,000 tons of her sugar on hand upon which the banks of Cuba and some banks in the United States had loaned 15 cents per pound. The result was financial disaster to Cuba. Every bank in that island, with the exception of the branch banks of certain United States banks, failed. This 500,000 tons of Cuban sugar upon which the banks had loaned 15 cents per pound was ultimately sold at from 4 to 5 cents per pound. It has been estimated by Government officials that the people of the United States during the first half of the year 1920 paid for their foreign sugar nearly $600,000,000 more than they would have paid had the United States Government accepted the offer made by the Cubans in the summer of 1919, when they tendered their crop at 7 cents per pound.

During all these months while the people of this country were paying from 30 to 35 cents per pound for their foreign sugar the price of the domestic beet and cane crop was regulated by the Government. As stated before, Louisiana was permitted to sell her crop at from 17 to 18 cents per pound, while the price of domestic beet crop was held at from 10 to 12 cents per pound. In order that the domestic crop might last as long as possible the country was zoned and no beet sugar—except a comparatively small amount distributed by the Sugar Equalization Board—was sold east of Pittsburgh and Buffalo or south of the Ohio River. Even by thus husbanding the domestic beet crop that sugar east of the Mississippi was exhausted by March or April of 1920. While it lasted the ultimate consumer was paying for such domestic sugar from the retail grocer not to exceed 15 cents per pound. East of the Buffalo-Pittsburgh line the ultimate consumer was paying much more for his foreign sugar. Beet sugar lasted in the Western States a little longer but it was sold while it lasted at the Government price of from 10 to 12 cents per pound. When this beet sugar was finally exhausted we had the orgy of high sugar prices throughout the length and breadth of the country, and our people were generally paying from 30 to 35 cents per pound for refined sugar and were glad to get imported raw sugar from the four corners of the world at 25 cents per pound. Ultimately the corner in sugar was broken in the late summer. In August, 1920, the Government withdrew all control of the beet-sugar prices and from that time on there has been unrestricted competition in the selling of sugar. When beet sugar came on the market in the fall of 1920 it was sold generally at 10 to 11 cents per pound, declining steadily until the spring of 1921, when there was a slight flurry in the market caused by an attempt on the part of the Cuban Government to control the price and distribution of Cuban crops through a committee appointed by the Cuban Government under decree issued by the President of that Republic in February, 1921. This control proved abortive and with the exception of the flurry in the early spring of 1921 the market has steadily declined until in the fall and winter of 1921–22 the New York price of cane granulated sugar was $4.90 per hundred pounds, less 2 per cent for cash, or practically $4.80 per hundred pounds, with Cuban raw sugar selling at from $1.75 to $1.94, delivered in bond at New York.

The relinquishment of the control of beet sugar in August, 1920, worked a great hardship on the domestic beet-sugar industry, as the Government had practically fixed the price of beets planted in the spring of 1920 and to be harvested in the fall of that year. This price was the highest in the history of the industry. Under the price fixed by the Government for this crop of beets the manufacturers were obliged to pay the farmers in the fall of 1920 from $12 to $12.50 per ton for their beets. The sugar made from these beets was sold during the season beginning in the fall of 1920 at an average of about 6½ or 7 cents per pound, whereas to have justified the price paid for the beets the sugar should have been sold at at least 10 cents per pound. Some of the factories were unable to dispose of their entire output before beginning manufacturing in the fall of 1921 and actually sold the balance of the crop made from $12 beets at a price which netted the factories but $4 per hundred for such sugar.

The effect of this method of demobilization of the beet-sugar industry was very disastrous. The loss entailed upon the domestic sugar industry up to January 1, 1922, by virtue of the plan of demobilization, with the resultant demoralization of the sugar market, has been the net loss to the beet-sugar industry of about one-third of the $200,000,000 capital invested in that industry.

The experience of the United States in trying to control in time of war a necessary food product like sugar should thoroughly convince the country that it is not safe to depend entirely upon foreign supply. In the first place such supply might be cut off entirely in time of war. This objection would apply with equal force if we should depend upon the supply of sugar produced in our insular possessions. In the second place, when we depend upon a foreign supply our experience demonstrates that it is impossible effectually to regulate the price of such supply, especially during the periods of mobilization and demobilization. We can not always depend upon the friendly attitude of the Government controlling such foreign supply, and, Mr. President, I submit that we ought not to consent to depend upon such foreign control. Neither of these objections holds with reference to a supply of sugar produced within the borders of continental United States. Such a supply is always subject to the absolute control of our Government so far as price, distribution, and marketing are concerned and can not be disturbed by foreign invasion, for the area of production is in the central part of the country. Moreover, if we still maintain our hundred beet-sugar factories with their organizations intact and their beet-growing farmers interested in the business, it is possible, in case of a protracted war, to increase the output of domestic beet sugar at least 50 per cent by simply encouraging the farmers to raise more beets. This would give our people a war ration of sugar even if all foreign sugar and sugar production in our insular possessions were cut off entirely from our market. No fiscal legislation should be passed which would close our beet-sugar factories or cut down our annual output of beet sugar below 1,000,000 tons, which amount is practically one-quarter of our annual consumption of sugar in peace times. To reduce our output below this figure is not only to run an unnecessary war risk but is also to remove from our market the best balance wheel serving to regulate the price of sugar in time of peace.

Mr. President, the raising of sugar beets in the United States is directly in the interest of agriculture. Many of the Senators who are opposing a proper protective tariff on sugar are expressing their extreme friendship for agriculture; and yet I shall show the number of people who are interested in the growing of sugar beets, that it is a great industry, and that its possibilities are unlimited. It is a farmer's product; it contributes to the welfare of the country. The beet-sugar industry should not be destroyed or its growth even retarded by the competition which is furnished by organized capital contributed by people who are not interested in farming or in agriculture, and I think I shall be able to show before I conclude that that class of people are controlling not only sugar production but also sugar prices and distribution, and are influencing this legislation. In my judgment the situation may be summed up in this way: The struggle on the floor of the Senate to-day is a contest between the great sugar refining interests of the East and that which are already absorbing the sugar lands of Cuba and are in control of the sugar output, on one side, and the American sugar-beet growers and sugar producers here in our own country on the other.

Mr. GERRY. Mr. President——

Mr. TOWNSEND. I yield to the Senator from Rhode Island.

Mr. GERRY. Does not the Senator from Michigan think that the consumer is involved at all?

Mr. TOWNSEND. Indeed I do think the consumer is involved; I am not overlooking that fact; but I think that the sugar refineries have no regard whatever for the good of the consumer. They are evidently exploiting Cuba and free or insufficiently protected sugar will destroy American competition and then God have mercy on the consumer. They have never shown the least sympathy for the sugar user; every time the domestic product has been disposed of, the price of foreign sugar has been increased and they have more than recouped the losses which they sustained during the time when they were cutting the price of the domestic product for the purpose of eliminating American production.

The Government reports covering several years prior to our entering the World War show that the amount paid by the beet-sugar factories to the farmers for beets constitutes from 52 per cent to 58 per cent of the total cost of producing sugar. The average of these figures is 55 per cent. For several years to come the costs of manufacture, including transportation, labor, fuel, taxes, and insurance, will average higher than during the years covered by the above-mentioned Government reports. It is fair to assume that for several years to come the amount paid the farmer for his beets will represent not more than 50 per cent of the total cost of producing beet sugar in the United States.

The minimum price for which the farmer will grow the necessary amount of beets to produce a million tons of sugar is $6 per ton. This was the general price in 1916 and 1917, and as far back as 1912 the factories were paying the farmer $5.65 per ton for his beets. It is unreasonable to suppose that with the increased agricultural costs the farmer will grow beets in the future at less than $6 per ton.

The Government reports above referred to show that the average extraction per ton of beets is 240 pounds granulated sugar. When the factories pay the farmer $6 per ton, delivered at the railroad station, for his beets they are paying that amount for the 240 pounds extractable sugar in the beets; that is, they are paying the farmer at the rate of $2.50 per hundred pounds for the extractable sugar in the beets. If such payment represents 50 per cent of the total cost of producing beet sugar in the United States, then the total cost of producing such sugar will be $5 per hundred pounds, or 5 cents per pound. This is a careful estimate of the average cost of production for the next few years. Those factories which are able to get an extraction of more than 240 pounds per ton of beets will be able to reduce this figure somewhat. The opportunity for such increased extraction is not, however, as great as formerly, owing to the fact that the sugar-beet seed which is now being imported from Germany is not of as high a quality as that which was imported before the war. Only a comparatively small amount of the beet seed now used is raised in the United States; but I desire to state that, due to the action of Congress in making appropriations for the Department of Agriculture, we are rapidly producing American sugar-beet seed, and there is every reason to believe that within a short time we will have produced a sufficient quantity to meet the needs of this great industry in the United States.

The following are the high and low prices of 96° Cuban sugar, delivered in bond at New York, for a period of 12 years preceding the war, as given by Willett & Gray, the quotations being the net cash price per hundred pounds:

Year.	Highest.	Lowest.
1902	$2.31	$1.585
1903	2.225	1.815
1904	3.50	1.97
1905	3.875	2.06
1906	2.73	2.00
1907	2.59	2.03
1908	3.125	2.31
1909	3.09	2.25
1910	3.09	2.44
1911	4.60	2.06
1912	3.44	2.41
1913	2.44	1.875

The crop of sugar which Cuba is now making will be produced at a less cost than any previously made. This is primarily owing to two reasons: First, her improved factories as compared with pre-war conditions, which factories enable her to get better extraction; second, labor cost is less than ever before since Cuban independence. There is abundant Government testimony to show that Cuba will produce at least 2,000,000 tons of sugar this season at a cost of not to exceed $1.50 per 100 pounds, and that an additional million tons can be produced at a cost of from $1.75 to $2.25 per 100 pounds. The freight rate from Cuba to New York is back to pre-war conditions.

In view of all the facts in the case it can be safely stated that the in-bond net cash delivered price of Cuban sugar at the port of New York for some time to come will range from $2 to $2.25 per 100 pounds, which prices will afford many of the Cuban mills an ample profit.

In making this statement I am not saying what the refiners of New York will sell the finished product for to the consumer. The range between the price paid by the refiner for raw sugar and the price which they receive from the public for refined sugar is very great. At times it is unconscionable, and yet his friends here are either consciously or unconsciously aiding him to destroy his American competitors and thus allow him to practice all the time what he now does a part of the time. Sir, if I am not without common sense or ordinary reason, inadequate protection of a necessity of life which our country has ample agricultural possibilities to produce, not

only in sufficient quantities to supply the needs of its own people but for export as well, is an impeachment of statesmanship and patriotism. Why, when agriculture is suffering from unprofitable production, rob it of one of its most profitable products? Beet sugar is an infant industry. Its possibilities are unbounded. When other nations are protecting their sugar industries with duties in excess of the highest which anyone has proposed for ours, should we hesitate to impose a sugar duty barely sufficient to enable it to exist?

The figures published by Willett & Gray show the following difference between the duty-paid price on raws and the New York net cash price for refined during the years enumerated:

	Cents per 100 pounds.
1910	78. 0
1911	89. 2
1912	87. 9
1913	77. 2
1914	86. 9
1915	91. 7
1916	107. 6

It is fair to assume that the refiner's costs of operation are now greater than they were before the war. A $1 margin between raw and refined is reasonable. It must be remembered that the lower the price of raws the lower the necessary margin between raw and refined, on account of the fact that the 7 pounds lost in the act of refining is of less value with cheap raws than with expensive raws.

If to the probable average New York in bond price of Cuban raws, namely, from $2 to $2.25 per hundred pounds, we add $1 per hundred pounds to the refiner's margin and a $2 per hundred pound duty effective against Cuban raws, we will have as the New York price of refined sugar a quotation of from $5 to $5.25 per hundred pounds. Beet sugar is sold at about 20 cents per hundred pounds less than cane sugar. This would make the effective New York basis for beet sugar to range from $4.80 per hundred pounds to $5.05 per hundred pounds. Remember, the probable cost of beet sugar is $5 per hundred pounds.

It will thus be seen that the minimum duty to be imposed upon Cuban raws is $2 per hundred pounds. Under such a duty the beet-sugar factories can pay the farmer $6 a ton for his beets and can produce granulated beet sugar at $5 per hundred pounds. Such a tariff will equalize the difference in cost of production between the average Cuban sugar and the average beet sugar and will undoubtedly allow the best mills in Cuba and the best situated beet-sugar factories in the United States to make some profit. Any reasonable tariff must be based on average costs and not on the highest or lowest cost sugars in either country.

I am going to print, with the permission of the Senate, Mr. President, a table prepared by a Member of the House of Representatives [Mr. MARTIN]. In a speech delivered in the House of Representatives July 11, 1921, Representative MARTIN stated that the effective sugar tariffs then in force in different countries were as follows, the rates quoted being in dollars per 100 pounds of sugar:

England	$5. 574
France	6. 128
Japan	3. 392
Austria	2. 39
Italy	2. 00
Netherlands	4. 103
Hungary	2. 39
Denmark	1. 216
Canada	1. 93
Spain	2. 276
Czechoslovakia	1. 216
Germany	2. 03

Since the date of Representative MARTIN's speech several of these tariffs have been materially increased, notably that of Canada, which is now, I think, $2.39. I understood the junior Senator from Louisiana [Mr. BROUSSARD] on Saturday to say that the Canadian tariff is now $2.35. I may be mistaken, and he may be right; but that is immaterial.

The United States Department of Commerce has recently compiled data showing that in most countries of the world the tariffs have been increased since the war from 50 per cent to 600 per cent. For data concerning these increases I refer to an article in the Literary Digest of January 7, 1922, on page 74. I have not verified that with any statistics from the department.

In the face of such a general trend toward higher tariffs it is unwise to consider as a fetish the schedules in the Dingley tariff bill and the Payne-Aldrich tariff bill. Certainly it is common sense to appreciate the fact that in these post-war times the United States has the highest scale of wages in the world, and also that it has the highest-valued currency in the world. All civilized peoples are trying to sell their products in American markets for American dollars.

The conditions confronting Congress in the consideration of the present sugar schedule are different from the conditions confronting Congress in the consideration of any previous sugar schedule. From the passage of the McKinley bill to the passage of the Underwood bill the annual output of Cuban sugar, plus the annual output of our domestic sugar, was less than the annual consumption of sugar in the United States. This situation is now entirely changed. Cuba is producing 4,000,000 tons of sugar annually. The duty-free sugar of continental United States and its insular possessions now amounts annually to 2,000,000 tons. These 6,000,000 tons of sugar are competing for the market of the United States, which can consume only about 4,000,000 tons of sugar annually. Last year our consumption was only 4,100,000 tons.

These two sources of supply have competed for the United States market since our Government relinquished the control of sugar in August, 1920. During the 15 months that elapsed from that time up to January 1, 1922, there accumulated a surplus of 1,200,000 tons unsold Cuban sugar, and nearly as much unsold domestic sugar. In round numbers, the surplus of these two stocks on January 1, 1922, was 2,000,000 tons. The financial results of such competition have been disastrous both to Cuba and the United States, and for several months in the winter of 1921 and 1922 sugar was selling at much less than the cost of production.

Every bank in Cuba, with the exception of the branch banks of certain banking institutions of the United States, has become insolvent and closed its doors. Millions of dollars' worth of American goods shipped to Cuba are unpaid for. The wage rate on Cuban plantations has dropped to 40 cents per day. Coupled with this financial and social disaster there was threatened revolution, intervention, and annexation. In the United States fully half the sugar properties of Louisiana have passed into the hands of receivers or are on the verge of receivership; 15 of the 106 beet-sugar factories in the United States were closed down before the crop harvested in the fall of 1921 was manufactured. Most of the beet-sugar factories that manufactured the crop of 1920 and the crop of 1921 lost heavily both seasons. I understand that many of the factories which operated in the fall of 1921 are not operating now. All beet-sugar factories in the United States hesitated last spring to put out contracts to their farmers for growing beets this season. All have waited to see what Congress will do with the sugar tariff. The price which factories could offer to farmers was not sufficient to encourage them to grow beets in sufficient quantities for the profitable operation of the factories. Fully one-third of the $200,000,000 invested in the beet-sugar factories of the United States has been wiped out by the last two disastrous seasons.

Mr. President, I have not been in the Senate Chamber all of the time. I do not know whether or not reference has been made by any Senator to an alleged report sent out by the Great Western Sugar Co. I have heard that such a report has been sent out and that it showed a satisfactory condition of that company. I do not know, and I do not desire to speak with any certainty in reference to rumors which have come to me, as to what relation, if any, the Great Western Sugar Co. has with the refiners of the East and the West. I do know that attempts have been made in the past by these refineries to absorb the beet-sugar interests of our country. They could well afford to buy and close them. I do not know just what particular benefits or advantages surround this particular company which have enabled it, I understand, in the past to handle its business with greater profit than those engaged in the business elsewhere in the United States.

I do know that the sugar factories of the United States generally, more than 90 per cent of them, have had most disastrous years, that they are laboring under great troubles now, and that they have not been able during the last year to enter into contracts for sugar beets to supply sufficiently their activities during this fall and winter. I do know that the report of the Michigan Sugar Co., which company generally is perhaps one of the most successful of the beet-sugar factories, shows a much better condition than the reports of nearly all of the other factories engaged in the business. I have here two reports of the Michigan company, one for the fiscal year ending June 30, 1921, and the other for the fiscal year ending June 30, 1922, and I desire to insert them in the RECORD at this point.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

REPORT OF THE DIRECTORS OF THE MICHIGAN SUGAR CO.

SAGINAW, MICH., *September 1, 1921.*

To the stockholders:

The annexed balance sheet gives the financial condition of the company for the fiscal year ended June 30, 1921.

Respectfully submitted.

For the board of directors.

F. R. HATHAWAY, *Treasurer.*

Michigan Sugar Co. balance sheet, June 30, 1921.

ASSETS.

Property account:		
Land, buildings, machinery, and equipment:		
Manufacturing plants	$7,336,046.17	
Weighing stations and equipment	132,909.61	
Rolling stock, factory tools, stable, and other movable equipment	304,970.04	
Total plant equipment	7,773,925.82

REPORT OF THE DIRECTORS OF THE MICHIGAN SUGAR CO.

SAGINAW, MICH., *July 24, 1922.*

To the stockholders:

The annexed balance sheet gives the financial condition of the company for the fiscal year ending June 30, 1922.

Respectfully submitted.

For the board of directors.

F. R. HATHAWAY, *Treasurer.*

DETROIT, MICH., *July 20, 1922.*

THE PRESIDENT AND BOARD OF DIRECTORS,
Michigan Sugar Co., Detroit, Mich.:

We have examined the books and accounts of the Michigan Sugar Co. for the year ending on June 30, 1922, and certify that the attached balance sheet is correctly prepared therefrom.

We have satisfied ourselves that only actual additions and extensions have been added to the property accounts during the year. No specific provisions for depreciation of the manufacturing plants have been made since June 30, 1920, but the maintenance and repair expenditures

during this two-year period have been very heavy. Repair expenditures necessary to put the plants into operating condition for the coming season are being treated as applicable to the business for the year ending June 30, 1923. Depreciation has been provided to June 30, 1922, on the other properties of the company.

Physical inventories of the materials and supplies on hand, taken at the close of the manufacturing season and valued at cost or market, whichever was lower, have been adjusted by subsequent receipts and issues to and including June 30, 1922. The inventories of products are based upon recent physical inventories valued at approximate market prices and the inventories as a whole have been certified by the responsible officials to be correct.

The investments in other companies are stated upon the annexed balance sheet at the cost of acquisition, without adjustment to the relative book values, and have been confirmed by an inspection of the stock certificates and notes receivable.

We have verified the cash and securities owned by actual inspection or by certificates from the depositaries and have satisfied ourselves that full provision has been made for bad and doubtful accounts and notes receivable, and for all ascertained liabilities with the exception of a possible additional assessment for Federal income and profits taxes.

Subject to the foregoing, we certify that the balance sheet is, in our opinion, properly drawn up so as to show the true financial position of the company on June 30, 1922.

PRICE, WATERHOUSE & CO.,
Public Accountants.

Board of directors: Henry M. Butzel, Detroit, Mich.; Charles H. Hodges, Detroit, Mich; F. R. Hathaway, Detroit, Mich; Benton Hanchett, Saginaw, Mich.; Lewis H. Jones, Detroit, Mich; Gilbert W. Lee, Detroit, Mich.; George V. N. Lothrop, Detroit, Mich.; George B. Morley, Saginaw, Mich.; James B. Peter, Saginaw, Mich.; John H. Qualman, Saginaw, Mich.; Guy W. Rouse, Grand Rapids, Mich.; R. N. Wallace, Saginaw, Mich.; William H. Wallace, Saginaw, Mich.; Charles B. Warren, Detroit, Mich.

Officers: Charles B. Warren, president and general counsel; George B. Morley, first vice president; Gilbert W. Lee, second vice president; William H. Wallace, third vice president and general manager; F. R. Hathaway, secretary-treasurer; H. M. Sullivan, assistant secretary; H. L. Berdan, assistant treasurer; R. N. Wallace, assistant general manager; R. J. Baird, auditor.

President's, secretary's, treasurer's, and sales offices, Union Trust Building, Detroit, Mich.

General manager's and purchasing offices, Eddy Building, Saginaw, Mich.

Mr. TOWNSEND. The Cuban sugar costs much less to produce than does the sugar made in the United States or its insular possessions. Unless there is an adequate tariff the Cuban sugar will ultimately entirely supplant our domestic product. Cuba is now producing annually as much sugar as we consume each year. Even if our domestic crop is not enlarged, every ton of Cuban sugar brought into this country in excess of from 2,000,000 to 2,100,000 tons will supplant just so much domestic crop; and I want to repeat that this will all be done for the benefit of the great refining companies located in the United States, who are coming to own the sugar lands in Cuba and who furnish the market for the product of the producers on Cuban land which they do not own. Even on this basis no provision is made for the increase in our domestic crop. Congress must decide whether our domestic crop shall be allowed to increase to take care of our increased consumption, or whether it shall be forced to remain at a stationary figure, or whether it shall be curtailed in order to permit Cuba to market a greater amount of her crop in the United States, or whether the domestic crop shall be destroyed entirely in order to find a market within the United States for the entire output of Cuban sugar, which output now enjoys a 20 per cent preferential tariff. The responsibility for this decision rests squarely on the shoulders of Congress. The only way to protect our domestic sugar industry is by an adequate tariff imposed on Cuban sugar. Such a tariff, as has been previously explained, is $2 per hundred pounds of 96° sugar.

Mr. President, at the risk of legitimate criticism that I am repeating myself, I desire again to say that at this time of agricultural depression we can not afford to make the burdens of agriculture heavier. The raising of sugar beets has been generally a profitable enterprise for the farmers of this country—that is, the farmers in the region of the 106 beet-sugar factories of the United States. The raising of sugar beets is not only profitable because of the ready money which it brings to the farmer for his beets, but the growing of the beets themselves is a benefit to the land upon which they grow. The tops, in the form of a by-product that is left with the farmer for feed, are of great value to him. So, if it is true that the present situation in Cuba—the ownership of its land and the control of the sugar by the great sugar-refining companies of the United States—is going seriously to affect the growing of sugar beets in the United States or the production of cane sugar in Louisiana and other Southern States, then it seems to me that it is the part of wisdom and patriotism to lay aside all notions of partisanship and vote for a measure which evidently is in the interest of the farmers and all other people of this country.

I have received, I have no doubt, petitions with more than 1,000 names from farmers in the State of Michigan asking me to exert my influence for the purpose of securing a 2-cent rate of duty on Cuban 96° raw sugar. I am doing that not only because they ask it but because I believe that it is right, and because I do not believe that it means an additional burden upon the people of the United States. It will mean a better average price than the lowest price that comes when beet sugar is on the market; but it will not be a burden to the consumer of sugar when we take into consideration the fact that these refiners, when the beet sugar is off the market, invariably raise the price of sugar, and that increase in price generally comes in the summer and fall. It comes at a time when our people require the most sugar—in the canning and preserving season—and our sugar is off the market then. The people have to have sugar. There is but one place outside of domestic production to go for it, and that is to the refiners who own and control the sugar of Cuba.

There are at present 106 beet-sugar factories in the United States. These factories are distributed among 17 States of the Union, as follows:

California	13
Colorado	18
Idaho	9
Illinois	1
Indiana	1
Iowa	3
Kansas	1
Michigan	17
Minnesota	1
Montana	1
Nebraska	5
Nevada	1
Ohio	5
Utah	19
Washington	3
Wisconsin	5
Wyoming	3

The company investment in lands, buildings, and machinery is about $200,000,000. The working capital, either owned by the companies or borrowed from banks, is about $100,000,000. Very few of the beet-sugar companies own lands for raising beets. Fully 95 per cent of the beets raised each year are grown by farmers under contracts made from year to year with the sugar companies. The acreage planted annually for beets ranges from 800,000 to 900,000. At $150 per acre, this represents real estate valued at $120,000,000 to $135,000,000, which figure makes no allowance for the investment in farm machinery to cultivate the crop. When it is considered that any given field produces a crop of beets but once in four years under the crop-rotation plan, it will be seen that the value of the land devoted periodically to the production of sugar beets is fully $500,000,000.

In the fall of 1921 there were harvested in this country 7,500,000 tons of sugar beets, or an average of about 9½ tons per acre, the season's yield being slightly below the normal yield for the country of about 10 tons per acre. Engaged directly in the growing and handling of the crop were 100,000 farmers, 85,000 field workers, and 35,000 mill operatives. The crop was produced almost entirely by growers and under contract entered into with the manufacturing companies in the winter of 1920–21. These companies paid the growers for beets in the fall of 1921 about $50,000,000, and in addition to the expenditure for beets approximately an equivalent amount was paid for operating supplies, labor, and railroad freights, the bulk of this money being distributed in the various territories in which the mills were operated.

The universal custom in writing beet contracts is for the sugar company to guarantee the farmer a minimum amount per ton for his beets, with the proviso in the contract that if the price of sugar advances above a certain figure the farmer shall participate in such improvement in the price. The usual division of such advance is about 50–50 between the farmer and the sugar company. This gives the farmer a guaranteed minimum price for his crop.

Sugar beets are the only farm produce which is universally sold direct by the farmer to the ultimate consumer without the intervention of any middleman. This insures the farmer the maximum returns for his crop.

Fully 75 per cent of the beets are grown within a radius of 20 miles of the factory, and scarcely any of them are grown more than 40 miles from the factory. No other crop is marketed with such great economy of transportation costs. The establishment of a beet-sugar factory literally makes a market for this farm product at the farmer's nearest railroad station. It is the universal custom that the beet-sugar factory pays the freight. The 10 tons of beets raised per acre stand a short railroad haul of from 6 to 40 miles. From those 10 tons of beets there is produced 2,400 pounds of sugar, which sugar must be shipped to the consuming markets. It will thus be seen that less than one-eighth of the crop produced on the farm must stand the long haul. It is this economy in transportation which

has given the beet-sugar industry such a hold upon the sparsely populated farming districts of the West. When the Colorado or Nebraska farmer raises wheat or potatoes, the entire tonnage of his crop must be shipped to Chicago or beyond; whereas when he raises a crop of beets, the entire tonnage must be shipped simply to the near-by sugar factory and the outgoing sugar tonnage from the factory to Chicago and beyond is less than one-eighth of the tonnage produced upon the farm.

The following data are taken from Willett & Gray's Weekly Statistical Sugar Trade Journal:

Year.	United States beet sugar production (long tons, 2,240 lbs. each).	Cuban production (long tons, 2,240 lbs. each).
1911–12	541,101	1,895,984
1912–13	624,054	2,428,537
1913–14	655,298	2,597,732
1914–15	646,257	2,592,667
1915–16	779,756	3,007,915
1916–17	734,577	3,023,720
1917–18	682,837	3,446,083
1918–19	674,892	3,971,776
1919–20	652,957	3,730,077
1920–21	969,419	3,936,040
1921–22	900,000	.....

Beet-sugar manufacturing season begins in California about August 1, in the other beet districts about October 14, and lasts approximately 120 days. The Cuban manufacturing season begins about December 15 and lasts until the following June, with some factories continuing until September.

1921	4.763	6.207	144.4

It will be noticed that the last above table is incomplete for the year 1920. This is owing to the fact that on September 23, 1919, the United States Government relinquished its control of the price of foreign raw sugar. Up to that time the refiners had been paying $7.28 per hundred for Cuban raws, duty paid, and the selling price of the refined product made therefrom was $8.82 per hundred pounds net cash. All of the crop of Cuban sugar harvested the preceding season was under contract and there was no raw sugar to be purchased by the refiners for prompt delivery when they were permitted to enter the open market on September 23, 1919. They, however, very promptly began to buy futures for delivery after the Cubans began making their crop about December 15, 1919. Though this crop, as I have said, had been offered to the United States Government the preceding summer—July, 1919—at 7 cents per pound, the Cubans did not hesitate to advance the price of their raws even before they began to manufacture the same in December, 1919. By January 15, 1920, the duty-paid price of Cuban raws had advanced to $13.04 per hundred pounds. By April 1 the price was $14.04 per hundred pounds. By April 15, $19.06 per hundred pounds. By the middle of May it had advanced to $20.06 per hundred pounds. The peak price was reached May 19, 1920, when the Cubans sold at $23.07 per hundred pounds. These exorbitant prices led our Government to undertake the purchase of full duty-paying raw sugar wherever it could find it in the markets of the world.

By this means the corner in Cuban raws was broken with the Cubans still having some 500,000 tons raws, which they were holding for $30 per hundred pounds. By the middle of June the duty-paid price of raws had dropped in New York to $18.06 per hundred pounds. By the last of July there was a further decline to $16.30 per hundred pounds. By the last of August the price had dropped to $12.04 per hundred pounds. And when beet sugar came on the market the middle of October the duty-paid price of raw sugars in New York had dropped to $7.75 per hundred pounds, since which time there has been a steady decline in the price of raw sugar until it reached the bottom early in January, 1922, when the duty-paid price of Cuban raws was $3.35 per hundred pounds, or $1.75 per hundred pounds delivered in bond at New York.

Coincident with the fluctuation in the price of raw sugar during the year 1920 there was a corresponding fluctuation in the price of refined sugar made from such imported foreign raws. The middle of January the refiners' price of refined sugar was from 15 cents to 16 cents per pound. By the latter part of April it had advanced so that the quotations were from 16 cents to 22¾ cents per pound. The peak price of refined sugar was in the latter part of May, 1920, when it was quoted as high as 26½ cents a pound by one of the eastern refiners. The New York prices of refined sugar ranged from 21 cents to 22½ cents per pound from the latter part of May until the latter part of August. Many buyers by that time had become loaded up with imported raw sugar, which the consumer was using in the raw state, and this sugar was thrown onto the market and offered as secondhand sugar at considerably below the refiners' price. This forced the refiners to steadily drop their prices until, when beet sugar came on the market the middle of October, 1920, they were quoting refined at from 11 cents to 12 cents per pound. Within the next month it had dropped to 9½ cents, and there has since been a steady decline until January, 1922, cane sugar was freely offered in New York at $4.90 per hundred pounds, which price is subject to 2 per cent discount for cash, making about $4.80 per hundred pounds net.

The beet-sugar manufacturers did not participate in any of the high prices prevailing during 1920. The Government continued to regulate the price of beet sugar until August 26, 1920, the prices ranging from 10 cents a pound to a maximum of 12 cents a pound, the ultimate consumer buying such beet sugar at 15 cents per pound. The entire crop of beet sugar made east of the Missouri River went into consumption by April 1, 1920. The factories in the Rocky Mountain States retained enough of their sugar for their local consumption until midsummer of 1920, but sold their output at not to exceed 12 cents per pound.

The injustice to the beet-sugar manufacturer did not merely extend to the limitation of his prices for the output of sugar made from the beets harvested the fall of 1919. While the control over beet sugar was being maintained by the United States Food Administration until August 26, 1920, it was necessary to determine the terms of the beet contract which the beet sugar companies should offer to the farmer in the winter of 1919–20. The Government took a hand in fixing the price to be paid for beets to be planted the spring of 1920 and the price then determined, largely through the Government's activities, was the highest price ever paid for beets either in this country or abroad. Under it beet-sugar companies paid the farmers from $12 to $12.50 per ton for the beets planted the spring of 1920 and harvested the fall of that year. The sugar made from these high-priced beets was marketed during the season begin-

ning October, 1920, long after the Government had ceased to control the price of either foreign or domestic sugar. The beet-sugar factories received an average of only about 6 cents a pound for the sugar made from the $12 to $12.50 beets grown the summer of 1920. Considerable of that sugar was carried over into the late summer and early fall of 1921 and netted the factories only about $4 per hundred pounds.

Mr. President, I need add nothing to what I have said, nor will I further occupy the time of the Senate in urging upon its Members the necessity of protecting properly what I regard as a most legitimate and necessary industry in the United States. This is, I repeat, a proper subject for protection, and the question before us now is what rate of protection is required in order that this industry may not only continue as it is, but that it may be induced to expand until it will finally supply all the sugar which the United States needs, thus furnishing an increased means of income to the farmers of the country, protecting our own people in case of war, and against the extortion of the sugar refining companies, which have never manifested any interest in the people generally? I believe that rate of duty is $2 per hundred pounds on 96° Cuban sugar.

Some months ago I heard that some people had proposed that Cuba limit her sugar production in order that the refiners who had loaded up with Cuban sugar might save themselves from losses and as compensation therefor Congress would not raise our tariff on sugar. But I gave no credit to the rumor. I condemned the proposition then as I do now. It is my duty to legislate for our country, and that is what I am proposing to do now. I am more interested in the people of the United States than I am in a few who would exploit them.

Mr. McCUMBER. I offer an amendment to paragraph 1635, which with paragraph 1636 form the potash paragraphs. I ask that the amendment may be printed and lie on the table.

The PRESIDENT pro tempore. The amendment will be printed and lie on the table.

INSPECTION OF LOCOMOTIVE BOILERS.

Mr. WATSON of Indiana. I ask unanimous consent for the immediate consideration of Senate Resolution 327, submitted by the Senator from Mississippi [Mr. HARRISON] for the Senator from Utah [Mr. KING], and referred to the Committee on Interstate Commerce. I report it from the committee favorably with an amendment.

Mr. JONES of Washington. Let the resolution be read.

The Assistant Secretary read the resolution (S. Res. 327) which had been reported from the Committee on Interstate Commerce with an amendment, on page 1, line 9, after "1915," to strike out the words "requiring the regular inspection of the boilers of locomotives," so as to make the resolution read:

Resolved, That the Interstate Commerce Commission is hereby required and directed to report to the Senate whether or not the provisions of the act entitled "An act to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their locomotives with safe and suitable boilers and appurtenances thereto," approved February 17, 1911, and the amendment to said act approved March 4, 1915, is being violated; and if so, to report the extent of such violation and to report specifically whether inspection of locomotive boilers is presently being made in all Federal locomotive boiler inspection districts and upon the roads of all common carriers engaged in interstate commerce as required by said act.

The PRESIDENT pro tempore. The Senator from Indiana asks unanimous consent that the report may be received and that the resolution may be considered. Is there objection?

The Senate, by unanimous consent, proceeded to consider the resolution.

The PRESIDENT pro tempore. The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

The resolution as amended was agreed to.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. WILLIS. Mr. President, there has been some controversy in the Senate and in the country as to the bearing the duty on raw wool would have on the price of clothing. I think it is only fair that a statement on that subject which has been prepared by the Wool Marketing Department of the American Farm Bureau Federation should be so published that the public may have the benefit of it. I therefore ask unanimous consent that the statement of the American Farm Bureau Federation be printed in the RECORD at this place, in the regular RECORD type.

There being no objection, the matter was ordered to be printed in the RECORD in 8-point type, as follows:

THE WOOLGROWERS' ANSWER TO THE CLOTHING AND CLOTH MANUFACTURERS' ATTACK ON WOOL TARIFF.

"In view of the widespread agitation now being instigated by certain clothing and cloth manufacturers concerning proposed duties on raw wool in the pending tariff bill, a few of which are reproduced here, these facts are presented with a view of correcting erroneous statements that are carelessly being circulated either through ignorance of facts or by a desire to deceive the consuming public and lead them to think that the tariff on raw wool, which has been in effect for over one year, will be the means of greatly increasing the cost of clothing to the consumer. These vicious attacks are made by large clothing manufacturers of 'ready-to-wear' clothing and spread broadcast among their retailers with suggestions that they be run as paid advertisements in their local papers, thereby seeking to mold public sentiment through circulation of such malicious statements against the wool tariff.

"The woolgrowers have not only carefully considered the proposed rate of duty but also the method of applying it, bearing in mind that they as a group are not only producers but consumers. Applying the duty upon the clean yield or the scoured content of grease wool has been recommended by the present Tariff Commission and also the Tariff Commission of 1910, and is stated to be the most scientific and equitable method of applying a duty on wool, simply because the clean yield is always the price-regulating factor. The clean yield is what the manufacturer pays for. Inasmuch as this differs greatly in different grades it is easy to understand that this would be the proper basis upon which to apply a duty.

"We stand for a square deal for agriculture and the woolgrowers. If the difference in cost of production of foreign and domestic product is to be the measure that fixes duties upon manufactured articles then the farmer and woolgrower should be accorded the same degree of protection. But the woolgrowers have not even asked a duty equivalent to the difference in cost of production of foreign and domestic wools, as will be seen in accompanying paragraphs.

"This propaganda against woolgrowers and agriculture is not only being promoted by a small group of clothing manufacturers but also by a small fraction of woolen manufacturers, who do not speak for the majority. You are asked:

"1. In the name of justice to the woolgrowers and agriculture to give the truth herein set forth as wide publicity as possible in your local papers, in your farm-bureau papers, in State daily papers, etc.

"2. Let your Senators and Representatives know that you stand for a square deal for agriculture. There is a group of Senators and Representatives that are representing the agricultural industry as it never was represented before. Let them know you are back of them. Select the publicity best suited to your locality.

ACCUSATIONS OF CLOTHING AND CLOTH MANUFACTURERS.	WOOLGROWERS' ANSWERS.
"1. That the proposed tariff of 33 cents per clean pound will increase the cost of suitings made from all wool from $4 to $5 each and on overcoats $7.50.	"It requires 9.8 pounds of grease wool to manufacture cloth for an all-wool suit of clothes. Nine and eight-tenths pounds at 20 cents, the average price received by growers for 20,000,000 pounds of 1921 pooled wools, would be $1.96, the total amount received by grower for wool required to manufacture a choice suit, providing only virgin wool is used. Much of the 1921 clip was sold on a market protected by an emergency tariff, which is higher than the proposed tariff schedule.
"2. They state tariff on wool will add (variously stated) from $150,000,000 to $361,000,000 to the annual clothing bill of the consumers.	"The total value of the 1921 domestic clip, estimated at 280,000,000 pounds at 20 cents, which was the average price per pound received by the woolgrower, amounts to only $56,400,000, and the estimated value of the 1922 clip of 260,000,000 pounds at 33 cents after the tariff has been in effect for over one year, would only be $85,800,000; then, how can the

ACCUSATIONS OF CLOTHING AND CLOTH MANUFACTURERS—CON.

"3. That the proposed duty of 33 cents per clean pound content is 83 per cent higher than the rates in the old Payne-Aldrich bill, which provided 11 cents per grease pound duty.

WOOLGROWERS' ANSWERS—CON.

woolgrower and the tariff be responsible for $150,000,000 to $361,000,000 increase in clothing values when the total amount of money received by the woolgrowers for their clip is considerably less than half of the estimated increase to the consumer by reason of the tariff, as set forth in the clothing manufacturers' advertisement?

"The provisions of the Payne-Aldrich bill of 11 cents per grease pound duty on wool and the manufacturers' compensatory duty of 44 cents per pound of cloth and an ad valorem duty in addition thereto, have been in effect the majority of the time for 50 years. This relation between the grease duty and the manufacturers' duty is based on a 4 to 1 ratio, or on an estimate of 33⅓ pounds of clean wool from 100 pounds of grease wool. This is the ratio that has been used by the manufacturers and is also the ratio the woolgrowers used in arriving at the 33 cents per clean pound duty, and upon this estimated shrinkage the 33 cents per clean pound is exactly equivalent to the 11 cents per grease pound of the old Payne-Aldrich bill, so where is the 83 per cent increase in the present rates over those that have been in effect the majority of the time for 40 or 50 years?

MANUFACTURERS SEEK TO DENY WOOLGROWERS' PRIVILEGE ADVOCATED AND ENJOYED BY THEMSELVES.

"The theory upon which the present tariff bill is being prepared and the one upon which the manufacturers have based their argument is that the rates of duty shall be equal to the difference in the cost of production of foreign and domestic articles. This is the basis upon which in the proposed tariff clothing manufacturers are allowed a duty on 'clothing of every description wholly or in chief value of wool valued at not more than $4 per pound, 33 cents per pound and 45 per cent ad valorem.' The woolgrowers are not even asking as much as the difference in cost of production of foreign and domestic wools. This would amount to approximately 18 cents per grease pound, as was indicated by recent testimony before the Senate Finance Committee by special representatives to Argentina of the United States Tariff Board. The manufacturers are advocating the difference in the cost of production rule as governing the amount of duties upon their products, but seeking to deny the woolgrowers the same privilege they enjoy.

NO RELATION BETWEEN WOOL TARIFF AND RETAIL PRICE OF CLOTHING.

"For a number of years preceding May 27, 1921, the date upon which the present wool tariff became a law, wool was on the free list, while clothing was protected by the relative high duty of 35 per cent ad valorem. No complaint was heard from the manufacturers then because they had a special advantage over the producer. Let us see how it worked out. The average wholesale price of clothing in the year 1920 under free wool was 302 per cent of normal values, using wholesale prices of 1913 as 100 per cent (United States Department of Labor Bureau), while at the present time, or after the tariff on raw wool has been in effect over one year, the wholesale price of clothes has been reduced to 182 per cent of 1913 values. In other words, wholesale values of clothes have been reduced 120 per cent since the tariff on wool was placed, which shows conclusively that there is little or no relation between the tariff on raw wool and the price of finished product to the consumer, and demonstrates again the fallacy of the argument of the clothing manufacturers.

"The statement that domestic wools are not suited for use in the manufacture of better grades of clothing is propaganda pure and simple, as any reliable woolen manufacturer will frankly state. In many cases the domestic wool is preferable.

CONDITION OF DOMESTIC WOOL INDUSTRY.

"The number of sheep in the United States has decreased approximately 10,000,000 head in the last 10 years, and in 1920 163,000,000 pounds more wool were imported into this country than in 1910, which shows the rapid decline of the domestic sheep and wool industry. The woolgrowers are not seeking to impose a tax on the consuming public, but demand equal protection for the wool-growing industry to that accorded the manufacturers of our products. For a certain group of manufacturers to assail protection accorded one industry, which is established by the same principle, namely, 'difference in the cost of production of foreign and domestic,' that they themselves staunchly uphold in fixing duties upon their products strongly savors of an attempt to secure special favors.

WHY WOOL SCHEDULE IS ATTACKED.

"There can be only one object in attacking the tariff on wool as is being done by clothiers and a small group of manufacturers and speculators. They are not advocating lowering proposed or existing rates on the commodities they manufacture, which were made on the same basis and theory as duties on wool. Therefore, it must be construed to be an attempt to maintain the advantage over the producer which they have had the majority of the time for 50 years in tariff laws. Shall one tremendous industry prosper at the expense of another much smaller? The answer is no."

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock.

Mr. JONES of New Mexico. I ask the Senator from North Dakota to withhold his request for just a moment, until I can confer with him.

Mr. McCUMBER. Very well; I withhold the request.

Mr. GERRY. I offer the following amendment to the pending amendment of the Senator from Louisiana [Mr. BROUSSARD], and I ask that it be printed.

SEVERAL SENATORS. Let it be read.

The PRESIDENT pro tempore. The Secretary will state the amendment to the amendment.

The ASSISTANT SECRETARY. It is proposed to strike out of the pending amendment, on line 3, the figures "1.16" and insert in lieu thereof the figures ".71," and to strike out in the same amendment, in line 6, the words "five one-hundredths" and to insert in lieu thereof the words "twenty-six one-thousandths."

Mr. GERRY. I will state that these are simply the rates found in the Underwood law.

The PRESIDENT pro tempore. The amendment to the amendment will be printed.

Mr. McCUMBER. Mr. President, I will change my request for unanimous consent so as to provide that when the Senate closes its session on this calendar day it shall take a recess until to-morrow at 10 o'clock.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

Mr. JONES of New Mexico. I ask unanimous consent that, beginning at 10 o'clock to-morrow, I may be permitted to address the Senate upon a subject other than that which may then be before the Senate. My discussison, of course, will be upon the pending bill. It is on a matter which was overlooked when the unanimous-consent agreement was entered into yesterday.

Mr. SMOOT. For how long does the Senator intend to address the Senate?

Mr. JONES of New Mexico. For about one hour.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from New Mexico? The Chair hears none, and it is so ordered.

Mr. RANSDELL. Mr. President, sugar is by all odds the best of our revenue producers. Hence a duty on sugar is justifiable from the most extreme Democratic viewpoint so long as we continue to impose import duties for the purpose of raising revenue. From the earliest period of our national history until to-day there has been a duty on sugar except during the years 1891 to 1895, when the McKinley tariff was in effect, and in lieu of a protective duty on sugar a bounty of 2 cents a pound was paid to American producers.

Mr. SHEPPARD. Will the Senator give those dates again?

Mr. RANSDELL. The dates were July 1, 1891, to July 1, 1895, during which time a bounty of 2 cents a pound was paid on sugar and there was no duty except on sugar above No. 16 Dutch standard of color, on which there was a duty at that

time of one-half cent per pound. Sugar was absolutely free except as to that small duty above No. 16 Dutch standard, and in lieu of a duty, as I said, there was a bounty of 2 cents per pound.

Mr. SHEPPARD. What was the amount of the Dutch standard sugar as compared with the total?

Mr. RANSDELL. I can not answer that question.

Under President Madison, brown sugar, which must have been the same as the 96° test sugar of the pending bill, had a duty of 3 cents, which was reduced to 2½ cents under President Andrew Jackson and the same under President Tyler. Under President Grant the duty on sugar was 2 cents to 3.25 cents, according to grade. Under the Morrill law, during the Presidency of Mr. Arthur, 96° sugar had a duty of 2.24 cents. Under the Dingley law, when McKinley was President, 96° test sugar had a duty of 1.685. Under the Payne-Aldrich law the duty was the same as under the Dingley law on 96° test sugar, but Cuban reciprocity of 20 per cent reduced the duty on the Cuban sugar under that law to 1.348.

Under the Simmons-Underwood law 96° test sugar from Cuba was 1.004 and from other foreign countries 1.1256. The free-sugar clause was repealed on April 27, 1916. I might add that I predicted its repeal when we had the Simmons-Underwood law under consideration. I undertook the rôle of prophet and stated at that time that sugar never would go on the free list, and circumstances showed I was a true prophet.

It never did become actually free. The emergency tariff act of May 27, 1921, imposed a duty of 1.6 cents on sugar, which is the present duty effective against Cuba, 2 cents a pound being the duty on sugar from other countries.

I now wish to present some figures showing that sugar has always been a very effective revenue producer. The first available data that we have on the subject is for 1821, at which time the duty collected on sugar was $1,202,102. It thereafter increased steadily. I shall give the returns by decennial periods, beginning with 1870, when the duty amounted to $36,819,041. In 1880 it was $39,739,306; in 1890, $53,985,874; in 1900, $57,417,772; in 1910, $52,810,995; and in 1920, $78,663,291.

During the eight years of President Wilson's administration the revenue derived from sugar by calendar years was as follows:

In 1913, $53,134,244. Pay attention to this, Senators. That amounted to 17 per cent of the total duty collected on all importations of merchandise from abroad.

In 1914 the duty collected on sugar was $61,508,851, which was 21.68 per cent of all the duties collected that year.

In 1915 the sugar duty was $49,525,673, which was 24.05 per cent of the total import duties.

In 1916 the sugar duty was $55,795,563, being 26.6 per cent of all the import duties.

In 1917 the duty collected on sugar was $55,382,140, which was 24.99 per cent of all duties collected.

In 1918 the duty on sugar was $48,980,573, being 27.12 per cent of all duties collected.

In 1919 it was $68,510,967, or 28.85 per cent, and in 1920 it was $78,663,291, or 23.74 per cent, of all duties collected.

The average collections on the importations of sugar, Mr. President, during the eight years of President Wilson's incumbency were $58,938,925, more than 25 per cent of all revenue collected from taxes on imports.

The percentage of revenue derived from sugar as compared with all other imports—and this is what I am trying to impress upon Senators, that sugar is the best of all revenue producers, and has been from the beginning of this Government—was not as great prior to the Wilson administration, but very high, ranging from 19.33 per cent in 1870 to 21.75 per cent in 1880, 23.83 per cent in 1890, 25.03 per cent in 1900, 16.17 per cent in 1910, and 23.74 per cent in 1920. There is no article on which imports are collected that is at all comparable to sugar in the amount of revenue derived therefrom. If we are going to continue to raise money for the purpose of carrying on our Government by imposing duties on importations, then I say there is no article which compares with sugar. It is the best of all, brings more money, and is more easily collected on than any other. If the rate on sugar in the pending bill is raised to 2.5 cents on full-duty countries and 2 cents as to Cuba, it should produce at least twice as much as the 1-cent duty under the Wilson administration, or an average of about $118,000,000 a year. These facts prove beyond question that sugar is the ideal revenue producer.

Now, Mr. President, from the viewpoint of many good Democrats, and certainly as a matter of equity, there should be such a rate of duty on sugar as will place the American producer on fair terms of equality with his principal foreign competitor, the Cuban producer of sugar. This, of course, is on the assumption that sugar can be produced under fairly good conditions in this country. As to beets, the late Mr. James Wilson, when Secretary of Agriculture in 1909, issued a very interesting statement entitled "The Beet Sugar Industry in the United States," which was published as Senate Document No. 22, Sixty-first Congress, first session. In this he said that 274,000,000 acres in the United States have soil and climatic conditions adapted to satisfactory beet culture, and concluded his general discussion in these words:

> I estimate that if the beet sugar were grown throughout those portions of the United States adapted by nature and with the aid of irrigation to its culture, with a system of rotation including the cultivation of the beets every fourth year, 15,000,000 tons of beet sugar could be produced in the United States annually, or more than the world's total production of sugar at the present time.

He was speaking of the year 1909.

It thus appears that we could readily produce a great deal more beet sugar in the United States than is needed for our total consumption of about four and one-half million tons at the present time.

Louisiana has produced sugar from cane for over a century and a quarter, and less than one-tenth of her available sugar area is cultivated in sugar cane. The United States Department of Agriculture estimated that in 1920 there were in the 22 sugar-producing parishes of Louisiana a total of 2,976,782 acres in farms, of which 1,896,885 acres were improved, and the area estimated to have been planted in cane in 1920 was 299,000 acres. The State's normal production of sugar is from 250,000 to 300,000 tons, though the crop of 1920 was only 169,270 tons, which in 1921 rose to 324,431 tons.

The Louisiana area cultivated in cane could easily be quadrupled and a crop of at least 1,000,000 tons a year for that State assured if we had stable laws maintaining a duty of at least 2 cents a pound on sugar imported from Cuba. Without such a duty, Mr. President and Senators, the Louisiana sugar industry is going to languish in the future as it has in the past; it is not going to be a success. It can not be a success without a duty of at least 2 cents a pound on sugar imported from Cuba.

Exact data as to the possibilities for cane-sugar cultivation in Florida are not available, but I hold in my hand a very interesting letter, which is dated the 3d of this month, from Mr. Jules M. Burguieres, a prominent citizen of that State. Before reading it I should like to ask the Senator from Florida [Mr. FLETCHER] if he knows Mr. Burguieres and whether he is a responsible and reliable man, whose statements may ordinarily be depended upon?

Mr. FLETCHER. Mr. President, the Senator from Louisiana propounds a very definite question, and I have no hesitation in answering it. I have known Mr. Burguieres for some time. We in Florida esteem him as a very valuable citizen and his standing is of the highest character. There can be no question about his integrity and his responsibility. We also regard him as a man of most excellent judgment, and particularly well informed on the sugar situation. We believe that he understands that industry from the growing of the cane to the manufacturing of the sugar. He knows the kind of land which will successfully produce sugar cane; he knows the possibilities of the industry in Florida and also in Louisiana, where, I believe, he formerly lived. We consider him as a citizen who is thoroughly responsible and reliable in every way and a man, I repeat, of the highest standing and character.

Mr. RANSDELL. I thank the Senator from Florida for his good opinion of Mr. Burguieres, who was formerly one of the most honored citizens of Louisiana. I now wish to read a few words from his letter to me, which, as I have stated, is dated the 3d of this month, from West Palm Beach, Fla. He says:

> It is now eight years since I have been here, and my investigations in sugar and my plantings have proven beyond doubt that we have a great deal of land adaptable to sugar-cane cultivation which will yield a good sugar content.
>
> That land located east and south of Lake Okeechobee and southwest of Lake Okeechobee is the land best adapted, in my opinion, to sugar cultivation in Florida. Not all of the land in that area would be sugar land. I figure that there are probably two and one-half million acres that could be devoted to sugar, but on account of the considerable vegetable production, etc., not more than one-half, probably, in time would be devoted to sugar cultivation. In other words, I think we can have somewhere from a million and a quarter to a million and a half acres actually producing cane, which should make the production from a million and a half to 2,000,000 tons of sugar. All this presupposes a reasonable protection being given to the industry. Every now and then we see Chinese labor going through our own country in bonded railroad cars to work in Cuba. What we want is protection necessary to protect ourselves against the products of cheap labor in a foreign country and protect us also against other economic situations in other countries.
>
> Just at this present time there are about 8,000 acres planted in sugar cane in this lower Florida peninsula. The Pennsylvania Sugar Co., in the rear of Miami, has some 3,200 acres in cane planted, and they contemplate planting about 2,000 acres more. The planters around

Moore Haven have planted on the southwest shore of Lake Okeechobee about 2,000 acres in cane. The Florida Sugar & Products Co., at Canal Point, on the southeast shore of Lake Okeechobee, together with planters in that territory, have and expect to have shortly about 2,500 acres in cane. There are other small plantings here and there. Cane planting has been held up, principally because there have been no sugar mills. There have been numerous small power mills making sirup.

There is at present practically completed one sugar mill of 400 tons of cane per day capacity, which will grind cane at Canal Point, on the southeast shore of Lake Okeechobee, this coming winter. The Pennsylvania Sugar Co. expect to have their big 1,000-ton mill completed by next February. All the foundations have been completed for same. This mill is located 16 miles northwest of Miami. The Moore Haven Sugar Co. have a 100-fon sugar mill which made sugar last year, and I understand they are about to convert this into a larger mill for grinding more cane next season.

I have been making tests of cane and growing same for the last seven years in Palm Beach County. I have also made other observations in all the other counties adjacent. My conclusions lead me to the belief that we can have a splendid production, but we should have a sensible policy of protection for this industry, which is merely in its infancy. I have written to both Senators FLETCHER and TRAMMELL lately, asking them to give this situation their support. The agricultural interests of the United States need necessary protection, and an economic study of the situation will enable all Senators to appreciate that fact. I know I need not go very much further into this necessity for protection with you, as you are thoroughly posted in the matter. It is my belief that Florida can produce a million and a half tons of sugar, and probably more. The Everglades drainage district was a real problem to solve, but we have solved it these last few years.

I wish I would have the pleasure of having you at some time see this remarkable country. Senator FLETCHER has no doubt talked to you about it. With best wishes, I am,

Yours very sincerely,

JULES M. BURGUIERES.

Mr. President, I wish to say, in connection with Mr. Burguieres's testimony, an examination of the map will show that the great areas in the State of Florida south of Lake Okeechobee, where he says the sugar lands lie, are fully 300 miles south of the sugar section of Louisiana, and hence nothing like so much subject to cold and the untoward conditions which affect sugar growing in Louisiana. There is no reason why under proper encouragement Florida should not raise at least a million and a half to two million tons of sugar, as indicated by Mr. Burguieres.

Mr. FLETCHER. Mr. President, may I interrupt the Senator?

The PRESIDENT pro tempore. Does the Senator from Louisiana yield to the Senator from Florida?

Mr. RANSDELL. I will be very glad to yield.

Mr. FLETCHER. The statement I am about to make is rather confirmatory of that made by the Senator from Louisiana. Within the last few years a Pennsylvania company have gone into what was originally a part of the Everglades, land which has been reclaimed, just north and west of Miami, and they have now planted something like 5,000 acres in sugar cane. Their holdings run into two or three hundred thousand acres. They are developing that industry to a very great extent in that vicinity, which is at the south end of the Everglades proper. Then, on the shores of Lake Okeechobee, in the southwest portion of the lake, a sugar mill is going up near Moore Haven, and the industry is progressing very rapidly there. At the southeast portion of Lake Okeechobee, at a place called Canal Point, which is not far from West Palm Beach and close to the interests of Mr. Burguieres, another sugar mill is about completed and the industry is fairly well started there, with prospects of attracting very considerable interest in the whole Everglades region. It is believed that those Everglades lands are peculiarly well adapted to the production of sugar cane and that the industry will prosper there.

Mr. RANSDELL. I thank the Senator for that contribution to my speech. I now wish to refer for just a moment, Mr. President, to Texas. I have no exact data as to Texas, the Empire State of the Union, when it comes to area and a wonderful State in every way; but beyond any question there is a vast area along its coastal plain and in the vicinity of the Rio Grande, far south of the sugar area of Louisiana, where climatic conditions are more favorable to this product of warm countries than they are in Louisiana. I am convinced, from my knowledge of the situation and the best information obtainable, that Texas could produce considerably more than 1,000,000 tons of cane sugar every year if an effort were made along that line and encouragement were afforded toward that end.

Hence, considering the beet-sugar situation with its possibilities of 15,000,000 tons per annum, as stated by ex-Secretary Wilson, Louisiana, with easily 1,000,000 tons; Florida, with 1,500,000 to 2,000,000 tons, as stated by Mr. Burguieres; and Texas, with a possibility of more than 1,000,000 tons, it is perfectly apparent that the United States does not need to depend upon any foreign land for this essential of life—sugar. We can produce and should produce in our own country all of the sugar that we need.

Then it goes without saying that in our island possessions, Porto Rico, Hawaii, and the Philippine Islands, sugar is a natural crop; it is indigenous almost to those islands. I assume that Hawaii and Porto Rico have about reached the maximum of sugar production under normal conditions, unless their lands are fertilized very much more heavily than at present; but there is an unlimited possibility of sugar production in the Philippine Islands.

Mr. John M. Rogers, special representative in this city of the American Cane Growers' Association, brought to my attention a very interesting fact connected with sugar which I should like to call to the notice of my colleagues in the Senate. It is that the per acre farm value of sugar beets and sugar cane is greater than for any other farm crop listed, except sweet potatoes, Irish potatoes, and tobacco. I am not aware that that fact is generally known; certainly it was not known to me until I began this study. That means that the grower and the laborer who do the actual cultivating of sugar cane and sugar beets receive more per acre for their labor; or, to put it another way, the farmer is required to cultivate fewer acres of sugar beets or sugar cane than of any other crop, with the exceptions noted, to receive the same cash return. Since the Department of Agriculture has not in all years reported the per acre value of sugar cane, the per acre value of sugar beets, which is officially reported, will be taken as the per acre sugar crop value, applying the beet value to the cane, though it is well recognized that the per acre value to the farmer who raises the crop is greater in the case of sugar cane than in the case of sugar beets. Fortunately, the Department of Agriculture does report the per acre value of sugar cane for the year 1919. For that year the per acre value of sugar-beet land is given as $108.83, while the per acre value of sugar-cane lands is given as $147.84, and for the State of Florida the Fourteenth Census of the Department of Commerce gives the sugar-cane value per acre as $202.54. But waiving the added strength that would give, my statement of the value of the sugar crop, both beet and cane, will be based on the per acre value of sugar beets, and, further, not to take advantage of justifiable figures, sugar-cane acreage and values of cane used exclusively for sirup making will be excluded. If these were added, both the acreage and the farm value would be materially increased.

I now present a table, which I will ask to insert in my remarks without reading, showing a number of farm crops, fair per acre value, and other points that are interesting in this connection.

The PRESIDENT pro tempore. In the absence of objection, it will be so ordered.

The matter referred to is as follows:

Per acre value of farm crops for the year 1919.

Product.	Per acre farm value.	Farm value per million acres.	Acres required to equal 1,000,000 sugar beets.	Acres in 1919 each crop.	Acres beets or cane required to equal in value each total crop.
Sugar beets and sugar cane	[1] $108.83	$108,830,000	1,000,000	[2] 1,173,455	1,173,455
Potatoes	144.54	144,540,000	752,940	3,952,000	5,207,572

Tobacco	296.90	296,900,000	363,180	1,910,800	5,261,303

[1] Cane for sugar, $147.

[2] Only cane and beets harvested for sugar making counted. The actual acreage in sugar crops harvested was—beets, 692,455; cane for sugar only, 179,900, which for cane was only a half crop. The total cane acreage for sugar and sirup was 481,000 acres—in eight States, 1,173,455 cane and beets.

Mr. RANSDELL. I wish to add that this table and these data show that 71 per cent of the cost of cane is returned to the farmer who grows the cane; 71 per cent of it goes back to the man who digs it out of the soil by the sweat of his brow.

What amount of duty is necessary to make sugar production profitable in continental United States? Bulletin 13 of the War Industries Board, entitled "Prices of Sugar and Related Products," also the testimony of Mr. Philip G. Wright, of the United

States Tariff Commission, before the Ways and Means Committee on the 18th of January, 1921, also Miscellaneous Series No. 53 of the Department of Commerce, and the June, 1921, issue of the Times, of Cuba, show that the State of Louisiana should have not less than 2½ cents a pound tariff, Cuban basis, if her product is to meet the sugar of Cuba on a equal basis in the American market; and what is true of Louisiana is true of Florida and Texas, so far as the production of cane sugar is concerned. There should be, to give them reasonable protection, a duty effective against Cuba of 2½ cents per pound—not 2 cents, as proposed in this bill. They should have 2½ cents per pound to place them upon terms of parity, upon terms of fair equality with the Cuban producer, if we can believe the testimony of the War Industries Board and Mr. Wright, of the Tariff Commission, and the Department of Commerce, and the great Cuban newspaper, the Times. They all fix it at this rate, giving reasons in detail—though I am not going to bother the Senate with these details now—figures which show that Louisiana would have to receive 2½ cents per pound to be put on terms of parity with Cuba.

In regard to beets, I believe from the investigation I have been able to make that they have a slight advantage over Louisiana cane in the cost of their production. I am inclined to think that beet sugar can be made slightly cheaper than cane sugar in the United States; but beyond question beet sugar, in order to compete on anything like parity with Cuban sugar, must have a duty of not less than 2 cents per pound effective against Cuba.

Why should the great mass of Americans who consume sugar, the 110,000,000 people in this country who eat sugar, consent to pay a duty of 2 cents a pound on it? That is a pertinent question. Why should they do it? I will answer, first, because we have to pay taxes to keep up the Government. We have to devise some means for paying the taxes to keep the wheels of government moving, and I have shown that the duty on sugar is the best revenue producer we have ever yet devised, so far as our imports are concerned. I have shown that we actually collected over $58,000,000 a year from a duty of 1 cent a pound on sugar during the eight years of the Wilson régime. The tax on sugar is the easiest of all taxes, it seems to me, to pay. It reaches the babe in the cradle and the old man on the verge of the grave. You are paying it for 365 days in the year when you eat your meals and drink your coffee and tea and other things that come on your table. You do not realize that you are paying it; but you have to pay taxes in some shape, form, or fashion; and a tax like this, which would not amount, even at the price of 2 cents a pound, to more than $1.90 cents per capita for every person in the United States, is an easy tax; it is not onerous; it is a tax which no one should complain of.

Mr. FLETCHER. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Louisiana yield to the Senator from Florida?

Mr. RANSDELL. I yield to the Senator from Florida.

Mr. FLETCHER. May I suggest to the Senator another thought which impresses me? I am not committing myself to the proposed amendment, now; but, in reference to this matter of revenue, it is estimated in some quarters—and I think there is a very sound basis for that estimate—that under many of the provisions of this bill and almost every highly protective measure the people pay about a dollar for about 4 cents that the Treasury gets. In other words, the protection is piled up and added to and increased to the consumer on nearly all the articles in this bill, so that the consumers of the country are paying twenty-six times as much money as goes into the Treasury of the Government on most of these items. In the case of sugar, however, I believe it is quite true—so far as I can judge, it is pretty well established—that the tax that is paid is the amount of the duty, and that amount goes into the Treasury of the Government and is not passed on and piled up and increased to others. In other words, the duty that is paid on sugar is a tax, we will concede, upon the consuming public, but it is a tax practically every dollar of which is paid into the Treasury.

Mr. SIMMONS. Mr. President——

Mr. RANSDELL. Pardon me one moment, Mr. President. The Senator's statement about that, in my judgment, is absolutely correct. A tax of 2 cents a pound on sugar goes to the Treasury of the United States. If we import under that tax 2,000,000 tons we know that we are going to get 2 cents a pound on that 2,000,000 tons. We know absolutely what we are going to get.

The Senator from Utah [Mr. SMOOT] in a very forceful manner to-day presented an argument and charts to show that the duty of 2 cents a pound is not passed to the consumer. He showed that when the duty was raised, the price of sugar was not raised in proportion. Some of it, of course, is added to the price which the consumer pays; but the great cry before us on the part of the refiners is that this increased price will be paid by the poor Cuban, and they mean, of course, the poor refiner. The consumer does not pay all of this increased price; but, as the Senator from Florida well says, on most of the commodities in this bill, when we establish a high rate of duty, that increased price is passed on to the consumer, and frequently it is doubled and trebled and quadrupled.

Mr. FLETCHER. Mr. President——

Mr. RANSDELL. I yield again to the Senator from Florida.

Mr. FLETCHER. May I suggest that even if this increased price of sugar passed to the consumer, it is not doubled and trebled and repeated; it is not pyramided to the consumer.

Mr. RANSDELL. It certainly is not.

Mr. FLETCHER. He does not pay any more than the duty, if he pays that.

Mr. RANSDELL. It certainly is not doubled or trebled or quadrupled. If he pays more, he does not pay any more than the actual amount of the duty itself.

I now yield to the Senator from North Carolina, if he wishes to interrupt me.

Mr. SIMMONS. Mr. President, I may have misunderstood the Senator from Florida. Of course, whenever a duty is imposed and there are imports, the whole amount of the duty that is paid on those imports has to go into the Treasury; and the whole amount of the duty on sugar that is collected at the customhouse, as in every other case, will necessarily go into the Treasury; and as we import probably a little bit more sugar than we produce in this country, more than half of the sugar will pay this tax at the customhouse. If that is what the Senator meant to say, of course I agree with him.

Mr. FLETCHER. What I meant to say was that, assuming that the tariff was a tax and was passed on to the consumer, in the instance of sugar the consumer was not called on to pay three and four and five times the amount of the duty, as in the case of most of the protected items in the bill.

Mr. SIMMONS. Undoubtedly the tax which is paid upon the imported part of the sugar that we use is passed on. When it is refined, of course I do not know, I can not tell, how much more is added and passed on. If it were consumed by the people without further manipulation, then probably no part of that duty would be passed on except such as the seller, the vendor of it, might see fit, in a spirit of thrift, to add to his ordinary profits. The trouble comes, however, with the part of the sugar that we do not import. The amount of tax that we levy against the imported article in the case of sugar and in the case of wool and in the case of all articles that are upon the same general basis of importation as compared with production is added to the price of the domestic product when that product is sold in the open markets of the country.

Mr. RANSDELL. I can not agree with the statement made by the Senator from North Carolina. I do not think the facts in regard to sugar show that an amount equivalent to the duty is passed on to that portion of the sugar which is produced in America; and I refer both the Senator from North Carolina and the Senator from Florida to the very able and interesting discussion of that very point brought out this morning by the Senator from Utah [Mr. SMOOT].

The consumer in America naturally wishes to buy in a competitive market rather than in one controlled by a big trust of sugar refiners, who conceal their unlawful acts through their holdings of Cuban sugar lands, and sugar mills, and sugar production in a foreign land where our antitrust laws do not reach.

There are 189 cane-sugar factories in the State of Louisiana. There are 89 beet-sugar factories in the United States, and in the whole Union there are only 20 refineries, two of which are on the Pacific coast, and devoted almost entirely, if not quite so, to refining sugar from Hawaii, and perhaps a little from the Philippines. So practically we are reduced to 18 refineries, located along the Atlantic coast, and one or two on the Gulf. It is perfectly easy and feasible for 18 powerful corporations to get together on some basis of combination with regard to their operations in foreign lands. I hope and believe that we can prevent effective trusts and combinations of the 18 refineries, in so far as their activities in America are concerned. But it is perfectly feasible for those refineries, which control more than 60 per cent of the Cuban output of sugar, to regulate the price thereof in Cuba. What is easier for those refineries, in case they drive the beet and cane sugar producers out of the market, than to say to their Cuban mills, "We want the price at which you sell to us, the American refiners, this year put up 1 cent, or 2 cents, or 3 cents." Of course there

will be a very small margin charged on the refining cost; there will be no combination in America, so far as the refineries are concerned. They would be very careful not to violate the antitrust laws of this country; but they would fix the prices from Cuba, through their control of 60 per cent of the Cuban production, so as to effectively raise the price of sugar very materially to the American consumer.

Mr. GERRY. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Louisiana yield to the Senator from Rhode Island?

Mr. RANSDELL. I yield.

Mr. GERRY. I would like to ask the Senator if it is not true that when there was a large surplus of sugar on hand in Cuba, and sugar was at such a high price, sugar then came in from all parts of the world and broke the market?

Mr. RANSDELL. That is true.

Mr. GERRY. In other words, the Cuban supply was unable to control the American market?

Mr. RANSDELL. That is true, and that proves absolutely the force of my argument. I am glad the Senator brought that out; I was just going to say that in my next sentence. I was going to tell how these Cubans—ostensibly Cubans, poor fellows—are controlled absolutely by our refiners, Americans who have expatriated a billion dollars of good, hard American money and put it into Cuba, and are now crying out for us to treat their billion dollars with just as much consideration as we treat the billion or more dollars invested in beet sugar in Louisiana, Florida, and Texas sugar, in Hawaiian, Porto Rican, and Philippine sugar.

These people are the very men who put up the price of sugar in Cuba in 1920. They put it up to 24 cents a pound. They controlled the situation there. They tried to make the American consumer pay 24 cents a pound; and how did we stop it? There was no sugar in Louisiana to stop it. We had a little dab of it there, and the Attorney General agreed with the Louisiana producers that they might sell that very small amount of their crop at 17 to 18 cents. He did that because they had not made a third of a crop, and because even at 17 to 18 cents there was a very heavy loss on their part. But the Cubans with a tremendous yield, with plenty of sugar on hand, tried to sell to us, not at 17 to 18 cents as Louisiana did, but at 24 cents, and we called their bluff by importing from foreign lands, largely from Java, 800,000 tons of full-duty sugar, and they would not put the price down until under Government initiative we did bring in a lot of it, and then the price went to pieces not only for the Cubans but for American producers of sugar also.

Mr. GERRY. Does not the fact remain that the price was broken by the importation of foreign sugar, and the Cuban supply was unable to control the American market?

Mr. RANSDELL. Yes; the price was broken by the importation of 800,000 tons of foreign sugar. The Government was obliged to do it, and all this foreign sugar had to pay 20 per cent more duty than that which came in from Cuba. The Cuban has a wonderful advantage over any other foreigner. If the duty on sugar is 2½ cents to the man from Java or Mexico or Honduras, or from any other country, it is only 2 cents to a man from Cuba. By the way, a good deal of sugar is being produced in several of the countries I have named. Some of my friends have immense holdings in Mexico. If we impose a duty, in order to make it effective at 2 cents against Cuba we must impose a duty of 2½ cents against the Mexican sugar, the Honduras sugar, and the sugar from all other countries. There is a difference in favor of Cuba of half a cent a pound, which frequently amounts to the difference between profit and loss. The Cuban has an enormous advantage, and the only way we could overcome that when he tried to hold up this country was to import 800,000 tons of sugar from Java and other lands at full duty, not at 1 cent per pound, as the Simmons-Underwood law of that date provided for the Cuban, but 1¼ cents per pound.

That was the situation. Do we want to return to that? Do we want these refiners to hold us up? Oh, no, Mr. President; the people of the United States want cheap sugar. I would like to see them have reasonably cheap sugar, and the only way they are going to get it is to maintain a competitive market. The only way they are going to get it is to encourage to a greater extent than now exists the production of sugar in Louisiana, Florida, and Texas, and in the beet-sugar States, and to maintain in full force and effect the production of sugar in Porto Rico, Hawaii, and the Philippines.

A combination among all these sugar growers is wholly impractical. The 189 sugar factories in Louisiana can not combine with the 89 beet factories in such a way as to put up the price, especially when we have our antitrust laws to protect us. Two hundred and seventy-eight factories never did form a combination for any such purpose as that. But 18 refineries, as I have shown—18 powerful corporations—already own and control enough land in Cuba, according to the testimony of Mr. Hy A. Rubino, to produce 8,188,000 tons of sugar. That is what they own now. I do not say they are producing that much, but they own land enough to produce 8,188,000 tons of sugar, and, according to the best evidence we have, they control at least 60 per cent of all the sugar raised in Cuba.

Mr. WILLIS. Mr. President, if the Senator has not already referred to it in his very instructive address, will he state what percentage of the actual production in Cuba is now controlled by American capital and American sugar refiners?

Mr. RANSDELL. The evidence will be put in a little more fully than I can give right now, but I understand that American capital controls to-day about 60 per cent of all the sugar raised in Cuba.

Mr. WILLIS. They are the "Cubans" who are making the most of the outcry?

Mr. RANSDELL. They are the people making the noise. The testimony of this Mr. Rubino before the Senate Finance Committee—page 2198, hearings—shows that they have sufficient land in Cuba to produce 8,188,000 tons, and his evidence also shows that there are other American holdings in Cuba not connected with the refiners, not allied with them in any way, not associated with them, whose land, in addition to that of the refiners, would produce about 2,782,000 additional tons of sugar. So that if the lands now owned and controlled by Americans or their allied interests were worked to their capacity there would be a Cuban production of American-owned sugar of 10,970,000 tons. In other words, these refiners and their allies have gotten hold of the Cuban industry, and they are trying to make it appear that they are good, patriotic citizens; that they must be looked after, and their investments must be cared for.

On that point I would like to ask Senators if they feel like taking care of an investment which expatriates itself? Let us assume that these investments were made in Germany or China, for instance, rather than in Cuba. These men say they have $1,050,000,000 invested in Cuba. Let us assume that that $1,050,000,000 were invested in China or in Germany. Will you please tell me how much revenue could be collected from that investment, how many schools kept up, how many roads maintained, how many churches supported, how many cities and towns built up, how much civilization created and made part and parcel of our great Government out of this $1,050,000,000 invested in China or Germany? All we could get out of those foreign investments would be probably a little income tax on the returns which these expatriators were willing, out of a sensitive conscience, to make to our revenue officers.

But what about the $1,050,000,000, in round numbers, invested in sugar in Louisiana, in the beet-sugar States, in Porto Rico, in Hawaii, in the Philippines, all American investments, all American countries, maintaining American institutions, paying honor to the American flag, paying American taxes? Is there any comparison between the two?

Do not understand me, Senators, as saying one word against Cuba. I glory in the act of our Government in giving freedom to Cuba from the oppression of Spain. I have often spoken of it as the most altruistic and magnificent act in the history of this or any other country. There is nothing comparable to it, and I am anxious and willing to help Cuba in every way. I want all investments of American money in Cuba to receive the same recognition from the Cuban laws and the same benefit as Cuban investors receive from their laws. But I do not want those investments treated better in America than American investments in America are treated, and that is what these people desire.

Restating my proposition, we must maintain competition in the production of sugar in this country if we hope to have reasonable prices for it. I say to you, Senators, that the consumer is a man of all men interested in a 2-cent duty, because the 2-cent duty means such a development of the sugar industry in the cane and beet sugar sections of our land that we will have a great number of American citizens competing with each other in the good old-fashioned American way for the business, and that is what we all want, I take it.

To my mind the best proof that sugar in America has not enough protection to make it attractive is the fact that $1,000,000,000 of our good American money has been invested in Cuban sugar. This billion dollars, as I said awhile ago, is crying aloud for lower duties on sugar regardless of its effect on our investments in sugar in the United States.

Mr. President, there is a vast difference to the general business of America and the money disseminated among our people in sugar produced here and that imported. Miscellaneous Series

No. 53 of the Department of Commerce, to which I alluded a moment ago, shows that in order to produce a ton of raw cane sugar in the State of Louisiana there is money paid to the farmer for his labor and to the factory for its cost to the extent of $79.56. Let me repeat that. To produce a ton of sugar in Louisiana there must be paid out in expenditures of every kind and sort $79.56. For beet sugar it is about the same, or perhaps a fraction lower. But what about a ton of Cuban sugar that is imported, let us say, in a good American ship at a cost of $3 a ton freight charge from Habana to New York? The ship gets $3 a ton out of it. The refiner pays out for labor to refine that sugar, to put it in shape so that we can use it on our tables, $6.72. In one instance, to get the sugar in shape to consume, in Louisiana and the beet-sugar region, $79.56 is expended in this country, and in the other instance only $6.72 is paid out to American labor by the refiners.

Mr. SIMMONS. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Louisiana yield to the Senator from North Carolina?

Mr. RANSDELL. I am delighted to yield to the Senator.

Mr. SIMMONS. In view of the vast difference in the cost of producing sugar here and in Cuba, the Senator said that we should encourage the industry in this country and after a while Americans would begin to compete with themselves and supply the market. Will we ever be able to supply the market at a price even approximating the price at which Cuba can produce this article?

Mr. RANSDELL. I am not certain that we can produce sugar at as low as Cuba in cost. I do not believe we can. I am quite sure that it can not be produced as cheaply in Louisiana, the State I represent in part and love with my whole heart. I do not believe we can raise it there as cheaply as we can in Cuba, but I believe in the southern portion of Florida and in the southwestern portion of Texas sugar can be raised relatively as cheaply as it can in Cuba. I believe under improved farming conditions beet sugar can be produced a great deal cheaper than it ever has been produced. I call the attention of the Senator from North Carolina to the fact that a great deal of the agricultural industry and prosperity of the great country we know as Germany was due to her beet sugar. Germany favored sugar in every way. She even paid an export duty on sugar, but she derived wonderful benefits from her cultivation of sugar beets. She planted the beet crop, as I understand, every fourth year, and cultivation of beets there resulted in a great fertilizing of the soil, as the Senator from Michigan [Mr. TOWNSEND] stated to-day. It resulted in great improvement of agriculture generally and was a wonderfully profitable thing to the German Empire, although they never did produce the sugar as cheaply as Cuba. Even if we can not raise it as cheaply as Cuba—and I do not believe we can—we can make it a very profitable industry in this country, and if it ever gets on its feet it will stay on its feet.

Mr. SIMMONS. I was not discussing the beet-sugar problem with the Senator. The beet-sugar problem of Europe is a hothouse problem, and nothing but a hothouse problem. Whatever development was obtained there was the result of bounties granted by the State, and it became such an abuse and so oppressive that they had a convention and decided to measurably stop that process, and to-day the beet-sugar industry of Europe is in a state of decadence.

But it is not that that I want to discuss with the Senator. I wish to ask the Senator this question, because I think it logically grows out of his statement. If I understood his statement a little while ago, it was to the general effect that it costs something over $70 to produce a ton of sugar——

Mr. RANSDELL. Seventy-nine dollars and fifty-six cents according to the Department of Commerce.

Mr. SIMMONS. Then he stated that Cuban sugar could be put upon the market for $3 plus some other figure which he stated.

Mr. RANSDELL. Oh, no; the Senator misunderstood me entirely.

Mr. SIMMONS. I hope I did misunderstand the Senator from Louisiana.

Mr. RANSDELL. The Senator certainly did misunderstand me. I do not see how so smart a man as the Senator from North Carolina could have misunderstood such a simple statement. I said that in order to produce a ton of sugar in the State of Louisiana, according to the Department of Commerce, there would have to be paid out to the farmer who produced the cane and to the factory which turned it into sugar $79.56. I did not state what it would cost to produce the sugar in Cuba. I did not go into that, but I did say that the refinery in this country which took the raw Cuban sugar and washed the molasses out of it and made it an edible product paid out in labor for the process of cleansing that sugar $6.72. That is what I said. I was trying to lead the Senate to understand that when a ton of sugar is made in America we get out of the transaction $79.56. When we bring a ton of sugar from Cuba all that American labor and American enterprise get out of the transaction is $6.72 paid by the refinery.

Mr. SIMMONS. That is for conversion?

Mr. RANSDELL. Yes; that is the proposition.

Mr. SIMMONS. Then I did not understand the Senator. Will the Senator tell us what it costs to produce a ton of sugar in Cuba as compared with what he said it costs to make a ton of sugar in Louisiana?

Mr. RANSDELL. I can give that to the Senator. The figures are as follows: The cost to produce a ton of sugar in Cuba is $28.92, as compared with $79.56 in this country.

Mr. SIMMONS. Now, I want to ask the Senator another question. He said that we ought to stimulate the production of sugar cane and beet sugar in this country, if we can; and he is talking about cane sugar, as I understand it.

Mr. RANSDELL. Yes.

Mr. SIMMONS. The Senator said that if we would stimulate it we would find ultimately that we would produce enough in this country to supply our own demands. If the time should come when we produced enough in this country, under the impetus of this stimulation, to supply the demands of the market, would there not be the same difference in the cost of production in this country and Cuba that there is now? Will we not have to continue to the end of time, in order to protect ourselves against Cuban competition, to pay the same bonus in order to continue to keep the industry alive?

Mr. RANSDELL. I do not think we will have to do anything of the kind. I believe if we would ever get the industry on a good sound basis in this country, so that we would produce, say, 4,500,000 or 5,000,000 tons of sugar, getting the business well established and thoroughly going, that it would be self-sustaining. Of course, sugar will always be produced possibly more cheaply, I have no doubt, somewhat more cheaply, in Cuba than in this country; but sugar is not a hothouse plant in America, I will say to the Senator. It can be made, and it will be made if we ever get it thoroughly started.

Mr. SIMMONS. But the Senator states that the cost of production in this country is something like three times as much as the cost of production in our neighboring country just across the water; and the question which interests me is, after years of artificial stimulation, when we have by that process of annual bounties brought the sugar production of this country up to the point where it supplies the demand, whether we will not have to continue that process, and when we stop that whether we will be able to produce sugar as cheaply as Cuba, and whether the industry would not under those circumstances go all to pieces at once.

Mr. RANSDELL. In answer to that question I will say to the Senator frankly that I do not believe we can produce sugar in this country as cheaply as it can be produced in Cuba; but if the Senator had heard the first part of my remarks he would bear in mind that I said we are obliged to raise taxes by some means, and even if we continue indefinitely a duty on sugar and Cuba still is sending to us—not as much, perhaps, as she does now, but a very considerable portion of what our people consume—we will be getting revenue from that source which will form a very just and proper part of the revenue of our country.

Mr. BROUSSARD. Will my colleague permit me an interruption?

Mr. RANSDELL. I very gladly yield to my colleague.

Mr. BROUSSARD. I gathered from the statement of the Senator from North Carolina that when he voted for a 1-cent duty upon sugar in the Underwood-Simmons law he was totally unjustified in doing so?

Mr. SIMMONS. I have said nothing of that kind.

Mr. BROUSSARD. I know the Senator did not say so, but I stated that I gathered that as a natural conclusion from the statement he had made.

Mr. SIMMONS. How could the Senator from Louisiana gather that from my statement when I was simply asking the senior Senator from Louisiana whether he thought we should ever be able to build up the sugar industry in this country to a point where we could compete with Cuba or where we could give to the people of this country sugar at a price anywhere near equaling or approaching the price that Cuba could give it to them for and whether in his opinion——

Mr. BROUSSARD. If we should destroy the American production of sugar, what does the Senator think we should have to pay for sugar?

Mr. SIMMONS. I said that——

The PRESIDENT pro tempore. The Chair reminds the senior Senator from Louisiana that the colloquy is wholly within his control.

Mr. BROUSSARD. I do not care to interfere further.

Mr. RANSDELL. Then, Mr. President, I will proceed, though I wish to be just as courteous as possible.

Mr. SIMMONS. If the senior Senator from Louisiana will yield for that purpose, I have not any objection to discussing the matter.

Mr. RANSDELL. I was stating, Mr. President, that a ton of sugar in this country would cause on the part of the people who made the cane and those who ran the factory and ground up the cane an expenditure of $79.56. Let us see what that means. A million tons of sugar which we produce in the United States, a million times $79.56, or $79,560,000, so that every million tons of sugar that we produce in the United States causes an expenditure in the agricultural sections of nearly $80,000,000. If we buy that sugar in Cuba and bring it over to this country and have it refined here, we then pay out in America $6.72 a ton, as I have before shown; multiply that by a million and Senators will see that we have a very different result. It is $6,720,000 in that instance as against nearly $80,000,000 in the other.

Do Senators want to encourage an enterprise in this country which will build up a wonderfully successful form of agriculture? As I have shown, we get more money per acre for producing sugar than for producing any other farm product with the exception of sweet potatoes, Irish potatoes, and tobacco. Do Senators wish to build up a form of agriculture in America which will be very successful and profitable and pay enormous sums of money to our own farmers and manufacturers, or do they want to build up Cuba? Do they want to build up a foreign land? I have always believed in America for Americans, Mr. President. I believe in looking after American institutions first, especially if along with my attempt to look after American institutions I can give the consumers of sugar a cheaper product than they ever would receive if we should get into the merciless hands of the refiners of sugar. Everyone who has ever studied this subject closely agrees that if we permit the sugar business to get into the hands of the refineries they will fix any price upon it they see fit. So we should by the imposition of this duty be giving, first, a good big revenue to carry on the Government—anywhere from $120,000,000 to $140,000,000 a year of revenue—and we should be giving cheaper sugar to the consumer because of the effective competition growing out of the great American industry being divided up among so many sources, as I have attempted to show.

Mr. President, there has been a great deal said in the argument—and I am not going to elaborate it—about the burden which a duty of 2 cents a pound would impose upon the American people. The refiners have been putting out their propaganda to that effect, and then, in the very next breath, they say that we are ruining poor, downtrodden, oppressed Cuba. In one breath we are adding 2 cents a pound to the American consumer of sugar because of the proposed duty, and in the next breath the Cuban producer pays the freight, pays the duty of 2 cents a pound. They have got to take one horn of the dilemma or the other.

I am frank to say that, as representing in part the State of Louisiana, I expect the price of sugars to go up somewhat in proportion, although not absolutely in proportion, to the increased duty of 2 cents, and I expect the people of my State to produce more sugar; I expect the industry to grow throughout the land.

Mr. President, I have occupied the time of the Senate longer than I anticipated. I now ask to publish in 8-point type, without reading, an interesting article prepared for me by Mr. Sidney Ballou, who represents Hawaiian interests in this country. It is entitled "Cuban sugar in war time."

The PRESIDENT pro tempore. Without objection, it will be so ordered.

APPENDIX.

CUBAN SUGAR IN WAR TIME.

(By Sidney Ballou.)

"Those interested in the production of Cuban sugar are conducting a vigorous and well-organized publicity campaign against the domestic industry and in favor of a lower tariff on their product. Among the claims made the following is prominently featured: 'Experience during the recent war showed the complete assurance with which the United States can rely on Cuba for immediate supplies of sugar.'

"It is difficult to believe that the memory of the American public is so short that this statement will be accepted at its face value. Cuban sugar was largely controlled from the United States during the war, but in the absence of such control, and sometimes in spite of it, the supply was undependable and subject to combination and control over which we had no jurisdiction.

FALL OF 1917.

"The food control act went into effect August 10, 1917. On August 22 Mr. Hoover, in a memorandum to the President outlining his problems, made the following statement:

"'Certain Cuban sugar producers—who are out of our reach—have combined to force up the price of the remaining 1917 Cuban crop, prior to the new crop in December, and have lifted the price of raw sugar in New York from 5 cents in June to 7.5 cents, duty paid, on August 16, and this against a three-year pre-war average of 4.2 cents. The recent advance of 1.6 cents alone would represent an added tax upon the American people of over $30,000,000 by the end of December.'

"As soon as the domestic crop came on the market the beet-sugar producers, together with the cane-sugar producers of Hawaii and Louisiana, entered into a voluntary agreement by which the entire western half of the country was supplied with refined sugar on a basis of 7.25 cents. At the same time the eastern seaboard, dependent upon Cuban sugar, was paying 8.40 cents.

"In spite of this disparity the supply of Cuban sugar promptly ran out and the eastern refineries were obliged to close for the lack of supplies. The Franklin refinery at Philadelphia closed on September 15, Arbuckle in Brooklyn on September 19, Colonial refinery on October 4, followed by the others in rapid succession. By October 24 all the sugar refineries in the United States were closed except one belonging to the American, and four refineries which were being supplied by Hawaiian raw sugar.

"The shortage which followed in the eastern States was most acute and was the subject of senatorial investigation. Mr. E. D. Babst, president of the American, testified that it was a shortage of supplies in no way due to the Food Administration. Mr. C. A. Spreckels, of the Federal, endeavored to lay the blame on an agreement signed by the refineries on October 10 after a majority of the refineries had closed, whereby the refiners agreed not to pay more than 6.90 for raw sugar. At any rate, there was no supply of Cuban sugar available at a price far in excess of what domestic producers were willing to accept for a similar grade and the country suffered accordingly.

1918 AND 1919.

"The entire Cuban crop of 1918 was purchased by the United States and its allies at a price of 4.60 f. o. b. Cuba, although the Cuban representatives requested 5.25 cents. As Bernhardt remarks in his Government Control of Sugar, 'The tremendous increases in the Cuban crops which have followed this action are testimonials to the sound judgment displayed at that time by the Food Administration officials.' It can hardly be doubted that the voluntary agreement of the domestic producers to take a 7.25 price for refined sugar had a considerable effect on the negotiations. The price finally agreed upon worked out into a price of 7.45 for that year. The Cuban crop of 1919 was likewise purchased at a price, necessitated by advance in costs, of 5.50 f. o. b. Cuba. The corresponding refined price in the United States was 9 cents.

OFFER OF THE 1920 CROP.

"In August, 1919, the Cuban committee offered to negotiate for the sale of the 1920 crop. No price was named, but it is generally understood and accepted that at that time they would have asked 6.50 f. o. b. Cuba, or an advance of a full cent on the preceding year's price. This offer was referred to President Wilson, from whom the most energetic representations of the Sugar Equalization Board failed to obtain any response whatever. By September 23 the price of sugar had advanced, the Cuban committee confessed that they could no longer control the action of the Cuban producers and their offer was withdrawn.

FALL OF 1919.

"With advancing prices and the prospect of the relinquishment of control at the end of the year, the fall of 1919 again demonstrated how little we could depend on Cuban sugar in time of stress. Again all Cuban sources of supply mysteriously dried up and the country suffered another acute shortage. The United States was divided into zones, the Hawaiian and beet-sugar production taking care of the entire country as far east as Buffalo and Pittsburgh and the Louisiana supply being allocated to the South. The eastern refiners, who are wont to

boast that they have refining capacity enough to supply the entire United States, were left only a narrow strip along the Atlantic seaboard, and here the famine was most acute. On several occasions domestic beet sugar was called upon to relieve particular cases of distress even within the eastern refiners' zone.

"There was no blame attached to the eastern refiners except in so far as they attempt to make the country believe that they 'produce' sugar. Their production was in a foreign country, where, except for their own holdings, it was entirely beyond their control.

THE YEAR 1920.

"With all official control ended, the Cuban producer was free to demonstrate 'the complete assurance with which the United States can rely on Cuba for needed supplies.' The result is history. At the first sign of advancing prices the Cubans began to hold their sugar for an exorbitant price. It has since been demonstrated that there was plenty of sugar available. Mr. E. F. Atkins has testified to the following condition of things as reported by him to the Attorney General at the time:

"'I said, "Mr. Palmer, I have just come from Cuba. I can assure you that there is no real scarcity of sugar." I said that there was sugar enough in Cuba to run the United States through into the next beet crop in October, and this was early in June. He said, "How do you know that?" "I have seen the sugar in Cuba. I know that there is a large stock of sugar in the interior of Cuba that never has been reported." They only reported the stocks in the ports.'

"Failing for the third time its supply of Cuban sugar, the United States began to import sugar from all over the civilized world. When, on the 1st of July, the price began to show signs of breaking, the Association of Hacendados and Colonos met in Havana and took steps to form a combination to prevent the price of raw sugar dropping below 24 cents. The arrival of over half a million tons which had been ordered from other countries, however, forced a disastrous break in the price, left the Cubans with an accumulated surplus, and unable to repay the banks the money they had borrowed to enable them to hold it. From the debacle which ensued Cuba is still suffering, but is blaming her troubles solely upon a subsequent increase in the American tariff.

"Lest it be thought that this picture is overdrawn, we will let Cuba's own spokesman make his own explanation, bearing in mind, however, that the Attorney General allowed Louisiana sugar to be sold at 17 and 18 cents solely upon the showing that an almost complete crop failure necessitated that price, a condition in no wise applicable to Cuba.

"Mr. Horatio Rubens testified before the Senate Finance Committee, as follows:

"'I am trying to disclose, Senator, if I may, that the Cubans, who may have made a mistake, and probably did, some of whom were naturally overambitious, had the same example, as was shown you to-day, of the fixation of price by the Attorney General in the case of Louisiana at 17 to 18 cents and the banner of speculation was nailed to the foremast of the vessel. So that my plea is: Please do not blame the Cubans entirely for the very natural assumption that when in November or December of the year previous to their making their crop Louisiana was authorized to charge 17 to 18 cents, so it was no marvel that finally in May and June the raw sugar went up to 23 cents.'

"This must be accepted as the best explanation Cuba is able to give.

THE YEAR 1921.

"The outstanding event of the year 1921 was far less spectacular than that of the preceding years, but is equally significant. It was the appointment of a sugar finance committee with authority to sell the entire Cuban crop at prices which it might fix. This was backed by legislation and decrees of the Cuban Government, so that eastern refiners could not even get the sugar of plantations in which they were interested unless previously contracted for, except on the terms and at the prices fixed by the committee.

"As market conditions went the attempted control harmed no one but Cuba itself. While avowing a determination to follow the law of supply and demand the ideas of the committee were so frequently above the market price that everyone else sold their sugar just under the umbrella so obligingly held. One of the most notable mistakes of the committee was immediately subsequent to the increase in duty by the emergency tariff act. The committee held to its previous cost and freight price of 3.875 cents for six weeks without a sale, waiting for some one to 'add the tariff to the price,' before it realized that added costs are not recoverable in a supply and demand market and dropped its price by the full amount of the added duty with an intervening market decline besides.

"While under conditions as they existed the absolute control of the crop by one seller did no material damage, it is particularly significant as showing what is likely to happen at any time this country is induced to place reliance upon Cuba to any greater degree than at present for its needed supplies of sugar."

Mr. PHIPPS. Mr. President, I intend to occupy the time of the Senate for but a few minutes to state my own experience and observation as to the development of the beet-sugar industry in Colorado and adjoining States. In Colorado, with its 14 operating factories, we find communities that look upon sugar beets as their backbone crop, their cash reliance, because it is a cash crop; they are paid in cash promptly upon the delivery of their product. Not only that, but they also participate in the profits which are realized by the sugar factories over and above the agreed rate per pound which those factories receive for their output.

I have never interested myself in the sugar business. I was strongly tempted to do so at one time. Going back to the year 1913, I well remember that I was solicited to take a strong interest in the sugar industry of Colorado. Investigation at that time, however, disclosed that the rate of protection under the act of 1909 was $1.685 per 100 pounds on raw sugar, but the act of 1913 had been passed, and, upon its taking effect, the rate was reduced to $1.348, with a further proviso that on March 1, 1914, it would be again reduced to $1.01, and that on May 1, 1916, sugar should be admitted into the United States free of all duty. Mr. President, I could from the data given me and which I collected demonstrate that with a fair rate of protection the beet-sugar industry was an attractive proposition, but when the rate was cut in a short period of time from $1.685 to $1.01 the margin of profit largely disappeared, and with a further threatened menace of that small duty being removed and sugar being put upon a free basis there was no inducement to me to invest my money in the beet-sugar industry.

I have never owned a share of sugar stock or any other form of security of a beet-sugar company in the United States. I have been interested in a Cuban enterprise which as a corollary has a production of cane sugar, and I believe to-day I have some stock and also some bonds in sugar mills in Cuba.

Mr. President, the farmers of the western section of the country under present prices of sugar, with existing tariff rates, can hardly expect to receive much, if anything, over $5 per ton for their sugar beets. That is not a remunerative rate to them. They will not develop the industry, increase their production, and plant new acreage at that price; they can not afford to do so; they can not secure labor that will enable them to produce beets and deliver them to the factory at $5 per ton and make a fair living out of the business.

The existing rate under the emergency tariff law has fixed the price for sugar beets for the current year. If that rate is to be continued as now proposed, there is no hope for the farmer; there is no encouragement to him; no inducement to him to plant additional acreage to sugar beets, although the acreage is there available and the labor is at hand.

Mr. President, with a fair rate of duty—not less than 2 cents per pound—against Cuban sugars, there is no question, in my mind, that the farmer can receive at least $6 a ton for his sugar beets; that he will be able to operate his farm at a profit; that his laborers will be well paid; and that it will mean increased prosperity and the further development of the great western section of the country.

The building of additional factories does not alone affect the district in which they are located, but it means increased business to the producing factories and mills of the East; it means an assurance to us that, with an increased output in our own country of sugar made from beets, we will not be dependent upon Cuba alone for our supply; and it will mean, when the business has been properly and thoroughly developed, that never again will we be subject to the menace of a holdup on the part of the producers of Cuba or any other country such as we experienced in 1918–19.

Mr. President, I feel entirely free to vote on the sugar schedule in this bill, as it would appear that I may be voting against what might be my own selfish interests, on account of my ownership of securities in Cuban sugar enterprises and the fact that I own none whatever in America. I want to say, however, that were conditions reversed, and were I the owner of stocks and bonds in American sugar enterprises, I should feel just as free as I do now to exercise my right as a Senator to vote on these sugar schedules. I should feel that my vote should be influenced only in case some special feature of the bill related to the one single company in which I owned a personal interest;

but if that section of the bill related to the general industry in which I might have an ownership in one particular company, I should feel that it was my right—and not only my right, but my duty to the citizens of Colorado, whom I represent in part—to vote in their interest for an increase to 2 cents as against Cuban sugars under this schedule.

Mr. CALDER. Mr. President, following exhaustive public hearings and much discussion the Finance Committee adopted the tariff of 2 cents per pound on imports of raw sugar, which was the rate in the bill as it came from the House. Owing to the preferential of 20 per cent granted imports from Cuba this rate amounts to 1.6 cents per pound on raw sugar from Cuba. A tariff of 1.6 cents per pound on raw sugar is, to say the least, high enough. It certainly should not be increased beyond that, to 2 cents per pound on Cuban sugar and 2½ cents per pound on sugar imported from all other places. Personally I urged the Finance Committee to adopt an even lower rate on this necessity of life, and I feel that any increase would be entirely unjustified and would be resented by the American people.

From the standpoint of needed revenue the tariff rate of 1.6 cents per pound on Cuban sugar will produce a great sum. More than 3,000,000 tons of Cuban sugar will be imported this year. At 1.6 cents per pound, or $32 per ton, this amounts to a tariff revenue of $96,000,000. This additional tax on a necessity of life comes out of the pockets of the American consumer. To increase this rate to 2 cents per pound will add approximately $25,000,000 to $30,000,000 to the cost of living of the American people directly, without in any way assisting in producing additional sugar from the cane fields of Louisiana or the beet fields of the West. This also involves a still higher price on all sugar produced locally, and simply means that millions of dollars will be handed over in excess profits to the beet-sugar factories. A tariff revenue of approximatey $100,000,000 on this necessity of life would seem to be sufficient, and to go beyond that would simply mean extortion. From the standpoint of protection the rate proposed by the House and concurred in by the Finance Committee, namely, 1.6 cents, is more than ample. In fact it is the highest ever placed on this commodity. It is 30 cents a hundred higher than the Payne law and 60 cents higher than the Underwood Act.

During the time the bill was under consideration by the Finance Committee there were conferences of beet-sugar producers of the United States, Cuban representatives, and representatives of the United States Government. This was during the winter and the first part of the year. At that time the beet-sugar producers knew that Cuba had in stock about 1,200,000 tons of the preceding crop.

They knew that Cuba was in dire straits financially. They feared that this store would be "dumped" on the market of the United States at a ruinous figure, and that this would depress the price that beet sugar and cane sugar produced in the United States would bring. Then they feared also that Cuba would produce a very large crop this year, which would also be "dumped," and they saw their market for beet sugar disappearing. That was their state of mind at that time. They were apprehensive lest their efforts would go for naught, and to hear some of them talk one would imagine they feared they would almost have to give their sugar away.

Animated by this idea, it was proposed on behalf of the beet-sugar interests that the Cuban Government should limit the season's crop of sugar to two and a half million tons. It was argued that this total, together with the 1,200,000 tons in storage in Cuba, would be sufficient for the year when supplemented by the sugar crop of the United States producers.

As a matter of cold business, it was held that the crop limitation on Cuba would be profitable all around, because it would tend to prevent an oversupply of sugar and keep up the price.

At that time, although the beet-sugar producers put on long faces and predicted the ruination of their industry, they made the suggestion that they would agree not to oppose a tariff of 1.4 cents per pound on sugar imported from Cuba.

One and four-tenths cents per pound suggested by the United States industries, when the outlook, they professed, was very dark, mind you, would be enough to give them the protection that they felt the American industries required. That rate is even lower than the rate included in the bill now before us, and represents a vast difference below the 2-cent rate now proposed.

There was a condition, however, to this offer. It was that the Cubans limit this season's crop to two and a half million tons. If Cuba would do that the price of 1.4 cents per pound would be ample for the purpose of protection. It would seem to me that it would be ample under any condition. If the beet-sugar producers could get along with 1.4 cents in January they can get along with that for all the time to come. In some manner, however, there crept into these discussions a sinister note. It became rumored that unless Cuba would agree to limit the crop the tariff would be fixed at a higher rate than 1.4 cents, and it might go up to 2 cents or 2½ cents as a sort of retaliation for the refusal of Cuba to comply with the demand of the local sugar interests.

At that time the argument was not that this high rate was required for protection, but that it would be imposed to the injury of Cuba. Of course, such a suggestion was received with surprise by Cuba, a country which we freed from foreign domination at great cost of men and treasure, and which is at the present time our ward among the nations. It was shocking to the sense of fair play of the American people.

Cuba was unable either officially or unofficially to comply with the demand for crop limitation, and let us see what has happened since.

The present emergency tariff rate on Cuban sugar is 1.6 cents. Under that rate there has been no dumping of Cuban sugar nor the ruination of the American beet-sugar industry. The beet-sugar crop of the United States has been sold out completely, to the profit, if not the complete satisfaction, of the beet-sugar interests. It is all gone. Cuba has sold to this country since the first of the year more than two and one-half million tons of this season's crop. She has sold practically all of the surplus remaining from last year of 1,200,000 tons, and yet this country is still buying sugar.

Had the limitation of two and one-half million tons been made effective in Cuba, the United States would now be confronted with a sugar shortage; and where would we turn for the requirements of the consumers in this country for the remainder of the year had the crop limitation been adopted? There would now be a mad scramble in the market of the world for sugar, and prices would have gone very high again at the expense of the American consumer.

Under the circumstances, we may be thankful that the crop-limitation plan was not accepted by Cuba. Under the circumstances, it is claimed there is no justification for increasing the tariff beyond the present rate, for no additional protection is needed, and the only real beneficiaries would be the speculators who have stocks of sugar on hand on which they would profit by a big rise in prices.

To increase the tariff by 2 cents a pound on raw sugar imported from Cuba, and 2½ cents per pound on sugar from other countries, would inevitably increase the price of sugar by at least 1 cent a pound to every housewife and family in the United States.

Sugar is now being landed in this country at from 3⅝ to 3¾ cents a pound, without duty. It is sold at wholesale at 7 cents per pound.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Idaho?

Mr. CALDER. I do.

Mr. GOODING. How does the Senator account for granulated sugar selling for 7 cents a pound at the present time? It is true that we are eating Cuban sugar now, I believe; but I will say to the Senator that the average price of sugar grown on the American farm, produced by American labor, and refined in American factories, was 5 cents a pound.

Mr. CALDER. When was that?

Mr. GOODING. That was this year. All the beet sugar sold for an average price of 5 cents a pound. Now, the American people are paying 7 cents a pound for Cuban sugar, or, in other words, it is costing them something over a quarter of a million dollars a day to eat Cuban sugar.

Mr. CALDER. The Senator knows that the beet-sugar crop was short this year. He knows that the beet-sugar crop is sold. He knows that Cuba is the only country within reasonable sailing distance of this country that has sugar to sell to us, and the Cubans have the market to themselves. If we had limited the sugar crop, if we had permitted them to raise only 2,500,000 tons this year, where would we be to-day? We perhaps would be paying 10 cents a pound, because of the limitation of the crop, for the sugar required to take care of our needs.

Mr. GOODING. The Senator has been very frank. That is exactly the situation. Cuba has a monopoly of the American market, and there is not any scarcity of sugar in Cuba. The crop of this year is the greatest that they have ever produced, almost enough for the entire consumption of the American people. It merely shows what happens every time a foreign monopoly has control of American markets. It is the old, old story, without any exception to the rule.

Mr. CALDER. Mr. President, when the sugar produced in America was sold and Cuban sugar was the only sugar available for our consumption here, of course the price went up. It is perfectly natural. Then, besides, we have a rate of 1.6 cents per pound upon sugar, as I have already pointed out, the highest rate ever voted by the American Congress, in the present emergency tariff bill. But, Mr. President, sugar is now being landed in this country, as I said a moment ago, at 3⅝ to 3¾ cents a pound, and this is nearly 2 cents a pound more than it was sold for in January of this year.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New York further yield to the Senator from Idaho?

Mr. CALDER. Certainly.

Mr. GOODING. Does not the Senator think the Americans who own sugar plantations in Cuba are profiteering at the present time when they charge 7 cents a pound for granulated sugar?

Mr. CALDER. I think the Senator is mistaken in the statement that the Cubans are charging, in Cuba, 7 cents a pound.

Mr. GOODING. No, Mr. President——

Mr. CALDER. Cuban sugar is being laid down in New York to-day for about 3¾ cents a pound without the duty paid. When you add the duty of 1.6 cents to that you get something like 5¼ cents a pound, or a little over that; and then the sugar is being sold wholesale in New York not by the Cubans but by the American refiners, who are paying for the refining and then adding a cent more for a profit. I make no apologies or excuses for these refiners who are charging a cent profit, but they are doing that because the crop is limited.

I make the point that it would have been more costly if Cuba had agreed to the proposition of the beet-sugar interests that they limit their crop.

Mr. GOODING. Mr. President, if it had been possible to enter into a contract with Cuba, it would not have affected this year's crop at all; it would have affected only next year's crop; and the point I want to make with the Senator is that it is not Cuba we should discuss; let us not discuss Cuba at all, because 85 per cent of all the sugar produced in Cuba is by American capital. It is not Cuba at all; it is Americans who now are selling to the American people the sugar they have grown in Cuba by contract coolie labor, shipped in there under bond, 40,000 of them on the island to-day, increasing at the rate of 8,000 per year. So it is said, and that testimony can be found in the hearings before the Finance Committee. With that kind of labor producing sugar in Cuba, the American people are paying something over a quarter of a million dollars a day for Cuban sugar. I have the exact figures, which I will put into the RECORD to-morrow. I had not intended discussing this question to-night. There is no question about growing sugar in America. When he was Secretary of Agriculture Secretary Wilson said that we could grow enough sugar here for the entire world; and of course we can, but we can not grow it in competition with coolie labor sent to Cuba in bond.

No American industry can develop under such competition as that, I do not care whether it is the sugar industry or anything else. The old question comes up, Are we going to give agriculture in this country a chance to live and develop? I do not care to make any further argument on the point now.

Mr. CALDER. I am in thorough accord with the Senator's views in that regard. I have voted for every rate in this bill providing for an increase in the duties on farm products. I have gone through with the committee on every proposition affecting farm products. I follow the judgment of the committee in this; they have recommended that a rate of 1.60 is enough on sugar to warrant its production here. This is a protective rate. It is 30 cents a hundred pounds more than was allowed in the Payne Act and 60 cents a hundred pounds more than in the Underwood Act. I believe it is sufficient. If I did not think it was, I would vote for a higher rate. It is 90 per cent ad valorem based on the price Cuban sugar was sold for in January of this year. It is 45 per cent ad valorem based on the price of Cuban sugar to-day. But, Mr. President, I wish to conclude my remarks.

The increase in the tariff would seem, from the foregoing plain statement of facts, to be unjustified; would increase the wholesale price to at least 8 cents per pound; and the people would have to pay 9 cents per pound, with little benefit to the American farmers or to American industry.

RECOGNITION OF THE LITHUANIAN REPUBLIC.

The PRESIDENT pro tempore laid before the Senate a telegram from sundry citizens of Waukegan and North Chicago, Ill., which was ordered to lie on the table and to be printed in the RECORD, as follows:

[Western Union telegram.]

WAUKEGAN, ILL., *August 7, 1922.*

Honorable Members of the Senate of the United States of America, Washington, D. C.:

We, American citizens of Lithuanian descent of Waukegan and North Chicago, Ill., at a mass meeting held in commemoration of the recognition of Lithuania by the United States of America, hereby wish to express our strengthened loyalty and our sincere gratitude to you for the recognition of the Lithuanian Republic.

JOHN B. KRIS,
SAM GLASS,
MATH BUDRUNAS,
Committeemen.

PETITIONS AND MEMORIALS.

Mr. LODGE presented a resolution of the congregation of the First Congregational Church of Greenfield, Mass., favoring an amendment of the Constitution prohibiting polygamy, which was referred to the Committee on the Judiciary.

Mr. WARREN presented resolutions of the Board of Trustees of the City of Rawlins and the Board of Commissioners of Carbon County, both in the State of Wyoming, protesting against attempts to permit the Southern Pacific Co. to retain control of the Central Pacific Railway, etc., which were referred to the Committee on Interstate Commerce.

Mr. WILLIS presented the petition of Alliance Lodge, No. 178, Brotherhood of Railroad Trainmen, of Alliance, Ohio, praying for the repeal of title 3 of the transportation act of 1920, and that the Railroad Labor Board may be supplanted by the Board of Mediation and Conciliation, which was referred to the Committee on Interstate Commerce.

REPORTS OF COMMITTEES.

Mr. WADSWORTH, from the Committee on Military Affairs, to which was referred the bill (S. 3408) to amend section 126 of the national defense act, approved June 3, 1916, as amended, reported it without amendment and submitted a report (No. 846) thereon.

Mr. STERLING, from the Committee on Civil Service, to which was referred the bill (H. R. 11212) to amend an act entitled "An act for the retirement of employees in the classified civil service, and for other purposes," approved May 22, 1920, reported it with an amendment and submitted a report (No. 847) thereon.

FUNERAL EXPENSES OF THE LATE SENATOR CROW.

Mr. CALDER, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred Senate Resolution 332, reported it favorably without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay, from the miscellaneous items of the contingent fund of the Senate, the actual and necessary expenses incurred by the committee appointed by the President pro tempore in arranging for and attending the funeral of the Hon. WILLIAM E. CROW, late a Senator from the State of Pennsylvania, upon vouchers to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WADSWORTH:

A bill (S. 3890) to amend an act entitled "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916, as amended by the act of June 4, 1920; to the Committee on Military Affairs.

By Mr. SHORTRIDGE:

A bill (S. 3891) to further amend section 4756 of the Revised Statutes; to the Committee on Naval Affairs.

A bill (S. 3892) authorizing the State of California to bring suit against the United States to determine title to certain lands in Siskiyou County, Calif.; to the Committee on the Judiciary.

By Mr. STANFIELD:

A bill (S. 3893) granting a pension to Rebekah M. Presley; to the Committee on Pensions.

By Mr. FRELINGHUYSEN:

A bill (S. 3894) for the relief of the De Kimpke Construction Co., of West Hoboken, N. J.; to the Committee on Claims.

A bill (S. 3895) for the relief of Benjamin H. Richardson; to the Committee on Naval Affairs.

A bill (S. 3896) fixing the grade upon retirement of certain officers who served in the war with Spain, the Philippine insurrection, or the Boxer rebellion, and the war against Germany; to the Committee on Military Affairs.

RETIREMENT OF NAVAL AND MARINE RESERVE FORCE OFFICERS.

Mr. SHORTRIDGE submitted an amendment intended to be proposed by him to the bill (H. R. 7864) providing for sundry matters affecting the Naval Establishment, which was referred to the Committee on Naval Affairs and ordered to be printed.

WHAT THE UNITED STATES HAS DONE FOR THE INDIAN.

Mr. SPENCER. I ask unanimous consent to have inserted in the RECORD in 8-point type a short article on what the United States has done for the Indian, written by Mr. H. O. Bishop. It contains a great deal of information on the Indian question.

There being no objection, the article was ordered to be printed in the RECORD in 8-point type, as follows:

[From the National Republican, August 5, 1922.]

WHAT UNCLE SAM'S DONE FOR THE INDIAN—THE GOVERNMENT, AS SOME THINK, MAY HAVE DONE TOO MUCH, BUT CERTAINLY HAS NEVER DONE TOO LITTLE FOR THE RED MAN.

(By H. O. Bishop.)

The other day I was strolling past the huge gray building known as the Interior Department, which is presided over by Albert B. Fall, Secretary of the Interior, when my attention was attracted by a dozen or more husky Indians coming out of the main entrance. They did not look stolid and solemn as I had supposed full-blooded Indians always looked. They were smiling and chatting to each other in a most friendly and contented sort of fashion. One large specimen of "the first families of America" nonchalantly extracted a Perfecto from his vest pocket and, striking a match on the front of the building, fired it up and puffed on it with apparently as much joy and contentment as "Uncle JOE" CANNON gets out of his choicest ones. As I stood there watching the delegation slowly amble toward the White House I was accosted by a woman who bore all the marks of a discontented "high brow." She wanted to know if I didn't think it a shame and an outrage the way the Government of the United States had treated the poor downtrodden Indians of the country. I timidly replied that I had always been under the impression that the Government had been more than generous in promoting the welfare and looking after the interests of the red man. She dismissed me with a withering glare and started up the street murmuring something that I didn't quite hear—perhaps it was best that I didn't.

FIRST-HAND INFORMATION.

"Well," I said to myself, "just what has been done for the Indian?" I decided then and there to get some first-hand information upon the subject. Entering the big Interior building I went to the third floor, where Charles H. Burke, Commissioner of Indian Affairs, has his office. Burke was formerly a member of Congress from South Dakota, and served for a number of years as the chairman of the Committee on Indian Affairs. This experience, together with his residence in one of the Indian sections of the country, gives him unusual knowledge of the Indian situation. I told him about the little incident with the lady down in front of his building and smilingly asked, "How about it?"

"With all due respect to the lady, and others of her misguided and misinformed ilk, I am obliged to say that she does not know what she is talking about," was his quiet reply. "I wonder if that lady knows," he continued, "that from the year 1872 up to this time this Government has spent a little more than $400,000,000 in educating and promoting the general welfare of the Indians, and that in this good year of 1922 we are spending more than $10,000,000 on them." Then looking me squarely in the eye, he made this earnest and significant statement: "No other Government in the history of the world has treated a dependent people more liberally than the Government of the United States has treated the Indians of this country."

How I did wish that I had interviewed Burke before coming in contact with that discontented and fault-finding soul down in front of the building!

After chatting with Commissioner Burke for half an hour he introduced me to E. B. Meritt, the assistant commissioner, and the heads of important divisions. From these capable and energetic men I gathered many interesting facts concerning the Indians and what has been and what is being done in their behalf. I was amazed to learn, for instance, that the Indians under Federal jurisdiction have their reservations in practically every State west of the Mississippi River. Like the average citizen I had not the remotest idea as to how many Indians there are in the country. Inquiry developed the fact that according to the latest reports there are 312,381 Indians under Government supervision in the United States, consisting of 165,031 full bloods and 147,350 mixed bloods. The Indian problem is perhaps the most human problem with which the Government has to deal, for it touches human life at almost every point of contact.

FOR CHILDREN AND ADULTS.

Broadly speaking, the work of the Government for the Indians is divided into two main branches: First, the education of the Indian children; and, second, the promotion of industrial activities among the adults. The Indian Service has about 5,500 employees at the different agencies and schools, and 200 in the Washington office.

For the education of the Indian children the Government maintains three kinds of schools: First, the day schools; second, the reservation boarding schools; and third, the nonreservation boarding schools. Last year there were 158 day schools with 5,296 pupils; 60 reservation boarding schools with 9,179 pupils; and 18 nonreservation boarding schools with 9,372 pupils; besides which there were 33,250 Indian pupils in the public schools, 5,530 in mission schools, and 137 in private schools, making a total of 62,764 Indian children in schools of all classes.

Half the day is devoted to theoretical classroom work, and the other half to manual training for the boys and the domestic arts for the girls. The Government teaches the Indian boys useful trades by which to earn their living, and trains the girls to be home makers. Not long ago former President Eliot, of Harvard, said that the Indian schools had the best curricula of any in the United States. Hundreds of Indian boys and girls, after graduating from the Government schools, have taken their places in various walks of life alongside the whites.

The Indian boys and girls go about their school work eagerly. They are hungry for the attainment of knowledge and the art of doing something worth while. The girls quickly emerge from the pathetically primitive and insanitary methods of housekeeping of their mothers and grandmothers and remodel home life along the lines of their white neighbors. They also take especial delight in learning all the details of dressmaking and millinery. Girls that formerly were content with arraying themselves in blankets are now clothed in artistic home-made gowns and millinery that would be creditable in any town in the country. They soon become exceedingly proficient in athletics, such as tennis and basket ball. Many girls are given training in the hospitals and develop into splendid nurses. The boys take to the learning of trades with the same avidity that a duck takes to water. They are given courses in painting and decorating, printing, blacksmithing, and various other trades that will fit them for self-supporting careers in after life.

A COMPLEX PROBLEM.

A few citizens of the country realize what a complex problem the education of the Indian youth is. The Indians are distributed throughout more than one-half of the States. Some of them group themselves within limited areas, while others live as individual families scattered over large territories. Some are non-English speaking people, just emerging from a life of ignorance and superstition, while others are almost ready to take up the full duties of citizenship. In fact, there are all classes and conditions between the almost untouched Apache and the independent Navajo of the Black Mountains of Arizona, and the intelligent, ambitious, forward-looking Cherokees, Choctaws, and Chippewas. This makes a complex and varied system of schools necessary.

In the early days everything was given gratuitously to the Indians, but the policy now is to furnish free supplies only to the old, sick, and indigent, as every able-bodied Indian is expected to support himself and family by his own efforts. In 1915 free rations were issued to 16,916 Indians. In 1921 the number had been reduced to 11,082, all the others supporting themselves.

Many of the reservations seem best adapted to the live-stock industry, and the Government is doing everything it can to encourage the Indians along this line. It employs for this purpose 100 stockmen. In 1921, 44,847 Indians engaged in this industry, owning stock worth $30,000,000. The Government furnishes high-grade sheep, cattle, and horses for upbreeding the quality of the Indian stock. The small Indian pony is being bred with large horses more suitable for agricultural work. The old-time Indian cattle made up mostly of hide and horns are being graded up until they are now on a par with the profitable herds of experienced white stock raisers. Sheep that formerly were small and produced very little meat or wool have been bred up until they look like an entirely different breed. The pure-blood breeding animals for this development it should be remembered, are furnished by the Government through the Bureau of Indian Affairs.

INDIAN AGRICULTURE.

Many of the reservations contain large areas of good farming land. The Government employs 250 practical farmers to in-

struct the Indians in modern agriculture. In 1921, 48,962 Indians cultivated 890,700 acres of land and produced crops worth nearly $12,000,000.

The Government has constructed extensive irrigation systems on many of the reservations in the arid sections of the West. In 1921 there were 5,371 miles of main and lateral ditches on various reservations, with 607,044 acres within service of ditches. To June 30, 1921, the total expenditures for Indian irrigation projects, including construction and maintenance charges, were nearly $22,000,000.

It has been found that the spirit of competition is a strong incentive to success among the Indians. Agricultural fairs are held in the fall of each year on many of the reservations, at which the Indians display farm products and live stock in competition with each other, premiums being given for the best exhibits. Most of the fairs are managed by the Indians themselves, under the supervision of the superintendent, which furnishes them with practical experience in business organization.

The Indians also exhibit at county and State fairs, sometimes in open competition with the whites, where they have won numerous prizes. Several years ago an Indian won first prize on wheat at the South Dakota State fair over all comers.

Encouragement is given to these industrial displays and cooperation is sought from county and State agricultural associations. It is believed that such occasions may be the means of diverting the interest of the Indians from so-called Wild West shows and sensational round-ups, which offer little aside from old-time feats of barbarity that have no elevating effect upon the spectators but tend to impress the Indian that these performances receive popular approval.

THE TIMBERLANDS.

Some of the reservations contain large areas of valuable timber, estimated to be worth over $73,000,000. The Government operates 59 sawmills on different reservations for the manufacture of lumber, a large part of which is used in the construction of modern homes for the Indians. In 1921, 44,195 Indian families resided in permanent homes, and only 10,946 families in tents, tepees, and so forth.

On a large number of the reservations the Government operates mills for the manufacture of flour from grain produced by the Indians.

If an Indian desires to farm and has not the necessary implements or the money to buy them, the Government will purchase such articles for him from funds authorized by Congress under what is known as the reimbursable plan, which has been in operation about 10 years, the total expenditures amounting to over $4,000,000.

Many of the older Indians support themselves by engaging in the original native industries, such as the manufacture of baskets, pottery, beadwork, and Navajo rugs and silverware. In 1921, 26,949 Indians produced such articles worth nearly $2,000,000.

A large number of the Indians support themselves by outside employment wherever they can get it, just like the whites. In 1921, 25,323 Indians earned in that way over $4,000,000. The service employs a man, himself an Indian, who does nothing else but travel about the country in the vicinity of the reservations and elsewhere in order to find work for Indians off the reservations and to see that they obtain fair wages and proper treatment. The Indian is no longer a liability but a distinct asset to the industrial and economic life of the country.

The United States is the greatest trust company in the world; it administers individual and tribal Indian property worth $761,000,000.

The Government looks after the health of the Indians. It operates 81 hospitals and employs 148 physicians for this purpose. The death rate among Indian children under 3 years of age has been materially reduced within the past few years, and the ravages of tuberculosis greatly lessened. A force of field matrons is maintained, who visit the Indian women at their homes and give them advice and help in the preparation and serving of food, housekeeping, the care of children and of the sick, and other important information.

PROBLEM OF HEALTH.

Commissioner Burke is particularly interested in maintaining and improving the health of the Indians. It is a tremendous problem, however. As the line of progress advances society in favored communities seeks more and more to advance itself through appeals to all agencies that may offer protection and contribute to its welfare. The time has come when preventive medicine, with its coadjutants, philanthropy and social uplift, must be applied to the solution of the health problem of the Indian Service. Heredity, which may be defined as the genetic relation between successive generations, is now recognized as an important factor of preventive medicine. Its laws should be taught in the Indian school, particularly with regard to their application to health. Education and environment have but limited power to improve an imperfect basis of human life, but diseases and impairments that can not be cured may be prevented.

The physician, as well as the sanitarian, is helpless in the presence of many deplorable conditions, both in the individual and in society at large, which are inherited from ancestors—conditions which might have been prevented, but can never be entirely remedied when they exist. Dr. Oliver Wendell Holmes said more than a half century ago that the time to begin the training of a child is a hundred years before its birth. The best protection that one can have against disease is inherited vital energy manifesting itself in healthy organic cells that will respond to every favoring force of habit, environment, education, and training that may encompass them, while at the same time offering stern resistance to all inimical influences and factors that beset them.

The Indian Service countenances no fads and trusts no fanciful theories; its policy is to make use of all scientific knowledge which it can command to secure to future generations of Indians the best of all birthrights—the right to be well born and to possess sound minds in sound bodies.

If medical service for the Indians consisted only of the dispensing of medicine to those who are ill, the duties would be very simple, notwithstanding their importance. But the Indian medical service is a social uplift service allied inseparably with its educational and industrial activities.

MUST BE TAUGHT.

The present administration is seeking to discourage a perfunctory response to duty and to foster a real, live, purposeful policy and determination to restore to a race its pristine health and virility by means of the application of the laws of preventive medicine, operating through education, social uplift, and constructive science, as applied to nutrition, hygiene, and the relations of all the agencies under control that may improve or impair the racial qualities of future generations of Indians, either physically or mentally. The purpose of the Indian Service is to bring about gradual and permanent improvement in the physical, mental, and moral nature of every Indian who may be influenced by the factors and conditions that promote favorable change. The hope of the Indian race lies in the children, and what we wish to appear in them must be taught in their schools.

The Indians are subject to the same diseases as white people. They have more trachoma and perhaps more tuberculosis, but there are fewer venereal diseases, less diphtheria and scarlet fever, and, as a rule, pneumonia is not so prevalent among them as it is among the whites. The problems of treatment and care of the Indian, however, differ in many respects from the treatment of white people. Tact and knowledge of Indian nature, with experience in the use of preventive measures, are as essential to the success of the service physician as an intimate understanding of medicine and surgery, and in this direction he is greatly aided by the efficient field matron whose duties closely relate her to the Indian family, especially the mothers and daughters, and who in her work for the improvement of home conditions is often able to locate many cases of disease and by skillful sympathy obtain the consent of the patient for medical treatment.

At last reports there were 153,373 citizen Indians and 105,000 church members, 198,841 Indians wear modern clothes, 133,193 speak English, and 91,331 read and write English.

The Government welcomes missionaries on the reservations, 627 of whom are working among the Indians at the present time.

THE INDIAN WAR RECORD.

The Indians made a splendid war record. Ten thousand of them served in the Army and 2,000 in the Navy. An Indian was the first American soldier to cross the Marne. Another, Walter G. Sevalia, of Brule, Wis., was one of the hundred American soldiers decorated by General Pershing for conspicuous bravery in action. He swam the Meuse River and the Est Canal under heavy fire, carrying pontoon cables, and after being severely wounded reached headquarters with an important message. Probably no more brilliant instance is recorded than that furnished by Pvt. Joseph Oklahombi, full-blooded Choctaw, of the One hundred and forty-first Infantry, of Bismarck, Okla., who received the croix de guerre under order of Marshal Petain. The order follows: "Under a violent barrage dashed to the attack of an enemy position, covering 210 yards through barbed-wire entanglements. He rushed on machine-gun nests, capturing 171 prisoners. He stormed a strongly held position containing

more than 50 machine guns and a number of trench mortars. Turned the captured guns on the enemy, and held the position four days, in spite of a constant barrage of large projectiles and gas shells. Crossed 'no man's land' many times to get information concerning the enemy and to assist his wounded comrades."

In view of the foregoing facts and statements it would seem that Uncle Sam is doing a big and highly commendable work among our red brothers. There are many students of the Indian question who believe the Government is doing too much rather than too little for the Indian and that he has been rendered too dependent by benevolent paternalism. At any rate there is no rational cause for the boohooing of the paleface sob sisters.

RECESS.

Mr. McCUMBER. I move that the Senate take a recess, the recess being under the unanimous-consent agreement until 10 o'clock a. m. to-morrow.

The motion was agreed to; and (at 5 o'clock and 50 minutes p. m.) the Senate, under the order previously entered, took a recess until to-morrow, Tuesday, August 8, 1922, at 10 o'clock a. m. to-morrow.

SENATE.

TUESDAY, *August 8, 1922.*

(Legislative day of Thursday, August 3, 1922.)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDENT pro tempore. The pending question is upon the amendment proposed by the Senator from Rhode Island [Mr. GERRY] to the amendment of the Senator from Louisiana [Mr. BROUSSARD] to paragraph 501. Unanimous consent has been given the Senator from New Mexico [Mr. JONES] to address the Senate upon questions involved in the bill other than the pending paragraph. The Senator from New Mexico will proceed.

Mr. JONES of New Mexico. Mr. President, a few days ago I offered an amendment to this tariff bill which, in effect, is a substitute for all the bill after the enacting clause. And I desire to discuss briefly the reasons for offering this amendment and its provisions.

The bill now before the Senate has been under discussion for about three and a half months. The circumstances under which it was prepared have been disclosed and its general tendencies developed. In my judgment, the time has arrived when we are justified in making a general survey of the situation and calmly considering whether or not the bill as it has been framed should become law.

A tariff is a tax levied upon commodities which are imported into the United States, and any tariff law affects the welfare of a nation in at least four of its most important economic factors. These factors are (1) the Federal revenue, (2) prices to the consumer, (3) effect on domestic industry, and (4) effect on international trade. They are so related that in the consideration of any one of them neither of the others should be ignored and can not be ignored without serious and harmful results. If a large amount of revenue is to be obtained from the taxes on imports, and that object be the principal purpose in the consideration of a tariff law, the general tendency will be (a) to raise the prices of commodities to the consumer, (b) to aid domestic industry whose products compete with imported commodities, and (c) to restrict international trade. If the law be framed with chief reference to the consumer, its tendency will be (a) to reduce the revenue, (b) to reduce aid to domestic competitive industry, and (c) extend international trade. If the law be framed for the chief purpose of granting aid to competitive domestic industry, its general tendency will be (a) to decrease the revenue, (b) increase prices to the consumer, and (c) to restrict international trade. If the bill be framed with chief reference to promoting international trade, its general tendency will be (a) to decrease the revenue, (b) lower prices to the consumer, and (c) to decrease the aid granted to domestic industry.

In the early years of the Republic the amount of tax levied upon imports was relatively small. A tax of 5 or 10 per cent was considered substantial. After the War of 1812 the duties were increased from time to time and reached a point where they became the subject of political controversy. It may be said, however, that at no time prior to the Civil War did duties upon imports upon an average reach the height which was established during our Civil War and which has since, under all tariff laws, been maintained. The tendency of every Republican tariff law since the Civil War has been to increase the duties, and the present bill as it passed the House contains rates of duty which are by far the highest ever proposed in any previous bill. The Finance Committee of the Senate has made some radical reductions from the rates in the bill as it came from the House, but the rates as presented by the Finance Committee to the Senate are upon the average higher, and in numerous instances much higher, than rates which have ever appeared in any tariff law.

It follows, therefore, that the general tendencies of a tariff law upon the economic welfare of the Nation will be intensified and operate to a greater degree than ever before if this bill should become law. In these circumstances it is our duty as legislators to give the greatest possible consideration to what we are doing.

I desire to suggest some of the innumerable questions which should be considered in tariff legislation in connection with each of the major economic factors before mentioned.

I. Our Government requires revenue much beyond any amount dreamed of prior to the recent World War. According to the last report the Treasury of the United States is facing a very substantial deficit during the present fiscal year. A budget law has been passed for the purpose of balancing for fiscal years the estimated receipts and expenditures of the Government. If this purpose shall be accomplished it is necessary to know in advance how much revenue will be derived from the various sources. Before any estimate can be made with reasonable accuracy as to the amount of revenue which will be derived from tariff taxation answers must be found to many questions which naturally arise. Among these are: (a) Will foreign countries continue to produce commodities for export to the United States at the present rate, or will such production be increased or decreased? (b) Will the proposed rates of duties decrease or increase imports? (c) To what extent could domestic producers realize reasonable profits after reducing prices below the point of foreign competition? (d) Will the duties increase or decrease prices in the United States so as to affect the quantity of consumption, and, if so, to what extent? (e) Are the duties so high as to prohibit importation and thus produce no revenue?

II. A tax upon imports affects the consumer by increasing the prices of the commodities which he must buy. If he purchases an imported article on which a tax is levied the tax is necessarily added to the price which the importer has paid for the foreign commodity and, of course, must ultimately be borne by the consumer. If the tax is imposed upon commodities which are produced in the United States it enables the American producer to increase his price by the amount of the duty above the price which could be asked if no duty were imposed and still compete on equal terms with the importer. If the duty be so high that the American producer can sell his products for less than the foreign cost plus the duty it enables him to raise his price to a point just below competitive prices and the increased cost to the consumer will be paid in the form of additional profit to the American producer and the Federal Treasury derives no revenue.

From the consumers' point of view two great questions of public policy present themselves. Having in mind that revenue derived from this source is derived by taxation upon the things consumed by the people and, in the main, upon the things which the people must have in order to provide food, clothing, and shelter, and that this tax will not be borne in proportion to the ability to pay taxes, the question of public policy necessarily arises as to what proportion or how much of the Federal revenue should be raised by means of a tariff. In the second place, to the extent that domestic producers are enabled by reason of the tariff to increase their prices and their profits, the question arises how far the Government is justified, through taxation, in permitting domestic producers to increase their prices and profits at the expense of the consumers of those products. If prices are increased, there will be fewer people able to buy, and this ratio is governed by the amount of the increase of prices. Consideration, therefore, should be given to this question of decreasing consumption because of inability to buy. During the discussions of this bill flippant references have frequently been made to the smallness of the amount by which prices of commodities will be increased in some instances under this proposed bill. I beg to remind Senators that however small the increase of price may be, to many it means inability to obtain the article

at all. We should not and must not ignore the fact that there are thousands and hundreds of thousands of people, even in this great and prosperous Nation of ours, who do and must consider the expenditure of each and every penny which they may be able to obtain. The extent of the sacrifices and suffering which this bill will entail should receive the most careful inquiry and the most conscientious consideration.

III. The next economic factor to which I call attention is that of the effect of this bill on domestic industry. As to any commodity which would be imported into the United States in the absence of a tax upon the importation there can be no such thing as a "free trade tariff." If there be no article produced in the United States which is comparable, or may be substituted, the tax is added to the price and the trade restricted by the lessened demand at the increased price. If there be produced in the United States articles which are comparable, or which may be substituted, the American producer is enabled to increase his prices, and whatever the amount of the tax may be it operates as a protection to the American producer. In this connection many questions arise: (a) Are antiquated and inefficient methods subsidized and are development and progress discouraged? (b) Will undue profits be exacted from the consumer? (c) Will the organization of monopolies be encouraged? (d) At what point shall infant industries be considered as having attained their majority? (e) What are the industries with quantity production, efficient organization and management, and advanced processes which no longer need protection? (f) What are the "key" industries which must be maintained regardless of cost? (g) To what extent shall our population be encouraged to live in congested manufacturing centers; and (h) to what extent are we justified through taxation in rendering aid to specific and special industries?

IV. The importance of the foreign trade of the United States does not seem to have impressed itself upon the country to the extent which it demands. The Department of Commerce, under date of May 22, 1922, published a table showing the imports and exports of 20 countries for the calendar years 1913, 1920, and 1921. For the gold-standard countries the original figures for 1913 have been converted into dollars at par and those for 1920 and 1921 have been converted at the average rate of exchange. Following the table just referred to is another table showing the total foreign trade, imports and exports combined, of 20 countries in 1913, 1920, and 1921. These 20 countries are the most important foreign-trade countries in the world. It will be observed that in 1913 the United States was third in the list of these foreign-trade countries, including both imports and exports; in 1920 it was first, and in 1921 it was second. In the last-named year the United Kingdom carried on 23.8 per cent of the foreign trade of all these foreign countries combined and the United States 22.11 per cent. In the previous year, 1920, the foreign trade of the United States was more than one-fourth of all these 20 countries combined. Even prior to the World War, in 1913, the United States was second as an exporting nation, and since the war is by far the largest exporting nation in the world. These tables are worthy of careful examination, and I ask that they may be inserted as a part of my remarks without reading.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

Imports and exports of 20 countries for the calendar years 1913, 1920, and 1921.

Countries.	Imports.			Exports.			Relation to 1913.			
							1920		1921	
	1913	1920	1921	1913	1920	1921	Imports.	Exports.	Imports.	Exports.
	1,000 dollars.	*1,000 dollars.*	*1,000 dollars.*	*1,000 dollars.*	*1,000 dollars.*	*1,000 dollars.*	*Per cent.*	*Per cent.*	*Per cent.*	*Per cent.*
United States	1,792,596	5,278,481	2,509,148	2,484,018	8,228,016	4,485,031	294	331	140	181
Canada	659,904	1,193,559	715,972	460,519	1,163,002	731,390	181	253	108	159
Argentina	478,859	774,612	463,550	500,988	913,389	490,560	162	182	97	98

Mr. JONES of New Mexico. Even prior to the World War in 1913 the United States was second as an exporting nation, and since the war is by far the largest exporting nation in the world.

I have also a table prepared by the Department of Commerce showing the exports and imports of the United States by great groups in per cent of total. These statistics are given for the years 1910 down to and including the first four months of 1922. I am sure that the agricultural producers and also the manufacturers will be deeply interested in a study of these tables. Special attention is called to the fact that the item marked "Foodstuffs in crude condition and food animals" comprises the least, and the item "Manufactures ready for consumption" comprises the largest single share of our export trade to-day, whereas in normal pre-war years such manufactures were second to "crude materials." The increasing surpluses produced by our manufacturing industries must be turned to foreign markets, and this is being done at a rate which would seem to indicate that our commercial history will be following along the same path as that of England about a hundred years ago, when her industrial expansion during the rise of the factory system in the Napoleonic war period resulted in compelling her to seek out every foreign market for her surpluses. I ask that the table may be inserted as a part of my remarks without reading.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The table referred to is as follows:

Exports and imports by great groups in per cent of total.[1]

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922 (4 months).
EXPORTS (DOMESTIC MERCHANDISE).													
Crude material for use in manufactures	33.10	35.41	33.31	30.13	34.03	18.80	12.55	11.76	15.37	20.78	23.15	22.47	24.34
Foodstuffs in crude condition and food animals	6.42	5.13	4.60	7.49	5.90	18.66	8.91	8.54	6.42	8.75	11.36	15.81	10.78
Foodstuffs partly or wholly manufactured	15.16	14.01	14.69	13.23	12.59	16.74	14.02	11.85	19.76	25.32	13.82	15.29	16.83
Manufactures for further use in manufacturing	15.66	15.35	16.04	16.83	16.06	13.10	15.40	19.13	20.58	11.90	11.86	9.13	12.89

Manufactures ready for consumption	23.62	23.67	21.78	22.51	23.72	20.04	14.19	14.19	13.67	12.66	16.61	24.66	23.16

[1] Fiscal years, specie values to and including 1918; subsequently calendar years.

Mr. JONES of New Mexico. It is really astonishing to know how many and how varied are the industries of the country which are vitally interested in securing a market for their surplus products. The foreign commerce department of the Chamber of Commerce of the United States, in a pamphlet discussing "Our world trade in 1921," has prepared a table showing the total production in the United States according to the latest available figures, and the exports of a considerable number of the chief products of the United States. The table also shows the percentage of the total production of the several commodities which were exported during the year following that for which the total production was ascertained. I ask leave to have this table inserted in the RECORD as an appendix to my remarks without reading. (See Appendix B.)

It is both important and interesting to know with what countries our foreign trade is carried on. An article by Mr. Roorbach, chief of the Bureau of Research, Department of Commerce, recently discussed the subject "Europe and the development of American foreign trade." He presented some statistics which I believe to be very useful in the consideration of this question at the present time. One table gives the trade of the United States with Europe, both imports and exports, for the years 1910–1920, inclusive, comparing the same with the total imports and exports of the United States. This table I ask to be inserted in the RECORD without reading.

The table referred to is as follows:

TABLE V.—*Trade of the United States with Europe, 1910–1921.*

Year.	Exports.			Imports.		
	Total (millions of dollars).	To Europe.	Percentage to Europe.	Total (millions of dollars).	From Europe.	Percentage from Europe.
1910	1,710	1,136	65.10	1,557	806	51.76
1911	2,013	1,308	63.84	1,527	768	50.30
1912	2,170	1,342	60.87	1,053	819	45.57
1913	2,428	1,479	59.98	1,813	892	49.25
1914	2,329	1,486	62.86	1,894	895	47.29
1915	2,716	1,971	71.21	1,674	614	36.70
1916	4,272	2,999	69.21	2,197	616	28.04
1917	6,227	4,324	68.75	2,659	610	22.96
1918	5,839	3,732	63.04	2,946	411	13.97
1919	7,750	5,187	65.50	3,904	750	19.22
1920	8,080	4,466	54.27	5,278	1,227	23.26
1921	4,485	2,364	52.70	2,509	765	30.50

Mr. JONES of New Mexico. Mr. Roorbach also furnishes a table regarding this trade by groups of commodities, which I ask also to be inserted in the RECORD without reading.

The table referred to is as follows:

TABLE VI.—*Trade of United States with Europe, by groups of commodities, average 1910–1914.*

	Total (millions of dollars).	From Europe (millions of dollars).	Per cent of group total from Europe.	Per cent of all imports from Europe.
IMPORTS.				
Crude materials	580	217	37.4	26.4
Foodstuffs	397	101	25.4	12.2
Manufactures	696	506	72.7	61.4
EXPORTS.				
Crude materials	701	593	84.4	44.2
Foodstuffs	421	300	71.4	22.3
Manufactures	995	438	44.0	33.5

Mr. JONES of New Mexico. The discussion of these tables by Mr. Roorbach is so illuminating that I ask that the same may be printed in the RECORD in 8-point type as a part of my remarks without reading.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

DEPENDENCE OF THE UNITED STATES ON EUROPE.

"The dependence of the United States upon Europe as a market has always been similar to that of the rest of the world. This country has looked to Europe both as a market for goods and as a means of furnishing facilities for financing and transporting such goods not only to Europe but to all other parts of the world as well. Table V gives the total values of American export and import trade, the amount with Europe, and the percentage that the trade to Europe bore to our total trade.

"In the year 1913–14, 62.8 per cent of American exports went to Europe, although there had long been a gradual decrease in the relative importance of the European export market for the United States. In 1880 Europe took over 86 per cent of our exports; in 1890, 80 per cent; in 1900, 74.6 per cent; in 1910, 65.1 per cent. In spite of this decrease in relative importance the absolute values of our exports to Europe were constantly increasing before the war, and Europe has continued by far the most important of our export markets.

"After the outbreak of the war the importance of Europe in our export trade increased, both in actual and relative value, reaching 71.2 per cent of our export trade in 1915, 69.2 per cent in 1916, and 68.7 per cent in 1917. This increase, of course, was a result of large shipments of war supplies to Europe. Following the armistice, however, the proportion of our exports to Europe rapidly declined. In 1921, only 52.7 per cent of our

total export trade found its destination in Europe, as compared with 60 to 65 per cent before the war. Although this was still a very large proportion of our exports, Europe is now far less important relatively than ever before as a market for American goods.

"In the import trade, Europe, preceding the war, supplied the United States approximately 50 per cent of the total. As in the case of exports, there was before the war a gradual but a steady decrease in the proportion of goods bought from Europe. In 1880 we received 55.5 per cent of our imports from Europe; in 1890, 57.1 per cent; in 1900, 51.8 per cent; and in 1914, 47.3 per cent. During the war, however, imports from Europe dropped to unprecedentedly low volumes, as well as to low percentages of total trade. In 1918, less than 14 per cent of our total imports were from Europe, and even the actual value of imports in that year was less than half the value of the imports in 1914. With the signing of the armistice, imports from Europe rapidly increased, but in 1921 the proportion was still far below pre-war levels—only 30.5 per cent. Even the absolute value of imports from Europe in 1921, in spite of inflated prices, was much less than the value of imports in 1914. This inability of Europe to sell to the United States means, of course, that Europe is less able to buy from the United States and that the United States' most important market for exports must remain greatly curtailed as long as this condition exists.

EUROPE AS A MARKET FOR AMERICAN MANUFACTURES.

"Table VI shows the trade of the United States with Europe by groups of commodities for the years 1910–1914.

"Contrary to the general impression, exports of American manufactured goods to Europe constituted a very large proportion of our trade with that continent. The trade of the United States with Europe differs in one important respect from the trade of most other sections of the world with Europe. Most of the other non-European countries are chiefly dependent on Europe as a market for foods and raw materials. The United States, being the largest manufacturing country in the world, depends upon Europe, not only as a market for foods and raw materials, but for manufactured goods as well. And manufactures are the largest element in the United States export trade, and the most rapidly growing group of our exports. During the five years preceding the war exports of manufactured goods to Europe amounted to $438,000,000, constituting 33½ per cent of our total export trade to Europe and 44 per cent of our total export of manufactures. During this same period foodstuffs exported amounted to $300,000,000, or 22.3 per cent. Crude material exports were valued at $593,000,000, or 44½ per cent of our exports to Europe. When it is recalled that manufactured goods make up by far the largest proportion of American exports, and that Europe absorbs 44 per cent of this important group, the dependence of the United States upon Europe as a market not only for our exports in general, but for our manufactures, becomes evident. Europe is by far our most important market not only for foodstuffs and crude materials, but for fabricated materials as well. It should be noted in this connection that 'foodstuffs' imports includes both crude foodstuffs and manufactured foodstuffs. If we should include the manufactured foodstuffs with other manufactured goods, we would find that approximately 50 per cent of American manufactured products are exported to Europe.

"The importance of Europe as a market for American manufactured products is even more clearly indicated when we consider the chief groups of articles which make up our export of manufactured goods. To enumerate only a few of our important manufactures may be interesting. In the year 1913–14 60.3 per cent of American exports of agricultural implements was sent to Europe; 17.1 per cent of electrical machinery and appliances; 72.6 per cent of cash registers; 62.9 per cent of adding machines; 46 per cent of sewing machines; 72.7 per cent of typewriters; 39.9 per cent of tools; 2 per cent of all other machinery, including metal working, textile, mining, and other types of machinery. Iron and steel manufactures other than machinery also depended upon Europe to a very large degree for markets. Of such highly fabricated articles, for example, as pipes and fittings, Europe took 20.8 per cent of our exports; 9.3 per cent of structural iron and steel; and 28.6 per cent of miscellaneous iron and steel manufactures.

"Even in such highly specialized goods as scientific instruments and apparatus, Europe took 39.8 per cent of our exports; 41.2 per cent of our musical instruments went to Europe; 58.5 per cent of motor cycles; 36.9 per cent of automobiles. It is rather surprising that in the group of chemicals, drugs, dyes, and medicines, 26.7 per cent of our large exports went to Europe. Paint exports to Europe constituted 38.8 per cent of our total trade in that commodity; glass and glassware, 17.5 per cent; rubber goods, 41.8 per cent; leather manufactures, 25 per cent; paper and paper manufactures, 18 per cent; cutlery, 32.4 per cent; clocks and watches, 36.2 per cent. In fact, a list of our most important exports of manufactured goods shows, with few exceptions, that Europe was the dominating market.

EXPORT OF EUROPEAN MANUFACTURES TO UNITED STATES.

"Imports of manufactured goods from Europe during the period of 1910 to 1914 constituted 61.4 per cent of our total imports from Europe. This was 72.7 per cent of the total import of manufactured products of the United States. Since Europe's chief export to the United States has been and must continue to be manufactured goods, the revival of Europe's ability to manufacture and to sell those manufactured goods in the United States is not only one of the indispensable requisites for the revival of European prosperity but also a very important factor in improving economic conditions in the United States. Before the war European-United States trade was resting largely on the exchange of Europe's manuafctured goods for goods manufactured in the United States as well as for foodstuffs and raw materials. Before the war American exports of manufactures to Europe were growing more rapidly both in quantity and in relative proportion to our total trade than any other group.

"At the same time—and largely making it possible for our exports of manufactured goods to Europe to develop—Europe was sending manufactures to the United States. Whatever interferes with Europe's ability to export manufactures to the United States must inevitably prevent the United States from exporting to Europe. Europe must depend on manufactured goods to pay her imports. She has comparatively little exportable surplus of other goods. To that degree, therefore, that the manufacturing industry of the United States depends on foreign markets for its full revival, it must largely depend upon the revival of European manufactures.

"Europe's ability to buy is largely conditioned by her ability to sell; and she must sell manufactures—the material she has in largest surplus to sell. Since the export of manufactured goods constitutes the most important and the most rapidly growing part of American export trade, and since Europe is and long has been the principal market for those manufactures, there is a vital relation between the development of American trade and American industry to supply that trade and the development of Europe's manufacturing industry.

"But not only will the revival of manufacturing industry in Europe stimulate directly the trade of the United States with Europe; it will also stimulate United States trade with other parts of the world. Other sections of the world are depending in large degree for their revival upon the resumption of manufacturing in Europe, making it possible for European countries to buy raw materials and foods which the rest of the world has to sell and upon the selling of which world prosperity so largely depends."

Mr. JONES of New Mexico. Much has been said in recent years regarding our trade with Latin America. It is an interesting fact that the supremacy of the United States in Latin American trade was already assured before the war. We lead both England and Germany in the export trade to the 20 Republics in Latin America, and our imports from these Republics nearly equaled the combined purchases of the United Kingdom and Germany. Since the war our position has been materially strengthened, but perhaps the most important thought is that even before 1914 our supremacy was clearly established. The Department of Commerce has prepared some statistics showing the competition in Latin American trade. The table of these statistics I ask may be inserted in the RECORD as a part of my remarks without reading.

The table referred to is as follows:

Competition in Latin American trade.

IMPORTS INTO LATIN AMERICA.

	1913		1920	
	United States currency.	Per cent.	United States currency.	Per cent.
Total from all countries	$1,283,703,000	100	$2,679,579,000	100
United States	310,717,000	24	1,332,449,000	50
United Kingdom	304,843,000	23	440,400,000	16
France	176,896,000	14.5	117,921,000	4
Germany	284,439,000	22	64,528,000	2

EXPORTS FROM LATIN AMERICA.

Total to all countries	$1,535,467,000	100	$3,238,102,000	100
United States	463,869,000	30	1,643,287,000	51

France	130,206,000	9	201,575,000	6
Germany	192,938,000	12.5	53,217,000	2

Mr. JONES of New Mexico. From July 4, 1789, the date of the first tariff act of the United States, down to the year 1842 the balance of trade was against the United States. We were then a young country and dependent to a considerable extent upon foreign countries for the means of our development. Since the tariff act of August 30, 1842, down to the present time the balance of trade under each tariff act has been in favor of the United States. I ask to have inserted as an appendix to my remarks a table showing the balance of trade from the beginning of the Republic down to and including the calendar year 1921. (See Appendix B.)

Prior to the World War we were a debtor Nation, and the balance of trade in favor of the United States was settled by sending abroad our commodities in payment of interest, expenses of tourists abroad, and other items which will occur to all. Foreign countries were glad to get commodities from us in payment of our indebtedness to them. For the years 1914 down to and including 1921 the average annual balance of trade in our favor has been $2,563,792,677, making a total for these years of more than $20,500,000,000. About one-half of this balance of trade was adjusted by the amount of the loans from the United States to foreign Governments during and since the war. Much the greater portion of American securities which were held abroad prior to the war have been resold in the United States. The American Red Cross and other philanthropic organizations contributed large sums in aid of foreign nationals. Immigrants in the United States remitted very substantial sums to their relatives in foreign countries. Since the war there has been a large investment of private American capital in foreign securities. Our manufacturers and others engaged in exporting American products have been and are carrying large unfunded accounts. Such methods have made it possible to finance our foreign trade.

The Federal Reserve Board has prepared an estimated international balance sheet for the years 1919 down to June, 1922. On the creditor side of this sheet is shown the excess exports of merchandise and other net exports amounting to the total sum for the period of $10,491,000,000. On the debtor side of this sheet appear the items by which the account is balanced. Special attention is called to the fact that notwithstanding our imports of gold and silver United States currency, payments by the United States Government on account of international loans, private investment of American capital abroad, American securities resold to the United States, immigrants' remittances, relief furnished by the Red Cross and other organizations, and tourists' expenditures, there is a credit balance which is carried by our merchants, manufacturers, and bankers to the extent of $2,809,000,000. I ask that this balance sheet may be printed in the RECORD as a part of my remarks without reading.

The table is as follows:

Estimated international balance sheet of the United States.

[In millions of dollars.]

Items.	1919	1920	1921	January to June, 1922.	Total January, 1919, to June, 1922.
UNITED STATES, CREDITOR.					
Excess of exports over imports of merchandise	4,016	2,949	1,976	401	9,342
Net exports of gold and silver	441	.....	.....	.....	.....
Net exports of Federal reserve notes	91	103	.....	.....	194
Net interest payments receivable	60	125	200	125	510
Net ocean freight payments receivable	220	140	65	20	445
Total	4,828	3,317	2,241	546	10,491
UNITED STATES, DEBTOR.					
Net imports of gold and silver	.....	70	679	116	424
Net imports of United States paper currency	.....	.....	125	50	175
Net international payments of United States Government	2,375	305	18	.....	2,698
Net private investment of American capital abroad	300	235	500	650	1,685
American securities resold to United States	150	125	50	25	350
Immigrants' remittances and relief	600	700	400	200	1,900
Tourists' expenditures	50	150	150	100	450
Total	3,475	1,585	1,922	1,141	7,682
Net additions to unfunded credit balance of the United States	1,353	1,732	319	[1] 595	2,809

[1] Excess of debits over credits.

Mr. JONES of New Mexico. If we are to continue exports how shall the accounts be liquidated? During the war and since, foreign countries have been sending us all the gold they could spare, and this country now has nearly one-half of all the gold in the world. We also own about one-half of the diamonds in the world. Art treasures and even heirlooms from foreign countries have been sold in the United States in large quantities.

Almost every day we hear of some foreign government putting up its tariffs and otherwise raising obstacles against the influx of American commodities. We hear much of retaliatory measures taken by foreign countries and contemplated by them, induced largely by the pendency of the tariff bill which is now being considered in the Senate. Should we not weigh all these problems which so directly involve the welfare of the United States and concerning which the passage of the proposed tariff law is such an important factor?

Many of the problems which I have suggested gave us little concern prior to the World War. Tariff making, while complex, was relatively simple compared with present problems. We now have to think of unstable governments, unstable exchange, general business depression throughout the world, the World War debts, changes in industry, new industries, new markets, our increased development, our merchant marine, and our balance of trade. We are now in a new era, fraught with many and varied problems of world economics and world civilization. We can not live in the past, but must live in the present and make our plans for the future.

Under these conditions the present tariff bill is presented. No one can measure its effect. Notwithstanding the Tariff Commission has rendered useful service and done all that could have been expected of it with the meager appropriations allotted, with its limited authority, and the war conditions which have prevailed since its organization, relatively little of the necessary information has been furnished or is presented in connection with the bill. Apparently no thought was given by the framers of the bill to many of the questions which I have suggested or to others which must occur to any student of the subject. Doctor Taussig, a Republican and a great economist, in his Tariff History of the United States, tells us something of how the Payne-Aldrich law of 1909 was framed. He says:

> The whole situation was one too familiar in our tariff history; the details of legislation had been virtually arranged by persons having a direct pecuniary interest in the outcome, and having also the closest relations with the legislators controlling the outcome. Even though there was no corruption—and there is no ground for suspecting anything more than generous contributions to party chests—the outcome was much the same as if there had been corruption. It illustrates once more how radically bad was the method by which the details of our tariff legislation were settled.

My mind adverted to the above passage from Doctor Taussig by reason of the remarks made in the Senate on July 28 in the discussion of this bill by the great and venerable Senator from Minnesota [Mr. NELSON], who said:

> I had hoped, Mr. President, that protection would not run mad, as it has done. I have sat here quietly. I have voted for many schedules here that I felt were entirely unjustified, hoping against hope that there would be a modification, but every once in a while it seems that the Finance Committee meet, and they come in here with their program for an increase or a change. They get new light as a result of new hearings. I never in all my life saw such a swarm of men as were around the Finance Committee while they had this bill before them. Day after day they came there with their handbags. They swarmed in the corridors, and the bill indicates that most of them got their work in well.
>
> I am very sorry that the committee have gone to such extremes as they have.

Mr. President, prior to the World War there was a growing sentiment demanding that the tariff should be taken out of politics and that tariff making should be based upon scientific principles. Since the war a change in the system of tariff making has become a matter of vital necessity. I do not believe that it is possible to lay down any iron-clad rules of universal application for the making of what might be called a scientific tariff, but I do believe that a situation can be brought about which will to a large extent get the tariff out of politics.

During the course of the present debate there have been proposed in the Senate methods of revising the tariff that differ radically from the method that has prevailed in the past, including the preparation of the present bill. They may be taken as indicating a widespread belief in Congress and in the country that the old method can not effect and continue for a reasonable length of time to maintain a proper adjustment of the tariff to the country's commercial and industrial needs. The reasons for this belief need not be discussed here. The nature and causes of the defects in the old method are obvious and are freely admitted by thoughtful men of all parties and all interests.

The new methods that have been brought forward, all purporting to "take the tariff out of politics" and to provide for a ready and accurate adjustment of duties under any general

policy that Congress may determine, are alike to the extent that they include as the central and dominating feature a provision for fixing duties on the basis of the difference between domestic and foreign production costs.

There is no doubt that this theory of tariff making has won a wide acceptance in the United States. From the point of view of the protectionist it is moderate, it is fair, it provides for as much protection as domestic industries need, and for no more, and it would fix rates at that competitive point where a substantial revenue would be secured for the Government. But it is only a theory, owing in part to the difficulties in the way of its practical application and in part to the fact that in many cases other matters must be considered in addition to production costs before rates of duty can be made to conform to the best interests of the country as a whole.

Without undertaking an exhaustive discussion of this theory some of the difficulties met in efforts to apply it may be mentioned.

First among these is the fact that for the overwhelmingly greater part of the articles that enter into commerce the exact costs of production can not be ascertained in a reasonable time and at a reasonable expense. There are, indeed, some industries with simple processes resulting in a single product whose costs are readily found; and there are in many industries a few exceptional plants with a scientific organization and a well devised system of accounting where costs may be allocated to the different products with a fair degree of accuracy. But these are not representative of the great body of producers in any country. In modern industry most processes result in a number of joint products and by-products, and the costs incurred can be distributed among them only by arbitrary allocation. To the producer this is a matter of relatively little importance as the total cost and the total yield are what concern him. But to the tariff maker it is a matter of vital importance if the exact cost of an article is to determine the duty on it. This is as true of many agricultural operations as it is of manufacturing. When the cattleman, for example, delivers his animals for slaughter he does not know and he does not care how much of the costs which he has incurred should be imputed to the hide and how much to the carcass. Clearly any cost allocation among these products of the industry is purely arbitrary. This is well illustrated by the studies of the cost of wool growing made by the Tariff Board during President Taft's administration, and by the present Tariff Commission. The former Tariff Board made the most extensive and careful investigation of the conditions and the costs of sheep husbandry that was ever undertaken. But its method of determining what part of the costs should be imputed to wool and what part to mutton and lamb has not been generally regarded as satisfactory. That method consisted in deducting from the total costs incurred on a flock all the receipts for sheep and lambs sold, and then dividing the balance by the number of pounds of wool produced. This made it appear in some cases where there were large sales of lambs that the wool had cost actually less than nothing. The fallacy of this method of cost distribution seems self-evident.

The present Tariff Commission, therefore, after ascertaining total costs allocated them to wool and to lambs in proportion to the cash receipts of the producer from these two sources. This method is open to the objection that the number and price of lambs may rise or fall, and thus receipts from this source may grow or decline without corresponding changes in the case of wool. Under such a system of accounting when a good lamb crop is sold at a favorable price the cost of production of wool goes down and that of lambs goes up, while a poor lamb crop and a low price by a curious paradox would greatly reduce the cost of growing lambs and increase the cost of growing wool. To the sheep raiser it is a matter of no practical importance how much of the costs should be theoretically imputed to one of these joint products and how much to the other. But when a duty is to be placed on each of them and those duties are to be based on the cost of production it becomes a matter of vital importance. An arbitrary method of cost allocation such as was used by the Tariff Board or by the Tariff Commission gives results that are sufficiently accurate for most business purposes but surely are not exact enough to serve as the sole basis for levying duties.

The difficulties thus arising in the case of a relatively simple pastoral industry are multiplied many times in the more complicated organization that distinguishes most branches of manufacturing. Men who are at all familiar with accounting methods know that they vary widely from plant to plant. The costs of certain processes and products shown on the books of one establishment frequently differ by 50 per cent or more from the costs shown on the books of another. It is true that much of the trouble arising from this fact would be removed if and when a uniform system of accounting could be imposed on all producers of a particular article. But aside from the time, the cost, and the doubtful success of efforts to do this, it would frequently show misleading results. For example, what is the chief product of one plant is often the by-product of another, and no uniform system of finding costs could be fairly applicable to both. The business policy of going concerns in our established industries, the size, the organization, the construction, the degree of dependence on allied branches, show an infinite variety, and yet all must be given consideration in their accounting. It is not too much to say, therefore, that the forcing upon them of any uniform system would upset and seriously endanger the prosperity of many hitherto successful establishments.

It should be remembered, furthermore, that to all the troubles of whatever nature arising in the study of domestic costs there are added others yet more serious when a study is attempted of costs abroad. Government agents may be empowered to demand from domestic producers statements, access to books and accounts, and information of any conceivable kind. But from foreign producers only such information may be procured as is published, as can be deduced from a general investigation of an industry, or as good will and the hope of trade benefits may induce producers to furnish. It can scarcely be supposed that British, German, Japanese, or any other foreign manufacturers would afford to American investigators information which might lead to heavier duties on their products, and which would frequently expose their most intimate trade secrets. This is borne out by the experience of all who have attempted foreign investigations. It follows that statements of foreign costs are estimates that at best must lack in precision and exactness.

In view of these facts is it safe to rely exclusively upon cost difference as the sole measure of duties? Is it not necessary to check cost investigations and to supplement them by investigations of other trade conditions? That they are helpful, and always desirable, in making a tariff is undoubtedly true. But it is equally true that they are not sufficient by themselves.

A second difficulty in applying this theory is found in the fact that however exact our knowledge of costs may be, it is enough to show that they differ widely from plant to plant and from time to time. For example, a report of the Tariff Commission shows that beet sugar, one of the relatively few articles for which exact costs can be learned, is produced in this country at very different costs, rising from a total of $63.58 a ton for one factory to a total of $155.36 for another; and this wide divergence does not appear to be exceptional. Similar divergencies, though seldom so great, persist in all fields of production. Now, what figure among so many are we to take as the "domestic cost of production"?

It is obvious that the higher the figure taken the larger will be the percentage of protected establishments in industry. But the most ardent protectionist would hardly urge a duty high enough to protect producers whose high costs are due to unwise location, inadequtae equipment, extravagant methods, or poor management. Neither would the average cost always prove to be the right one; for it might well subject to destructive competition a half or more of those engaged in the industry, among them in many cases deserving men whose high costs are due to experiment, research, and innovations that contribute most to progress. In short, even when exact costs of production are ascertained they are found to vary between wide extremes, and serious matters of general economic welfare and of public policy are involved in determining just what figures between these extremes are to be taken as the "domestic cost" and the "foreign cost" of production.

There is a third difficulty which has been suggested a number of times in the present debate, and that is the difference in the cost of production in a given foreign country as compared with the cost of production of other foreign countries. It is evident that if the tariff should be fixed so as to equalize the difference of the cost of production in the foreign country of lowest cost it would amount to an embargo against other countries having higher cost.

At the present time domestic costs are unstable and some foreign costs are violently and rapidly changing. How should we deal with such conditions?

Without enumerating further difficulties in applying the suggested theory of tariff making, is it not clear enough from what has been said that duties can not be fixed by a simple mathematical measure; that we should not give too strict and

literal an interpretation to the proposition that duties shall be based on the difference in costs of production in this country and abroad? What those who advocate this theory really have in mind is the general thought that when foreigners contributing to our markets enjoy advantages over Americans engaged in an established, reputable, and desirable industry, those advantages should be offset by a duty on their products. This is a broader and a much more feasible proposition. To give it application, however, requires investigation, and the investigation should not and can not be limited to costs.

In any attempt to apply the rigid rule of difference in cost many other questions arise. A choice must be made between many domestic costs and many foreign costs for the same product and great discretion is needed in making that choice as a basis for duties. A wise decision is impossible without a careful investigation of the organization of industries, their methods and processes and their general efficiency. To protect antiquated processes and obsolete equipment would be to subsidize stagnation and to put a premium on inefficiency. Unless the organization of the industry, the degree of interlocking control, the possibility of monopolistic tendencies are known, it is impossible to determine whether domestic competition has a normal influence in keeping down costs and stimulating improvements. No mere ascertainment of costs without due regard to these things can be considered sufficient for determining the tariff.

Again, it is as important to analyze the nature of the costs incurred in production as it is to ascertain their total amount. It is hardly too much to say that in all nations at the present time the regulation of industry and trade at least pretends to keep in view before everything else the necessities of the laboring classes who constitute the greater part of the population. Therefore the rates of wages in industries, the ratio of labor costs to total costs of production and the probable effect on wages of changes in duties are considerations both of economic and of political importance. The distribution of costs, therefore, as among the labor employed, the material used, the overhead and fixed charges and other items of varying importance must be examined with intelligence and impartial judgment before the point is fixed that should be taken as the basis for duties.

Any discussion of the difference in cost of production for the purpose of tariff legislation is necessarily restricted to commodities having at least a substantial degree of comparability. Last year the Congress appropriated $100,000 for the purpose of comparing prices in the United States of domestic and foreign products. An attempt was made in a thorough way to obtain the desired information, and we have had placed before us the Reynolds report, showing what information was gathered. From this report it appears that not more than 25 per cent of the prices obtained were prices of comparable articles, although the prices of such articles were what was being sought. There were such differences in class, kind, quality, and design as to destroy their comparability. No one has suggested how an investigation of the difference in cost would suggest the rates of duty which should be imposed upon works of art, literary productions, diamonds, and innumerable articles which do not compete with articles of domestic production.

Another matter of vital concern is the degree to which an industry is capable of supplying the needs of the people to a reasonable amount and at reasonable prices. It is possible—and indeed some examples have been brought forward in the present debate—to turn out in this country a limited amount of more or less exotic products. Industries of this character, started sometimes as an experiment, tempt men to make permanent investments and devote labor to producing articles at a great cost that it would have been better for them and for the country if they had never tried. They can be continued in business only at the expense of the public in the form of high prices that have to be kept up permanently by shutting out foreign supplies through the help of the tariff. If such an industry is truly an "infant industry" and shows promise of future growth sufficient to supply the market at reasonable prices, the question of equalizing its costs with foreign costs by means of a duty may be fairly considered. But surely the present capacity of the industry and its future possibilities should be carefully investigated before its products are given a heavy duty that must always remain as a perpetual burden on the public. It might be invidious in the present connection to mention by name some industries of this character, but examples must occur to all who have followed the present debate.

Again, there are certain industries for which our supply of raw materials are known to be limited in amount. It is possible by means of heavy duties to hasten the exploitation of these materials, and thus in a few years to denude the country of supplies that in time of war or other emergency would be vitally necessary. Previous to the recent war "conservation" was a popular word in our language. Have we forgotten all that it connotes, and are we willing by equalizing foreign and domestic costs in these industries of limited supply to stimulate exploitation and to weaken the Nation's future strength? Surely, before fixing such a duty a wise public policy demands a careful investigation of industrial capacity as emphatically as of industrial costs.

And now it may be asked whether any investigation on which a tariff is to be based can be considered as complete unless it has given attention to prices. In view of the inexactness of our knowledge of costs, particularly of foreign costs, is it not necessary to check what we do know by a comparison of prices? Is there any other way to discover the practice of "dumping," to which men of all parties are equally opposed? Above all, is it not here that the interests of the consumer deserve and demand attention? The numerous reasons for supplementing an investigation of costs by an investigation of prices seem too obvious to require discussion.

Attention also should be directed to the fact that there are some industries that altogether, regardless of cost, it is contrary to public policy and the good of the country that our people should maintain, while on the other hand, equally regardless of cost, there are some that the interests of the public welfare require us to foster. In the first group are some industries so notoriously harmful that they are actually prohibited by law. But in addition to these there are others that cater mainly to frivolous and extravagant tastes, sometimes even to demoralizing habits or to physical or social excesses, though not in such obvious and large degree as to make them amenable to the law. Such industries divert labor and capital from other more useful enterprises, and it can hardly be claimed that they are all equally entitled to aid at the hands of the Government. Should not these facts be given consideration as well as the costs at which the products of such industries are turned out? In the other group are all those industries that every country must maintain to defend its independence against aggression. This group includes also what recently it has become common to style "key" industries. No one is opposed to maintaining such industries, whatever their costs may be. But there is room for serious disagreement as to just what is a "key" industry and as to just how necessary some other industry actually may be to the preservation of our safety.

This disagreement can be removed only by a broad and painstaking examination of the nature of the industry involved, its significance for naval and military operations, the degree to which its products are essential for the prosperity of other industries, and in general the importance of the part it plays in the smooth functioning of the Nation's whole industrial system.

Any tariff law framed solely upon the basis of the difference in cost of production has and can have but one object in view; that is, the granting of aid to domestic industry and totally ignoring whatever effect such action would have upon the Federal revenues, our international trade, and the cost of living. As has already been shown, these are such important factors in our present economic life that they can not be ignored without baneful results to our future welfare and prosperity.

Enough has been said to show how much more than the cost finding alone is involved in making the tariff. Wide, careful, and thoroughly unprejudiced and impartial investigation is required, and by its results vital questions of public policy are to be determined.

Who shall make the investigation, and who, using the results, shall determine the matters of policy? Common sense tells us, and experience has fully proved, that Congress can not make the investigation that is necessary. Time and labor and the special aptitude for work of this kind has not in the past been sufficiently available in Congress, whose Members have too many other duties to be able to devote themselves exclusively to this exacting task. It seems unavoidable that the investigation should be intrusted to a commission adequately equipped to conduct it.

But a commission should not be empowered itself to fix the rates of duty in the tariff law. Aside from the doubtful constitutionality of intrusting this power to a commission under any kind of limitations, too much is involved in tariff making for which Congress only and wholly is responsible to justify its delegation to any other agency, even to the Chief Executive himself. We must not forget that the power to make a tariff

is the power to tax. And it is much more than that. What I have said has been said in vain if it is not clear that tariff making involves vital matters of public policy which Congress would be derelict to its duty if it be turned over for settlement to any other agency whatsoever.

The proper course, then, is that the results of the investigations should be reported to Congress. But the reports should be in such form as to make it possible for Members of Congress to understand and to use them. Nothing is more apparent than the utter and wasteful futility of the thousands upon thousands of pages of Government reports coming to every Congressman because it is physically impossible for him to glance through them even if he devoted to it every waking hour of the day. The Tariff Commission's report should begin with a statement of the rate of duty which it would recommend. It should then adduce in language as clear and concise as possible the evidence collected by its investigation which, in its opinion, proves that the rate named should be adopted. The nature of such evidence would necessarily differ in different cases, but whether it is sufficient or not must be left for Congress to decide. The report should also set forth such pertinent facts, uncovered by the investigation, bearing upon organization, efficiency, and other relevant matters as should be given consideration in determining duties. But while such in general should be the nature of the commission's reports, they need not be cast in a mold so hard and fast as to limit the freedom necessary to make a full and true exposition of all relevant facts and any questions of public policy which may be involved.

With facts thus presented in an intelligible and concise manner, facts ascertained after thorough investigation, it would be possible for Congress to legislate on the tariff with a feeling of confidence that it knows what to expect from any action that it may take.

Mr. President, such a plan might not remove tariff making entirely from politics, but it would provide information which would enable any Congress to frame an intelligent tariff law upon any theory which it might adopt. Moreover, it is my judgment that most of the controversies which have arisen in the past regarding tariff legislation have arisen because of the lack of definite information as to facts and as to consequences. No one will openly advocate the creation of monopolies through tariff legislation, and, on the other hand, no one will openly advocate the destruction of any industry which is being prosecuted in a proper way and for the benefit of our country. Furthermore, what the business world needs more than anything else is a feeling of security. Frequent changes of duty, "tinkering with the tariff," slight changes made merely to effect a theoretically perfect adjustment, are apt to do more harm by upsetting calculations and business commitments than they can possibly do good by promoting a minor sort of abstract justice. As changes arise in the fields of industry and commerce, or as other exigencies may occur that render some of the duties fixed in the law no longer applicable to the altered conditions, the machinery should be provided whereby the Congress could intelligently change the law for a definite and fixed purpose. There has also been some demand for what is called a flexible tariff. For the reasons which I have heretofore given, I know of no advisable way of bringing about flexibility other than through action by the Congress from time to time when it shall be made to appear, after full investigation as heretofore discussed, that such changes are necessary.

For the purpose of removing the tariff from politics as far as possible and to prevent the enactment of a general revision of the tariff laws without definite information as to the reasons for such changes or the effects of such changes, and for the purpose of avoiding a general disturbance of business by a general revision of the tariff at this time, a few days ago I offered the amendment which is a substitute for this bill. This amendment is a revision and extension of the powers now conferred by law upon the Tariff Commission. All Senators have been furnished with a copy of the amendment, and I therefore ask that it may be printed in 8-point type as an appendix to my remarks without reading.

The PRESIDENT pro tempore. Without objection, it is so ordered.

(See Appendix C.)

Mr. JONES of New Mexico. I deem it unnecessary to discuss at this time the detailed provisions of this amendment. I feel certain, however, that if it be adopted the Tariff Commission will have full power and authority to make such investigations, such analyses, and such reports as I have indicated to be necessary to the intelligent understanding and enactment of tariff legislation by the Congress. I believe it is generally agreed that the Tariff Commission has been seriously hampered in its work by reason of insufficient funds. I have therefore provided for an increase of the present appropriation for the Tariff Commission from $300,000 to $1,000,000 per annum.

It is generally conceded that the present bill is unsatisfactory and it does not appear that there is any necessity for its passage. During the war some foreign countries, notably those of South America and Australia, were not able to obtain transportation for their commodities and a large surplus was accumulated. Those countries in the main were producers of agricultural products. When the channels of trade were opened after the war those surplus products sought markets wherever they might be found. Much of them were brought to the United States and thereby contributed largely to the demoralization of prices for our domestic agricultural products. A situation was presented which demanded and received appropriate action by the Congress in the enactment of what is known as the emergency tariff law. I assisted in framing and passing that law and it has been made permanent legislation. It will stand until it is repealed. That law placed a substantial duty upon all agricultural products, with few exceptions, and in my judgment it is far better for the agricultural interests of the country to let the law remain as it is rather than accept the unjustified provisions of the bill which we are now discussing. From a purely selfish standpoint except as to a very few items the agricultural interests of the country will secure no substantial additional advantages under the proposed bill if it should become law. Under the provisions of this bill the duties upon wool and wheat are reduced below the rates of the present law. The bill as it came from the House provided for a greater reduction than that adopted by the Senate. The rates of duty upon cattle in the bill as it came from the House are less than the present law. The rates fixed by the Senate, while changed from ad valorem to specific, are substantially the same.

The tariff upon sugar, corn, and beans as now provided by this bill as it passed in the House and was recommended to the Senate is the same as under the present law. It will thus be seen that upon the principal agricultural products there is no substantial advantage to be gained by the enactment of the pending bill into law. There are considerations, however, which demand the attention and are of great concern to the agricultural interests of the country. The duties upon manufactured products have been increased far beyond the provisions of the present law. The chairman of the Finance Committee [Mr. McCUMBER], in referring to this matter, on July 12 said:

> Notwithstanding the fact that rates are higher upon agricultural products than ever before, those rates do not anywhere nearly measure up to the duties which are given for the protection of manufactured articles other than agricultural.

There are now no imports of agricultural products of such quantity as to affect the prices of American commodities. The importations of frozen meats to the United States have ceased. Of such importations which caused so much concern soon after the termination of the war, more than 60 per cent were reexported. They were not of such kind and quality as to be acceptable to the American consumers. The prices of meat products in recent months have been increasing. The real concern, therefore, of the agricultural producers should be directed to the high prices which are being charged and will be charged for manufactured products if the present bill should become law. While according to the latest reports animal products are but little higher in price than prior to the war, while corn is lower in price than prior to the war, the average prices of all commodities, including these low-priced farm products, is more than 50 per cent above the pre-war prices.

It is my contention that the manufacturers of the country are not justified in generally insisting upon higher duties than under existing law. It appears that wholesale commodities, other than farm products, are now, or were in April of this year, 72 per cent higher than prior to the war. A comparative table showing the valuations of the prices of wholesale commodities down to and including April of this year as compared with the prices of farm products, and showing the purchasing power of the farmer's dollar, appeared in The Producer for July, 1922. This table should receive careful consideration by any manufacturer who is seeking to have the duties upon his products raised and which he expects to sell to the farmers and other consumers of the United States. According to this table, in April of this year the price of all farm products was only 15 per cent above the 1913 price, while the price of all wholesale commodities was 72 per cent above the pre-war price and the farmer's dollar was only worth 67 cents. Mr. President, I ask that this table be printed as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	Price of farm products.	Wholesale commodities.	Purchasing power of farm products.
1913	100	100	100
1914	106	96	110
1915	102	96	106
1916	118	122	96
1917	186	168	110
1918	208	188	111

Mr. SIMMONS. Mr. President, I am very much interested in the table, but I do not know that I caught the significance of it. As I understood the table it shows that farmers' prices have advanced 15 per cent.

Mr. JONES of New Mexico. In April of this year farmers' prices on an average were 15 per cent above 1913 prices.

Mr. SIMMONS. The pre-war prices?

Mr. JONES of New Mexico. The pre-war prices.

Mr. SIMMONS. How about the prices of other commodities?

Mr. JONES of New Mexico. The prices of other commodities were at that time 72 per cent above the 1913 prices.

Mr. SIMMONS. The date from which the Senator calculated the farmers' prices was August?

Mr. JONES of New Mexico. I calculated from 1913, but the present prices were figured from April of this year.

Mr. SIMMONS. That is a little bit more than a year after the emergency tariff law went into effect.

Mr. JONES of New Mexico. It is, and even at that time the farmer's dollar was worth only 67 cents. The prices of manufactured articles are still so much higher than the prices of agricultural products that it leaves the farmer's dollar, measured by his products, worth only 67 cents.

Mr. SIMMONS. I suggest to the Senator that if he could get the figures showing the advances in the farmers' prices, if any, over the pre-war prices, on May 27, 1921, when the emergency tariff act was passed, and the advances in other prices up to that date over the pre-war prices, his table would be exceedingly illuminating.

Mr. JONES of New Mexico. This table includes that. It takes in the year 1913 and every year since that date, down to and including the month of April of this year.

Mr. SIMMONS. I shall be very much interested in examining it.

Mr. JONES of New Mexico. I am sure the Senator will, and it will be found very illuminating to anyone who desires to be informed on this subject.

There has been much depression in industry in the United States, as there has been all over the world. But there is no sufficient evidence to show that any industry in the United States is being seriously affected by reason of importations. Moreover, world prices and conditions are such that the industries are not and can not be menaced by importations. We have index tables for the principal countries of the world from which we might expect competition. While, as I have stated, the prices of manufactured products in the United States are far above pre-war prices, we find that in Canada, England, France, and Japan, after making allowance for exchange, prices are much more above the pre-war prices than they are in the United States.

Mr. SIMMONS. That is one thing I have asserted heretofore, that prices in other countries have advanced equally as much as prices in this country have advanced, if not more; but that has been denied vociferously on the other side of the Chamber.

Mr. JONES of New Mexico. I get my information from official sources, gathered by the Department of Commerce.

Mr. SIMMONS. I am not calling into question the Senator's data. I think they are absolutely correct. I was simply calling attention to the fact that, largely to meet the exigencies of the situation, I suppose, the other side have been calling those figures into question.

Mr. JONES of New Mexico. I think the Senator has very accurately diagnosed the situation.

The Federal Reserve Bulletin for February, 1922, discusses the foreign trade of England and contains a statement showing the percentage deficiency of quantity in 1921 compared with 1913. This statement gives the names of the commodities whose export value exceeded £5,000,000 in 1913. The result appears that of such commodities exported in 1921 there was an average decrease of 53.9 per cent. Mr. President, I ask that this table, which is very short, may be inserted at this point as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Commodities whose export value exceeded £5,000,000 in 1913.

Percentage deficiency of quantity in 1921 compared with 1913:	
Food, drink, dutiable	—48.4
Coal	—75.9
Earthenware, glass, abrasives, etc	—49.2
Iron and steel, and manufactures thereof	—64.7
Nonferrous metals, and manufactures thereof	—33.2
Cutlery, hardware, implements, and instruments	—53.3
Machinery	—25.9
Cotton yarns and manufactures	—60.3
Woolen and worsted yarns and manufactures	—49.3
Manufactures of other textile materials	—63.1
Apparel	—70.8
Chemicals, drugs, dyes, and colors	—60.3
Vehicles (including locomotives, ships, and aircrafts)	—21.1
Total, all classes	—53.9

Mr. JONES of New Mexico. Reference has often been made during the discussion of this bill to competition from Germany, and it must be apparent to all those who have listened to this discussion that this bill was framed with German conditions furnishing the chief excuse for many of the proposed increased duties. It is a fact, however, that Germany in the last eight months of 1921 exported only 40 per cent of the tonnage shipped during the corresponding period of 1913. During the same period the total production in Germany was only 60 per cent of that for the corresponding period prior to the war. It is also established by official reports that only 7.1 per cent of the exports from Germany reached the shores of the United States. This ratio is precisely the same as the figures given for the per cent of Germany's total exports to the United States in 1913. Moreover, every day we read of conditions in Germany which indicate almost a total collapse of German industry.

Mr. SIMMONS. I hope the Senator will pardon me, but he is discussing a matter which I think has not been sufficiently developed, and I am very glad he is developing it, and is now fortifying his position by the citation of official data. Did the Senator give the percentage of German exports which come into the United States?

Mr. JONES of New Mexico. Only 7.1 per cent of the total German exports reached the United States in 1921, and the same percentage of those exports reached the United States in 1913.

Mr. SIMMONS. The Senator probably has answered, by his table, what that 7 per cent amounted to in dollars.

Mr. JONES of New Mexico. In some of the tables which I previously introduced to be printed in the RECORD I have given a statement of the classes of these commodities imported and exported from this country.

Mr. SIMMONS. My recollection is that the total for the year 1921 was something around $80,000,000.

Mr. JONES of New Mexico. The Senator is quite right. The total exports from Germany to the United States during 1921 were only a little more than $80,000,000, while our exports to Germany for the same period were nearly $400,000,000.

Anyone who is familiar with world conditions, including the conditions in the United States, must realize that no benefit may be expected, but in all probability there will be many baneful results from a general upward revision of the existing tariff laws. Until the recent strikes we were reading every day of increased activity in substantially all the manufacturing industries. Unemployment was continually decreasing. This increased activity, however, was due principally to the increased demands of the American consumer.

The time had come when the consumers of America were compelled to buy in order to meet their necessities. There is little hopeful prospect, however, that our export trade will revive in the near future. Of course, foreign countries will continue to purchase to a limited extent things produced in the United States which they must have in order to sustain life. But the ability of foreign countries to buy from the United States is relatively exhausted. We have their gold, their diamonds, their art treasures, and even their heirlooms. Their ability to obtain credits in the United States is about exhausted. Obstacles in the way of laws and regulations are continually being raised in foreign countries against imports from the United States. The quantities of farm products as

well as manufactured products in the United States which must find markets abroad in order to permanently revive the industry of the United States have been heretofore shown.

Apparently no intelligent consideration was given to these matters by the Finance Committee. The chairman of the Finance Committee, in reporting this bill to the Senate, suggested that the farmers of this country should quit growing the products of which the United States produces a surplus. He advised the wheat growers to stop raising wheat and to raise flax. That admonition, of course, was intended to embrace every industry in the United States which was producing a surplus. It is only upon the theory of the isolation of this country from world trade that this bill can be supported.

Mr. President, a great many of the criticisms which I have made of this bill have been supported by a number of Republican Senators and in the editorials of all the leading newspapers of the country. I have prepared some excerpts from the remarks of Senators and these editorials with a few explanatory comments. I ask that these excerpts, editorials, and brief comments may be printed in the RECORD, without reading, immediately after the conclusion of my remarks, in 8-point type.

The PRESIDENT pro tempore. Without objection, it is so ordered.

(See Appendix D.)

Mr. JONES of New Mexico. Mr. President, I submit that in all history of tariff legislation there can be found no instance where a tariff bill, during its consideration, received such universal condemnation as has the bill now under consideration. Generally speaking, its active support outside of Congress comes from only those who are obsessed by unreasoning fears and who hope to derive some individual pecuniary gain. The general welfare of the country is ignored. After careful study of the bill and the conditions of industry in the United States and abroad, I am deeply convinced that the passage of the bill will be productive of harm to the individuals and industries, not only of the State which I in part represent but of all the States comprising this Republic. If the amendment which I propose be adopted, and its provisions carried out, any cases of emergency which exist or may arise will be reported to the Congress on the first Monday of next December.

It is widely believed that this bill, after it passes the Senate, will meet an ignominious demise in conference and never become law. The House of Representatives established its rates in the bill on a basis radically different from that proposed in the bill before the Senate. It would seem that there is much reason for the prophecy of the failure of the bill in conference. If it should not fail in conference, the result would be an unwise departure even from the obnoxious methods employed in any previous tariff legislation. The ad valorem rates provided by the House of Representatives are based upon American valuation, while such rates in the Senate are based upon foreign valuation. It has been stated on the floor of the Senate by the chairman of the Finance Committee, and in this I believe he is probably correct, that in such a case every ad valorem rate which may be fixed in the bill by the Senate will be subject to revision by the conferees and without any limitation. If the conferees should finally agree and the bill be reported to the Senate, our parliamentary rules would prohibit any action upon any separate item or items in the bill, and it would have to be accepted or rejected as a whole. The parliamentary procedure in the House of Representatives would be substantially the same. It is evident, therefore, that as to its most important features the bill would be the product of the secret sessions of the conference committee, governed by considerations and influences which no one can foretell.

I appeal to Senators who are supposed to favor the passage of the bill to calmly and conscientiously consider the bill in all its angles before casting their vote. It is my firm conviction that with conditions at home and abroad uncertain, unstable, and ever changing we should not disturb our existing tariff laws as a whole. Let us provide adequate funds for the use of our Tariff Commission. Let it have an opportunity to make scientific studies of any industries which are reasonably supposed to demand a modification of the existing tariff law. Let that commission make its report, containing a finding of facts and recommendations. Any such report prepared as is provided for in the amendment which I have proposed would, in my judgment, be acceptable to the Congress and meet with little opposition. In my judgment there would be manifested little, if any, partisanship in the consideration of such a report. This procedure would result so far as may be in a "scientific tariff" and meet the heartfelt wish of all of us who want "to take the tariff out of politics."

APPENDIX A.

Balance of trade under tariff acts from act of July 4, 1789, to and including the year 1921 of the act of October 3, 1913.

Act of—	Fiscal years.[1]	Imports.	Exports.	Annual average excess imports.	Annual average excess exports.

Aug. 5, 1909	1910–1913	6,482,467,103	8,322,459,209	.....	459,998,026
Oct. 3, 1913	[3] 1914–1921	24,205,272,824	[4] 44,715,614,243	.....	2,563,792,677

[1] Fiscal years ending Sept. 30 prior to 1843.
[2] From 1844 to 1918, fiscal years ended June 30.
[3] Calendar year after 1918.
[4] Exports, 1914–1921, as follows:

1914	$2,329,684,025
1915	2,716,178,465
1916	4,272,177,579
1917	6,227,164,050
1918	5,838,652,057
1918 (6 months ending Dec. 31, 1918)	3,122,533,666
1919 (calendar year)	7,749,815,556
1920 (calendar year)	8,080,480,821
1921 (calendar year)	4,378,928,024

Imports contain gold and silver from 1790 to 1842, inclusive.
Exports contain gold and silver from 1790 to 1872, inclusive.

APPENDIX B.

TABLE 20.—*Quantity comparison of production and exports of important commodities.*

[Production statistics are from Census of Manufactures for 1919, except where otherwise stated. Exports are for fiscal year ending June 30, 1920.]

Commodity.	Unit	Production.	Exports.	Per cent exported.
Motor cycles	Number	59,000	35,000	59.3
Rosin	Barrels	2,270,000	1,322,000	58.2
Unmanufactured cotton [1]	Bales	11,900,000	6,915,000	58.1
Copper [2]	Pounds	[3] 1,286,000,000	[4] 692,232,000	53.8
Rice [1]	Bushels	42,800,000	22,900,000	53.5
Rye [1]	do	88,900,000	[4] 41,500,000	46.7
Leaf tobacco [1]	Pounds	1,455,000,000	648,000,000	44.5
Lubricating oils	Gallons	819,000,000	336,113,000	41.0
Petroleum residuum	do	126,000,000	50,273,000	39.9
Illuminating oil	do	2,305,000,000	915,138,000	39.7
Turpentine spirits	do	19,270,000	7,461,000	38.7
Naphthas other than gasoline.	do	533,000,000	184,762,000	33.4
Sulphur [2]	Tons	1,191,000	393,000	33.0
Condensed, evaporated, and powdered milk.	Pounds	2,214,000,000	710,533,000	32.0
Zinc spelter [3]	Tons	416,000	129,000	31.0
Starch	Pounds	783,500,000	237,600,000	30.3
Binder twine	do	229,500,000	59,472,000	25.9
Steel rails	Tons	2,100,000	554,000	26.4
Wheat [1]	Bushels	934,000,000	[5] 219,900,000	23.5
Iron and steel wire	Tons	1,225,000	285,000	23.3
Cotton waste, including rags and clippings.	Pounds	337,000,000	74,389,000	22.1
Lime acetate	do	152,000,000	32,885,000	21.6
Refined sugar	do	7,043,000,000	1,441,031,000	20.5
Cotton hosiery	Dozen pairs	60,500,000	12,395,000	20.5
Railway cars	Number	163,000	32,000	19.6
Commercial automobiles	do	126,000	24,000	19.0
Tin plates, terne plates, and taggers' tin. [6]	Pounds	2,578,000,000	457,897,000	17.8
Linseed, cottonseed, and corn oil cake and meal.	Tons	2,013,000	351,000	17.4
Barley [1]	Bushels	161,000,000	[5] 27,600,000	17.1
Structural iron and steel.	Tons	2,255,000	340,000	15.1
Iron and steel sheets and plates.	do	6,875,000	1,100,000	14.7
Fuel and gas oil	Gallons	4,772,000,000	686,000,000	14.4
Cotton cloths	Square yards	6,233,000,000	867,000,000	13.9
Wire nails	Tons	587,500	80,000	13.6

[1] Production data from United States Department of Agriculture.
[2] Production data from United States Geological Survey.
[3] Smelter output.
[4] Ingots, plates, wire, etc.
[5] Includes flour.
[6] Production data from Statistical Abstract of United States, 1920.

TABLE 20.—*Quantity comparison of production and exports, etc.*—Contd.

Commodity.	Unit.	Production.	Exports.	Per cent exported.
Fertilizers	do	8,291,000	1,129,000	13.6
Rubber boots and shoes	Pairs	75,000,000	9,900,000	13.2
Iron and steel bars and rods	Tons	6,828,000	731,000	10.7
Dressed-weight meats [1]	Pounds	22,573,000,000	2,264,000,000	10.0
Gasoline	Gallons	3,637,000,000	295,000,000	8.1
Passenger automobiles	Number	1,553,000	116,000	7.5
Cast-iron pipe	Tons	628,000	47,000	7.5
Leather boots and shoes	Pairs	274,000,000	20,000,000	7.4
Soap, except toilet and fancy	Pounds	2,228,000,000	156,000,000	7.0
Ropes, cables, and cordage	do	225,600,000	15,600,000	6.9
Anthracite coal [2]	Tons	79,000,000	4,700,000	6.0
Pianos and organs	Number	368,700	22,000	6.0
Bituminous coal [2]	Tons	409,000,000	23,000,000	5.6
Staves	Number	1,475,000,000	80,790,000	5.5
Lumber	Board feet	34,550,000,000	1,752,000,000	5.1
Printing paper	Tons	2,076,000	96,000	4.6
Hydraulic cement	Barrels	80,778,000	3,180,000	3.9
Linseed oil	Gallons	32,400,000	1,136,000	3.5
Oats [1]	Bushels	1,232,000,000	[3] 43,000,000	3.4
Cotton yarns	Pounds	625,000,000	20,000,000	3.2
Butter	do	938,500,000	27,156,000	2.9
Iron ore [2]	Tons	60,000,000	973,000	1.6
Corn [1]	Bushels	2,859,000,000	[4] 16,700,000	.6

[1] Production data from United States Department of Agriculture.
[2] Production data from United States Geological Survey.
[3] Includes oatmeal and rolled oats.
[4] Includes corn meal.

APPENDIX C.

Amendment intended to be proposed by Mr. JONES of New Mexico to the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, viz: Beginning on page 1, strike out all of said bill after the enacting clause and insert in lieu thereof the following:

"That sections 702, 703, 704, 705, and 709 of Title VII of the act of Congress approved September 8, 1916, entitled 'An act to increase the revenue and for other purposes,' be, and the same are hereby, amended to read as follows:

"'SEC. 702. That it shall be the duty of said commission:

"'(a) To investigate the administration and fiscal and industrial effects of the customs laws of this country now in force or which may be hereafter enacted, the relations between the rates of duty on raw materials and finished or partly finished products, the effects of ad valorem and specific duties and of compound specific and ad valorem duties, all questions relative to the arrangement of schedules and classification of articles in the several schedules of the customs laws, and, in general, to investigate the operation of customs laws, including their relation to the Federal revenue, and their effect upon the export commerce, the industries, and labor of the country.

"'(b) To investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential provisions, economic alliances, the effect of export bounties and preferential tariff and transportation rates, the volume of importations and exportations compared with domestic production and consumption, and conditions, causes, and effects relating to competition of foreign industries with those of the United States, including dumping and unfair competition.

"'(c) To investigate, as hereinafter provided, as fully as may be practicable the industries in the United States which are or may be affected by the imposition of or exemption from customs duties. In the case of each industry so investigated it shall give consideration to the organization and capitalization; the methods, processes, and efficiency of production; the sources and costs of materials, the costs of conversion, so far as they may be ascertained and all other costs incurred in production; the rates of wages, and the ratio of labor costs to the total cost of production; the methods used and the expenses incurred in preparing for market, distributing, and selling the products of the industry and the wholesale and export prices of such products in domestic and in foreign markets; the degree to which the capacity of the industry enables it to meet the needs of domestic consumers and to produce a surplus for export; the nature of any obstacles that may exist in the way of the prosperity and further expansion of the industry; and any reasons peculiar to the industry for granting or withholding by the Government of aid in the form of bounties, subsidies, embargoes, customs duties, or in any other form.

"'(d) To investigate in foreign countries as fully as may be practicable the conditions under which industries that do or may compete with the industries of the United States are prosecuted in such foreign countries in the same manner and to the same extent as provided in the preceding paragraph (c) for the investigation of the conditions under which industries are prosecuted in the United States.

"'SEC. 703. It shall be the duty of the commission to make such analyses of the import trade of the United States as may be necessary to show what imports by reason of their nature, quality, class, and variety compete with and what imports supplement in the domestic markets the identical, comparable, or other products of any industry established in the United States; to ascertain the expenses incident to transporting, distributing, and selling in the domestic markets articles of foreign origin that compete with any product of any industry in the United States and the wholesale and export prices at which such articles are sold in the country of origin and in the United States.

"'SEC. 704. (a) It shall be the duty of the commission to report to Congress annually on the first Monday of December hereafter any case or cases arising through changes in industrial or commercial conditions in the United States or in foreign countries which render it advisable that any rate of duty on imported articles under then existing law should be removed, raised, or lowered by a substantial amount. In connection with any such case so reported the commission shall state the reasons and the facts on which such reasons are founded which, in its judgment, make it desirable that Congress should remove, raise, or lower the rate of duty under then existing law.

"'(b) As a part of any report made to Congress in pursuance of paragraph (a) of this section, the commission shall recommend the rate or rates of duty which in its judgment should be fixed by law; and in connection with each rate so recommended the commission shall set forth in such detail as may be necessary the facts upon which it bases its conclusions; and shall point out the reasons of public policy which make it desirable that Congress should fix such rate.

"'(c) It shall be the duty of the commission to report to Congress on the first Monday of December of each year hereafter a statement of the methods adopted and all expenses incurred and a summary of all reports made during the year.

"'(d) In case of disagreement among the commissioners as to any report, finding, or conclusion authorized or directed under the provisions of said Title VII as amended by this act, separate reports by any one or more of the commissioners expressive of their views shall be made with respect to the matter in disagreement.

"'SEC. 705. That the commission shall put at the disposal of the President of the United States, the Committee on Ways and Means of the House of Representatives, and the Committee on Finance of the Senate, whenever requested, all information at its command and shall make such investigations and reports as may be requested by the President or by either of said committees or by either branch of the Congress.

"'SEC. 709. That there is hereby appropriated for the purpose of defraying the expenses of the establishment and maintenance of the commission, including the payment of salaries herein authorized, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $1,000,000 for the fiscal year ending June 30, 1923, and for each fiscal year thereafter a like sum is authorized to be appropriated.'"

APPENDIX D.

WHAT SOME REPUBLICAN SENATORS AND EDITORIALS HAVE SAID.

In the St. Louis Globe-Democrat of July 2 Senator CUMMINS, of Iowa, is quoted as saying: "This is the most inopportune of all times I have ever known to enact a general revision of the tariff law. The information that is necessary is not at hand, and even if it were at hand at this moment we could not depend upon it as a basis for action to-morrow or next month or six months hence."

After paying a glowing tribute to the ability and worth of the distinguished Senator from Iowa, the great Missouri newspaper says:

"The position he takes as to tariff legislation is that which this paper has held ever since the tariff revision was proposed, and it is the position declared by the Republican Party in its platform in 1920. 'The uncertain and unsettled condition of international balances,' said the platform, 'the abnormal economic and trade situation of the world, and the impossibility of forecasting accurately even the near future, preclude the formation of a definite program to meet conditions a year hence.'

"We can now no more forecast even the near future than we could then," continues the St. Louis publication. "The Finance Committee, it is true, claims to have drawn away the veil that separates ordinary mortals from the coming years, and has

legislated on what is to come as well as on what is. But obviously Senator CUMMINS has little faith in the prescience of his colleagues, having learned by long association that they are of the same clay as himself, and he does not pretend to be a soothsayer."

Among the Republican Senators, Mr. TOWNSEND, of Michigan, occupies a place of distinction. He, like many of his colleagues on the other side of the House, takes the position that the present is an inopportune time to frame a tariff bill. In his speech delivered in this Chamber June 24, the senior Senator from Michigan said:

"I recognize the fact that this is the most unfavorable time imaginable to revise the tariff. Not only are all world industrial conditions abnormal, all values changing almost daily, exchanges fluctuating with the rising and setting of the sun, reconstruction going on in nearly every country in the world, but since the House passed this bill the total changes in all conditions which affect values have made it almost impossible to use the House bill except as a glossary of titles, and at the rate the Senate is moving this measure will become ancient by the time it is allowed to pass. That conditions will continue to change there can be no doubt."

I call attention to the able speech of the Senator from Nebraska [Mr. NORRIS] delivered in this Chamber on May 18 of this year. In that address Senator NORRIS said, among other things:

"Mr. President, I realize the difficulty that the committee has been under in drafting this bill. There is no man here who has had more sympathy than I have had for them in the work that is before them, and no man more willing to testify to their earnestness and their diligence in working on this bill. The difficulty was that they were up against an impossibility in trying to draw a bill along protective lines. With the disjointed condition of the world to-day I think it is an impossibility to draw a tariff on protective lines. With the changes that are going on all over the world, and that we know are continuing to go on, and that we want to go on until the world gets back to a normal condition, we can not expect to draft a tariff law to-day, even if we could draw one on scientific lines, that would not be out of joint to-morrow."

Earlier in the same address the Senator from Nebraska warns his colleagues that the bill will not suit the farmers of the Nation. He says:

"Mr. President, we can not defend a bill built on these principles. You may get the votes and put it through, but I warn you that we will be the sufferers. It almost commences to look as though this side, which was organized to protect the farmer, have some kind of a deal with somebody else by which they say, 'We will vote for everything you ask.' Strength is given to that kind of a proposition from the fact that there is, as a rule, nobody here."

During a speech by the Senator from Nebraska on May 12 of this year, the senior Senator from Idaho [Mr. BORAH] interrupted to state among other things that he was willing to postpone consideration of the measure. On that occasion Senator BORAH remarked:

"Let me say another thing while I am in this controversy. I do not think there are any facts to be had upon which to base an intelligent tariff bill at this time. That is my opinion."

"The answer to that is that they should not pass the bill," suggested Senator HITCHCOCK. Whereupon Senator BORAH said:

"I would unhesitatingly vote to postpone consideration of the bill and to take care of the situation, as far as I think it needs to be taken care of, by a simple addition to the emergency tariff law. I do not know where we could get any facts as to the cost of production abroad. I have not been advised of such facts. I do not see how it is possible to secure them. The facts that would be available to-day would be utterly swept away to-morrow by the conditions throughout the world. I do not believe it would be possible to make a tariff law of permanent worth under such conditions."

Replying to another question by Senator HITCHCOCK, the Senator from Idaho said:

"I frankly confess that I do not know what the difference is in the cost at home and abroad, and I am in exactly the same boat as every other Senator in this Chamber, so far as being able to determine the question. There are no facts presented and there are no facts to present."

The able chairman of the Finance Committee [Senator MCCUMBER] said in a speech in this Chamber on April 20 last:

"We have often been advised, and the advice is well founded, that of all times in our history this is the very worst time in which to formulate and put into effect a new tariff measure. * * * Heretofore we have had comparatively little difficulty in applying as the standard of measurement in fixing our rates the difference between the domestic and foreign costs of production. These differences for the most part have been reasonably stable and certain, but since the 11th day of November, 1918, we have lived in a new world. Old landmarks have been swept away. Old guides have become misleading."

The junior Senator from New Jersey [Mr. EDGE] told us in a brief address on July 11 of this year that he believed Congress to be at best poorly equipped for the service of drawing a permanent tariff bill at this time.

"At best, because of lack of technical knowledge, Congress is poorly equipped, and, anyhow, there are too many other problems the solution of which Congress demands at our hands. I freely admit my lack of knowledge as to the wisdom of many of the schedules I have voted on during the consideration of this measure. * * * Again, may I repeat, with all due respect, that this Congress, or no other Congress, is equipped to enact scientific tariff schedules, and that to properly serve the country they must be flexible."

Senator FRELINGHUYSEN, of New Jersey, is apparently not fully assured of the wisdom of definitely revising the tariff at this time. He would at least make provision for the revision of the work of Congress by some other agency. The following, quoted from his speech in the Senate July 11, is at least significant:

"Personally, while fully subscribing to the policy of protection as measured by an honest difference between the cost of production at home and abroad plus a reasonable profit, I recognize that the problem is more involved to-day than at any time in the history of the country. I recognize fully the fact that trade can not alone go in one direction; that if we sell we must buy; and that to-day the European countries can hardly reimburse us through any other agency than by an exchange of goods. I believe that such exchange should be encouraged, and encouraged on a much larger scale than trade reports register at the present time.

"I recognize that embargoes and too heavy duties operate against a correction of this condition; but I recognize likewise that positive and distinct discrimination should be made by us as to what commodities we will permit to make up the volume of our imports and those that it is inimical to our domestic interests to encourage. I feel that Congress is hardly equipped clearly to balance the necessity of these discriminations, and it makes me all the more positive that other agencies, purely American agencies, must be employed."

In a recent speech Senator LA FOLLETTE said:

"In my opinion it is impossible at this time to undertake a study of the difference in cost of production. So we have before us at this time as much as the present Tariff Commission could do. There are a large number of surveys in the different industries, showing what they are doing in other countries in the way of production, such information as they could gather over the years they have been at work. But I undertake to say that the fact that it is impossible to make this scientific study is the best reason in the world why this Finance Committee should never have undertaken to make a complete revision of the tariff at this time."

Many editorials from the leading Republican papers of the country are constantly appearing condemning the provisions of this bill. In fact, I can not call to mind any newspaper in the country—Republican, independent, Democratic, or commercial—which is ardently supporting the bill. Many of these editorials have been printed in the RECORD from time to time, and I do not recall that the proponents of this bill have brought forward any editorials of recent date commending it.

That the present bill does not meet the approval of Republican newspapers is made clear by the opinions which I quote from publications in widely separated parts of the country. The Kansas City Star, which has never seen its way clear to give enthusiastic support to any but the Republican Party, has this to say of the bill:

"The Senate Republican leaders are beginning to doubt the wisdom of passing the tariff bill before the congressional elections in the face of evidence furnished by recent primaries that the bill is extremely unpopular; knowledge comes, but wisdom lingers usually until it is too late."

The New York Herald, owned by that loyal and virile Republican, Frank Munsey, in its issue of July 5 has this to say of the tariff:

"The tariff changes that nearly all of us supposed were immediately necessary to ward off imminent foreign menace have not proved the only thing that could save the day. Far from it, the day has been saved, and well saved, with no new tariff law at all except the emergency tariff provisions hurriedly enacted more than a year ago.

"And with the country now so much stronger and sounder in economic health than it was two years ago and one year ago,

with its enterprise so much more confident and its incentive so much more eager to press on in its present national aspect, it is not creditable that the country will not give a good account of itself in the next several months without any complete revision of the tariff, if it can not have complete revision that is sound in economics and right for the American people. There is no shadow of a doubt that the country, having gone so far, can go further and go in spirit to get the tariff that is right.

"But it is unsafe for Congress to assume that the country would view with courage a revolutionary tariff threatening to increase the public's living costs inordinately and to renew the economic horrors of inflation. It is an unsafe gamble for Congress to assume that the American people would indorse at the November elections a hurried, imperfect, scrambled, wretched tariff in which nobody really believes.

"The American people do not want the tariff which is now before Congress. They do not want any new tariff that is not right. They are willing to wait a while longer for what they do want—a tariff that is right. The American people will not meekly suffer a tariff mistake. The present majority may not survive a tariff mistake."

It is pleasant to be able to obtain such substantial Republican indorsement for delay and such unequivocal support for my statement that the country is not threatened with ruinous foreign competition.

On July 7 of this year the New York Tribune, whose Republicanism has not in a generation been doubted, warns Congress to "Have a care."

"There is no reason for passing a complicated, highly technical, and confessedly faulty tariff bill at this session," says the Tribune. "No harm can come from fuller study and more intelligent drafting or from waiting until economic conditions at home and abroad can be better established. Yet some in Congress talk as if the country were clamoring for tariff legislation and did not care much what it got in that line only so it got something quickly."

The Tribune complains that the authors of the tariff are trying to protect special groups of producers instead of viewing the matter from the broad standpoint of national policy or national necessity. In this connection the great New York publication says:

"None of the founders and great exponents of the protective system ever dreamed of employing protection except for national purposes or ever laid duties except with the hope of enabling the domestic producer to dispense after a time with anything like prohibitive rates. The authors of the Fordney and McCumber bills have evidently been parceling out protection for the benefit of individual producers and groups of producers rather than with a proper regard for the ultimate effects of those duties on the country as an economic whole."

After declaring that, in its judgment, the senior Senator from Massachusetts [Mr. LODGE] would welcome postponement of the bill, the Springfield Republican remarks:

"The Senate leaders would serve their party best at this time by frankly scrapping the tariff legislation, which can not now be enacted into law before October, a month before election. All indications are that prices will rise in the autumn, as they already have on woolen goods, and the price movement would be a political burden for Republican candidates."

On May 20 the Chicago Tribune, in a brief editorial, quotes from an address by the President to the Chamber of Commerce of the United States. In that speech the President said, "I realize we can not sell abroad unless we buy. Let us sell to the world the things we produce and which they do not, and let us buy the things they produce and we do not." Approving these words, the Tribune comments:

"They are sound observations. Such is the reasoning of the best economists on tariffs and trade since tariffs and taxes were first conceived. But they are not being applied in the making of the present tariff bill at Washington. That bill has been prepared largely through the influence of various private interests, each appearing in committee and arguing for a tariff which would protect its particular commodity and develop its particular business, regardless of the effect of that duty upon international trade or the advantage of the country as a whole."

If the Tribune is correct in its diagnosis of the present bill, it is difficult to see how, if it gets through Congress, it will receive Executive assent.

In the Boston Transcript, one of New England's foremost Republican papers, appears the following editorial comment. I quote from the edition of May 25:

"But the farmer will be blind to his most important interests if he fails to see that he will be unfavorably affected by a tariff policy which makes it difficult for Europe to continue to buy its customary quantity of food products in the United States. If he can not find a ready market for his surplus wheat, the price is bound to go down, and this can not be changed by an appeal to the soundness of the protective principle or a reference to prosperous periods under high protection. During these periods we were a debtor Nation; the balance of trade was against us. To-day we are the great creditor Nation of the world and there is a heavy balance in our favor. This makes all the difference in the world. We must permit Europe to pay out by selling to us, or we must invest heavily in European securities. That is what Europe did when the case was reversed. Nothing but the most superficial knowledge of everyday economics could suggest any other view."

I find in an earlier issue of the New York Tribune, published May 27 of this year, the following recommendation:

"The Senate can do the Republican Party and the country a service by postponing tariff legislation until conditions clear up and the Republic's real interest in the venture which Mr. FORDNEY and Mr. MCCUMBER have in hand can be more satisfactorily determined. There is no rush for an upward balancing of rates, which may do more harm than good. The situation in commerce and industry, both here and abroad, is unstabilized. More than that, the Fordney-McCumber bill is an undigested bill. It lacks the scientific character which an after the war tariff bill, breaking new ground, ought to have."

The Ohio State Journal, independent, usually Republican, of Columbus, Ohio, in its issue of May 27 of this year makes the following observations:

"There seems to be little or no sentiment for the pending tariff bill except such as comes from the specific business interests which hope to profit financially by it. All the great Republican and independent newspapers, so far as our observation goes, are against the bill in anything like its present form. The realization seems to have come to the general public that it would be an absurdity, to put it mildly, to erect a higher tariff wall than we have ever had around the country at a time when what our producers need is a wider market, when what our consumers need is employment and reasonable cost of living, when what our Treasury needs is interest on our European loans, not to mention some of the principal. If commercial isolation was good for us in the old times, when Europe prospered and owed us nothing, surely it can not be good for us now, when European industry is more or less paralyzed and mortgaged to us. When a man owes you money you do not attempt to curtail his business so that he can not pay you."

My attention has again been called to editorial comment in the Chicago Tribune. On June 1 that paper said:

"The tariff makers are working in exactly the old logrolling methods which have been operative for decades. One man desiring a high tariff on a certain commodity, regardless of the effect upon the country as a whole, agrees with another man desiring a high protective tariff on another commodity, regardless of its effect upon the public, that each will support the other's demands. They do so; the tariff is fixed on these commodities and the public is ignored. Other men agree on other commodities with similar results. The result is a tariff of exploitation rather than of protection. If such a bill is passed and becomes a law it will not do the Republican Party any good at the coming elections. Each interest which is so advanced may cast a grateful ballot at the coming election, but even so they will be in the minority compared to the mass of voters who get high prices without high wages out of the arrangement."

This is the newspaper which did such yeoman service for the majority party two years ago.

The Chicago News, an independent newspaper, which during national election campaigns is invariably with the Republican Party, has the following editorial comment in its issue of June 14 of this year:

"There is significance in the implied admission that the pending tariff bill will increase prices all along the line and arouse widespread dissatisfaction and resentment. If the bill were sound, no such effects would follow. Besides, what necessity is there for protective duties so high as to advance commodity prices that in many instances are still inflated?"

Approving the advice given the Republican Members of Congress by the New York Tribune, the Springfield (Mass.) Republican in its issue of June 23 remarks:

"The New York Tribune speaks with the wisdom of a political sage in advising Congress to adjourn and go home before passing the tariff bill."

The Brooklyn Eagle, an independent newspaper, says in its issue of June 5 of this year:

"Why is it that so many good Republican newspapers throughout the country are jumping on the tariff bill as establishing a measure of protection which, in their judgment, the country does not need?"

The Indianapolis News, an independent publication, which gave strong support in the primaries to the junior Senator from Indiana, and usually leans strongly in the direction of the Republican Party, says editorially on June 15 of this year:

"The idea of throwing a tariff sop to the farmers to reconcile them to schedules which exceed all the needs of protection and afford to those favored an opportunity to make enormous profits is ingenious, but as the farmers long ago ceased to buy gold bricks they now naturally reject sops and are not flattered by the offering."

"The country needs a tariff revision which takes fully into account the change which has occurred in our economic status," observes the New York Tribune of May 22 of this year. "We have become a creditor nation. The age of isolation has passed. Protection must assume a modified and more scientific form. Mr. FORDNEY'S statesmanship of 25 or 30 years ago, sound enough then, is too unsophisticated now. The tariff he has drawn is not suitable to large classes of American producers and manufacturers, and is opposed to the interest of most consumers." In another issue, June 22, the same paper calls the tariff bill a very bad bargain.

"What our farmers and our manufacturers need now is the least restricted markets for their products it is possible to have," remarked the State Journal, of Columbus, Ohio, on May 6. "What the great mass of our consumers want is work together with a lowering cost of living. What Europe is in desperate need of is a chance to resume industry, sell goods, recuperate her strength, and pay her debts. These ends, infinitely more important than the advancement of the supposed interests of some comparatively small favor-seeking American group, would not be enhanced by a high tariff, but rather defeated by it."

The Washington Star, which has pretty consistently supported the present administration and the majority party in Congress, speaking of the tariff in its issue says:

"The fact of the matter is that neither its friends nor its enemies can be sure of the bill in action. Conditions everywhere, at home and abroad, are such that the ordinary bases of action have disappeared. Tariff revision now and tariff revision which took place in 1913, with the World War coming between the two dates, are horses of another color."

On March 17 of this year the New York Tribune characterizes the bill as "rash and inopportune."

"Why should Congress hurry the tariff along?" the distinguished New York Republican organ asks. "The time isn't ripe yet for a permanent revision. From a political viewpoint a revision made just before a congressional election means almost certain defeat for the party in power in the House. The country as a whole is not greatly interested in tariff revision at present. It is much more interested in an economic settling down."

The New York Herald in its editorial columns of March 22 carries the caption "Our foreign trade blowing up."

"The country," says the Herald, "is losing its export business, first, because the goods it wants to sell abroad are for the most part too dear to find any buyers in competitive foreign markets where other producers can sell for less than we can because they produce for less than we do. This country is losing its export business, secondly, because foreign producers, even when our prices are right for the goods we offer abroad, can not buy from us if they can not pay us."

Criticizing the heavy tariff on gloves provided for in the present bill, the Christian Science Monitor remarks:

"During many years the American manufacturers of gloves were given the benefit of protective duties, but they utterly failed to produce the light-weight leather gloves of the style and finish that the American women were accustomed to wear. In view of this failure, there is absolutely no reason why Congress should impose a heavy burden of higher prices for gloves bought by the women of the United States."

Sustaining my contention that the most important matter to be considered at the present time is how we are to obtain and improve foreign markets, the Indianapolis News makes the following suggestions in its issue of April 17 of this year:

"A decline in foreign trade, if severe, involves economic prostration in several basic industries and widespread suffering among the people. To belittle the importance of foreign markets is therefore to proclaim one's ignorance of modern economic conditions and one's indifference to the country's vital needs."

Mr. GERRY. Mr. President, I send to the desk certain amendments and ask that they may lie on the table so that they can be called up at the appropriate time.

The PRESIDENT pro tempore. The proposed amendments will lie on the table. The question is upon the amendment proposed by the Senator from Rhode Island [Mr. GERRY] to the amendment offered by the Senator from Louisiana [Mr. BROUSSARD].

Mr. GERRY. Mr. President, I wish to say a few words in regard to some of the amendments which I have sent to the desk.

The PRESIDENT pro tempore. The Senator from Rhode Island can not discuss the amendments at this time.

Mr. GERRY. I should like to ask the Chair when the Senator from Rhode Island will have the opportunity to discuss the amendment? The vote will take place not later than 2 o'clock.

The PRESIDENT pro tempore. The Senator has stated that correctly. The unanimous-consent agreement provides that discussion must be confined to the pending paragraph, either the sugar paragraph as a whole or to the pending amendment. The Senator would not be within the rule if he were now to discuss amendments which are not pending.

Mr. GERRY. The Senator understood that under the pending unanimous-consent agreement a Senator was allowed to take one hour on the schedule and an hour on each amendment. The Senator spoke yesterday an hour and a half and, therefore, would have half an hour on the general paragraph if he cared to discuss that.

The PRESIDENT pro tempore. The present occupant of the chair was not in the chair at that time.

Mr. GERRY. The Senator is very sure he did not take longer than that time, but he only wishes to take about five minutes now on the schedule.

The PRESIDENT pro tempore. The Senator addressed the Senate for an hour and a half. What part of that time did he consume upon the paragraph as distinguished from the amendment?

Mr. GERRY. It is a little hard for the Senator to determine. He was discussing practically the first amendment which came up in relation to paragraph 501. He thinks it is fair to say that the Senator took an hour on the amendment to paragraph 501 anyway.

The PRESIDENT pro tempore. The Senator now desires to take half an hour upon the paragraph?

Mr. GERRY. The Senator will not take as long as that. He will not take longer than three or four minutes.

The PRESIDENT pro tempore. The Senator from Rhode Island will proceed.

Mr. GERRY. Mr. President, as typical of the sugar schedule I want to call attention to two or three rates contained in it. In paragraph 503, for example, in the committee amendment, there is put into effect a new method of assessing the sugar content. I think the method adopted by the committee was sound and probably more accurate, but it makes it rather difficult to determine how much higher the rate is than it was under the Underwood law. However, I have sent to the desk an amendment which I shall call up later, and which I believe will give an example of how the paragraph and other paragraphs of the bill are formed and compare with the Underwood rate.

This paragraph, like every other paragraph in the schedule, is a great deal higher in its rates than the Underwood-Simmons rates. For example, in paragraph 504 the pending bill fixes a rate of 4 cents on maple sugar and maple sirup, while under the Underwood-Simmons law these commodities were taxed at 3 cents. There is no real reason for adding this tax, except for the purpose of giving additional higher prices to certain favored corporations or industries. The amount imported is negligible and the revenue derived from it would be very small. I hope when it comes to the vote that the Senate will refuse to accept the House provision and will go back to the lower rate. I also hope that they will go back to the lower rate on dextrose sirup, which is grape sugar. They have increased that rate from one-eighth of a cent to one-half cent per pound.

Now, let me take another example of how the rates have been increased, apparently with no idea of raising any large amount of revenue, but simply for the purpose of looking after certain industries that wanted to be favored. Paragraph 505 has a long list of commodities, such as adonite, arabinose, dulcite, galactose, inosite, and so forth. The duty fixed in the pending paragraph is 50 per cent ad valorem. Under the Underwood Act the rate was 15 per cent ad valorem. Most people reading over the paragraph would not know what these things are nor their uses. Under the Underwood law they were contained in the general chemical schedule, as I have said, at 15 per cent ad valorem, with the exception of salicin, used in the cure of rheumatism, which is found on the free list. The general character of these articles on which the tax is assessed can be briefly explained as follows:

Adonite is found in the sap of the Adonis vernalis. It has never been prepared in any quantity and only for experimental purposes.

Arabinose does not occur to any extent in the free state. It can be easily made from gum arabic and cherry gum. It is probably used to a slight extent as a medicine and for experimental purposes.

Dulcite (dulcitol) is made from Madagascar manna and from d-galactose. It is used in cases of diabetes.

Galactose occurs very rarely in the free state. It can be easily made from lactose and also from raffinose and certain gums and pectins. It is used as a test for the functual activity of the liver.

Inosite is found as the methyl ester in the muscles of animals and in plants. It can be made from an extract of walnut leaves. It is probably only used in experimental work.

Inulin is a variety of starch found in the dahlia, sunflower and chicory. It has been used to prepare fructose and medically in cases of diabetes.

Levulose (fructose) very rarely occurs alone, but usually with glucose. It can be made from inulin and from invert sugar.

Mannite (mannitol) is found in manna, in the sap of the larch, also in leaves, fruits, and fungi. It is made from manna. It has been used as a laxative and in cases of diabetes.

Talose has only been made synthetically from d-talonic lactone and from d-galactose. It has probably only been used experimentally.

Tagatose has only been made synthetically from d-galactose. It also probably has been used only experimentally.

Ribose has been prepared synthetically from ribonolactone and from adonite.

Melibiose has been prepared from raffinose.

Dextrose (glucose of over 99.7 per cent) occurs in many fruits and unripe grains. It is made easily by the hydrolysis of starch and cellulose. It has been used (in this very pure condition) as a culture media for bacteriological work.

Mannose occurs to a slight extent in many plants. It is easily made from ivory nuts. It has probably only been used experimentally and medically.

Melezitose occurs in manna from the larch and from Douglas fir. It is prepared from this manna.

Raffinose occurs in sugar-beet molasses and in cottonseed meal. It can be easily recovered from either. It is probably only used experimentally and medically.

Rhamnase (probably rhamnose) occurs as a glucoside in plants. It can be made from Persian berries.

Salicin is quite a well-known drug. It occurs in willow bark and has been extracted therefrom. It has been used in cases of fever and rheumatism.

Sorbite (sorbitol) does not occur in free state. It can be obtained synthetically from glucose. It also can be prepared from mountain-ash berries. It is used experimentally to obtain sorbose.

Xylose is obtained from wood gums which are found in the bark, roots, and leaves of plants. Often the hulls of cotton seed and oats are used for its preparation. It has probably been only used experimentally.

Mr. President, it seems to me that it would not be wise for Congress to place such a high tax as 50 per cent ad valorem on these commodities, thereby penalizing articles which are mostly used by scientific men in their experiments or are used for medicinal purposes in the treatment of diseases which are largely prevalent and which it is so important that the people shall be treated for at the lowest cost. I think this section of the schedule is typical of the manner in which the bill in its entirety has been drawn.

The PRESIDENT pro tempore. The question is on the amendment proposed by the Senator from Rhode Island [Mr. GERRY] to the committee amendment.

Mr. SIMMONS obtained the floor.

Mr. NICHOLSON. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Carolina yield to the Senator from Colorado?

Mr. SIMMONS. I yield to the Senator from Colorado. I simply took the floor because I knew the Senator from Colorado desired to speak, and I noticed that his attention was diverted for a moment.

Mr. NICHOLSON. I thank the Senator from North Carolina for his courtesy.

The PRESIDENT pro tempore. The Chair recognizes the Senator from Colorado.

Mr. NICHOLSON. Mr. President, before taking up the discussion of this question I wish to make my position clear. There has been a great deal of talk concerning the personal interest of Members of this body in the production of sugar, in sugar refining, and in the production of other commodities, and, in order that there may be no doubt as to my personal position, I desire to state to the Senate for its information that I am not directly or indirectly interested in an acre of land in the United States which produces a ton of sugar beets or sugar cane, nor do I own any interest in any factory or refinery in the United States which produces a pound of sugar. I am the owner of stock in a plantation and mill in Cuba which produces and ships raw sugar to the United States for refining and marketing. I wholly disregard my connection with the Cuban interests, and my only concern at this time is to legislate for the best interests of the people of my own State and every other sugar-producing State in the Union. In making this statement I do not wish to be understood as indicating that if I were interested in the domestic sugar industry I would withhold my vote or change my attitude in the least, for if a measure is good for the country at large it is good whether I am or am not financially interested in the industry affected.

I am especially interested in the development of the beet-sugar industry because of the fact that it is due to the development of this industry that, while during the past several decades the prices of all other agricultural products have greatly increased, the price of sugar has been greatly decreased. In 1840, when practically all of the sugar of the world was produced from cane, the New York wholesale price of granulated sugar was over 11 cents per pound and the sugar was of an inferior grade as compared with the sugar of to-day; so that the people are indebted to the sugar-beet growers of the Temperate Zone for the reduction in the price of sugar which has gradually taken place. The production of sugar beets since that time has steadily increased until at the commencement of the great World War there was produced from sugar beets 50 per cent of the world's entire sugar requirements. From this can be readily seen the great importance of the continued development of the beet-sugar industry and the necessity, especially on the part of the United States, for the production of increased quantities of sugar beets.

There is no country on the face of the earth which has such a large acreage available for the production of sugar beets as has the United States. The question of the possible beet-sugar area of the United States arose in this body in 1909, and on April 8 of that year the Senate passed a resolution calling upon the Secretary of Agriculture—the Hon. James Wilson, of Iowa—for data on this subject. Section 6 of the resolution reads as follows:

> The methods which have been pursued by the Department of Agriculture in order to determine the beet-sugar area in the United States; also, what States are now known to be adapted to the culture of sugar beets; also, what amount of beet sugar could be produced annually in the United States.

I desire to read from page 27 of the Secretary's reply to the resolution:

> POSSIBILITIES OF BEET-SUGAR PRODUCTION IN THE UNITED STATES.
>
> NATURAL CONDITIONS.
>
> In regard to the possibilities of beet-sugar production in the United States, conditions of soil and climate naturally deserve to be considered first. In another part of this report I have given a brief summary of "the methods which have been pursued by the Department of Agriculture in order to determine the beet-sugar area of the United States." I have also commented on the work of a similar character performed by the State agricultural experiment stations and by private individuals and associations. A map has been prepared, and is presented herewith, showing not only the theoretical sugar-beet belt but the actual location of every factory established in the United States since the period of successful operation began. A glance at this map reveals the enormous possibilities for the further development of the industry. In order to give more definite expression to these possibilities I submit the following data:
>
> The theoretical sugar-beet belt lies between the isotherms of 69° and 71° F. for the three months of June, July, and August, as determined by a study of climatic data for a long period of years. The possibility of growing beets of satisfactory quality within this belt has been determined not only by a great number of experiments but by actual production for factory use. By the same means it has also been demonstrated that satisfactory beets can be grown in large areas adjacent to and removed from this belt. A careful determination made in the Bureau of Soils of this department indicates that the sugar-beet belt—bounded by the isotherms indicated above—contains a total area of 428,000 square miles, or 274,000,000 acres. As this belt extends across the country from ocean to ocean, it is evident that its western third contains large areas of land that are either mountains or arid and unirrigable, and such areas must be eliminated from consideration. No attempt has been made to estimate the available acreage of lands lying outside this theoretical belt. To say that such lands are more than sufficient to make up for the mountainous and arid lands eliminated from the belt is certainly a conservative estimate. We are therefore justified in saying that the total area having soil and climatic conditions adapted to the production of satisfactory sugar beets is at least 274,000,000 acres. Of course, a large part of this area is occupied by woodlands, permanent pastures, cities, and villages, farm homes, roads, rivers, etc.; and considerable areas are too rough or too swampy for cultivation. It is neither possible nor necessary in this discussion to determine exactly what part of this area is at present actually improved. It is certain that the percentage of cultivated ground is large and, moreover, that it is steadily increasing and will continue to increase so long as the density of population increases.
>
> Perhaps our capacity for producing beet sugar can be shown most clearly by considering the beet acreage necessary to produce the sugar which we now import from foreign sources.

During the past five years our average production of beets per acre has been 10 tons and the average extraction of sugar by the factories 12 per cent. The average production of sugar per acre has therefore been 2,400 pounds, or 1⅛ short tons. During the fiscal year 1907–8 we imported from strictly foreign sources—not including the island possessions of the United States—1,666,795 short tons of sugar.

To have produced this sugar at the average rate of 1⅛ tons per acre in 1907 would have required 1,389,000 acres of sugar beets. In other words, if our beet acreage for 1907 had been increased by 1,389,000 acres, yielding at the average rate for the past five years, and we had possessed factories to work up the beets, we would have produced enough sugar to supply the entire home demand.

Dividing now the 274,000,000 acres lying within and adjacent to the sugar-beet belt, having soil and climatic conditions adapted to the production of satisfactory beets, by 1,389,000 acres, we find the quotient to be 197. If, therefore, beets had been grown on only 1 acre out of every 197 acres of the adapted area, the beets produced would have yielded enough sugar to replace all the foreign sugar we used. Speaking in round numbers, we would at the present time have to grow beets on only one two-hundredth part of our demonstrated sugar-beet area—in addition to the area already in use—to make this country self-sustaining in the matter of sugar. If we suppose but one-fourth of the sugar-beet area to be actually devoted to crops, the growing of beets on but 1 acre out of every 50 tilled acres would enable us to stop using foreign sugar.

The consumption of sugar has been increasing very rapidly in the United States. It has in fact doubled in a period of 20 years. While consumption can not be expected to increase so rapidly in the future, it is not unreasonable to suppose that it may double again in the next 30 or 40 years. From the figures already given it appears safe to say that our sugar-beet area is sufficient easily to take care of such an increase in consumption. When we consider that the production of cane sugar in our Southern States is likely to increase, and that a large increase of cane sugar may confidently be expected from Hawaii, Porto Rico, and the Philippines, it is evident that the meeting of future demands will bring no greater difficulties than those involved in supplying our present needs.

If, therefore, the possibilities of beet-sugar production in the United States are to be judged solely from natural conditions of soil and climate, I believe it is perfectly safe and conservative to estimate that we can produce beet sugar enough, along with the cane sugar produced in the South and in our insular possessions, to supply the entire home demand of the present and of the future.

But I would not be understood to mean that the foregoing statement indicates the limit of possibilities. The production indicated above should by no means exhaust the possibilities of the area outlined, and I believe that area can be vastly increased. I estimate that if the sugar beet were grown throughout those portions of the United States adapted by nature and with the aid of irrigation to its culture, with a system of rotation including the cultivation of the beet every fourth year, 15,000,000 tons of beet sugar could be produced in the United States annually, or more than the world's total production of sugar at the present time.

I now send to the desk and ask that the Secretary read a copy of a letter addressed by me to the present Secretary of Agriculture, Hon. Henry C. Wallace.

The PRESIDENT pro tempore. Without objection, the Secretary will read the communication.

The Assistant Secretary read as follows:

JULY 8, 1922.

Hon. HENRY C. WALLACE,
Secretary of Agriculture, Washington, D. C.

DEAR MR. SECRETARY: On account of the great bearing the beet-sugar industry has on the prosperity of all farming communities where it is established, I am much interested in seeing that industry prosper and expand.

I had been led to believe we had ample territory where soil and climatic conditions were especially favorable for producing high-grade beets to produce all the sugar we consume, but one of the witnesses before the Finance Committee intimated that such was not the case.

In order that I may be able to take this matter up intelligently, I shall appreciate it very much if you will advise me whether or not you consider there is enough first-class sugar-beet acreage in the United States, which, if planted to beets and with the possible expansion of cane-sugar production in the Southern States, would enable us with our insular product to take care of our own sugar requirements.

Any other information you can give me along this line will be highly appreciated.

Sincerely yours, SAMUEL D. NICHOLSON.

Mr. NICHOLSON. Mr. President, I now desire to read the reply of Secretary Wallace to the letter just read by the Secretary:

DEPARTMENT OF AGRICULTURE,
Washington, August 5, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate.

DEAR SENATOR: Replying to your letter of July 8, there seems to be no question but that we have in the United States an abundance of sugar-beet land, which, along with the cane-sugar land, can be made to produce all of the sugar needed to meet our home requirements.

During the past five years the average consumption of sugar in the United States was about 4,853,000 short tons yearly.

Our beet-sugar production has been increasing at the rate of about 40,000 short tons per year. During the five-year period 1917–1921 the continental United States produced annually 872,424 short tons of beet sugar and 231,236 short tons of cane sugar. During the same period we received from Hawaii, Porto Rico, and the Philippines average yearly shipments of 1,079,846 short tons. Thus our total home and island production equals 2,183,506 short tons annually, or nearly 45 per cent of our total consumption. At this rate of production, therefore, we need about 2,669,885 short tons in addition to our home production of cane and beet sugar.

In 1921 our sugar-beet acreage was about 814,988 acres. It is estimated that there are 200,000,000 additional acres of excellent sugar-beet land in the States of the Northwest and about 45,000,000 acres in States not now producing sugar beets, all of which, under favorable conditions, can be brought into satisfactory production. It seems reasonable to say, therefore, that we can add 245,000,000 acres to our sugar-beet acreage.

Most of the cane sugar in the United States is produced in Louisiana, 226,366 acres of sugar cane having been harvested in that State for sugar production in 1921. This was less than one-sixth of the present tillable area in those parishes in which sugar cane is grown and less than one-tenth of a possible tillable area in those parishes, having in mind the area which is capable of drainage. A conservative statement, therefore, would be that it should be possible to produce a million tons of cane sugar in Louisiana.

The foregoing gives the basis in answering your question as to whether or not it is possible for the United States and her insular possessions to produce sufficient sugar to meet our needs. Under conditions which have prevailed during the past 25 years there has been a gradual increase in our sugar production. This increase can, of course, be accelerated by favorable economic conditions. This all involves a matter of public policy, and should have full consideration in connection with the formulation of a national agricultural policy for the United States.

In considering this matter the character of the beet crop and its relation to soil fertility, as well as the effect upon the land of the sort of cultivation given and the value of beet tops, beet pulp, and beet molasses for live-stock feeding purposes should, of course, be given due weight.

This whole question offers a tempting field for discussion, but I believe that in the foregoing I have answered the question asked in your letter.

Very truly yours, HENRY C. WALLACE, *Secretary.*

It is my belief that, if a proper survey were made, it would be found that in the State of Texas, which is about the size of the German Empire before the World War, and which empire produced in the neighborhood of 3,000,000 tons of sugar annually, a like result could be obtained if the land in Texas adapted to the production of sugar cane were planted to this crop. The area of Texas is 167,866,600 acres, so that only one out of every 56 acres would be required to equal the German production of sugar, namely, 3,000,000 tons.

It is estimated that in Cuba there is under cane cultivation an area of approximately one and a half million acres, which produce a crop of 4,000,000 tons annually. I am given to understand that in the Florida everglades there is an area of approximately 4,000,000 acres which, when drained, is adapted to sugar-cane cultivation, or enough acreage to produce far more sugar than the amount produced in Cuba.

I have very briefly endeavored to show the possibilities of the production of beet and cane sugar in the continental United States, but this subject could be very much enlarged upon did time permit.

Mr. President, I think it a fair conclusion that had it not been for the development of the beet-sugar industry, thus giving us two sources of sugar supply, the world would be paying far more per pound for its sugar than it is to-day. Not only did the discovery that sugar could be produced commercially from beets greatly enlarge the sugar-producing area of the world but prior to that time the cane-sugar production of the Tropics, produced by slave labor, was most primitive and wasteful. From the outset the production of sugar from beets was under highly scientific methods, evolved by the world's leading chemists, and gradually the scientific knowledge developed in the beet-sugar industry has been applied to the cane-sugar industry of the Tropics, until to-day their primitive mills and wasteful processes have given way to the scientific successes which first developed the beet-sugar industry and their modern mills are as extensive as are the beet-sugar factories.

Back in 1840, when the Tropics, after centuries of continued cane-sugar production, had reached a world output of 1,288,000 tons, the newly created beet-sugar industry produced 51,500 tons, or only 3⅝ per cent of the total. In that year the average wholesale price of raw sugar in the United States was 11¼ cents per pound. Our total consumption then amounted to only 120,000 tons, of which about one-half was produced in Louisiana and the other half was imported from the Tropics, mainly from Cuba.

Mr. President, we all know that the wonderful progress made in the methods of producing sugar has been duplicated in the production of other farm crops through the invention of the reaper, the mowing machine, the drill, the corn planter, and a multitude of other farm implements. Of course, while the other farm costs of production have decreased, the price of labor has steadily increased, both on beet and nonbeet farms.

Mr. President, I want to show you that of all the foodstuffs upon which reliable data is to be obtained, running back as far as 1840, sugar is one of the four items which has declined in price, and the decline in the price of sugar is far greater than in any of the other three. These figures from 1840 to 1890 are taken from the Aldrich report of the Senate Finance Committee, published in 1893. Quarterly prices for each year are given, and the yearly figures I will use are secured by taking an average of all the prices for each year. The prices from 1900 to 1921 are from the reports of the United States Department of Labor, and the figures cover 21 food commodities.

The quotations show that of the 21 food commodities, 17 have increased in price all the way from 16 to 186 per cent, with an average increase of 45.22 per cent. Bread has gone up 122 per cent, butter 160 per cent, cheese 126 per cent, eggs 121 per cent, ham 122 per cent, while raisins top the list with an increase of 186.1 per cent.

On the other hand, the price of coffee has declined 25 per cent, corn meal 26 per cent, mutton ninety-five one hundredths of 1 per cent, and sugar 44.8 per cent.

Practically every other food commodity the wage earner purchases has gone up nearly 50 per cent, while sugar can be purchased at about one-half of what it was selling for 80 years ago.

Mr. President, if the price of sugar had kept pace with the price of other food commodities, sugar now would be selling regularly for 16 cents a pound instead of 6.2 cents, the average price during 1921.

So, Mr. President, the consumers of sugar have nothing to complain of. Their only complaint on the price of sugar was the price in 1920, which was due not to our domestic producers, who had no sugar to sell, but to the exploiting New York-Cuban producers, who, having a million tons of sugar in the warehouses, formed a pool to bleed us and agreed among themselves not to sell an ounce of their great stores of this article at less than 24 cents a pound for raw sugar f. o. b. Cuba.

Mr. President, I have here a table giving the average yearly price of each of these commodities, by decades from 1840 to 1921, and, without objection, will have it printed with my remarks.

The PRESIDENT pro tempore. Without objection, it will be so ordered.

The matter referred to is as follows:

Wholesale prices of foodstuffs.
(By decades, 1840-1921.)

	1840	1850	1860	1870	1880	1890	1900	1910	1921	Per cent increase.
Beans, per bushel	(1)	(1)	$1.906	$2.498	$1.775	$2.175	$2.087	$2.399	$3.102	62.7
Bread, per pound	(1)	$0.035	.04	.06	.05	.05	.032	.04	.078	122.8
Butter, per pound	$0.16	.1675	.1875	.347	.2925	.2175	.225	.301	.417	160.6
Cheese, per pound	.09	.0662	.0962	.1437	.1187	.0953	.113	.157	.204	126.6
Eggs, per dozen	(1)	(1)	.1621	.3125	.1693	.19	.198	.326	.359	121.4
Flour, per barrel	[2] 5.56	[2] 5.59	8.06	9.25	8.90	6.037	4.65	3.35	8.326	49.7
Lard, per pound	.0956	.0681	.1125	.1437	.075	.0581	.069	.125	.111	16.2
Bacon, per pound	.08	.045	.086	.1425	.0688	.0536	.075	.133	.1343	67.8
Beef (ribs), per pound	(1)	(1)	.1425	.25	.16	.16	(1)	(1)	.213	49.4
Ham, per pound	.12	.0645	.0833	.205	.0991	.1083	.103	.164	.267	122.5
Lamb, per pound	(1)	(1)	.1125	.185	.1312	.1316	(1)	(1)	.205	82.2
Salt pork, per barrel	14.606	10.906	17.988	27.937	13.312	12.062	12.507	23.738	26.662	82.2
Milk, per quart	(1)	(1)	.05	.0675	.0537	.0475	.027	.037	.0645	29
Raisins, per box 20 pounds [3]	1.356	2.737	2.493	3.10	2.312	2.35	1.521	1.224	3.88	186.1
Rice, per pound	.0303	.0315	.0459	.079	.0725	.0556	.055	.055	.044	45.2
Onions, per 100 pounds [4]	(1)	(1)	1.04	2.878	1.89	1.97	1.471	1.796	2.438	134.4
Potatoes, white, per bushel	(1)	.725	.5071	.756	.468	.86	.374	.428	1.074	48.1
Average increase in price of 17 commodities										45.22
Coffee, per pound	.0948	.095	.1303	.10	.1512	.1958	.082	.095	.072	−24
Meal (corn), per 100 pounds	1.626	1.585	2.002	2.627	1.645	1.371	1.012	1.542	1.193	−26.6
Mutton, per pound	(1)	(1)	.105	.18	.1325	.1425	.073	.101	.104	−.95
Average decrease in price of 3 commodities										17.18
Sugar, per pound [5]	.1125	.0912	.0978	.1351	.098	.0627	.0532	.0497	.062	−44.8

[1] No data.
[2] From 1889 American Almanac.
[3] Prior to 1921 "London Layer," 1921 "Coast seeded."
[4] Converted from barrels to 100 pounds on basis of 55 pounds per bushel, 3 bushels to barrel.
[5] From United States Statistical Abstract.

NOTE.—Except as indicated by footnotes the prices for 1840 to 1890, inclusive, are from volume 2 of the 1893 Aldrich report of the Committee on Finance, and cover prices of such principal food commodities as also have been given for subsequent years by the United States Department of Labor. Prices for 1900 to 1921 from Bulletin No. 269 and February, 1922, Monthly Labor Review of the United States Department of Labor.
The above tabulation comprises the average of 1,100 quotations.

Mr. NICHOLSON. These individuals who had unconscionably profiteered on sugar in 1920 are the same people who are now shedding crocodile tears as to the price the poor laboring man will have to pay for his sugar if we enact a tariff bill which will protect the domestic sugar industry.

Mr. President, whenever the sugar tariff is being discussed we hear a lot about increasing the cost of the wage earner's breakfast table by increasing the duty on sugar. Opponents to the duty on sugar point to the fact that next to Great Britain we consume more sugar per capita than do the people of any other great nation. They say, with truth, that we consume one-fifth of all the sugar produced in the world, and from this they draw the conclusion that even a slight rise in the price of sugar places a material extra burden on every wage earner and farmer in the Nation. Let us consider this matter for a moment in connection with actual figures and see where we land—see just what figure the price of sugar cuts in the poor man's food budget.

During the past 10 years our average annual consumption of sugar has been 82¼ pounds per capita, or 411¼ pounds a year for a family of five. This is a large amount of sugar, and if the housewife purchased that amount of sugar at the corner grocery, her sugar bill at 6 cents per pound would amount to $24.67 per annum—not a very great sum with which to load the family budget.

But, Mr. President, the housewife does not purchase this amount of sugar. Over two-thirds of our entire consumption is used in the manufacture of confectionery, soft drinks, condensed milk, jams, jellies, preserves, and innumerable other products, the prices of which are not influenced by the price of sugar they contain, be it ever so great. Of all these articles, confectionery perhaps contains the greatest proportion of sugar, and who will say that when he pays 50 cents or 75 cents or $1.50 for a pound of choice candy, he would pay a cent a pound less or a cent a pound more, depending upon whether sugar was selling at 5 cents or 6 cents or 7 cents per pound.

From 12,000 families scattered throughout the Union, our Department of Labor has ascertained that the average amount of sugar purchased by these wage earners' families is 147 pounds per annum, which, at the normal price of 6 cents per pound, costs the total sum of $8.82. Thus, for less than the compensation received for two days' toil, the skilled mechanic is able to supply his family with all the sugar it purchases in a whole year. The wage earners' normal sugar bill amounts to less than a penny a meal for his entire family, an infinitesimal sum, which brings more pleasure to each member of his household than does any other article he purchases.

Far be it from me to wish to burden the farmer or wage earner, but to talk about an increase of 1 cent a pound in the price of sugar as being an additional burden under which he would have to stagger is nonsense. An increase of 1 cent per pound in the price of sugar would cost the wage earner the sum of $1.47 a year, less than what he spends in one evening to take his family to the movies.

Mr. President, it is the increase in price of other commodities which cuts a figure with the wage earner's annual budget. Let us consider some of these increases and see how small the wage earner's sugar bill is in comparison. From 1913 to 1919 the price of milk advanced 6.6 cents per quart, and as the average wage earner's family consumes 337 quarts of milk a year, the increase alone in the size of his milk bill was equivalent to an increase of 15 cents per pound in the price of all the sugar he purchased.

Mr. President, when sugar goes up a cent a pound the newspapers are filled with harrowing tales of how greatly the rise affects the wage earner, but when butter goes up we hear little or nothing about it; yet the increase in the United States of the price of butter from 1913 to 1919 represented to the working man two and one-half times as much additional outlay as the total cost of all the sugar purchased for his entire family in 1913. The increased cost of his eggs in 1919 as compared with the cost of the same quantity in 1913 amounted to twice the cost of all the sugar the wage earner's family purchased in 1913.

The extra amounts the wage earner had to pay for his milk, his butter, his bread, or his eggs in 1919, because of their increase in price since 1913, each and every one of them amounted to more than his entire 1919 sugar bill, in which year his sugar averaged to cost him 11.3 cents per pound—about twice its normal price. And the excess money he had to pay and did pay for these four articles of food because of their increase in price amounted to $82.33. With sugar at the abnormal price of 11.3 cents per pound, this excess amount the wage earner had to pay for four food commodities because of their advance in price would pay the wage earner's entire sugar bills for five years.

Why, Mr. President, to say nothing about the beef and mutton and bacon and ham and other meats the working man consumes, he pays out as much money, mostly in the winter, for pork chops alone as he pays out for sugar during the entire year.

In 1919, 12,096 wage earners' families made monthly reports of their purchases to the United States Department of Labor. They reported on 46 separate and distinct articles of food, for which their total payments averaged $467.38 per family. One of the 46 articles purchased was sugar, for which they paid an average of 11.3 cents per pound, or about double its normal price and nearly twice what it has been since selling for. But even though paying this abnormal price for sugar, the wage earner's annual sugar bill amounted to only $16.61, or less than 3½ per cent of what he expended for the 46 articles of food mentioned.

Mr. President, an increase of 40 cents per hundred pounds in the cost of the wage earner's purchases of sugar would increase the family expense only 1 cent per week, and to consider the size of his sugar bill as a prime factor when legislating for the purpose of building up and expanding this great national industry would be equivalent to considering the cost of the shoe blacking for the officers' shoes as a prime factor when appropriating a hundred million dollars for a Navy with which to defend our country. It is a mere flyspeck on our cost of living. The cost of shoes to the farmer and wage earner, as compared with the price he paid for them before the World War, has been tripled, so that they now pay as much extra money for one pair of shoes as their entire family sugar costs for the whole year. The wife of the farmer or workingman who purchases a few yards of calico paid 6½ cents a yard in 1915. In 1920 the same goods cost her 26 cents per yard. The gingham for her apron cost her 8 cents a yard in 1915; in 1920 it cost her 33½ cents per yard. Her muslin has gone up from 10.8 cents to 46½ cents a yard. Clothing has advanced 350 per cent. All of these artieles are largely produced by the Atlantic coast manufacturers, a great many of whom are opposing the increase of 40 cents per hundred pounds now asked for in the duty on sugar. If the refiners and exploiters of Cuban sugar estates have really the interest of the American farmer and wage earner at heart as much as they would have us believe, why do they not call attention to these exorbitant advances which are making greater inroads upon his pocketbook than the price of sugar, and which are so essential to the comfort of himself and family?

Mr. President, although we are next to the greatest sugar-consuming people in the world and absorb one-fifth of all the sugar produced in the world, whether the farmer or wage earner secured his sugar at normal cost or for nothing it would have no appreciable effect on his cost of living.

I have here a tabulated statement giving the average quantity, average price per unit, and total average cost per family of 46 articles of food consumed by 12,096 wage earners' families in 1919, together with the price paid per unit in 1913, so far as given by the Department of Labor. With the consent of the Senate I will have it appear in my remarks, for it covers more fully the point I have just been trying to set forth in a few words.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

The cost of living.

[Average price per unit in 1913 and average price per unit, quantity consumed, and total expenditures of 12,096 wage earners' families in 1919. Compiled from Bulletins No. 269 and No. 270 and Mimeograph Sheet No. 1018 of the United States Department of Labor.]

Article.	Unit.	Average price per unit.		Quantity consumed per family, 1919.	Total family expenditure, 1919.	Percentage increase in price per unit, 1913–1919.
		1913	1919			
Sirloin steak	Pounds	$0.254	$0.417	32	$13.34	64.1
Round steak	do	.223	.389	32	12.45	74.4

[1] Not reported separately in 1913.

Average percentage increase in price, 23 commodities, 1913–1919, 85.5.

Mr. NICHOLSON. Mr. President, I have stressed the cost of sugar to the farmer and laboring man in order to counteract the misleading propaganda with which the seaboard refiners and Cuban exploiters are flooding the country in their effort to prejudice the minds of the general public, and the wage earner in particular, in which effort they are leaving no stone unturned, their object being to destroy our domestic sugar industry.

People are apt to think of sugar primarily because of its pleasant taste, rather than because of its actual food value. There are few who realize that sugar contains far more actual nutriment than any other article appearing on the average American table. In order to more fully set forth the nutriment contained in a pound of sugar as compared with the nutriment in the other articles appearing on the average table, I have obtained from the Department of Labor a statement which is rather illuminating to say the least.

This statement shows that in order to obtain from bacon the same nutriment contained in a pound of sugar costing 6.8 cents, the consumer has to pay 27 cents, or a difference of 20 cents; for the same nutriment in leg of lamb as to be found in a pound of sugar he has to pay 66 cents, or 59 cents more; for the same nutriment in bread as to be found in a pound of sugar he has to pay 14 cents, or fully twice as much; for the same nutriment in butter as to be found in a pound of sugar he pays 25 cents, or almost four times as much; for the same nutriment in sirloin steak as to be found in a pound of sugar costing 6.8 cents, he pays 70 cents, or 63 cents more than he pays for the same nutriment in sugar; for the same nutriment in ham that he gets from a pound of sugar he pays 55 cents, or practically eight times as much; for the same nutriment in eggs as he obtains from a pound of sugar he pays 93 cents, or almost fourteen times as much.

I ask the Senator from Idaho what duty has been placed upon dried eggs?

Mr. GOODING. Eighteen cents.

Mr. NICHOLSON. A duty of 18 cents has been voted by the Senate upon dried eggs, and yet we find men in this body who refuse to grant the farmer a duty of 2 cents a pound on sugar.

In my estimation, the information set forth in these statements is most valuable, and I, therefore, ask unanimous consent to have the letter from the Labor Department, with accompanying statements, printed in the RECORD as part of my remarks.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF LABOR,
BUREAU OF LABOR STATISTICS,
Washington, July 31, 1922.

Hon. SAMUEL D. NICHOLSON,
Room 245 Senate Office Building, Washington, D. C.

MY DEAR SENATOR NICHOLSON: In response to your request I am forwarding you a statement showing the average price per pound, calories

per pound, cost of 1,000 calories, calories per $1, and cost equivalent to cost of 1 pound of sugar, and for a number of specified articles.

The prices per pound given in the second column are the average for the year ending June 30, 1922, of the prices in the 51 cities from which the Bureau of Labor Statistics secures retail prices. The calories per pound in the third column are those furnished you by the Bureau of Chemistry of the United States Department of Agriculture. The subsequent columns of the table are simple computations from the data given in the second and third columns.

I am inclosing also the wholesale prices for the articles named for the year ending June 30, 1922. These are not, strictly speaking, averages for the United States, but are averages of the market price in the cities from which the bureau secures quotations. For example, the prices for sugar and mutton are New York prices; the prices for pork (bacon) and ham are Chicago prices. The prices for bread, butter, and eggs are average quotations from several cities. The articles named in this list do not correspond exactly with the articles named in the retail price list but are the nearest to those articles for which the bureau has prices. You will understand, of course, that our wholesale price figures are for a general purpose and indicate the trend of prices and have no direct relation to our retail prices of foodstuffs which are carried as a part of our cost of living investigation. In other words, it is not possible in most cases to relate directly our wholesale prices with our retail prices and the bureau never attempts to do so.

I should think the table of calories based upon retail prices would serve your purpose better than the wholesale prices. I am returning you herewith your letter from the Agricultural Department. We were unable to add the item of fish, as the only fish we carry is canned salmon.

If I can be of any further service to you let me know.

Sincerely yours,

ETHELBERT STEWART,
Commissioner of Labor Statistics.

Average wholesale prices of selected commodities for the fiscal year ending June 30, 1922.

	Average price.
Sugar, granulated, in barrels, per pound, New York	$0.053
Pork, cured (bacon), per pound, Chicago, average of rough and short clear sides	.129
Mutton, dressed, per pound, New York	.109
Bread, before baking, per pound, weighted average price	.072
Butter, creamery, extra, per pound, weighted average price	.402
Beef, loins, fresh, per pound, average of New York and Chicago price	.251
Hams, smoked, loose, per pound, Chicago	.277
Eggs, fresh, per dozen, weighted average price	.360

Average price per pound, calories, etc., of specified articles of food in the United States for the year ending June 30, 1922.

Article.	Price per pound.	Calories per pound.	Cost of 1,000 calories.	Calories per $1.	Cost equivalent to cost of 1 pound of sugar.
Sugar	$0.068	1,860	$0.037	27,353	$0.068
Bacon, sliced	.395	2,685	.147	6,797	.270
Leg of lamb	.348	975	.357	2,802	.660
Bread	.091	1,205	.076	13,242	.140
Butter	.482	3,605	.134	7,479	.250
Sirloin steak	.372	985	.378	2,648	.700
Ham, sliced	.490	1,670	.293	3,408	.550
Eggs (47 cents per dozen)	.316	635	.498	2,009	.930

Mr. NICHOLSON. Mr. President, we have a good example of what the difference between a $1.60 and a $2 rate of duty to Cuba means to the domestic sugar industry. In 1897 Congress decided that we should have a domestic sugar industry which would supply us with all of our sugar, and to create that industry it levied a duty of $1.68½ on raw sugar. We then had only four struggling little beet-sugar factories in the whole United States—three in California, one in Utah, and two in Nebraska.

Immediately the Dingley tariff bill was passed capital began to build more factories, and in 1902 we had 44 factories. Mr. Havemeyer, of Sugar Trust fame, became scared, and he set the wheels in motion which resulted in the Cuban reciprocity treaty which reduced the duty to Cuba 33⅓ cents per 100 pounds. Meanwhile, to remove some of the strongest opposition to the treaty, which had held it up for a year, he purchased a large interest in several beet-sugar companies, which accounts for his son and the Sugar Trust being interested in them to-day.

Mr. President, according to the published report of the Department of Agriculture, at the time the Cuban reciprocity treaty was adopted we had 86 projected new beet-sugar factories in the United States, to cost $49,000,000:

Two were to be located in Arizona, to cost	$1,500,000
Five were to be located in California, to cost	3,500,000
Seven were to be located in Colorado, to cost	5,000,000
One was to be located in Indiana, to cost	1,000,000
Six were to be located in Iowa, to cost	3,500,000
One was to be located in Idaho, to cost	500,000
Twenty-eight were to be located in Michigan, to cost	14,900,000
Five were to be located in Minnesota, to cost	2,400,000
One was to be located in Montana, to cost	500,000
Two were to be located in New York, to cost	1,500,000
One was to be located in New Jersey, to cost	500,000
Two were to be located in North Dakota, to cost	1,000,000
Three were to be located in Ohio, to cost	1,350,000
One was to be located in Oregon, to cost	500,000
One was to be located in Pennsylvania, to cost	500,000
Two were to be located in South Dakota, to cost	1,000,000
Three were to be located in Utah, to cost	2,500,000
Ten were to be located in Wisconsin (4 plants; Racine), to cost	6,350,000
Two were to be located in Wyoming, to cost	1,500,000

Mr. President, when that treaty was adopted reducing the duty on Cuban sugar 33⅓ cents per 100 pounds every one of those 86 projects except 6 were abandoned, and most of them never have been revived. As a result of tinkering with the sugar tariff in the 19 years since that treaty was adopted we have only built 62 factories, or 24 less than the number we had projected 19 years ago.

Mr. President, that is what 33 cents a hundred means when it comes to building up a great national industry. Are we going to leave the duty at $1.60 for the benefit of a few Sugar Trust and Cuban sugar-producing men, or are we going to add 40 cents a hundred to it and build up another great home industry?

Mr. President, I desire to call the attention of Senators to a preferential tariff existing between Australia and South Africa, which tariff provides for a differential in favor of sugar produced by white labor as against sugar produced by black labor. I quote from the United States Tariff Commission on Colonial Tariff Policies, page 785, as follows:

> The "color line" in sugar duties: The "color line" drawn with regard to the duties on South African sugar was an interesting feature of the South African agreement. Cane sugar under the general Australian tariff was dutiable at 6s. per hundredweight, but under the agreement with South Africa discrimination was made between sugar "produced solely by white labor" and sugar "produced wholly or partly by black labor," a preferential rebate of 2s. per hundredweight being granted to the former, whereas to the latter a rebate of only 1s. per hundredweight was granted.
>
> This discrimination was due to the influence of the Labor Party, which has always opposed the grant of preference to British colonies and possessions that rely upon colored labor for the carrying on of their industries. During the debate on the preference resolutions of 1904 Mr. Watson, the leader of the Labor Party, upon being asked whether he would allow India to share in an Australian preference, replied, "No; except in regard to such products as tea I would not give any preference to products made by Asiatic labor which would come into competition with the products made by white people, though I am prepared to give such a preference to the products of the white labor of Great Britain."

But, Mr. President, the American farmer and the American laborer find themselves producing domestic sugar in competition with the black labor of the Tropics, which is the cheapest labor in the world. No laborer in the world can live as cheaply as does the laborer engaged in the production of sugar in the Tropics.

Is it fair to ask the farmers and laborers of this country, where production costs in all lines of human endeavor are much higher than in the Tropics, to produce sugar in competition with what is practically slave labor in order that the seaboard cane sugar refiners, with their enormous plantations in Cuba, may be permitted to make outrageous profits as soon as they find that the supply of domestic sugar has been absorbed by the consumer?

Let us see how the laborer engaged in the production of sugar in the Tropics lives, or rather exists: His habitation is the rudest kind of a hut, consisting of four poles stuck in the ground, with a roof of palm leaves, and this is his sole protection from the elements. His food consists of plantains, fish, and the milk of goats, which only the fortunate few possess. The clothing of himself and family is the scantiest and shoes are unknown. Surely no Member of this body is desirous of seeing the American farmer or laborer brought to this most degraded and semi-barbarous condition.

Do we find any protest against the proposed tariff coming from the American farmer or laborer? Certainly not, because they fully realize that if they have to produce sugar in competition with the slave labor of the Tropics it means the lowering of the standard of living of the American farmer and American laborer.

Is there any sane man or woman who believes that there is not a greater difference than 2 cents a pound between the cost of producing sugar in the Tropics and the cost of producing it in the United States?

But if the domestic production of sugar were discontinued and we had to rely on that produced by the black labor of the Tropics, it would not be long before the American consumer would be paying the price for sugar he used to pay before American domestic sugar became a factor to be reckoned with in competition with the sugar produced in the Tropics, the price paid by the American consumer at that time being from 11 cents to 15 cents per pound for a very inferior article.

The experience we had immediately after the World War should be a lesson to us. At that time the Atlantic coast cane-sugar refiners, with their plantations in Cuba, thought they had us by the throat and were holding us up for 24 cents a pound for sugar. Did we find the Atlantic coast refiners at

that time issuing propaganda calling attention to the enormous price the American farmer and laborer was compelled to pay for his sugar? No; they were as silent as the Sphinx of Egypt on this question.

I have received a great many letters concerning this question and desire to quote part of a letter received by me from Mr. A. R. Peck, of the Anaheim Sugar Co., Los Angeles, Calif.:

A careful analysis of the cane-sugar situation will disclose the fact that probably 60 per cent of the production of raw sugar in Cuba is in the hands of the New York cane refiners or people closely allied with them. It is therefore not surprising that they should protest against any duty on sugar which is sufficient to properly protect the beet-sugar industry of this country.

I happen to be quite closely allied with one of the cane-sugar refiners in New York and know from conversations had with him that any movement in Washington intended to give adequate protection to the beet-sugar industry is extremely distasteful to him.

But, Mr. President, they are not satisfied with control of the sugar plantations in Cuba, but are now trying to lay their slimy hands on the domestic production of sugar. They have acquired large interests in some of the American beet-sugar companies, but, because of the cheaper cost of production in Cuba, they are enabled to make greater profits than in domestic production, and their desire now is to destroy this struggling American industry.

Of the numerous articles which delight the brain through the sense of taste, how many are made palatable and attractive through the admixture of sugar?

Mr. President, sugar represents more of comfort and ministers more to the simple delights of home than does any other single product. Truly it has been said that of all the articles that have been accounted luxuries, sugar is nearest to a prime necessity. Whatever political economists may say as to the size of our sugar bill, if the joy of life be considered, it is money well expended. And, Mr. President, there are no "choice cuts" in sugar, no expensive grades which only the rich can afford to purchase. Whether it grace the banquet table of the palace or the frugal meal of the hovel, sugar is of the same purity, sweetness, and snowy whiteness, and its cheapness in price places it within the reach of the humblest working man, be it on the far-away ranch or in the crowded city.

No American citizen who has pride in his country should object to an adequate tariff that will enable us to produce at home all of our requirements of this necessary and pleasurable article of food.

Mr. President, I desire to call attention briefly to the following changes which have taken place since the enactment of the Dingley tariff bill, which imposed a duty on sugar of 1.685, which rate was continued in the Payne-Aldrich bill, and the duty imposed by the Underwood tariff bill, which was 1.25. Since that time the farmer has to pay twice as much for his coal as he did at that time; he pays twice as much for his shoes as he did at that time; he pays twice the price for his clothing as he did at that time; and the great World War has imposed upon him an enormous burden of taxation which will go on from generation to generation. The people of the Tropics have to contend with none of these burdens placed upon the American farmer by the World War. If Senators wish to be honest with themselves they can readily come to the conclusion that the increase we are now asking for as between the duty in the Payne-Aldrich bill and the Underwood bill is justified from every viewpoint.

Mr. President, I have some letters that I desire to have placed in the RECORD. Among others, I have a letter from the Farmers' Sugar Co. of Ohio, written by C. H. Allen, a perfect stranger to me. The junior Senator from Ohio [Mr. WILLIS] is present, and he might be able to give us some information as to the writer and his reliability.

Mr. WILLIS. Mr. President, in answer to the inquiry directed to me, I can say with reference to the witness to whom the Senator refers that I know him very well. He is a prominent business man in Ohio and has been actively connected with the sugar industry of that State for many years. He is now president of the Farmers' Sugar Co., of Defiance, Ohio, and is a very reliable citizen.

Mr. NICHOLSON. I ask permission to send the letter to the Secretary's desk and have it read in full.

The PRESIDENT pro tempore. Without objection, the communication will be read as requested.

The Assistant Secretary read as follows:

THE FARMERS' SUGAR CO.,
OFFICE OF THE PRESIDENT,
Defiance, Ohio, July 14, 1922.

Hon. SAMUEL NICHOLSON,
Washington, D. C.

MY DEAR SENATOR NICHOLSON: Your letter of the 8th was received in my absence, and I did not get to see it until to-day. It would have been answered before this if I had not been out of town.

I have just wired you, of which the inclosed is a copy.

I can not understand how any man who has made any study at all of the sugar business in America, and who has any knowledge of the possibilities of our American soil and of our American farmers, could possibly intimate that beet-sugar production could not be materially increased without being "hothoused" by means of a tariff higher than the people ought or would stand for.

Either that man has obtained his information regarding these subjects from hearsay, from gossip in Pullman cars, or in and with groups of people interested in "killing" the business in this country, or else he is simply ignorant of what he is talking about. Let us hope the latter is the case.

I have traveled over practically all that part of the United States west of the State of Ohio where beets are grown, excepting the State of California. I have done this in an agricultural way, making speeches through Ohio, Indiana, Iowa, the Dakotas, Idaho, Oregon, Colorado, Washington, and I do not know how many other States, keeping myself thoroughly informed regarding agricultural conditions and possibilities. That was my business. And I can tell you truthfully the present beet-sugar interests are only an infant to what it might become. We have more land suitable for beet-sugar culture than any country on the globe, with possibly the exception of Russia; we have more intelligent farmers than any country on the globe; and why we should not use every means at our command to obtain superiority in the production of a crop that has been proven over and over again to have been of the greatest benefit to all the citizens of the country who have persevered in its culture is beyond me.

I can only attribute it to ignorance, lack of knowledge, and general indifference to the future welfare of those who are to come after us and take up our burdens.

You people of the valleys of the Rocky Mountains have shown a little quicker appreciation of the values of such crops as sugar beets and alfalfa; you have had a little more courage in branching out; you have been progressive, not so afraid to take a chance, and you have succeeded, and it is greatly to your credit and we all honor you for it (I am writing now as an agriculturist), but such a man as you mentioned who appeared before the Senate Finance Committee and made such a ridiculous statement must not think that all the soil and all the intelligence respecting the growing of beets and kindred crops lies in Colorado and the adjoining States.

Iowa alone has enough suitable land; it has the climate and the very best and most intelligent farmers I know of, who, if encouraged and instructed, can grow more sugar than Colorado and Utah combined. This is just one State in the Middle States of this country, and there are more like it.

I could say practically the same thing of Minnesota and South Dakota, to say nothing of Wisconsin, Michigan, and Ohio.

In Ohio two years ago, when the price of sugar raised the price of beets grown on the farm—this is governed to a great extent by the tariff—to such a point that farmers made more money growing them than growing the other crops, so many farmers tried to get contract to grow beets we did not have near factories enough. We could have filled three other factories if we had had them, greatly to the benefit of the farmers, the business men, the laborers, and everybody in the State.

We have in Ohio five factories using the product for the factories of 35,000 acres. If we would increase these to 15 factories, we could use the beets from only 105,000 acres.

I know northwestern Ohio, where these factories are; I know the land, I know its possibilities, I have traveled over its roads, on the trolleys crossing it, over the railroads that link it to Indiana on the west and Michigan on the north.

I have studied its geology, its history, analyzed its soil, know its virtues and its failings, know what its soil has done in the past, and I believe I am as able to judge what it will do in the future as any man living in it. I know its extent and I know the people who live upon it, and when I state we have at least 2,000,000 acres that will produce beets, and we are only using 35,000 acres in that valuable crop now, you will certainly pardon me for feeling a little sorry for the man who thinks we would have to hothouse sugar to produce it in this country.

One of the great troubles in the question of tariff on sugar is the supposition that it benefits the manufacturer of sugar rather than the man or men who run the threshing machine used in threshing the sugar from the beets.

Sugar is grown, never made. It is an agricultural question, pure and simple. Any tariff made protects the farmer.

I wonder if people ever realize that we would never have had any sugar produced from beets at all if it had not been for protection to the farmer until he was able to learn how to produce this valuable crop. Some people seem to think this should be done in a year, or at least before the next congressional election. It took Germany 50 to 75 years of a settled policy to learn how to make the most of their valuable discovery of sugar-beet raising.

If they gained by it, if they brought prosperity to their country by its use, if it paid, would it not be a good thing if we took advantage of their experience?

There is one other thought that has been uppermost in my mind for a long time when it comes to this question of tariff on sugar. I mentioned it in my testimony before the Senate Finance Committee last December, and I refer you to that for particulars.

I have heard men engaged in the sugar-manufacturing business give their testimony before committees time and again, trying to prove—and I think easily doing it—the impossibility of competing with Cuba without protection, as if this Nation should take particular care of the business they were engaged in.

If there is no higher reason than what they give, their business should go down.

The American people are not going on year after year taxing themselves for the benefit of a few individuals.

If the sugar business is to live in this country, it must live because it will in the end benefit all the people, not just a portion of them.

This brings us to the reasons for a protective tariff against free trade, and we are right into politics, and there sugar will be as long as these two questions are before the American people.

I have already written too long a letter, but I got started and could not quit. Kindly pardon me for the same.

I am sending you under another cover a late copy of the Sugar Journal, which has two articles written by myself that may further give you my views—one on page 10, the other on page 14.

This is the only copy I have, but San Francisco is so far away that I am willing to part with it if you can gain any information that may be of use to you.

Yours very truly,

C. H. ALLEN.

Mr. NICHOLSON. Mr. President, I desire to quote for the RECORD a paragraph from a report made by the Baragua Sugar Co., as follows:

Net profits of the property, before depreciation and income taxes but after inventory adjustments, for the last five years, have averaged $2,030,772 per year, or more than six times annual interest charges on these bonds. Even in the calendar year 1921 such net profits were over $1,003,000.

I will send to the desk the letter inclosing the Baragua Sugar Co. announcement, and also the announcement itself, and ask that they may be inserted in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

THE HOLLY SUGAR CO.,
OFFICE OF THE PRESIDENT,
Colorado Springs, Colo., July 28, 1922.

Hon. SAMUEL D. NICHOLSON,
Senate Building, Washington, D. C.

DEAR SENATOR: The inclosed shows profits of a Cuban sugar property located on the east end of the island, and 1921 profits were under an emergency tariff of 1.60, and demonstrate what a small company in Cuba can do under a tariff resulting in United States beet-sugar growers and factories experiencing very substantial losses.

Very truly yours,

A. E. CARLTON.

(New issue.)

$4,500,000 BARAGUA SUGAR CO. (COMPANIA AZUCARERA BARAGUA), SUBSIDIARY OF PUNTA ALEGRE SUGAR CO., FIRST MORTGAGE 15-YEAR 7½ PER CENT SINKING FUND GOLD BONDS.

[To be dated July 15, 1922. (Closed mortgage.) To mature July 15, 1937.]

Interest payable January 15 and July 15 without deduction for normal Federal income tax up to and including 2 per cent. Pennsylvania and Connecticut 4 mills taxes and also the Massachusetts income tax not in excess of 6 per cent annually will be refunded by the company on appropriate request. Coupon bonds in denominations of $1,000, $500, and $100, interchangeable, registerable as to principal only. Redeemable in whole or in part at 110 and accrued interest on any interest date to and including July 15, 1928, the premium thereafter decreasing one point for each year or fraction thereof. The Chase National Bank, of the city of New York, trustee.

An annual sinking fund of $225,000 in cash or bonds at face value is provided commencing July 15, 1923, total payments aggregating 70 per cent of the par value of this issue. Bonds will be drawn by lot and called for the sinking fund at the current redemption price if not purchasable at or below this price.

Capitalization:

First (closed) mortgage 7½ per cent bonds, this issue	$4,500,000
Capital stock, 110,250 shares ($50 par)	5,512,500

Mr. Edwin F. Atkins, president of the Punta Alegre Sugar Co., summarizes as follows his letter to us:

"Compania Azucarera Baragua (translated Baragua Sugar Co.) is being incorporated under the laws of Cuba and will succeed to the ownership of the fixed assets of the present Baragua Sugar Co., a Delaware corporation. The entire capital stock of the new company will be acquired by the Punta Alegre Sugar Co.

"The property is a self-contained, low-cost sugar producer, including a modern mill with a daily capacity of 5,000 tons of cane; over 42,000 acres of land in Camaguey Province owned in fee, approximately 19,000 acres controlled through lease, and about 10,000 additional acres from which the cane is under contract; 110 kilometers of standard-gauge private railroad; adequate rolling stock, and a private seaport.

"It is estimated that in normal years the port facilities alone will result in a saving in shipping costs in excess of the interest on this bond issue as compared with costs if dependent upon public carriers.

Net profits of the property, before depreciation and income taxes but after inventory adjustments, for the last five years have averaged $2,030,772 per year, or more than six times annual interest charges on these bonds. Even in the calendar year 1921 such net profits were over $1,003,000.

"Net tangible assets of the company as shown on its projected balance sheet will be over $2,270 per $1,000 bond and have recently been appraised as having a value in excess of this figure.

"The present advantageous arrangement for marketing the sugar of the Punta Alegre Sugar Co. through E. Atkins & Co. is available to the new company."

Application will be made to list this issue on the New York and Boston Stock Exchanges.

The legal proceedings in connection with this issue are being passed upon by Messrs. Chadbourne, Babbitt & Wallace, of New York City, for the bankers, and Messrs. Root, Clark, Buckner & Howland, of New York City, for the Punta Alegre Sugar Co. in conjunction with Claudio G. Mendoza, Esq., of Habana, Cuba, for the bankers and the Punta Alegre Sugar Co. jointly. Interim certificates of the Chase National Bank, of the city of New York, or temporary bonds will be issued pending delivery of bonds in definitive form.

We offer these bonds when, as, and if issued and received, and subject to the approval of counsel.

Price 100 and interest yielding 7½ per cent.

HAYDEN, STONE & CO.
BROWN BROS. & CO.
HARRIS, FORBES & CO.

(Statements contained herein are not guaranteed, but are based upon information which we believe to be accurate and reliable and upon which we have acted in the purchase of these bonds.)

Mr. NICHOLSON. I should also like, with the consent of the Senate, to have inserted in the RECORD a letter from Dr. Harvey W. Wiley, formerly head of the Bureau of Chemistry of the Department of Agriculture. I also send to the desk a letter from the United States Sugar Co., of Milwaukee, Wis., which is all contained in one page; a letter from the Columbia Sugar Co., of Bay City, Mich., all of which is contained in one page; a letter from the Holly Sugar Co., of Colorado Springs, Colo.; a communication from the Wyoming Sugar Co., of Ogden, Utah; a communication from the Michigan Sugar Co., of Detroit, Mich.; a communication from the Larrowe Construction Co., of Detroit, Mich.; a communication from the Garden City Co., of Garden City, Kans.; a communication from the Utah-Idaho Sugar Co., of Salt Lake City, Utah; and a communication from the Minnesota Sugar Co., of Minneapolis, Minn., all of which I desire may be printed in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The communications referred to are as follows:

GOOD HOUSEKEEPING,
BUREAU OF FOODS, SANITATION, AND HEALTH,
Washington, D. C., July 17, 1922.

Hon. SAMUEL O. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SENATOR: The question which you raise in regard to the area suited to the culture of beets is one of great practical interest. During my service in the Bureau of Chemistry I made very extensive investigations of the influence of climate, and especially of temperature, upon the sugar content of sugar beets and of sweet corn. Altogether about 50,000 analyses were made of sugar beets grown in various portions of the United States. A summary of the results of this extensive work was published as Bulletin No. 52, revised, United States Department of Agriculture, Division of Chemistry, issued in 1899. Of this bulletin, I regret to say, I have only one copy; but I am sure you would be able to get it or borrow it from the librarian of the Department of Agriculture, or you may probably get it from the Superintendent of Public Documents.

I found the greatest factor in the production of sugar was the temperature, especially during the three growing months of June, July, and August. In all parts of the United States where the mean temperature for those three months is 70° F. I found the richest sugar beets were grown. With this data I constructed a prospective map of the areas in which sugar beets of this high degree of richness could be produced. This map also contains, in the form of red dots, the locations of the successful sugar-beet factories in the United States. You will be surprised to see how nearly contained in the mapped area are all the successful sugar factories which were in operation at that time. I have no map of the additional factories erected since then, but I believe they will all be found approximately in or near the area predicted.

Of course, all parts of this area are not suitable for the cultivation of sugar beets. Some parts of this area are mountainous and not tillable; others are in an arid region, where water of irrigation is not available. Still others are in arid regions where irrigation has been practiced. In the eastern portion of the United States this area is located where severe winters are likely to occur and thus interfere with the harvesting and storage of beets. I am prepared to say, however, without hesitation, that sufficient area suitable in every respect to the culture of sugar beets may be found in the places indicated in this map, near or adjacent thereto, which if devoted to the growth of sugar beets would supply the needs of the whole world.

The cultivation of the sugar beet is a good example of intensive agriculture, because, while it pays the farmer to produce 15 tons per acre, it does not pay him to produce 5 tons per acre. If, moreover, by intensive agriculture he can raise the yield to 20 or 25 tons per acre, the farmer's profit will be all the greater.

I feel certain that by reason of the work done by the Division of Chemistry that many millions of dollars have been saved that otherwise would have been given over to the attempted cultivation of sugar beets to areas where the sugar content would have been too low to compete with really good beets.

In addition to this information in Bulletin No. 52 I published a series of separate investigations on the influence of environment on the composition of the sugar beet, which are contained in Bulletins 64, 74, 78, 95, and 96 of the Bureau of Chemistry. I regret I do not have reprints of these, but I am sure you can get them in the manner suggested above for Bulletin 52. You will find them full of very useful information in view of the problem which you are now studying.

I appreciate very much your generous reference to the value of my work in promoting what I consider to be one of the greatest industries of this country and one capable of almost illimitable extension.

Yours very truly,

H. W. WILEY.

UNITED STATES SUGAR CO.,
Milwaukee, Wis., July 10, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SIR: I inclose herewith copy of my telegraphic reply to your letter of July 8.

From my actual knowledge of the soil and climatic conditions in Wisconsin and Minnesota, in which States we operate, I feel justified in stating that the production of beet sugar could be increased to five or ten times the greatest output of any year if capital could be assured of a protective tariff covering the difference in cost of production attributable to the higher scale of wages paid in the United States. The same rate of expansion, no doubt, could be had in nearly all of the western and northern States where sugar beets are now grown.

As you well know, the general scale of wages has not declined to anywhere near pre-war rate, which is reflected in the higher cost of coal and all other supplies and railway freights, hence the industry must have at least 2 cents a pound protection on Cuban sugar.

Yours truly,

J. S. LAWSON, *President.*

COLUMBIA SUGAR CO.,
Bay City, Mich., July 11, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SIR: We are in receipt of your wire relating to the duty on sugar from Cuba and replied thereto to the effect that in our opinion a 2-cent duty on sugar from Cuba would stimulate the beet-sugar industry in this country to such an extent as would soon result in a production of sugar equivalent to a war ration and eventually our entire requirements.

You undoubtedly have the statistics showing the growth of the beet-sugar industry during periods of a favorable tariff. There is absolutely no reason why these same results should not be repeated under a tariff of 2 cents on sugar from Cuba. For statistics covering these questions we would refer you to Mr. Truman G. Palmer, 901 Union Trust Building, Washington, D. C. You may perhaps be familiar with the fact that Mr. Palmer is the statistician for the United States Sugar Manufacturers' Association and has an enormous amount of material bearing on every phase of the sugar industry.

We would call your attention to the recent increases in the price of sugar. They have been brought about by Cuba owing to the fact that she is to-day the dominant factor in the world's sugar market and holds what amounts to practically a corner on sugar. In 1919 and 1920, when Cuba thought she occupied a similar position, we saw her push the prices up to an intolerable point. She is now repeating this in a milder way, of course. Beet sugar always sells from 10 to 40 points below the price of the eastern seaboard refiners, is equal in quality in every respect to cane sugar, and could save the sugar consumers of the country a tremendous amount of money if put in a position to do so by an adequate and permanent tariff against Cuba. We regard 2 cents as such a tariff.

Appreciating your efforts in the behalf of this tariff and wishing you all success, we remain,

Yours very truly,

E. WILSON CRESSEY,
Secretary and General Manager.

THE HOLLY SUGAR CO.,
OFFICE OF THE PRESIDENT,
Colorado Springs, Colo., July 29, 1922.

Hon. SAMUEL D. NICHOLSON,
Senate Building, Washington, D. C.

MY DEAR SENATOR: My attention has recently been called to an optimistic circular issued by one of the beet-sugar companies, which is marketing some of its preferred stock.

The apparent prosperity of this company is based on the payment of $5 per ton to the beet growers, resulting in 30 per cent decrease in acreage for the current year and anticipated decrease of more than 50 per cent next year, as a farmer can not raise beets on such a contract.

The conditions therein set forth do not at all represent the situation of the industry generally.

The well-founded opinion of the beet-sugar industry, whose owners are not in any way interested in the Cuban sugar industry, is that the purpose of the circular is largely, if not wholly, to adversely influence Congress on the sugar tariff.

In 1888 the sugar-refining industry on the Atlantic seaboard, as result of competition in the control of powerful financial interests, approached bankruptcy. The elder Havemeyer then formed the Sugar Trust and gathered in the bankrupt concerns.

Present antitrust laws, perhaps, require a little different method, but do not prevent the same results.

To-day the domestic sugar industry is facing extinction. The inclosed annual report of the Holly Sugar Corporation is fairly representative of the financial condition and operating results of the average beet-sugar company in the United States. With one exception no company made a better showing and many are in more difficult situation. Without exception the beet growers' position is equally unfortunate.

If the United States is without domestic production of sugar the consumer will of necessity pay a price limited only by the avarice of the Cuban producers. Seventy-two per cent of the entire Cuban production is controlled by the Atlantic seaboard refiners and capitalists.

The beet-sugar company owned and controlled jointly by the younger Havemeyer and the American Sugar Refining Co. is of small value compared with the vast interests involved in their ownership of foreign cane sugars. The present situation does not involve the absorption of the bankrupt beet-sugar companies, but crushing them and placing the American sugar-consuming public at the mercy of the owners of the Cuban sugar production. Beyond the control and regulation of the laws of the United States, the added cost to the American consumer might easily be $1,000,000,000 a year.

The emergency tariff of 1.60, or practically ½ cent per pound above the pre-war duty, does not permit the payment to the beet grower of an adequate price, or one which will permit him to continue production. If we are to have a substantial domestic production of, say, 1,500,000 tons (less than one-half of our requirements if the duty-free product of our insular possessions is included) it is necessary to have a protective tariff of 2 cents on importations from Cuba, as without such a tariff the grower can not grow the necessary beets.

Very truly yours,

A. E. CARLTON.

WYOMING SUGAR CO.,
Ogden, Utah, July 15, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SIR: I am pleased to acknowledge receipt of your letter of July 8, but feel that I am unable to furnish you with all of the information you desire, as my experience in the beet-sugar industry has been confined to the State of Wyoming, our factory being located at Worland, Washakie County, Wyo.

At the present time there are only three sugar mills in the State of Wyoming, all of these mills having been built since 1915. Due to the war conditions, the subsequent inflation and deflation, the development throughout the entire State has been very slow, due principally to the fact that the migration of new farmers into the State has been practically nil, for reasons which are directly attributable to the three causes above mentioned.

Conditions in the State of Wyoming, particularly in the northern, north central, and eastern sections, are very adaptable to the culture of sugar beets, and with the natural land development, it will only be a matter of time until the State of Wyoming will produce as much beet sugar as the State of Colorado, and it will not require any more protection through a tariff than does the industry of Colorado, Utah, and Idaho. It is estimated that the Big Horn Basin alone has a million acres that eventually will be put under irrigation, not to mention the future possibilities of the Riverton and Lander section, in which at the present time the United States Reclamation Service has under construction a very large irrigation tract.

My personal opinion is that the State of Wyoming offers greater opportunity for the development and expansion of the beet-sugar industry than any of the other States in the intermountain section. Conditions in Wyoming are just as favorable for cultivation of sugar beets as in any State in the West, and I see no reason why it would require a hothouse duty to properly develop this industry.

I am inclined to question the fact that we could produce enough sugar within the United States to supply our entire requirements, although it may be possible. I do feel, however, that it would be an easy matter to produce at least 50 per cent of our national requirements.

In concluding I would like to state that in my opinion it is of the utmost importance that we receive a duty of 2 cents against Cuba, and it should be definitely borne in mind that the benefits derived through this increased protection will almost wholly go to the farmers, viz, that it will make it possible to pay them a higher price for their beets, which, in turn, would mean a material increase in acreage. The problem confronting the beet-sugar companies to-day is the fact that they have not been able to offer a beet contract with a sufficient guaranty to make the raising of sugar beets profitable to the farmers. I do not believe that we can expect the farmers to raise beets in future years on the pre-war prices, as their cost of production has materially increased.

If there is any further information I can give you, I should be very glad to have you call upon me.

Yours very truly,

J. M. ECCLES.

MICHIGAN SUGAR CO.,
Detroit, Mich., July 12, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SIR: Your letter of the 8th instant addressed to the general manager of the Michigan Sugar Co., Mr. W. H. Wallace, has been handed me for reply, as Mr. Wallace is now away on his vacation.

Permit me first to express our thanks for the earnest efforts you are making to secure a 2-cent duty on sugar imported into the United States from Cuba. We certainly appreciate the work you are doing and shall be glad to render you any assistance in our power.

I am thoroughly satisfied, and so is Mr. Wallace, that if we could have a 2-cent duty against Cuba the result in Michigan would be that we would double the output of beet sugar in this State. It is possible that there would not be very many new factories built. There is, however, room for one or two more in the Upper Peninsula. The great increase in Michigan that would result from a 2-cent duty on Cuban sugar would be that the 17 factories now in the State would be able to pay a sufficient sum for beets to induce the farmers to raise a full crop for each one of the 17 factories. At present we are skimping along on about 60 per cent to 65 per cent of a normal acreage. Unless we can pay more for beets next season the acreage in Michigan will be still less next year than this. If we could get a 2-cent duty against Cuba and pay the farmers a price for their beets that would compete with the prices that they are receiving for their other farm crops every factory would get a run of from 100 to 120 days, which, as I say, would virtually double the output of beet sugar in the State of Michigan. You must understand that we are differently situated in Michigan than in some of the Western States in that the farmers here are engaged in general farming, whereas in Colorado the range of their farm products is limited. In Michigan we must compete with the price of beans, peas, wheat, corn, oats, rye, chicory, potatoes, fruits, and hay. All these farm products now command a good price, and all of them, thanks to the Senate, will be protected by a good duty with resultant good price in the future. Under such circumstances you can readily see that sugar must be protected with a corresponding duty in order that the factories can pay the corresponding price for beets that farmers obtain for their other crops. Please remember also that every beet contract put out by the factories in Michigan carries a provision whereby the factory guarantees a minimum price for beets and gives the beet grower the advantage of any increase in the price of sugar above the minimum sugar price named in the contract. In other words, all beet contracts are participating contracts, the farmer thus getting his full share of the duty imposed on sugar.

Relative to your other inquiry concerning territory in the United States adapted to beet culture, will say that the Department of Agriculture some years ago, in reply to a resolution passed by the Senate, gave the information that the extent of land in this country adapted to beet culture was sufficient to raise more sugar than the entire world consumes. You can get this report from the Department of Agriculture by sending a request to the Secretary of Agriculture. I think also that Mr. Truman G. Palmer, of 901 Union Trust Building, Washington, can give you the definite reference to the name and number of the report.

There is certain beet area of the United States not yet developed that has come under the careful examination of the officials of our company. I am referring now more particularly to the following areas:

Ohio has but 5 factories. She has a splendid beet district capable of supporting fully as many factories as Michigan.

Wisconsin has 4 or 5 factories. She can easily support as many as Michigan.

Minnesota has but one factory. She can easily have a dozen.

Iowa has plenty of splendid territory for supporting a dozen or 15 factories.

South Dakota is situated in the same way.

I am not so familiar with the undeveloped area in the Western States. In my own mind I am thoroughly satisfied that if we could be assured that there would be a 2-cent duty on Cuban sugar for the next several years, we would have a wonderful development of the beet-sugar industry in the United States and would soon place this country in a position where it would be absolutely independent for a sufficient quantity of sugar to constitute a war ration of at least 2,500,000 tons. Of course, there are areas to produce much more sugar than this 2,500,000 tons, but I am trying to confine my statement of the case to the probable increase that would take place within the next few years if we could have this 2-cent duty against Cuba assured for a few years.

Trusting that the above will give you our views of the situation, I am,

Yours respectfully,

F. R. HATHAWAY,
Secretary-Treasurer.

LARROWE CONSTRUCTION CO.,
Detroit, Mich., July 18, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SIR: Your letter of July 8, addressed to Mr. J. E. Larrowe, vice president of the Northern Sugar Co., has just been received in this office, having been forwarded from Minneapolis, to which place your letter was originally addressed. While Mr. Larrowe is the vice president of the Northern Sugar Corporation, his own place of business

is located here in Detroit. Mr. Larrowe to-day is in Denver, Colo., and in view of the apparent urgency of your request, we telegraphed Mr. Larrowe the gist of your letter, and while we are not sure that our telegram will reach him before he leaves Denver, yet we hope that we have succeeded in reaching him.

The writer's personal opinion, based on the talk we have heard in sugar circles and amongst construction men, is that a 2-cent duty on Cuban sugar and 2½ cents against the rest of the world would work wonders toward the development of the domestic beet-sugar industry, particularly if there was no immediate likelihood of the duty being rescinded by a succeeding Congress. Of course, as you undoubtedly know, what has hindered the domestic beet-sugar industry more than anything else has been the uncertainty surrounding it, as men with money hesitate about going into some business that is a football of politics. Give the beet-sugar people an assurance that the tariff will not be changed for at least 10 years, and I think that you would see a wonderful development in the business.

Very truly yours,

CHARLES STAFF, *Secretary.*

—

GARDEN CITY, KANS., *July 15, 1922.*

Hon. SAMUEL D. NICHOLSON,
Washington, D. C.

DEAR SIR: Upon my return home from a short absence I find yours of the 8th instant.

I am glad to give you facts in reference to our sugar mill, and will show you why we can not successfully operate without sufficient protection, and the circumstances that govern our business substantially exist and are operative with all other beet-sugar mills.

Our factory operated its first campaign in the winter of 1906–7, and has been in continuous operation since. We are equipped with electric power—have a Steffens process and a pulp drier—this being so constructed that we save all there is to save in the original beet, and we produce the sugar under these circumstances as cheaply, or more so, than the average factory.

We are particularly fortunate in our location as to sales of our product, being able to sell our sugar on a short haul, within the boundaries of our own State. Under these circumstances we should have been prosperous under the existing tariff, but we have not been, and even at that believe we are still to the good as compared with several of the companies who are in the hands of their bankers.

Had it not been for the extreme optimism and generosity of our stockholders, we, too, would to-day be operating, if at all, under a receiver.

Since the year one all beet-sugar companies have pursued the very unbusinesslike policy of contracting for their beet acreage upon a flat price per ton, this being the only crop a farmer raises that he has been able to contract at a stated price, irrespective of the market value of the refined products made from the beet. Naturally, if the value of the refined product were low the factory stood the loss, which fact can be fully demonstrated by citing the year 1920.

Our own company, as well as practically every beet-sugar company in the United States, contracted during the fall of 1919 and early spring of 1920 with the beet grower on the basis of $12 a ton flat for the beets to be grown during the season of 1920 and to be delivered during the fall of 1920.

During the season, while these beets thus contracted for were growing, the price of sugar dropped by leaps and bounds, until by harvest time these $12 beets were actually worth barely $5 per ton.

This caused enormous losses to every company that issued such contracts, and is the primary cause of our own company getting down to business tactics, and we are now issuing what is known as the "sliding-scale" contract—a contract wherein we pay the beet grower a full value and no more for his beets. This contract is based on two points, namely, the sugar content of the beet and the market price of the sugar made from that beet.

This is the only true and business method of purchasing the raw product. By this method the sugar mill is protected, but the beet grower is now put up squarely against the value of sugar, as he will no longer be paid, as in the past, more than his beets are worth. He will not grow these beets unless he can do so at a profit to himself, which he can not to-day, with his still excessive cost of living, labor, and freight rates. In our own experience our acreage has been cut 50 per cent, and unless this is remedied we will have to automatically close our factory from lack of raw material with which to operate it.

It has taken this long letter to arrive at the following facts:

1st. Sixteen years of experience, during which time we have so reduced our assets that we are practically bankrupt to-day, have proven beyond dispute that we can not continue to pay the grower more than his beets are worth;

2d. The grower, by the evidence of our shrunken acreage, will not grow these beets unless he can do so at a profit; and

3d. Our growers can not produce these beets on the present market price of sugar at a profit, and the present price of sugar is protected by our present tariff.

It is our candid opinion that if the tariff be placed at not less than 2 cents on Cuban sugar this increase will provide the necessary margin of profit to enable the grower to get back again to his old acreage basis.

There are so many facts and arguments as to the reasons why a farmer should grow beets, with which the farmer is fully conversant, that he will grow them, and continue to do so from year to year, unless the growing of same is an actual, direct loss to him.

Very truly yours,

F. A. GILLESPIE,
Treasurer Garden City Co.

—

UTAH-IDAHO SUGAR CO.,
Salt Lake City, Utah, July 18, 1922.

Senator SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SIR: Please pardon delay in replying to your letter of July 8, but our agricultural superintendent has been out of the city most of the time since your letter was received, and I was desirous of getting his views before replying to your communication. Realizing that the sugar schedule may be considered almost any day, I wired you last night as follows:

"Answering your letter of 8th, my knowledge of conditions not only in intermountain and Pacific Coast States, but in other parts of country where sugar is produced, warrants statement that possibility of expansion of beet-sugar industry is very much underestimated. The primary difference between the cost of sugar produced from beets grown on American farms and cane sugar manufactured from the raw product obtained from countries where exceptionally low labor cost prevails is approximately 2 cents per pound. A stable tariff policy based upon that figure against Cuban sugar would, in my opinion, insure those engaged in producing domestic sugar sufficient protection to enable them to pay the farmer a price for beets comparable with that obtained for other crops. Such a stabilized policy would speedily bring about a very large increase in the production of domestic sugar, eventually supplying largely, if not altogether, our country's needs. As the value of sugar beets as a rotating crop is fully recognized by all scientific agriculturists, any added acreage planted to beets means increased fertility of the soil."

Supplementing this message, I have before me a communication, dated July 12, from Mr. Mark Austin, general agricultural superintendent of the Utah-Idaho Sugar Co., reading as follows:

"I have carefully read the Senator's letter of July 8, relative to the growing of sugar beets for the production of sugar and his remarks with reference to the tariff.

For your information, will say that 30 years' experience in Colorado, Utah, and Idaho has convinced me that the sugar beet is not a "hothouse" variety of plant but a very dependable product, and its continued cultivation means very much to the farmers. All sections of the country should have at least one cultivated staple crop to which a part of the lands may be planted in rotation with other crops, and the beet is an ideal plant for such purpose, as it calls for deep plowing, intense cultivation, and roots very deep into the soil; furnishes an abundance of cattle and sheep feed in the shape of pulp, sirup, and beet tops, making it possible to feed more live stock on the farm, thereby producing a better market for hay, grain, and other crops. A variety of feed that will produce meat and dairy products is always desirable if one hopes to bring about profitable farming.

Another thing, there is no other crop that I know anything about that tends to produce the desired fertility in our soil, thereby maintaining and in many cases increasing the yield of cereals and other products.

With respect to the area where sugar beets can be successfully grown, this is very difficult of determination, since it depends on irrigation, rainfall, etc., but it is a fact that beets have been successfully grown in many States of the Union and can be successfully produced under irrigation in almost any of the territory west of the Missouri River where the altitude does not exceed 6,000 feet. I heard the late James Wilson, when he held the post of Secretary of Agriculture in President McKinley's Cabinet, say that, after a careful survey of soil suitable for sugar beets had been made by his department, in his opinion there was sufficient land under irrigation, or susceptible to irrigation, to produce all the sugar required in the United States.

As to how fast or how far the beet-sugar business will expand, that is impossible to say; but of one thing I am certain, it can never expand under a free-trade or low-tariff policy. All of the expansion that has marked the progress of the sugar-beet business has been under a protective tariff.

My experience with the farmers has taught me that under present conditions they can not successfully raise beets and sell them for less than $6 per ton. As an evidence of the truthfulness of this statement I need only cite our experience of this year. Under our profit-sharing contract the farmer is guaranteed a minimum price of $5 per ton. When the contract was made the price of sugar was very low, hence he was impressed with the idea that $5 per ton would be all that he would get out of his beets. As a result the acreage sown this year in the Utah and Idaho territory is nearly 30 per cent less than it was during the previous year.

I am satisfied that if sugar-beet raising can be stabilized and the farmer convinced that he would get a fair return from his beets every year increased acreage would result, the factories would have full in place of partial runs, cost of beets and factory expense would be reduced, and the business would be more firmly established.

This condition, however, can only be brought about by an adequate tariff provision, such as proposed by the representatives of the beet-sugar industry before the Senate Committee on Finance, December 19 and 20, 1921.

Now, my dear Senator, I do not know that I can add very much to what Mr. Austin has said in his letter on this question. The United States Department of Agriculture, in its report of the beet-sugar production by States for 1920–21, shows a total area harvested as follows:

	Acres.
California	122,813
Colorado	219,847
Idaho	45,810
Michigan	149,559
Nebraska	72,296
Ohio	49,199
Utah	112,567
Wisconsin	20,686
Other States	79,559

Or a total of 872,376 acres. The same States during the season 1910–11 planted 398,029 acres, and 10 years prior thereto, viz, 1900–1901, 132,000 acres. The yield per acre has increased from 1901, when it was 6.15 tons, to 9.80 tons in 1920–21.

To my mind this proves conclusively that the beet-sugar business has been on the upgrade during practically all of that period. There was only one break, which occurred at the time when our Democratic friends essayed to put sugar on the free list, when the acreage dropped from 580,066 acres harvested in 1913–14 to 483,400 acress in 1914–15. When the figures for 1921–22 are available they will doubtless show decreased planting as compared with 1920–21, due to the inability of the producers to pay a fair and reasonable price for beets on account of the prevailing low price for sugar.

If there are any other features of the business on which I can enlighten you I will be very glad to serve you.

I am inclosing you herewith a copy of the Utah-Idaho Sugar Co.'s contract with the farmers, which shows in detail the profit-sharing plan that has been in vogue in this territory during the past two years.

I am also inclosing you a sample of a circular letter recently issued to the growers, which is required under their contract as a matter of information.

Yours very truly,

J. H. LOVE.

—

MINNESOTA SUGAR CO.,
Minneapolis, Minn., July 22, 1922.

Hon. SAMUEL D. NICHOLSON,
United States Senate, Washington, D. C.

DEAR SENATOR NICHOLSON: Mr. James E. Larrowe, of Detroit, Mich., referred your inquiry regarding the prospects for establishing the beet-sugar industry in Minnesota and Iowa to me.

After 15 years' experience in the beet-sugar industry in Michigan I came to this section two years ago to assist in extending, if possible, the beet-sugar industry here.

There is great need of establishing the beet-sugar industry in northern Iowa and Minnesota. This territory has been proved, without a doubt, to be one of the best sections in this country for growing beets of good quality and of the average tonnage per acre. Minnesota has shown exceptionally high quality in sugar content; Iowa not quite so high but has grown a larger tonnage per acre. There has come to the farmers in this section the realization that their crops must be rotated, that they must do more intensive farming, and that they must have a root crop. Not only is this necessary from a financial point, but this rotation with a root crop is necessary in order to bring back the production of other crops to the point where they can bring better returns than they are now making on the grain crops.

It is the one popular note to-day with the farmers and the business organizations of this country, that of rotating crops and interjecting a root crop and increasing the dairy business, which goes hand in hand with the beet-sugar industry.

You will note the attached clippings from the Minneapolis Journal and the Minneapolis Tribune of last week, bringing out their interest in the extension of the beet-sugar industry.

As to increasing the beet-sugar production in this country, we will say from experience and careful investigation that the State of Minnesota and the northern half of Iowa alone could and should establish at least ten to a dozen beet-sugar factories. They have the soil and the climate, and I am of the opinion that they will sustain, in due time, a larger number of beet-sugar plants. We must have a tariff sufficient to protect us against Cuban sugars, and I doubt very much if there will be any extension to speak of under the present tariff of $1.60 against Cuba. The extension of the industry in this country will be slow, if any, under the present tariff of $1.60 against Cuba. We should have 2 cents against Cuba and 2½ cents against the world. There is no doubt but that we could in a few years double the production of beet sugar in this country, and it should be done. The farmers need the industry, but they can not produce the beets at the prices they have had to produce them at in the past without running a risk of losing money, and that is the reason the industry will not be extended under the present tariff. Quite naturally some of the beet-sugar companies now established would not be in favor of increasing the plants in this country; nevertheless we greatly feel the necessity of more plants in this section of the country.

In December, 1921, Mr. W. P. Hogarty, said to be one of the best authorities on agricultural conditions and the beet-sugar industry in this country, gave a lengthy address before the Commercial Club in Billings, Mont., which was printed, and no doubt could be secured from the secretary of the Rotary Club of Billings, and which contains more valuable information and data which would be helpful to you in building up your argument for the extension of the industry than any document I can refer you to at this time. Mr. Hogarty is now the general manager of the Great Western Sugar Co. for that district, and I quote a paragraph as follows, which answers your inquiry, about as we look at it, with reference to the extension of the industry:

"Here as elsewhere in this country the American farmer is in competition with the foreign producer of sugar. If the price of the sugar of this country can be kept such that the American beet grower can profitably grow this crop, the future of the industry is assured. With about 100 beet-sugar factories in this country, producing sugar from 875,000 acres of beets, the industry could expand to produce all of our consumption, and 500 factories of the present average capacity would be required and the acreage in sugar beets would amount to 4,000,000 acres. The benefits from such a reality would be far-reaching to the farmers of this country. Is it not worth believing in and making it not only our State aim but our national aim as well?"

If there is any further information we can give you to assist you in your argument for the extension of the industry, we will be pleased to do so.

Very truly yours, H. A. DOUGLAS, *President*.

Mr. SIMMONS. Mr. President, it is not my purpose to discuss the details of this proposition, but only to place certain data in the RECORD and to discuss a few of the fundamentals of the question which is now before the Senate. I shall not desire to occupy more than 15 or 20 minutes, and I wish to say now that if there is any Senator who desires to make a set speech, I am perfectly willing to yield to him, provided I may have 15 or 20 minutes left before the time set for a vote.

Mr. GOODING. Mr. President, I intend to occupy about 10 minutes only, but I am in no hurry, and I will wait until the Senator from North Carolina concludes.

Mr. McCUMBER. Mr. President, will the Senator yield to me in order that I may send to the desk an amendment and ask to have it printed?

Mr. SIMMONS. Certainly.

Mr. McCUMBER. I send to the desk a proposed amendment to the pending bill and ask that it may be printed.

The PRESIDENT pro tempore. Without objection, the proposed amendment will be printed and lie on the table.

Mr. SIMMONS. Mr. President, on yesterday during the delivery of the speech made by the Senator from Louisiana [Mr. RANSDELL] he stated that the cost of producing a ton of sugar in Louisiana was $79.56. Upon his making that statement I interrupted him, and I wish to read briefly extracts from the colloquy between him and myself:

Mr. SIMMONS. In view of the vast difference in the cost of producing sugar here and in Cuba, the Senator said that we should encourage the industry in this country and after awhile Americans would begin to compete with Cuba and supply the market. Will we ever be able to supply the market at a price even approximating the price at which Cuba can produce this article?

The Senator answered that question satisfactorily. He was then asked by me to state the cost of producing sugar in Cuba, which I said I had not quite understood. He replied:

I can give that to the Senator. The figures are as follows: The cost to produce a ton of sugar in Cuba is $28.92, as compared with $79.56 in this country.

Mr. SIMMONS. Now, I want to ask the Senator another question. He said that we ought to stimulate the production of sugar cane and beet sugar in this country, if we can; and he is talking about cane sugar, as I understand it.

Mr. RANSDELL. Yes.

Mr. SIMMONS. The Senator said that if we would stimulate it we would find ultimately that we would produce enough in this country to supply our own demands. If the time should come when we produced enough in this country, under the impetus of this stimulation, to supply the demands of the market, would there not be the same difference in the cost of production in this country and Cuba that there is now? Will we not have to continue to the end of time, in order to protect ourselves against Cuban competition, to pay the same bonus in order to continue to keep the industry alive?

Mr. RANSDELL. I do not think we will have to do anything of the kind. I believe if we would ever get the industry on a good, sound basis in this country, so that we would produce, say, 4,500,000 or 5,000,000 tons of sugar, getting the business well established and thoroughly going, that it would be self-sustaining. Of course, sugar will always be produced, possibly more cheaply, I have no doubt somewhat more cheaply, in Cuba than in this country; but sugar is not a hothouse plant in America, I will say to the Senator. It can be made, and it will be made if we ever get it thoroughly started.

Mr. SIMMONS. But the Senator states that the cost of production in this country is something like three times as much as the cost of production in our neighboring country just across the water; and the question which interests me is, after years of artificial stimulation, when we have by that process of annual bounties brought the sugar production of this country up to the point where it supplies the demand, whether we will not have to continue that process, and when we stop that whether we will be able to produce sugar as cheaply as Cuba, and whether the industry would not under those circumstances go all to pieces at once.

I have read that, Mr. President, because it is with reference to that aspect of this question that I especially desire to speak to-day.

It is contended or admitted by the proponents of this duty that the cost of producing a ton of cane sugar in this country at the present time is three times, or very nearly three times, as great as the cost of producing a like ton of sugar in Cuba. The question therefore is, in view of the experience of the past with reference to the cost of producing sugar in this country and Cuba, Can we reasonably hope that we ever will reach the point in this country under any conditions whatsoever as to the domestic production of sugar where we will be able to bring the cost of production in this country to anything like the level of its cost in Cuba? And if we shall not be able to do that, when by artificially stimulating this industry we have reached the point where it is producing enough annually to supply the domestic demand, if at the end of that time it is found that the relative cost of producing sugar in this country and Cuba is the same as now, will we not have to continue indefinitely to sustain our industry, although it has been established by artificial processes up to the point of producing our whole supply, by an annual bounty or subsidy or protective tariff tax equal to the difference between the cost of production here and in Cuba?

If that will be necessary, Mr. President, after we have fostered this industry to the point where it supplies the total domestic demand, then we will either have to see all of these immense contributions of the people to this industry go for naught, or we will have to continue to require the people of this country to pay for their sugar practically three times the actual value of that sugar, measured by the world price of it.

The theory of protection has always been, when applied to an infant industry, that it should receive nourishment from the Government, contributions from the people, to enable it to stand upon its feet against foreign competition until it had had ample time to establish itself, to attain its maturity, and then these large contributions were to cease. That has been the theory. Another theory of protection has been, as I have understood it—I mean the Republican theory—that an industry was entitled to protection upon the idea that it would not advance the cost, or, if it would advance it at all, only temporarily, to the American consumer, but that ultimately it would reduce that cost by bringing about sharp domestic competition. Advancing from that position, the Republican theory has been that when an industry is established, when it has been placed upon its feet and has become self-sustaining in the sense that it can produce all that the domestic market requires or the major part of the domestic demand, it is not entitled to further protection unless the price at which it sells its product to the American people is a reasonable price, considered in connection with the world level of prices in that industry.

I take it that no man in his senses in this country has ever openly advocated that we should continue to foster and encourage and stimulate an industry when it has been demonstrated that that industry can not exist in this country unless it is permitted to charge the people of this country three times or two times or one and a half times or one and a quarter times more than the people of this country could buy that product for from some other country. That sort of a tariff would be abso-

lutely oppressive. After we have put this sugar industry upon its feet, after we have stimulated it to the point where it can supply the entire domestic market, if then the conditions of competition between this country and Cuba are of such a character that the domestic producers can not sell their product to the American people with a profit without charging them from two to three times as much as they could buy that product for from Cuba, I say it would be oppression to continue to require the people to buy the domestic product and keep this weakling upon its feet.

Accepting for the purposes of the argument the figures of the senior Senator from Louisiana [Mr. RANSDELL] that at this time, 1922, the cost of producing a ton of cane sugar in this country is $79.56, as against $28.92 in Cuba, is there any reason based upon the present conditions for us to assume that, if we build up this industry further by largesses greater than we have ever given to them before, so that they can produce the whole amount needed to supply the American market, we will then be better able to compete with Cuba? Can we then sell sugar to the American people at a reasonable profit at a slight advance upon the foreign price, or will we always have to tax the American people so as to measure the difference between the cost of production here and the cost of production in Cuba? That is the question I raise.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from North Carolina yield to the Senator from Idaho?

Mr. SIMMONS. Yes; I yield to the Senator.

Mr. GOODING. I want to say to the Senator from North Carolina that just as long as labor is employed in Cuba for 60 cents a day, just as long as coolie labor from China is imported into Cuba under bond and worked as slaves, just that long, if we are going to grow sugar in this country, will there have to be a duty. When the price of labor in Cuba comes up to the standard of America, when the price of labor in other foreign countries comes up to our standard, we will not need any protection, but until it does we will have to have protection to grow sugar or to grow anything else in America.

Mr. SIMMONS. Mr. President, I expected that the Senator would answer just as he has answered me; but I want to say that there is not a thing in the answer, because the difference in the cost of production of sugar in this country and the cost of production of sugar in Cuba is not the result of difference in labor costs here and in Cuba.

Many years ago, before the war, when the Cuban treaty was pending here, I had occasion to investigate this matter thoroughly, and I found that it was admitted in those discussions that the difference between the labor cost in Cuba and in this country was slight. It is slight to-day, but even if it were as large as the Senator contends, it is not the difference in labor cost that brings about this difference in the total cost of production. There is nothing in the answer of the Senator.

Mr. GOODING. Mr. President——

Mr. SIMMONS. Mr. President, I do not want to yield any further. I understand the Senator's position thoroughly. I do not want to take much time, because I want other Senators to have ample time.

Mr. President, the real truth about the cane-sugar situation can not be found in a study of the difference in the labor costs in the two countries, although that may be a factor which enters into the problem. I have not said the labor costs are absolutely on a parity.

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Louisiana?

Mr. SIMMONS. I will yield for a question.

Mr. BROUSSARD. I merely want to call the Senator's attention to the fact that in the hearings, page 2311, the testimony of Mr. Joseph B. Chaffe shows that the labor cost in Louisiana is 52 per cent of the total cost.

Mr. SIMMONS. Mr. President, I have somewhere a statement of the wages paid in Louisiana, and I will attempt to find it in a few moments. The same story has been told for years that we must encourage the production of sugar in this country, and if we would encourage the production of sugar in this country by protective duties it would very soon attain to proportions where it could supply the domestic demand. The sugar industry in Louisiana is a century old, I think, and it has had lots of tariff nourishment at times. Instead of this industry expanding to meet the constantly expanding demands of the American people, the reverse is true.

Before I get to that I want to read from the Summary of Tariff Information as to the wages paid in the American cane-sugar industry. It gives the annual average wage in continental United States as $670; in the beet-sugar industry, $826; in the cane industry, $430. That is the average wage paid in the cane industry of Louisiana, according to the Tariff Commission. I do not recognize in that these great, enormous, staggering wage rates which it is claimed are the result of protection and an illustration of the high standard of wages paid to the American laborer. That is about $40 a month, a little over a dollar a day. Protection certainly has not won for the workers in the cane fields of Louisiana the high wages about which we have heard so much.

This same authority gives the value of the cane sugar produced as $18,947,683 and the total wages paid $1,561,376, or less than 10 per cent of the total value of the product.

Mr. GERRY. Mr. President, I would like to call the Senator's attention to the fact that in the beet-sugar industry, in many cases, Mexicans and Russians were brought in to take out the sugar, and not only that, but in certain States child labor was used.

Mr. SIMMONS. In the beet-sugar industry the average wage was $826. That average is a little higher than in the cane-sugar industry. I suppose it requires a little higher class of labor.

I only laid stress upon that in answer to the junior Senator from Idaho. I repeat, I do not think the labor cost enters very largely into the great difference between the cost of production here and abroad. It is a slight element. I suppose probably in Cuba they pay a little less than $480 a year in the cane fields, but only slightly less.

Mr. GOODING. Mr. President, will the Senator yield?

Mr. SIMMONS. Yes; I yield.

Mr. GOODING. I want to call the Senator's attention to the fact that we have a different class of labor in the North and in the West——

Mr. SIMMONS. Mr. President, I am talking about cane sugar.

Mr. GOODING. I am talking about sugar in general.

Mr. SIMMONS. I can not discuss two things at one time. I am talking about cane sugar, and when I was comparing wages in this country and in Cuba I was comparing wages in the cane industry and I only mentioned the other incidentally.

Mr. GOODING. Laborers in Louisiana receive twice as much as laborers in Cuba receive. I do not know what the coolies are paid, but there are 40,000 of them down there.

Mr. SIMMONS. I have not the Cuban figures, but I did investigate the subject several years ago, and there is not much difference in the wages paid in the two countries. The Senator will not be able to show that there is much difference. Again, the coolie labor is found to be very inefficient and expensive labor. That is not the trouble.

When I was interrupted by the page bringing me the figures I had sent for, and I returned for that reason to the subject I had been discussing before that, I was saying that the cane industry in Louisiana was a century old; that it had been stimulated for many years in the past with protection, except probably for a little while, when a bounty was paid them, and the same story we hear to-day was sung then. I have been in the Senate nearly 22 years, and whenever this subject has come up the same story we have heard to-day has been sung, with variations, it is true, but always to the same general effect, "If you will just give us protection enough, we will in a reasonably short time expand our operations, and we will be able to supply the American market, and you will not have to continue to buy sugar from Cuba."

In the face of that it is a rather remarkable coincidence that with all the protection we have given this industry during the last 20 years or more instead of increasing its production and meeting the American requirements it has been rather diminishing its output. In 1902 the production of sugar in Louisiana amounted to 728,000,000 pounds. Then it ran on increasing until in 1905 the production was 784,000,000 pounds; in 1908, 788,000,000 pounds; in 1909, 828,000,000 pounds. In 1910 it was 750,000,000 pounds. Then it fell in 1913 to 305,000,000 pounds. In 1914 it was 601,000,000 pounds; in 1915 it was 495,000,000 pounds; and in 1916, under the stimulus of the war, with high prices and great demand, it fell down to 277,000,000 pounds. In 1917 it was 621,000,000 pounds. In 1918 it was only 487,000,000 pounds; in 1919 it was 561,000,000 pounds; and in 1920, with sugar at its maximum price, it was 241,000,000 pounds.

That is the industry which is telling us to-day that if we will increase their protection 100 per cent their capacity for expansion and growth and development is such that they will very soon be able to supply the domestic market, together with the aid of the beet producers in this country.

Why have they not expanded, and why have they not been able to meet the Cuban situation any better than they have? I said it was not labor trouble. The Louisiana industry is

really an artificial industry. It is a hothouse industry, and that is due not to causes which can be controlled by man or by legislation; it is due to natural causes over which we and the producers of Louisiana have no control.

The trouble is that the seasons down there are not long enough for the juices of the cane to mature as they should, and the slightest frost affects the juice to such an extent that it can not in many instances be converted into sugar at all. I am told that it is a common sight, in passing through Louisiana in the fall, to see thousands of acres of sugar cane let go to waste as not being worth cutting because of an early frost.

Again, Mr. President, that is a natural thing which can not be controlled. Our climate is not as well suited to the sugar industry as the Cuban climate, just as the climate of this section of the country is not as well suited to the growth of certain plants as the South, as even the State which I represent, which is one of the most northern of the Southern States. The plant may grow. The plant may under certain very favorable and exceptional circumstances mature fruit. But the plant is always in danger of destruction by reason of the rigor of the seasons, a danger from which it is exempt in the South. So in Louisiana the plant is always in danger of a blighting frost, and this frost comes with frequency, and that is the reason why in the annual output of the Louisiana fields we observe such variation in the amount of production, running from 700,000,000 or 800,000,000 pounds down to 200,000,000 or 250,000,000 pounds. It is the effect of the frost in many instances and in most instances. It is not because it is not as profitable in one as in another year. It is not because the price of sugar is not as good in one year as it is in another. The great variations in production which I have shown by reading the table, and as would be very manifest to anyone who studied the table, show the effect of the natural impediment to the successful production of this commodity in competition with a country which God has made exactly adapted and suited to its production, both in climate, in soil, and in season.

Now, Mr. President, another matter that is natural and can not be controlled by human agencies is the fact that it requires a large proportion each year of the crop to seed the next year's crop, in Louisiana sugar cane being an annual crop, while in Cuba and other more favored countries one planting suffices for 12 to 15 or even more years. I do not remember now to have heard that question raised in the discussion, but in former discussions it has been raised in this Chamber. The loss to the Louisiana producer growing out of the fact that every year it takes such a large part of his crop to provide the plants for the seeding, or whatever it may be called, for the next year, was quite important. I can not describe the process technically, because I have not been in Louisiana and know nothing about it except what I have read.

But my understanding is that it is entirely different in Cuba. They plant there and the plant reproduces itself without any other planting for 10 to 15 years, thereby, of course, enormously reducing the cost of producing sugar cane and sugar. Every farmer knows that one of the chief expenses in the cultivation of his crop is the breaking and preparation of the land for planting the seed and the planting of his new crop. They have no trouble of that sort in Cuba. The plant is cut and springs up again from the stalk, as I understand it; that is, the roots send out new shoots from which the next crop is made.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Ohio?

Mr. SIMMONS. I yield.

Mr. POMERENE. In support of the statement just made by the Senator, I may say that when a special committee was sent to Santo Domingo we were advised there by native Dominicans that in the southern part of the Dominican Republic there were large sugar plantations which they had harvested from 15 to 20 years continuously without replanting. One of the leading Dominicans told us that in the northern part of the island he knew of a plantation which had been harvested for 32 years successively without replanting.

Mr. SIMMONS. That is without cost in those countries, whereas in Louisiana every year it takes a part of the crop, as I understand it, to pay the cost of preparing for the next crop.

Mr. BROUSSARD. Mr. President——

Mr. SIMMONS. I am perfectly willing to have the Senator from Louisiana explain that as to his State, although I have taken more time than I intended.

Mr. BROUSSARD. The Senator is entirely in error. We never plant more than once in two years, and in many cases we grow it three years without replanting. I have seen it grown as much as four years without reseeding. We could grow the cane just as they do in Cuba, but we find it more profitable after the second year to replant, unless the ratoons are very good.

Mr. SIMMONS. Is that what they call the new shoots?

Mr. BROUSSARD. Yes; ratoons. There are two reasons for that. The first is that we want the rotation of crops. We put in corn and cowpeas, to be followed by cane. We have found that if we proceeded by planting the cane and cutting the crop from year to year, the crops would be poorer and poorer until they would be practically valueless. We always make two crops and then have a replanting, although in many cases it is allowed to remain three years and four years, and there are some places where cane has been growing for 25 years without replanting.

Mr. SIMMONS. I do not want to take too much time on that. It may be that one year, as I have stated, is not correct. However, that was my information. It may be that they can go along without planting it oftener than once in two years, but they can get along in Cuba by planting it once in 10 or 15 years or even longer. That is a tremendous natural advantage that nobody is responsible for and which can not be overcome by legislation or by tariff protection.

The question is, under those circumstances, if we are able to produce sugar in this country, cane sugar we will say, together with beet sugar, to the point where cane sugar supplies one-half or one-third and the beet sugar supplies the remainder necessary to meet our domestic demands, with cane sugar laboring under the natural handicaps to which I have referred and which we can not correct by legislation and for which we can only compensate by subsidies or bounties, will cane sugar be in any better position then to compete with Cuba than now? Will not these natural handicaps make it impossible then and will we not have, therefore, indefinitely to call upon the people each year to pay into the pockets of the producers of cane sugar in this country a sum twice as great, probably, as the amount for which the sugar which they buy sells for in the markets of the world?

If that is so, we are doing a vain and foolish thing to undertake by artificial means to foster this industry when we know in the light of the facts that there are no circumstances or conditions under which it will ever be able to produce sugar for less than twice the price that it can be produced for in Cuba, and therefore never able to compete with Cuba to give the American people sugar at a reasonable price. All these protective duties are based upon the theory that the American people are not to be charged, as a result of them, an unreasonable price. Are we not doing a vain and foolish thing to continue this process?

Mr. President, I said I would not take long, but I have gone into the matter and taken longer than I expected. If there is any other Senator who wants to speak and I am trenching upon his time, if he will say so I shall conclude within five minutes. [After a pause.]

Mr. President, with reference to beet growing, I do not claim to know very much about the growing of beets in this country. All I know about the industry is what I have been told and what I have gathered out of official documents and literature which I have read upon the subject. A statement which was somewhat amazing to me was made here the other day by the Senator from Michigan [Mr. TOWNSEND], who comes from a beet-growing State. He told the Senate the other day in his advocacy of the encouragement of the sugar-beet industry that it was not only a valuable product for food purposes but that it is very helpful to the land, that it is a great land improver, and that we ought to encourage it for that reason, because if there is anything we needed more than another in this country it is the improvement of our soil. I agree with the Senator about that proposition, but my information is that just the reverse is true, that the beet draws heavily upon the soil and exhausts it; that, as a matter of fact, it is one of the greatest potash absorbers in the world; that if there is potash in the land, unless the crops are rotated, probably not using the beets oftener than once every four years, they will exhaust the potash in the land and impoverish it. For that reason I am told that Germany has been able more successfully probably than any other European country to cultivate the sugar beet, because she had her own inexhaustible supply of potash, a thing that the beet plant seems to especially love and feed upon.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Utah?

Mr. SIMMONS. I yield.

Mr. SMOOT. I do not know who gave the Senator the information, but the fact is just the reverse. Every bulletin issued by the Government and everyone who has studied the question a moment claims that the beet crop causes the least drain upon land of any crop grown. All the writers claim that it is un-

necessary to have a rotation of crops so long as the beets are grown upon the land. I will say to the Senator from North Carolina that I know of lands in the State of Utah where for 25 years they have never grown anything but sugar beets, and that without a thing in the way of fertilizer except through the irrigation they get.

Mr. SIMMONS. I know of lands in the South that have been growing cotton for 40 years, but I know they would not grow cotton at all unless we practically renewed the soil by putting plant food there.

Mr. SMOOT. But in the case I speak of there is no fertilizer added to the land or used on the land.

Mr. SIMMONS. I do not regard the point as essential at all. It was so stated, and I was amazed to hear it, because I understood the Senator from Louisiana [Mr. RANSDELL] in his speech to refer to a document issued by the Secretary of Agriculture—I believe Senate Document No. 22, Sixty-first Congress, first session—in which it was recommended that other crops be rotated, with the beets used every fourth year.

Mr. SMOOT. The fact is that they will resuscitate the land.

Mr. SIMMONS. Very well. That is probably what it was meant for. Then the Senator from Michigan was right and I am wrong about it. I do not profess to know anything about it; but I talked with an expert from the Treasury Department, and he thought the Senator from Michigan was wrong, and so I said so.

Even the Agriculture Department admits that only one crop of beets should be taken from the land in four years; that the other three years should be used in preparing the land for that crop by growing clover, peas, or some other improving crop. Does not this show that the beets are a hard crop on the land?

Mr. TOWNSEND. Mr. President, if the Senator from North Carolina admits that, of course I have nothing further to say. I wish to add, however, that the sugar beets obtain their sugar largely from the atmosphere. That is a scientific fact. The beets are cultivated and they are a direct benefit to the land. That fact has been proven, and their cultivation is recommended by every scientific man who has studied the question. I do not care further to interrupt the Senator from North Carolina.

Mr. SIMMONS. If the Senator from Michigan will pardon me, I do not wish to prolong the time, and I am not making any controversy with him. He knows more about the subject than I do. I accept his statement in reference to it entirely. It makes no difference, however, as to the point that I am going to make. The sugar is a pure carbohydrate, drawing nothing from the soil, but the beet pulp is rich with salts drawn from the soil.

Mr. President, I am deeply interested in the beet-sugar industry. We all have been deeply interested in it. The people of Europe are deeply interested in it; indeed, they are more deeply interested than are we. Europe has exploited the beet-sugar industry to a greater extent than have we in this country. I am satisfied, however, Mr. President, that the statistics show that the beet-sugar industry, when brought in competition by a free and open market with the cane-sugar industry and its product, can not live. I am therefore sure that the beet-sugar industry in this country, and, indeed, the beet-sugar industry throughout the entire world, is in a state of decadence instead of a state of development; that it can not live, except through a governmental bounty, as against competition with cane sugar, and that that fact has been thoroughly demonstrated.

I wish to ask the attention of what few Senators happen to be in the Chamber to the fact, as to the consumption of sugar, that, in 1900, of the total consumption of the world 64.7 per cent was beet sugar. The reason for this was that the various beet-sugar producing countries of Europe were vying with one another for the markets of the world. In order to stimulate the industry—and when I finish this statement, Mr. President, I will bring my remarks to a close—these sugar-producing countries of Europe granted bounties on the export of beet sugar while retaining prohibitive duties on the importation of sugar. Due to this England was enjoying granulated sugar at the price of about 2 cents below the cost of production where the same sugar was produced. This condition eventually became unbearable. After this artificial stimulation of the beet-sugar industry by all the beet-growing countries of Europe by enormous bounties and by prohibitive tariffs, Mr. President, what happened?

In 1902 the sugar-producing countries of Europe, as a result of this situation, called a convention at Brussels. We have heretofore heard a good deal of the Brussels convention. It was a convention called to consider the unbearable situation which had grown out of the attempt to stimulate and foster the beet-sugar industry by every country in Europe producing that product by large bounties and prohibitive tariffs. That convention was called to consider the effect of that policy upon the countries concerned in the production of beet sugar and the countries concerned as customers in the purchase of the product. The convention met at Brussels. After several failures to come to an agreement it was finally agreed that all export bounties should be abolished.

This decree went into effect in Europe in 1904; and what resulted, Mr. President? The beet-sugar industry was producing 64.7 per cent of all the sugar consumed in the world when fostered by those subsidies and bounties, but when they were repealed in 1904 what happened?

The result was that the world's consumption of beet sugar fell from 64.7 per cent to 51 per cent in 1905. In 1912 the decline had gone on until the world's consumption of beet sugar had fallen to 42 per cent of the total sugar consumption. Then we had the great World War, necessarily interfering with the production of this sugar. However, in 1920, year before last, the total consumption of beet sugar was only 21½ per cent of the world's consumption of all sugar.

That is the history of the beet-sugar industry in the world. It grew to enormous proportions under governmental bounties and subsidies. These gratuities of Government, these contributions by the people of the world, enabled the beet-sugar industry to overcome the difficulties of competing with cane sugar, which is indigenous to many of the great islands of the sea. As soon, however, as that prop was removed from beet sugar in Europe—not altogether, but so far as the bounties were concerned—beet sugar in Europe was, in a measure, put upon a basis of competition with cane sugar. In less than 20 years we have found that the production of beet sugar has fallen from 64.7 per cent of the world's consumption until to-day the production of beet sugar constitutes only 21½ per cent of the world's consumption of all sugars.

If these figures do not establish that this is a hothouse industry, that this is an industry which can not live against its competitor—namely, cane sugar—without the help of Government, without the contributions of all the consumers of sugar in the various nations of the world, then, Mr. President, it seems to me to be impossible to establish that or any other proposition which is based upon statistics and upon actual happenings in connection with the prosecution of an industry.

So I come back to my original proposition, Mr. President, and I say that if we shall stimulate the beet industry, if we shall stimulate the cane industry, if we shall give them all the protection of which they shall have need in order to enable them, in an incredibly short time if necessary, to supply the whole domestic demand for sugar, will we not have to continue that process of subsidizing the industry to the end of time, indefinitely, forever? So long as the American Government exists and the people eat sugar and Cuba lives and produces sugar, will we not have to continue it indefinitely, and, although the industry may be ever so flourishing, although it may be able to supply the entire demand of America, the minute we withdraw this protection and these bounties, will the industry be able to stand for a day in the face of Cuban competition? No, Mr. President, the facts, the statistics, the experience here and in Europe, in the world at large, show that it will not; that there can be no competition with Cuba on the part of the cane producers of Louisiana, the beet producers of the West, or the beet producers of Europe unless Government shall step in and by subsidies and bounties to some extent equalize not the difference in labor cost here and in Cuba, for that has very little to do with it, but the differences that grow out of the natural handicaps of both the cane and beet-sugar producers in America in competing with the sugar produced from cane in Java, in the Philippines, in Cuba, and in other islands of the sea where God has provided the conditions under which cane grows, while denying to this country and Europe, where the effort has been made to produce beet sugar and cane sugar the same advantages of soil and climate and season.

Mr. GOODING. Mr. President, it is not my intention to take up more than a few brief moments on this schedule. I discussed it at some length a few days ago, and it has been so ably discussed by the Senator from Utah, the Senators from Louisiana, the Senator from Michigan, and the Senators from Colorado that it seems to me that about everything has been said that can be said in the interest of a great industry.

I want to say to the Senator from North Carolina that just as long as the peasants of a foreign country are satisfied with a little in this life, just as long as they are willing to live under the same roof with the animals that they use upon their farms, just as long as the mother takes her babe out into the fields and tills the soil, just as long as there is selfishness in humanity that goes abroad and gets control of great in-

dustries and exploits the poorly paid labor of Europe and then comes back into America and exploits the American people where it has a monopoly, just that long will we have to have a protective tariff that makes up the honest difference in the cost of production in this country and abroad, or we can not maintain the American Government.

From a democratic point of view we can not do much in America. In the great State of Louisiana they have frost and everything else that goes to destroy the cane industry down there. The wool industry is only a pioneer industry. With the settlement of this country it must pass away. The hemp industry passed away simply because we did not give it proper protection; and if we listen to our Democratic friends there is not anything that we can do in America quite as well as they can do it in other countries. God forbid that the time will ever come in America when we shall be forced to do it as cheaply in this country, and when our people must accept the mere pittance that is paid to labor in foreign countries. It will not be America any longer if that time comes. We will have a condition here worse than that of slavery.

That time never can come, however. There is too much intelligence and too much independence here in America for labor to permit itself to be forced down to accept the measly pittance that is paid to the peons of Mexico and other foreign countries where, with a depreciated currency to-day, they are working for one-tenth or one-twentieth, if you please, what we are working for here in America. Germany has been forced to raise her tariff laws that were passed before the war 65 times over—65 times higher, if you please—as measured by the depreciated mark of to-day; Austria, 200 times over; France, 10 times over; Belgium, through her system of coefficients and multipliers, several times over. So it goes all along down the line, and here we are haggling over proper protection to a great industry!

The protectionist in America, regardless of whether he is a Republican or a Democrat, has never asked to place a duty on those things that we do not produce in America. We never have hothoused anything in this country. Coffee has been free for many years. Tea has been free. We buy 85 per cent of all the rubber of the world, and that is free. We permit the world to ship into this country every year nearly a billion dollars' worth of different commodities and products that are on the free list. We place protective duties only on the products that can be developed or grown or produced in America, whether they are products of agriculture, mining, or manufacturing. We do not go beyond that; and the protectionist, regardless of whether he is a Republican or a Democrat, is a protectionist because he believes in protection to American industries and American labor, and because he believes that through protection we can collect more revenue than can be collected from a Democratic revenue law that in some cases is so low that very little revenue is collected from it.

Mr. President, I think we all must understand that we have reached a period in the history of the world when there is combination, organization, and centralization everywhere. There is no exception to that rule. In this country capital has been organized for years. Is there a Senator here who is so far behind the times that he does not know that we have had a Sugar Trust in America for many a long year, and that that Sugar Trust has gone down into Cuba, bought the raw sugar land, developed sugar plantations, largely with coolie labor that has been brought here under bond and a 5-year contract and shipped through our own country in cars with doors locked and windows fastened and taken over to Cuba to work in the sugar plantations to compete with American labor and the American farmer?

What has happened? The question simply comes to this, Mr. President: Are we going to permit the sugar industry to exist in America, or are we going to turn it over to the selfish interests of this country, that are more dangerous to this form of government than such men as Bill Haywood or Eugene Debs, or such women as Kate Richard O'Hare, who said that the mothers who sent their boys to the war were no better than brood sows on a North Dakota farm?

Let me show you what they are doing and what we are paying for Cuban sugar at the present time, and what we have paid in the past.

Mr. GERRY. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Rhode Island?

Mr. GOODING. Yes; I yield.

Mr. GERRY. The Senator has been discussing labor conditions in Cuba. I know nothing about them; but from a perusal of the testimony before the Finance Committee it seems to me very conclusively proved that the beet-sugar industry also imported foreign labor to harvest its crops.

Mr. GOODING. I think it is true that we had some Mexican labor during the war, but I want to say to the Senator that they were paid American wages, $2.50 a day.

Mr. GERRY. But they did not hire American labor.

Mr. GOODING. They hired American labor, and they always do when they are able to get American labor; but during the war, when 4,000,000 boys answered their country's call, it became necessary to permit some Mexicans to come into this country and work in the beet fields.

Mr. GERRY. And since that time they were brought in.

Mr. GOODING. Not to my knowledge.

Mr. GERRY. Yes.

Mr. GOODING. But if so, they were paid an American wage.

Mr. GERRY. Mr. President——

Mr. GOODING. I can not yield further to the Senator because I have promised the Senator from Ohio [Mr. WILLIS] to yield the floor. He wants to take up a little time, and I want to get through.

Mr. GERRY. I shall be glad to have the Senator get through, if he will yield——

Mr. GOODING. No; I refuse to yield further, Mr. President.

Everybody knows about the measly pittance that is paid in Cuba. Mr. Rogers, who represents the cane-sugar industry, testified before the Finance Committee that he saw these laborers going through New Orleans in trainloads, and that there are 40,000 of them on the island at the present time, and that about 8,000 a year are being shipped into Cuba. That is the condition that you would have the American laborer and the American farmer compete with.

I am sorry that I have so little time, Mr. President, and have to hurry; but this question has been thoroughly discussed, and I am sure anything I may say will not add much to it.

I have here the sugar prices beginning with the 26th of June, 1914, and ending with the 23d of June, 1915. I shall not take time to read all the weekly prices of sugar; but on June 26, 1914, the price of granulated sugar in New York was $4.30 a hundred pounds. I think it has been explained very fully that the cane sugar produced in America and the beet sugar produced in this country are off the market along in March, and for that reason Cuba monopolizes the market after that time. The American product is off the market simply because we have not provided in this country for carrying over the raw sugar; and the sugar hardens in hot weather, especially in this damp climate, and for that reason it must be disposed of. There is no question that the American beet grower and cane grower by carrying their raw sugar over for a time and providing for it can supply the American needs for sugar the year around if we will give them an opportunity.

On June 26 granulated sugar in New York was $4.30 a hundred.

I will jump up now to August, when the American people are using the greatest amount of sugar, when the farmer's wife is canning, and the great canning plants all over the country are active and using the largest amount of sugar. Then is when Cuba is getting in its work. The price on August 6 was $7.50.

August 13, $7.50.

August 20, $7.50 again.

Then it drops down to $7 on September 3, and it jumps up again to $7.25 on September 10; but as soon as the domestic sugar comes on the market watch the change.

The first domestic sugar begins to appear on the market in November and December.

On the 3d of December, 1914, the price of granulated sugar in New York was $5.10.

On the 30th of December it was $4.95.

So it goes on down until we reach March, when it commences to climb up again, to $5.75, and goes on up until it reaches $6 again in May and in June.

In June it was $6.10 again. Then is when we are eating Cuban sugar.

Here is what I want to call the Senator's attention to more especially at this time to show how beautifully they work the game—and there is not any question that it is a game, and a most dangerous one for this Republic.

On January 5, 1922, refined sugar was selling in New York at $4.90 a hundred. I am going down to February; and I will not read each weekly quotation, because I have not time, but I will ask that these tables may all be placed in the RECORD.

On February 2 refined sugar was selling in New York at $5.10.

On February 23 it was selling at $5.10.

On March 2 it was selling at $5.20.

I have a letter, which is in the RECORD, which I put in a few days ago, from Mr. Hathaway, who is interested in sugar factories in Michigan and Ohio, who says that the average price paid for beet sugar this year was 5 cents a pound.

Now, watch the sugar market climb when we are eating Cuban sugar:

On April 6 refined sugar was worth $5.50 a hundred in the New York market.

On May 11 it was worth $5.40.

On June 1 it was worth $5.70.

On June 15 it was worth $6.

On June 29 it was worth $6.20.

On July 6 it was worth $6.20.

To-day it is worth $7, or 2 cents a pound more, if you please, than we paid for American sugar, grown by American labor, and refined in American factories built by American money.

I do not know why we should be so alarmed about taxing the American people to protect an industry. In America we collect less revenue from imports than is collected by any country in the world. Great Britain has a duty of 24 cents a pound on tea and collects a tax of $2 per capita. She collects a tax on cocoa of 27 cents per capita, on coffee of 7 cents per capita, and on sugar of $4.78 per capita.

The total customs receipts from imports for 1922 were $14.78 per capita in the United Kingdom; in France, $8.96 per capita; in Canada, our neighbor, $11.90 per capita from imports alone, while under the pending bill we will collect $3.29, according to the estimates made, which is a little more than we have collected under any revenue bill we have ever passed.

So it is just a question of whether we are going to protect the American people. That is all there is to this question. The protectionist who did not take into consideration the interests of the consumers would not be a good American citizen. American labor and American consumers are the ones who must be first considered in framing a protective tariff bill, and who has ever considered them better than the protectionist, I care not whether he is a Republican or a Democrat? In all the duties we have asked for imposts the highest duty ever asked on imports was $3.29 in America per capita.

Mr. LENROOT. Will the Senator yield just for a question?

Mr. GOODING. I yield for a question. I can not yield for any discussion.

Mr. LENROOT. Does the Senator take the position that the duties collected measure the amount of protection afforded?

Mr. GOODING. Do I take that position?

Mr. LENROOT. Yes.

Mr. GOODING. That the duties collected measure the amount of protection or the cost to the American people?

Mr. LENROOT. Do they measure the amount of protection afforded?

Mr. GOODING. My position on the tariff question is this: That without exception, whenever proper protection has been given to any industry in America, it has always meant cheaper products, farm products or manufactured products, I care not what it is, and there is no better example of that than in the case of the manipulation of Cuba to-day with the sugar industry. Simply because the American people are eating Cuban sugar they are paying something over $300,000 a day more than they paid when they were eating American sugar. Does that answer the Senator's question?

Mr. LENROOT. No; not at all. I asked the Senator whether he thought that the amount of duties collected measured the amount of protection afforded.

Mr. GOODING. I answer the question by saying that there is no exception to the rule, and that we have reached the period in the history of this country and the whole world when there are trusts and combinations in everything, and there is not an importer who comes into this country, I care not what he brings, but who takes every penny the traffic will bear from the American people. That is the history of protection all the way through.

I know the Senator would not take into consideration the difference between the freight rates from the West at the present time and what they were before the war, would not take into consideration the difference in the cost of producing a pound of sugar to-day and before the war. You can not drive the American labor down the way they have driven the slaves down in Cuba, and I think that is all it means, that and nothing more.

God forbid that the time will come when labor will not be organized in America to defend their rights. I wish I had more time, because I would like to discuss this question with the Senator.

Mr. LENROOT. Will the Senator yield for just one more question?

Mr. GOODING. Certainly.

Mr. LENROOT. Not having answered the question I propounded, I would like to ask the Senator this, if he could get the duties on the imports as high as he would like them, there would be no revenue whatever from those imports, would there?

Mr. GOODING. Mr. President, the history of the protective tariff has always been that we have received greater revenues when we have had high protective duties than at any other time, because the American people were more prosperous, they were the best buyers in the world all the time. That is the history of protection. But we have reached a different period in the history of America. Almost every country in the world has an embargo against us, with the exception of England, and her duties as against Germany are twice what ours are, on an average.

I want to tell the Senator that we have reached the period in the history of this country when the one great question of all is to find employment for our own people. Three million five hundred thousand men are out of employment, with the harvest in full swing.

You will be protectionists in the near future. Do not make any mistake about that. If you are going to maintain the American standard of living, it can be done only through the great principle of protection. I never want to see my people in this country reduced to the condition of peasants of foreign countries, and God forbid that that time may ever come.

Mr. President, I have here a number of telegrams, which I ask to have printed in the RECORD, together with the tables to which I have heretofore referred.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

MATHEWS, LA., *August 5, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

The chief people here who are making a fight against the domestic sugar industry are men like Mr. Edwards Atkins and other New Yorkers who have placed extremely large sums of money in foreign countries—Cuba, especially—and they are now endeavoring to injure and stifle the competition of our domestic industry. Won't you please forcibly show the Senate that if our capitalists were to do as Mr. Atkins and others have done—and that is transfer their capital to foreign countries, to the detriment of American producers—that the United States would soon become an industrial desert and that production in this country would absolutely cease. Wishing you every success in your efforts to get a fair living tariff on farm products and thanking you on behalf of millions of farmers, sugar producers, and myself, I am,

Yours truly,

E. F. DICKINSON.

—

BROUSSARD, LA., *August 7, 1922.*

Hon. FRANK R. GOODING,
Washington, D. C.:

You have my indorsement in your commendable work as chairman of the agricultural bloc. The necessity of a 2-cent protective tariff against Cuba is unquestionable. It requires such a tariff to earn a reasonable return on the money we have invested in farming. It is lamentable to think that Washington hesitates to protect its domestic producers against foreign interests. Can such delay be satisfactorily explained. Kindly accept my thanks and appreciation of your good work, which I hope will force the recognition which the American farmer justly deserves.

EUGENE LABBE.

—

MATHEWS, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

The absolute necessity for a good, decent tariff on American industries of all descriptions is absolutely needed. Sugar especially needs a good protective tariff, and I wish to thank you very much for your efforts in our behalf.

CATHERINE PLANTING & MANUFACTURING CO.,
C. S. MATTHEWS, *President.*

—

MATHEWS, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

On behalf of myself and many thousands of people who depend on the sugar industry in Louisiana I wish to thank you for your ardent efforts in our behalf for a fair and satisfactory protective tariff on sugar.

E. F. DICKINSON (INC.),
E. F. DICKINSON, *President.*

—

SALT LAKE CITY, UTAH, *August 5, 1922.*

Senator FRANK R. GOODING,
Care United States Senate, Washington, D. C.:

Beet-sugar producers generally heartily indorse your tariff stand, believing such action to be most beneficial not only to our domestic industries but also to American people, and do not hesitate to say that recent attacks upon your position are unwarranted and should fail because of the insincerity behind them.

S. H. LOVE,
President United States Sugar Manufacturers' Association.

—

NEW ORLEANS, LA., *August 5, 1922.*

Senator FRANK R. GOODING,
United States Senate Office Building, Washington, D. C.:

As a sugar and rice producer I heartily approve and commend your efforts in our behalf and in behalf of all similarly situated in the fight you are making for a protective tariff, without which our industry could not survive.

J. B. LEVERT.

LOCKPORT, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Your efforts for fair tariff on sugar greatly appreciated. Many thanks.

BARKER & LEPINE.

—

RACELAND, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Please do your utmost for tariff protection on all American industries, industrial and agricultural, and especially on sugar. A great many of our Louisiana sugar planters are in hands of receivers, and unless adequate tariff protection is secured many more will share a similar fate.

SIMON ABRAHAM CO.

—

NEW ORLEANS, LA., *August 5, 1922.*

HON. FRANK R. GOODING,
United States Senate Office Building, Washington, D. C.:

We have followed carefully the wonderful fight you are making in your support of proper tariff for the agricultural industries of the United States, and we, as producers of sugar cane from the soil and manufacturers of sugar therefrom, wish to congratulate you and to assure you that unless the Representatives and Senators from the South and the West vote for proper tariffs on agricultural products we can not expect our industries to live and prosper in competition with like industries in foreign countries. Our southern and western agriculturists have not had a fair showing in the past. We are with you, Senator Gooding, and we wish you success.

THE J. M. BURGUIERES CO. (LTD.).

—

NEW ORLEANS, LA., *August 5, 1922.*

HON. FRANK R. GOODING,
United States Senate Building, Washington, D. C.:

Permit me to encroach on your valuable time to express my appreciation and thankfulness for your continued wise and splendid efforts in behalf of all American agricultural products and especially for the cane-sugar industry, which is essentially agricultural, producing on the same farms or plantations raw material, sugar cane, and the finished product—direct-consumption sugar and sirups and molasses. The farmers' advocate is seldom popular except with his own clients and is often subjected to unmerited criticism, and we have been truly fortunate in having so able and willing a friend at court as yourself, and the agricultural bloc is to be congratulated on the earnestness and fearlessness of its leader in prosecuting its fight for proper recognition of the producers from the soil in the pending tariff bill.

JOE B. CHAFFE.

—

NEW ORLEANS, LA., *August 5, 1922.*

HON. FRANK R. GOODING,
United States Senate Office Building, Washington, D. C.:

As growers of sugar cane and representing many cane growers from whom we purchase cane which we manufacture into sugar-cane products, we wish to assure you of our entire approval of your splendid work as an individual Senator and as chairman of the agricultural bloc in behalf of our industry and to express our sincere thanks and appreciation of same and to ask for continuation of your unselfish efforts in behalf of all American agricultural products.

LAUREL GROVE CO.

—

NEW ORLEANS, LA., *August 5, 1922.*

HON. FRANK R. GOODING,
United States Senate Office Building, Washington, D. C.:

We are fully mindful of the fight you are making for a sufficient tariff on all agricultural products. We of the South can not expect to maintain our agricultural industries in competition with cheap, low-standard labor of foreign countries, and therefore we believe the entire South is fighting for its very existence in demanding adequate tariff protection. We are producers of sugar cane and sugar in large quantities and your success in your fight will mean that our industry will be saved.

J. N. PHARR & SONS (LTD.).

—

LOCKPORT, LA., *August 5, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Your efforts on behalf of the farming interests of this country are splendid, and we thank you. Sugar raised in the United States needs and must have a good protective tariff. Thank you for your help in this matter.

M. P. HERNANDEZ,
Cashier People's Bank of Lockport.

—

LOCKPORT, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

We favor protective tariff on sugar. Will greatly appreciate anything you will do to secure it.

BANK OF LOCKPORT.

—

MATTHEWS, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

The farming fraternity of the United States is under a debt of gratitude to you for your efforts in their behalf. This is especially so of the sugar, rice, and other agricultural interests of Louisiana. Your assiduous efforts on our behalf is more appreciated than words can tell. We thank you very much.

E. ROGER CO. (INC.).

—

RACELAND, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Never in the history of our country has a tariff on our industries been as necessary as at present. May we count on your assistance in procuring the proper protection for sugar, wool, and all industries of our country, thereby gaining the grateful thanks of our farmers? Many thanks.

RACELAND BANKING ASSOCIATION.

MATTHEWS, LA., *August 4, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Now, more than ever, if American industries are to get on their feet and go ahead for the welfare of the country a good protective tariff is needed on everything. Sugar, as raised in the United States, has fierce competition by those who are interested in stifling or stopping its production. Many, many thanks for your kindly help in giving us a decent tariff.

LOCKPORT CENTRAL SUGAR REFINING CO.,
J. T. BADEAUX, *President.*

—

HOUMA, LA., *August 7, 1922.*

Hon. FRANK R. GOODING,
United States Senate Office Building, Washington, D. C.:

We, the undersigned, cane growers and farmers, have followed with a great deal of interest your splendid stand and leadership personally and as chairman of the agricultural bloc in the matter of proper tariff protection on all farm products, and especially those of the South which have heretofore had so little consideration at the hands of the national lawmakers of the country. We emphatically approve and indorse your course, and trust that you will continue same with the same untiring effort that has characterized your movement up to date, for which we express our thanks and appreciation.

ERNEST ELLENDER.
WALLACE ELLENDER.
S. P. GUIDRY.
A. P. VIGUERIE.
A. C. VIGUERIE.
C. J. CHAMPAGNE.

—

BRECKENRIDGE, MICH., *August 8, 1922.*

Hon. GOODING,
Washington, D. C.:

I am very anxious for the duty on sugar.

CHAS. E. WATSON, *Farmer.*

—

BRECKENRIDGE, MICH., *August 8, 1922.*

Hon. GOODING,
Washington, D. C.:

I am interested in farm bloc; also duty on sugar. I am with you.

S. A. HOOKS, *Farmer.*

—

Range of cane sugar prices from June 23, 1914, to June 23, 1915.

	New York cane quotation.	San Francisco cane quotation.
1914.		
June 26	$4.30	$4.50
July 9	4.30	4.50

Lowest quotation for year $3.42 on January 3.
Sugar at present time $7 per hundred.

Total and per capita revenue derived from imports in the countries named for the latest year for which the figures are available.

Country.	Year.	Total receipts.	Population.	Per capita.
United States	1921	$292,397,349	105,710,620	$2.76
United Kingdom	1922	632,052,720	42,767,530	14.78
Canada	1922	104,420,541	8,769,489	11.90
France	1921	360,880,770	41,500,000	8.69
Germany	1922	1,047,200,000	62,000,000	16.89
Argentina	1920	70,526,398	9,000,000	7.83
Chile	1920	52,377,367	3,870,023	13.53

It is estimated that the per capita revenue under the finance bill will be $3.29.

Revenue derived from duties on imports of tea, coffee, cocoa, and sugar into France for the fiscal year ended March 31, 1920.

Article.	Duty (pound).	Receipts.	Per capita tax.
Sugar	2 1/5 cents	$86,962,304	$1.62
Coffee	26 cents	37,719,648	.90
Cocoa	do	9,549,412	.235
Tea	35 cents	672,384	.015
Total		114,903,748	2.77

Population, 1921	41,500,000
Total customs receipts from imports, 1921	$360,880,770
Per capita total receipts	$8.69

Revenue derived from duties on imports of tea, coffee, cocoa, and sugar into the United Kingdom for the fiscal year ended March 31, 1921.

Article.	Duty (pound).	Receipts.	Per capita tax.
Tea	24 cents	$86,150,710	$2.00
Cocoa	10 cents	9,854,512	.23

Population, 1922	8,769,489
Total customs receipts from imports	$104,420,451
Per capita total receipts	$11.90

Mr. WILLIS. Mr. President, I am a protectionist, and I shall continue to be so unless I am argued out of it by some of the extreme arguments of my fellow protectionists. I have only a very few minutes and shall take that time in explaining an amendment which I propose to offer.

The bill as it was reported from the committee, and the bill as it passed the House, provided a rate of $1.60 against Cuban sugar and $2 as against the world. The amendment which has been offered by the Senator from Louisiana [Mr. BROUSSARD] provides $2 against Cuba and $2.50 as against the rest of the world. I am frank to say that I am very much in favor of the sugar industry. Ten years ago, in another legislative body, at the other end of the Capitol, I did what I could do to foster that industry. I believe in the industry, because I believe in building up my own country, but I do not believe that we ought to adopt excessive rates in this item or any other.

In the State of Ohio we have 5 great sugar factories located at Paulding, Fremont, Findlay, Ottawa, and Toledo, but there is not entire unanimity of opinion as to what the rates ought to be in order to afford the necessary protection. I have presented petitions from some Ohio producers who think the rate ought to be $2 as against Cuba. Some others do not ask that.

After the amendment offered by the Senator from Rhode Island [Mr. GERRY] shall have been voted on, if it is voted down, I shall then offer an amendment to the amendment offered by the Senator from Louisiana so as to provide for the striking out of 1.45 in line 3 and inserting in lieu thereof 1.2. The effect of that, if it is adopted, will be to provide a rate of $1.80 as against Cuba and $2.25 as against the rest of the world.

Why will I offer that amendment? I have listened to most of the arguments and have read all of the hearings, and in my opinion the advocates of the $2 per hundred rate as against Cuba have not made out their case that that amount is necessary. But I am not certain that the 1.60 rate provided in the bill is a sufficient rate of protection, and therefore I shall offer this compromise amendment.

But I say, Mr. President, that the farmers who actually produce the sugar in our State are by no means unanimous upon this point. Ohio, as I have said, is interested in the sugar business. There are five factories in Ohio, which, of course, do not rank with those in California and Colorado in the quantity production of sugar. They produce some 30,000 tons. Now, I want to state what the farmers of Ohio say about this, not referring to petitions, but speaking of personal letters which have come to me, written out in longhand by farmers I know.

Here is one written from Custer, Ohio. The writer says:

I am a landowner, a farmer, a citizen of Ohio, and ask that you use your influence against any reduction in the present rate on sugar.

A farmer at Holgate says:

As a sugar-beet grower, a farmer, and a citizen of your district, I appeal to you to take no action that will reduce the present tariff on sugar.

A producer of sugar at Belmore reports:

As a farmer, may I appeal to you to take a firm stand against any reduction in the tariff rate on sugar. We have grown a heavy tonnage of sugar beets in this district for a number of years and are afraid a reduction in tariff would hurt the industry.

A farmer from Lime City says:

I am a farmer in a sugar-beet territory and I understand there is a movement to cut the tariff on sugar. If such is the case, would you kindly use your influence to prevent such action on the part of Congress?

Another, writing from New Bavaria, says:

It has come to my notice through some of the newspapers that there is some talk of reducing the present tariff on sugar. Please use your influence against any such action, as we farmers of northwestern Ohio want to grow beets, which is one of our best crops, and a reduction in the present tariff rate on sugar would have a tendency to close the beet-sugar factories of Ohio and thus prevent us from growing the most profitable crop.

And so on. There are several letters which I shall not take the time to read. That is the purport of them. They are protesting against any reduction in the rate and are not asking for an increase, and I call the attention of Senators to the fact that the bill carries a rate even higher than that provided in the emergency tariff law. When that was passed it was thought that rate was sufficient. You heard no clamor in the country for a higher rate. What has taken place since then to make so much higher a rate necessary?

The committee rate comes to us, in a way, with the stamp of approval upon it. In the first place it is the rate in the present law. In the second place it is the rate which the House has fixed. But I am willing to concede something, because exact information as to production costs is not obtainable, and therefore I shall propose this amendment.

Mr. POMERENE. Mr. President, may I ask if the Senator has heard from any farmer in Ohio who asked for an increase in the rate?

Mr. WILLIS. Only by way of petition. I say to my colleague that some petitions have come, signed by a good many farmers, some of them asking for the 2-cent rate as against Cuba; but the letters I have, in the cases where farmers have taken the pains to write, are protesting against a reduction of the tariff.

I say this, in conclusion, that the rate fixed in the bill is the rate in the present law. I suggest to my associates on this side of the aisle that I am as deeply interested in the sugar industry as any one of them; I want it to be maintained in this country, but if you shall place the rate so high that there will be a revulsion of feeling amongst the American people, you will destroy the sugar industry and will lead eventually to free trade in sugar, which I think ought not to be, because free trade in sugar would destroy a great American industry and leave consumers at the mercy of the refiners. I am willing that our sugar supply should be furnished by Cuba and America, including Hawaii, Porto Rico, and the Philippines. I do not desire that Cuba and the refiners should have a monopoly, as they would have if our beet-sugar and cane-sugar industries are killed by free trade. Therefore, first, I think, the amendment offered by the Senator from Rhode Island should be voted down, and if it is voted down, I then shall offer an amendment which I hope will be adopted.

Mr. WALSH of Massachusetts. Mr. President, as the objections to the high and unjustifiable duty proposed on sugar have been so well and fully presented and the time for debate is about to expire, I ask unanimous consent to insert in the RECORD some communications, editorial comments, and statements which represent, in the main, my views on this subject.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

BEET-SUGAR INDUSTRY.

The beet-sugar and other domestic interests have told the Senate Finance Committee of their deplorable financial condition, stating that many of them will be forced into bankruptcy if no relief is given them. The statement of their financial condition is no doubt a correct one, but their losses have not been incurred in operations, but are, rather, due to the enormous shrinkage in their inventory values. In this they are no exception to other manufacturing companies.

During the past years, under 1 cent protection against Cuba, these beet companies, as well as those of Porto Rico and Hawaii, have prospered and paid very satisfactory returns to their stockholders, and with a return to normal conditions a reduction of production, which will be forced through low prices, and a material increase of consumption, which will be expected for the same reason, there is every probability that the beet-sugar companies of the West will rapidly recover.

When the first of these beet-sugar companies were organized many years ago, preferred stock was issued for their cost and common stock, as a bonus, for a like amount. This was to attract investors and induce them to incur the risk of a new enterprise.

In course of time, under an ample protection, surplus earnings accumulated until the water was all squeezed out of their capitalization and liberal dividends were paid. In the case of the Great Western, of Colorado, these were at the rate of 47 per cent for a number of years; besides this, a very considerable amount was put into new construction to prevent others from entering the field.

As time went on the success of the Great Western and other companies under skillful management attracted competition and all have spread out beyond their legitimate territories in order to enlarge their market, this at the expense of their net earnings, for the longer the haul the greater freight rate to be deducted from their sales. Now these companies are short of capital, and dividends paid by them to their stockholders can not be recalled.

I use the Great Western as an illustration, a company which is well known and has been well managed. Its history in a great measure is that of all.

Now these beet-sugar companies of the West and Central West feel the need of an extended market. They can not go to the Pacific coast, as that is already occupied. Their only outlet is to the Atlantic or Gulf. In order to overcome freight on a long haul, they are asking increased duties on Cuban sugars to check their flow westward, at least beyond the Chicago line, for they realize that only in two ways can this be done—either by increased freight rates or an increased tariff.

The trouble at the present time is not any need of further protection, as costs in all countries are declining, but it is the question of overproduction and money already invested in further construction work undertaken or planned. Plans for new factories have been made by the Great Western, Utah-Idaho, and Amalgamated Beet Companies, as well as some smaller companies, but these are generally held up owing to present lack of funds.

The same is happening in Cuba and elsewhere, but work on new plants has necessarily been suspended or abandoned for the same reason.

The sugar industry in all countries is at a low ebb and Government intervention is sought to further check it. It will check itself if not interfered with through exhaustion of resources, both cash and credits; if artificially checked, the result would, in my opinion, be to encourage all, upon a higher market, to produce beyond requirements.

The claim of the great importance of the sugar beets as an agricultural crop can not be sustained; in fact, it is one of the least important to the country of all our agricultural crops, as shown by the Statistical Abstract of the United States of 1920, from which the following figures were taken:

Crop acreage, 1919.

Sugar beets	692,455
Potatoes	3,952,000
Sweet potatoes	1,042,000
Hay	56,552,000
Corn	100,072,000
Wheat	72,308,000
Oats	41,835,000
Rye	1,103,000
Barley	7,198,000
Buckwheat	739,000
Rice	1,091,800
Peanuts	1,256,000
Beans (6 States)	1,002,000
Clover seed	843,000
Kafirs	5,031,000
Cowpeas	1,453,000
Cotton	33,566,000
Flaxseed	1,572,000
Tobacco	1,910,800

It will be noticed that the cultivation of sugar beets is insignificant compared with that of Irish potatoes, or even sweet potatoes of the South, and that the acreage devoted to peanuts is almost double that devoted to sugar beets; even kafir corn, a minor crop but little known in the eastern part of the United States, as well as buckwheat, far exceed in importance the sugar beets, the beet acreage in 1920 being two-tenths of 1 per cent of the crop area of the country.

With these facts before them, the beet-sugar manufacturers are pushing forward the farmers for special protection against all other interests, although when the Fordney rates were assured the manufacturers reduced contracts for sugar beets 50 per cent, thus taking the protection for themselves to the detriment of the farmer.

When the rates against Cuban sugar were increased by the Fordney tariff 60 per cent, and now amount to very nearly 100 per cent ad valorem, the rate upon the sugar beets was left as before, at 5 per cent ad valorem. This to the benefit of sugar factories of Michigan and Wisconsin, located near the Canadian line that they might bring their beets in from Canada and have this advantage over other competitors.

As has always happened during any tariff discussion, the Louisiana interests are loud in their cries for Government aid, but it should be remembered that the States of Louisiana and Texas combined produce but about 5 per cent of the requirements, and their great difficulty consists of climatic conditions.

The only interest that has not been heard by the Senate Finance Committee is that of the consumer, including the farmers of the entire country, who pay a great part of the sugar tax for the benefit of a comparatively small number of farmers in the beet-producing States.

—

[From the New York Evening Post, June 17, 1922.]

THE INCREASE IN NEW SUGAR DUTY TO COST CONSUMERS $60,000,000 YEARLY—PEOPLE TO PAY DUTY IN INCREASED PRICES—MANUFACTURER OF CUBAN PRODUCT SAYS PROTECTION IS NOT NEEDED—HOW BEET-SUGAR INTERESTS OF THE WEST SHOWED POOR BUSINESS JUDGMENT.

(By Edwin F. Atkins, manufacturer of Cuban sugars and member of E. Atkins & Co.)

The consumption of sugar in the United States for the year 1921 amounted in round figures to something more than 4,000,000 gross tons, of which about one-half was furnished by so-called domestic producers, free of duty, including as domestic production the sugar of our insular possessions, i. e., Hawaii, Porto Rico, and the Philippine Islands. Of this about one-half was produced within our borders, i. e., beet sugars and Louisiana and Texas cane sugars.

Up to the time of the enactment of the emergency tariff rates the rate of duty upon imported sugar was 1.26 cents per pound. Under our reciprocity treaty with Cuba, allowing 20 per cent rebate upon Cuban sugars, these were admitted at a duty of approximately 1 cent per pound. Cuba supplies very nearly all of the foreign imported sugars, and is almost entirely dependent upon her sugar industry. The emergency tariff increased the duty on Cuban sugars from 1 cent per pound to 1.6 cents, an increase of 60 per cent.

It has been the claim of the extreme protectionists that the foreign producer, and not the domestic consumer, would pay this increase in duties, and this claim was partly borne out by the fact that immediately after the passage of the emergency tariff act the f. o. b. prices of Cuban sugars at once dropped to the extent of this increased duty.

Where a country is dependent upon importations for half of its supply it is obvious that in times when the world's production exceeds consumption, the foreign producer, in order to reach our market and sell in competition with duty-free sugar, would have to absorb this increase in the duties, but when consumption exceeds production conditions are changed and consumers then would have to pay the duty.

FURTHER PROTECTION NOT NEEDED.

After the crop of 1921 Cuba carried over some 1,200,000 tons of the previous crop, for which there was at the time no apparent market. Besides this Cuban stock there was a further accumulation in the United States of beet and other sugars, making a carry-over of nearly 2,000,000 tons, and prices in consequence began to drop rapidly. During this process of deflation, losses upon the inventory stocks in the hands of producers, importers, refiners, distributors, and consumers were enormous. It is to recoup themselves from these losses that the beet-sugar producers are anxious to secure an increase of tariff against Cuban sugars, as they do not need further protection to put them on a parity with Cuba in producing.

It is held by the opponents of the Fordney bill that a protection of 1 cent a pound is ample, representing as it does 33 per cent to 50 per cent of the value of the raw sugars in Cuba at normal prices. The Cuban sugars, when refined, have to seek an outlet largely in the Middle West and in the great competitive markets of Chicago and St. Louis, where they have to be sold in competition with beet sugars. In addition to the duty of 1 cent per pound the beet sugars have a further protection of railroad freights. To form a correct idea of relative costs of cane and beet sugars in these markets, freight from the Atlantic and Gulf ports as well as from Colorado and other places of origin should be added to the factory costs, and it will be shown that as a rule the beet-sugar sellers there have an advantage over eastern refiners.

OTHER SUGAR INTERESTS SUFFERED.

It is claimed by the extreme protectionists and domestic producers that higher duties are essential to the maintenance of their industry to avoid destruction, but an examination of financial conditions shows that the beet-sugar companies have not been the only ones to suffer, and that nearly all the large sugar companies, producers in Cuba and Porto Rico, as well as the refiners, during the past year have had to raise new

working capital to cover losses sustained during this period of deflation. An examination of the listing on the New York Stock Exchange of new bonds of sugar companies will confirm this.

The beet-sugar companies after exhausting their resources at their local western banks, and not finding it easy to place securities in the East, appealed to the Government for aid to help carry their inventory stocks, and obtained many millions of dollars as loans from the War Finance Commission, which went largely to sugar companies in Utah, Idaho, and other far Western States, owned or controlled by the Mormon Church, of which Senator SMOOT is the acting head in its financial matters.

Senator SMOOT is one of the most influential members of the Senate Finance Committee, and the member to whom sugar-tariff questions are always referred. He is an extreme protectionist, particularly upon the sugar tariff, and is using all his influence to raise the Fordney sugar rate of 1.6 cents on Cuban sugar to 2 cents per pound, apparently with the expectation of offsetting the losses of the beet-sugar producers by increasing prices to the United States consumers. In this policy Senator SMOOT has the backing of the farm bloc, and, as he is a member of the Republican National Committee, he naturally has great weight in the Senate.

While all the domestic sugar interests are working together for the highest possible duties they can obtain, they are not all in accord with the extreme views of the protectionists in regard to the sugar tariff. Recently one of the prominent producers of Hawaii, well known in sugar circles and highly respected, expressed the following opinion in the Honolulu Advertiser:

"The higher rate for which western beet men have been striving is more protection than the industry needs, and, if enacted, would undoubtedly lead to a reopening of the subject at the next session of Congress. The entire sugar industry suffered severe losses in the recent deflation, and what other industry did not? I do not believe that the American consumers ought to be taxed to make good the beet-sugar men's losses, which is what the enactment of the maximum duty would amount to. Other industries have had to take their losses and no exceptions ought to be made in favor of the beet people."

One of the largest distributors of both cane and beet sugars throughout the West recently made the following admission in one of his trade circulars:

"Another factor that reduces the consumption is the huge cost of sugar through ridiculous taxation."

This man is widely known throughout sugar circles and his opinion always carries weight. Besides being a distributor he is president of a well-known beet-sugar company.

BAD JUDGMENT CAUSED LOSSES.

The losses which the beet-sugar people have suffered are due largely to error of judgment. Three factories were built in the State of Washington, but the farmers there would not raise sugar beets, owing to the fact that they required much more labor than other farm crops and that wheat was much more profitable. The beet people also found that the local market for refined sugar was so limited that they could not dispose of the product of these factories without paying freight for 1,500 to 2,000 miles. In consequence only one of these three factories has been operated. It is obvious that an advance in tariff rates is essential for those interests in order to offset their freight rates.

Some of these beet-sugar companies did not market their sugars wisely when they had opportunity, but borrowed money and held the sugars for higher prices, which caused them heavy losses.

An argument constantly put forward by the beet-sugar producers is that they need higher duties and higher prices in order to maintain the standard of living of the American laborer. It is a well-known fact which can not be disputed that very few American laborers are employed in the beet fields, Japanese being largely employed in California, Mexicans in the Southwest and Colorado, and Russians and Poles in Michigan and other States. Recent investigations have emphasized the deteriorating effects of the prevalence of child labor in the beet fields.

SAYS CONSUMERS MUST PAY.

The effect of a continuance of the Fordney emergency sugar rates will be to add about $60,000,000 to the cost of sugar to consumers. Sugar is already the highest-taxed article on our list, and eventually the tax is taken out of the pocket of the consumer for the benefit of domestic producers (principally beet-sugar producers) if the consumer must pay the tax, as is the object of the bill, or if the producer pays the tax to keep the price of Cuban sugars down to so low a figure that they can not cover average costs, and so bring about a scarcity and raise prices at the expense of the consumer.

It would and already has caused the loss of much of our export business to Cuba, which has been one of our best customers, and to whom we supplied two years ago some 76 per cent of her requirements; it would greatly increase the requirements for working capital of the refiners, and millions of dollars tied up in drawbacks against exports, which are not collectible for 90 days after shipment, and increase in many ways the cost of refining, always at the expense of the consumer; moreover, the duty is not required to cover increased cost to domestic producers, as past losses are not a legitimate charge against future costs.

—

BOSTON, *December 14, 1921.*

Hon. DAVID I. WALSH,
Senate Chamber, Washington, D. C.

DEAR MR. WALSH: As a member of the Senate Finance Committee I take the liberty to address you in relation to the proposed tariff on sugar, as provided for in the Fordney rates.

This organization through a period of 10 years of exceptionally hard work and the great expense of covering the island of Cuba with traveling representatives and maintaining a large distributing stock in Habana have been able to build up a very satisfactory volume of business with the largest interests on the island, and we are confident that if the proposed sugar tariff is made effective it will serve to destroy the Cuban sugar industry and damage to some extent the good will between our connections and ourselves and seriously affect our business. It will have a tendency to knock down what we have been so many years building up, and may we ask that you lend your influence to defeat this measure on the proposed tariff act.

Yours very truly,

A. J. TOWER CO.,
EDWARD W. SWAN,
Vice President.

CAMBRIDGE, MASS., *December 21, 1921.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: We have become convinced that any extension of the destructive 60 per cent increase in the tariff rates on Cuban sugar or any increase in the former rate of 1 cent a pound, under which the domestic industry prospered, would be an act destructive of the good will for United States trade with Latin-America, and, in addition, would destroy the Cuban market for American goods, in which market we have sold $1,693,977,391 worth of goods in the past 10 years; and so we earnestly protest against the imposition of any increase in the tariff on Cuban raw sugar, and trust that you also agree and will favor the business interests of the country by voting against an increase in the tariff rates on Cuban sugar or any increase in the former rate of 1 cent a pound.

Yours very truly,

WHITTEMORE BROS. CORPORATION.

—

EVERETT STATION, BOSTON, *December 17, 1921.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: We have just received a letter from our distributors in Cuba, in which they state that American business men have invested in Cuba over one thousand million dollars, while the investment in sugar in Louisiana is only seventy million. Cuba buys from the United States over five hundred million and is therefore a very desirable market and is a natural export for American goods, but if the Fordney bill is going to put such a duty on raw sugar that the Cubans can't sell their sugar here and have to sell it to Europe, their business will go to Europe and the United States will lose this $500,000,000 worth of business.

The people in Cuba, of course, are very much exercised over the Fordney bill. Our agents there say so much so that a monster parade against the Fordney bill will take place on the 18th day of December, and they claim that Americans living in Cuba will march with the Cubans. It is not an anti-American parade, as some American newspapers have insinuated, but an anti-Fordney bill parade.

It seems to us here in Boston that, while we believe in tariff bills, it is not necessary to put an exorbitant tariff on raw sugar. While we do raise considerable sugar in this country, we believe that a high tariff would be simply putting money into the American producers' pockets, and keeping the Cuban sugar out of here would drive away their other business. Treat the Cubans fair and give them a chance, and they will buy a great many more goods from us than we can ever think of buying from them.

Trusting you will consider this letter when the Fordney bill comes up and do anything you can to defeat an unfair tariff on raw sugar, we remain,

Very truly yours,

BOSTON VARNISH CO.,
J. B. LORD, *President.*

—

SALEM, MASS., *January 11, 1922.*

Hon. DAVID I. WALSH,
Washington, D. C.

DEAR SIR: A very serious question is now before the Senate and Congress, viz, a tariff of 2 cents a pound on Cuban sugar, which, if carried, would ruin Cuba and destroy the best market in the world for our manufactured goods. During the war the United States insisted on Cuba increasing her supply of sugar.

The sugar industry in Cuba is very largely financed by American capital, which is now invested to the extent of many millions of dollars. It is claimed that 70 per cent of the investment in sugar plants in Cuba is owned in the United States. In addition to this the Cuban merchants who are dependent on this industry owe to merchants, manufacturers, and banks in the United States many millions of dollars, a large portion of which will be lost if this bill is passed. It seems incredible that our legislators would consider passing a bill that would bring such calamity on the merchants, manufacturers, banks, and investors in the United States who are so vitally interested.

We must beg that you use your powerful influence to save the country from making so grave an error and cause such enormous loss to American interests. Many other arguments could be urged, such as the probability of a revolution in Cuba caused by unemployment, which would mean that the United States would have to intervene at heavy expense to us, but surely no other arguments are needed than those mentioned, and we depend upon you to work to our best interests.

Very truly yours,

BELL BROS. CO.

—

BOSTON, *February 10, 1922.*

Senator D. I. WALSH,
Washington, D. C.

MY DEAR SENATOR: To protect an American industry which many believe to be uneconomic, we are imposing, under the Fordney tariff, a tax upon Cuban exporters which threatens their very existence. It seems to me that we can not continue this tariff without injuring our own interests, not only as investors and traders in Cuba but also as the principal consumers of Cuba's chief products.

Figures which I believe to be reliable show that American capital invested in Cuba in the sugar business amounts to $1,000,000,000, whereas the entire investment in the sugar industry in the United States is less than two hundred millions.

We are importing sugar at the rate of nearly 7,000,000,000 pounds a year—practically all of it from Cuba. Our own production of cane and beet sugar amounts to less than two and a half billion pounds. Since we can not produce the sugar we consume, the high import duties will in time bring higher prices, which will have to be met by American consumers.

Aside from these economic considerations, it seems to me that this tariff wall is likely to place such a burden upon Cuba as to menace all American business in that country and to impoverish the Cuban people. That will mean enormous losses to manufacturers and bankers in the United States.

We have, as a Nation, followed a course of paternal friendliness toward Cuba heretofore. The Fordney tariff, to my mind, is treachery to one of our good friends among the small nations.

I hope you will vote to kill this measure as uneconomic and mischievous.

Very truly yours,

WALWORTH MANUFACTURING CO.,
HOWARD COONTZ, *President.*

WESTFIELD MASS., *December 7, 1921.*

Senator DAVID I. WALSH,
Washington, D. C.

DEAR SENATOR WALSH: Our company has enjoyed a considerable business with various accounts in Cuba and is vitally interested in the maintenance of this business. We realize that with an attempt to put into force a decided advance in duty on Cuban sugar there must be some line of reasoning in its favor.

On the other hand, we have no means of being entirely familiar and can for this reason simply indicate to you our sincere desires that a plan be worked out that will make it possible for us to continue to do business with that country.

We are basing our opinion largely on the personal pleas of several of our largest accounts in that country who apparently feel that such a tariff measure as is being considered at the present time will be next to calamity for the sugar interests in that country.

We would like you to feel, therefore, that our interests, as we can see them, would support a tariff such as has previously been in force in Cuba.

Yours very truly,

WESTFIELD MANUFACTURING CO.,
N. R. CLARKE, *Assistant Secretary.*

—

PITTSFIELD, MASS., *December 8, 1921.*

Hon. DAVID I. WALSH,
Senate Chamber, Washington, D. C.

MY DEAR SENATOR WALSH: American firms in the past 10 years have sold in Cuba more than $1,600,000,000 of American goods manufactured in American mills by American workers. Applying the principle of protection of American industry to this situation, it would seem that protection means not only protection of American markets against foreign competition but also protecting the foreign markets for our goods against other foreign competition.

If Cuba can not continue to sell her sugar to us at a reasonable profit, she will, of course, not sell her sugar to us, but will sell it in any other market that proves profitable. In driving her sugar out of our markets we are driving our goods out of her markets.

Like other nations, where Cuba sells she will buy, and where she can not sell she can not buy.

In view of this situation, it is inconceivable that Congress will persist in enacting the 60 per cent increase in the tariff on Cuban raw sugar which was enacted in the emergency tariff act and which stands in the way of an early recovery of economic stability in Cuba. American firms, like ourselves, who have unpaid accounts in Cuba and who have in the past enjoyed a satisfactory market for their goods in the island, feel that persistence of Congress in the course adopted by the House of Representatives in the passage of the permanent tariff bill will mean an act detrimental to the best interests of American firms and American workers.

We urge you to seriously consider this point of view in connection with the enactment of the permanent tariff bill.

Yours very truly,

E. D. JONES & SONS CO.,
E. A. JONES, *Treasurer.*

—

BATES & BACON EXPORT CO.,
Attleboro, Mass., October 14, 1921.

The Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

SIR: Congress has already passed the emergency tariff bill, which levies a duty on Cuban sugar equivalent to an increase of 60 per cent over the previous tariff and the Fordney bill, which has already passed the House of Representatives, is designed to make permanent this increase.

As one of your constituents, the Bates & Bacon Export Co. wishes to register its emphatic protest against the perpetuation of this increase in the tariff on Cuban sugar and to request that you do everything humanly possible to have it stricken from the Fordney bill when it comes to conference.

Our corporation is organized exclusively for the foreign sale of jewelry and maintains its own branch offices in various foreign cities, including Habana, and during the year 1920 our sales in Cuba were approximately $400,000.

The purchasing power of Cuba is in direct proportion to its profitable sale of raw sugar which, as you know, is the principal industry of the island. If the sugar mills are forced to shut down, as many of them have been during the present year, because of their inability to produce and sell sugar at the prevailing prices, such action will throw tremendous numbers of Cuban laborers out of employment, cut off their buying power, and automatically such action will cut off the selling possibilities of merchants in all lines through the Republic.

If the sugar producers in Cuba are unable to sell their product to the United States, their principal market, on account of the greatly increased duty provided by the Fordney bill, the investments of American capital in the sugar industry in Cuba, amounting to more than a billion dollars, will be seriously jeopardized and American business with Cuba will be almost entirely wiped out until other world markets for Cuban sugar can be found or until such time as Cuba has established a new industry in some other line which will bring in an equivalent income to that heretofore enjoyed from sugar.

We have already seen the results of the increased duty on Cuban cigars, and while the action taken by Congress may be highly satisfactory to the American cigar manufacturers, the fact remains that the American lovers of good Cuban cigars are obliged to content themselves with the inferior products of the imitative manufacturers in this country.

There is no doubt that the American producers of sugar would be happy to see the increased duty on Cuban sugar perpetuated, but I believe that we as a Nation should look with broader vision upon matters of such importance. The increase would benefit the growers of American sugar and their employees, but it would be tremendously injurious not only to the Cuban producers of sugar and to the American capital interested therein but to every manufacturer and merchant in the United States who has, or has had, any business dealings whatever with customers in Cuba.

We ourselves have considerable money tied up in accounts receivable from Cuban customers, and I believe that I am safe in saying that every American exporter to Cuba is in the same position. Our Cuban customers have told us very plainly that if the proposed increase is made permanent many merchants in Cuba will find it absolutely necessary to go out of business, as the buying power of the working class, upon which they depend, will be too small to pay even the overhead expenses.

Cuba has not yet recovered from the effects of the moratorium established a year ago, and many American exporters have accounts receivable still on their books for 1920 business which they will find themselves unable to collect on account of their Cuban customers going into "suspension of payment" if the increased duty becomes permanent.

Ever since the United States Government was instrumental in obtaining Cuba's freedom from Spain it has been our boast that we always give Cuba the "most-favored-nation" treatment and that we afford her practically the same opportunities as are given to the States of our Union for the development of her industry and commerce.

We are counting absolutely upon you to do everything humanly possible to prevent the emergency increase from becoming permanent, and this corporation would appreciate a statement from you as to where you stand in this matter of such vital importance to the industry and commerce of your State.

Very truly yours, CHARLES JENKINSON, *Treasurer.*

—

E. ATKINS & CO.,
Boston, June 6, 1922.

Hon. DAVID I. WALSH,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR WALSH: Regarding sugar-tariff rates, which affect the whole country, one of the prominent sugar men of Hawaii, who is well known to me, recently expressed his views, as per copy of newspaper cutting which I inclose. This man, Mr. Tenney, realizes the danger of increased beet-sugar production in the United States, taking away his market on the Pacific coast and forcing the surplus of the Sandwich Islands to be shipped at very high freight rates, either rail or water, to Chicago and even to markets on the Atlantic coast. To this point I have frequently called attention in the past. All this would eventually be paid by the consumer.

One of the beet-sugar manufacturers, who handles large quantities of both cane and beet sugars, and himself a president of some of the minor beet-sugar companies and a strong advocate of high duties and supporter of the Fordney tariff, recently expressed his views in the weekly circular of his firm. Probably this crept into the circular without the knowledge or approval of the senior partner, who is a warm personal friend of mine and a good Republican:

"Another factor that reduces the consumption is the huge cost of sugar through ridiculous taxation."

Yours very truly, E. F. ATKINS.

—

[From the Honolulu Advertiser, April 25, 1922.]

MIDDLE ROAD BEST IN SUGAR TARIFF, SAYS E. D. TENNEY.

Commenting on recent Associated Press dispatches from Washington announcing that Senator SMOOT and other Republican leaders were willing to carry the fight for the emergency sugar tariff rate to the floor of the Senate, E. C. Tenney, president of Castle & Cooke, said yesterday that the middle course is the better. The higher rate for which western beet men have been striving is more protection than the industry needs, he declared, and if enacted would undoubtedly lead to a reopening of the subject at the next session of Congress.

"The entire sugar industry suffered severe losses in the recent deflation, as what other industry did not?" he said. "I do not believe that American consumers ought to be taxed to make good the beet-sugar men's losses, which is what the enactment of the maximum duty would amount to. Other industries have had to take their losses, and no exception ought to be made in favor of the beet people."

—

NEW YORK, *July 14, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: The public prints are carrying articles, some stating that the American Sugar Refining Co. is endeavoring to secure a higher duty on sugar and others that it is making efforts to secure a lower import duty on sugar.

In view of this publicity, we wish you to know that we have taken no part, directly or indirectly, in the matter of the pending sugar duty. As is well known, this company has investments both in the foreign and in the domestic sugar fields.

Very respectfully yours,

THE AMERICAN SUGAR REFINING CO.,
EARL D. BABST, *President.*

—

E. ATKINS & CO.,
New York, July 14, 1922.

Senator DAVID I. WALSH,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: In connection with this tariff question, I wonder what Senator SMOOT would have to say when faced with these facts:

Mr. FORDNEY increased in the emergency bill the tariff on sugar 60 per cent, making the Cuban rate 1.60 cents per pound, as against the 1-cent rate in the Underwood bill. Increasing the price of sugar this way means on the 5,000,000 tons we use annually an added cost to the consumer of $37,000,000.

This was done on the plea that Cuba, on account of her large carryover, would have to sell raw sugars at 2 cents per pound, which with 1.60 cents duty would make the price in the States 3.60 cents per pound duty paid, and such a price, it was claimed, was needed to protect our domestic industry. Without discussing the merits of this claim, the fact is Cuban sugar for a short time did sell at 2 cents per pound, but such a low market could only be temporary, and prices, following the natural course, have reacted so that last week sugar sold at 3½ cents per pound, which with 1.60 cents duty makes the duty-paid price 5.10 cents, instead of 3.60 cents, the price it was claimed the domestic trade needed. If the Underwood rate of 1 cent per pound on Cuban sugar was to-day in effect the duty-paid price would be 4½ cents per pound, or still nearly 1 cent per pound above the price domestic producers claimed they must have.

What possible argument can there be for maintaining the 60 cents per hundred increase effective in the emergency tariff and intended to be made permanent in the Fordney-McCumber bill?

In order to advance the price of sugar Senator SMOOT, through General Crowder, was making every effort in January to have Cuba restrict her crop to 2,500,000 tons, and Cuba was told that if she could do this the domestic sugar interests would consent to the tariff rate being reduced from 1.60 cents to 1.40 cents. Anyone familiar with conditions

in Cuba would know that this was not a practical suggestion, and to show how impractical it was from a supply standpoint I would point out that Cuba this year shipped up to July 1, 3,589,000 tons.

Had her crop been restricted to 2,500,000 tons, which with the 1,200,000 tons she carried over would give her a total of 3,700,000 tons, the entire supply would have been cleaned up by July 1. We would have nothing to fall back on for the balance of the year and speculation would now be rampant.

I suppose these facts will be met not with argument, but with the usual rot about some one "trying to ruin the domestic industry." Their predictions of ruination have never been realized. The domestic interest was to be ruined when years ago Hawaiian sugars were to be admitted free, and again when duty was removed from Porto Rico sugars. This cry was repeated when the product of the Philippines had free entry, and a tremendous cry of distress went up when the Underwood bill was passed and the tariff rate on sugar was reduced to 1¼ cents per pound, making the Cuban rate 1 cent per pound. Yet the domestic industry prospered enormously under the tariff rate, notwithstanding the frightful blunders and complete lack of thrift. I inclose herewith a statement of dividends paid by certain beet-sugar companies during the time the Underwood bill, which was the lowest protective tariff for many years, was in effect.

Yours very truly,

E. ATKINS & Co.

Statement showing profits and dividends of certain beet-sugar companies west of Mississippi River.

AMERICAN BEET SUGAR CO.

(Owns and operates six beet-sugar factories in Colorado, California, and Nebraska.)

Capital stock:
Preferred $5,000,000
Common 15,000,000

Year.	Net earnings.	Amount of dividends paid.		Earned on stock.

Mr. GERRY. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Frelinghuysen	Moses	Spencer
Ball	Gerry	Myers	Stanfield
Borah	Glass	Nelson	Stanley
Brandegee	Gooding	New	Sterling
Broussard	Harreld	Nicholson	Sutherland
Bursum	Harris	Norbeck	Swanson
Calder	Heflin	Oddie	Townsend
Cameron	Jones, N. Mex.	Overman	Trammell
Capper	Jones, Wash.	Pepper	Underwood
Caraway	Kendrick	Phipps	Wadsworth
Colt	Keyes	Pomerene	Walsh, Mass.
Culberson	Ladd	Ransdell	Walsh, Mont.
Cummins	Lenroot	Rawson	Warren
Curtis	Lodge	Reed	Watson, Ga.
Dillingham	McCormick	Sheppard	Watson, Ind.
Edge	McCumber	Shortridge	Willis
Ernst	McKinley	Simmons	
Fletcher	McLean	Smith	
France	McNary	Smoot	

The PRESIDENT pro tempore. Seventy-three Senators have answered to their names. There is a quorum present.

Mr. McCUMBER. Mr. President, I ask that the pending amendment may be reported.

The PRESIDENT pro tempore. The Secretary will state the pending amendment.

The READING CLERK. The pending amendment is the amendment offered by the Senator from Rhode Island [Mr. GERRY] to the amendment of the junior Senator from Louisiana [Mr. BROUSSARD] to strike out in the pending amendment, in line 3, the figures "1 45/100" and insert in lieu thereof the figures "71/100."

Mr. SIMMONS. I ask for the yeas and nays.

Mr. GERRY. The whole amendment has not been reported. I think it would save time to treat it as one amendment.

The PRESIDENT pro tempore. The Senator from Rhode Island asks unanimous consent that the two amendments which he has offered to the amendment of the Senator from Louisiana may be considered as a single amendment. Is there objection? The Chair hears none. The Secretary will report the entire amendment.

The READING CLERK. The Senator from Rhode Island [Mr. GERRY] offers an amendment to the amendment proposed by the junior Senator from Louisiana [Mr. BROUSSARD] to strike out, on page 95, line 18, the numeral "1 16/100" and insert in place thereof the numeral "71/100," and on line 20, after the comma, strike out the words "four one-hundredths" and insert in lieu thereof the words "twenty-six one-thousandths."

The PRESIDENT pro tempore. The Senator from North Carolina demands the yeas and nays. Is the request seconded?

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). I have a general pair with the senior Senator from Oklahoma [Mr. OWEN]. I transfer that pair to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

Mr. UNDERWOOD (when Mr. HARRISON's name was called). The junior Senator from Mississippi [Mr. HARRISON] is unavoidably absent. If present and not paired he would vote "yea."

Mr. JONES of New Mexico (when his name was called). On this schedule my general pair with the Senator from Maine [Mr. FERNALD] is released, and I am therefore at liberty to vote. I vote "nay."

Mr. McCUMBER (when his name was called). Transferring my general pair with the junior Senator from Utah [Mr. KING] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the junior Senator from Delaware [Mr. DU PONT], I vote "nay."

Mr. GERRY (when Mr. PITTMAN's name was called). I wish to announce that the Senator from Nevada [Mr. PITTMAN] has again been called from Washington on account of illness in his family. I ask that this announcement may stand for the day.

Mr. SIMMONS (when his name was called). I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG]. I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. TOWNSEND (when his name was called). I have a pair with the junior Senator from South Carolina [Mr. DIAL] which I transfer to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Maine [Mr. FERNALD] and vote "nay."

The roll call was concluded.

Mr. CARAWAY. I wish to announce the unavoidable absence of my colleague [Mr. ROBINSON]. I will let this announcement stand for the day.

Mr. HALE. I have a general pair with the senior Senator from Tennessee [Mr. SHIELDS]. I am unable to obtain a transfer of that pair. If permitted to vote, I would vote "nay."

Mr. CURTIS. I wish to announce that the junior Senator from West Virginia [Mr. ELKINS] has a general pair with the junior Senator from Mississippi [Mr. HARRISON]. I ask that this announcement may stand for the day.

Mr. SUTHERLAND (after having voted in the negative). As I have a general pair with the senior Senator from Arkansas [Mr. ROBINSON], and being unable to secure transfer of my pair, I withdraw my vote.

The result was announced—yeas 19, nays 52, as follows:

YEAS—19.

Ashurst	Harris	Reed	Swanson
Caraway	Heflin	Sheppard	Underwood
Culberson	Myers	Simmons	Walsh, Mass.
Gerry	Overman	Smith	Walsh, Mont.
Glass	Pomerene	Stanley	

NAYS—52.

Ball	Cummins	Harreld	McCumber
Borah	Curtis	Jones, N. Mex.	McKinley
Brandegee	Dillingham	Jones, Wash.	McLean
Broussard	Edge	Kendrick	McNary
Bursum	Ernst	Keyes	Moses
Calder	Fletcher	Ladd	Nelson
Cameron	France	Lenroot	New
Capper	Frelinghuysen	Lodge	Nicholson
Colt	Gooding	McCormick	Norbeck
Oddie	Rawson	Stanfield	Wadsworth
Pepper	Shortridge	Sterling	Warren
Phipps	Smoot	Townsend	Watson, Ind.
Ransdell	Spencer	Trammell	Willis

NOT VOTING—24.

Dial	Hitchcock	Newberry	Robinson
du Pont	Johnson	Norris	Shields
Elkins	Kellogg	Owen	Sutherland
Fernald	King	Page	Watson, Ga.
Hale	La Follette	Pittman	Weller
Harrison	McKellar	Poindexter	Williams

So Mr. GERRY's amendment to Mr. BROUSSARD's amendment was rejected.

The PRESIDENT pro tempore. At this point the Chair desires to make a statement with regard to the unanimous-consent agreement. If the agreement were literally construed, no other amendment could now be voted upon, inasmuch as the agreement declares that "the Senate shall proceed to vote without further debate upon any amendment that may be pending to the sugar schedule." The Chair believes, however, that it was the intent of the Senate that those words should include amendments that may be offered. If any Senator desires to question the ruling of the Chair upon the matter, it can be done in a very few moments.

Mr. McCUMBER. I ask unanimous consent that the Chair give to the unanimous-consent agreement that construction, in order that the paragraph referred to may include amendments pending and amendments that may be offered.

Mr. UNDERWOOD. Of course, it is understood that that will apply to all other paragraphs which may come up for consideration.

The PRESIDENT pro tempore. The Chair will so construe the agreement with regard to all the paragraphs similarly situated.

Mr. McCUMBER. That was the understanding.

Mr. WILLIS. Mr. President, I offer the amendment which I send to the desk.

The PRESIDENT pro tempore. The amendment will be stated.

The ASSISTANT SECRETARY. The Senator from Ohio proposes to amend the amendment offered by the Senator from Louisiana, as follows: In line 3 of the amendment offered by Mr. BROUSSARD, strike out "1 45/100" and insert in lieu thereof "1 2/10."

Mr. WILLIS. On that I ask for the yeas and nays.

Mr. SMOOT. Why not have a vote upon the whole amendment, because both affect the rate?

The PRESIDENT pro tempore. The Chair desires to remind the Senate that proceedings hereafter upon this paragraph must be without debate.

Mr. BRANDEGEE. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Connecticut will state the inquiry.

Mr. BRANDEGEE. If the amendment offered by the Senator from Ohio [Mr. WILLIS] should be agreed to, fixing the rate at 1.20 cents, the amendment providing for a duty of 2 cents could not be offered, could it?

The PRESIDENT pro tempore. The Chair will not conclude itself in regard to the inquiry, but it is the opinion of the Chair that such an amendment could not be offered.

Mr. BRANDEGEE. I agree with the interpretation of the Chair. I simply wish to vote intelligently. If I should vote for the 1.20-cent rate that would settle it, and I could not vote for the 2-cent rate.

The PRESIDENT pro tempore. The question is on the amendment offered by the Senator from Ohio [Mr. WILLIS] to the amendment of the Senator from Louisiana [Mr. BROUSSARD] on which the yeas and nays are demanded.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). I have a general pair with the Senator from Oklahoma [Mr. OWEN], who is absent. I am informed that were he present he would vote as I propose to vote. Therefore I shall vote. I vote "nay."

Mr. HALE (when his name was called). Transferring my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Vermont [Mr. PAGE], I vote "nay."

Mr. McCUMBER. (when his name was called). Transferring my general pair as on the previous vote, I vote "nay."

Mr. NEW (when his name was called). Repeating the announcement which I made on previous votes as to the transfer of my pair, I vote "nay." I ask that this announcement of the transfer of my pair may stand for the day.

Mr. SIMMONS (when his name was called). Making the same announcement as to my pair and transfer as upon the previous vote, I vote "yea."

Mr. STERLING (when his named was called). I have a general pair with the Senator from South Carolina [Mr.

SMITH]. Not being able to procure a transfer of that pair, I am compelled to withhold my vote. If at liberty to vote, I should vote "nay."

Mr. SUTHERLAND (when his name was called). I have a general pair with the senior Senator from Arkansas [Mr. ROBINSON]. I am absolutely unable to secure a transfer of that pair, and I therefore am obliged to withhold my vote. If permitted to vote, I should vote "nay."

Mr. WATSON of Georgia (when his name was called). I have a general pair with the Senator from California [Mr. JOHNSON], which I transfer to the Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before in reference to my pair and its transfer, I vote "nay."

The roll call was concluded.

Mr. UNDERWOOD. I desire to announce that the junior Senator from Mississippi [Mr. HARRISON], who is necessarily absent, if present would have voted "yea" on the pending amendment.

Mr. LODGE. Mr. President, I desire now to make an announcement which I should have previously made. The senior Senator from Maine [Mr. FERNALD], who is necessarily absent, has a general pair with the senior Senator from New Mexico [Mr. JONES]. If present and able to vote on the present vote and the preceding vote, the Senator from Maine would have voted "nay."

The result was announced—yeas 22, nays 48, as follows:

YEAS—22.

Ashurst	Harris	Reed	Underwood
Caraway	Heflin	Sheppard	Walsh, Mont.
Culberson	Ladd	Simmons	Watson, Ga.
Dial	Myers	Stanley	Willis
Gerry	Overman	Swanson	
Glass	Pomerene	Trammell	

NAYS—48.

Ball	Edge	Lodge	Pepper
Borah	Ernst	McCormick	Phipps
Brandegee	Fletcher	McCumber	Ransdell
Broussard	Frelinghuysen	McKinley	Rawson
Bursum	Gooding	McLean	Shortridge
Calder	Hale	McNary	Smoot
Cameron	Harreld	Moses	Spencer
Capper	Jones, N. Mex.	Nelson	Stanfield
Colt	Jones, Wash.	New	Townsend
Cummins	Kendrick	Nicholson	Wadsworth
Curtis	Keyes	Norbeck	Warren
Dillingham	Lenroot	Oddie	Watson, Ind.

NOT VOTING—25.

du Pont	Kellogg	Page	Sutherland
Elkins	King	Pittman	Walsh, Mass.
Fernald	La Follette	Poindexter	Weller
France	McKellar	Robinson	Williams
Harrison	Newberry	Shields	
Hitchcock	Norris	Smith	
Johnson	Owen	Sterling	

So the amendment of Mr. WILLIS to the amendment of Mr. BROUSSARD was rejected.

Mr. GERRY. I offer the amendment to the amendment, which I sent to the desk, and I ask for its immediate consideration.

The PRESIDENT pro tempore. The amendment which is proposed by the Senator from Rhode Island to the pending amendment will be stated.

The ASSISTANT SECRETARY. In line 2 of the pending amendment it is proposed to strike out the numeral "1 16/100" and to insert in lieu thereof the numeral "77/100," and on line 5 of the same amendment to strike out the words "four one-hundredths" and to insert in lieu thereof the words "three one-hundredths."

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the Senator from Rhode Island [Mr. GERRY] to the amendment of the Senator from Louisiana [Mr. BROUSSARD].

Mr. GERRY and Mr. SIMMONS called for the yeas and nays, and they were ordered.

The reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). On this amendment I am not positive as to how the Senator from Oklahoma [Mr. OWEN], with whom I am paired, would vote. Being unable to secure a transfer of the pair, I withhold my vote. If permitted to vote, I should vote "nay."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "nay."

Mr. SIMMONS (when his name was called). I transfer my pair as on the previous vote, and vote "yea."

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Maryland [Mr. WELLER], I vote "nay."

Mr. SUTHERLAND (when his name was called). Making the same announcement as before, I withhold my vote. If permitted to vote, I should vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

The roll call was concluded.

Mr. HALE. Making the same announcement as before with regard to my pair and its transfer, I vote "nay."

Mr. UNDERWOOD. The Senator from Mississippi [Mr. HARRISON], who is necessarily absent, would on this question if present vote "yea."

The result was announced—yeas 21, nays 50, as follows:

YEAS—21.

Ashurst	Glass	Reed	Underwood
Caraway	Harris	Sheppard	Walsh, Mass.
Culberson	Heflin	Simmons	Walsh, Mont.
Dial	Myers	Stanley	
Fletcher	Overman	Swanson	
Gerry	Pomerene	Trammell	

NAYS—50.

Ball	France	McCumber	Rawson
Borah	Frelinghuysen	McKinley	Shortridge
Brandegee	Gooding	McLean	Smoot
Broussard	Hale	McNary	Spencer
Bursum	Harreld	Moses	Stanfield
Calder	Jones, N. Mex.	Nelson	Sterling
Cameron	Jones, Wash.	New	Townsend
Capper	Kendrick	Nicholson	Wadsworth
Colt	Keyes	Norbeck	Warren
Cummins	Ladd	Oddie	Watson, Ind.
Curtis	Lenroot	Pepper	Willis
Dillingham	Lodge	Phipps	
Ernst	McCormick	Ransdell	

NOT VOTING—24.

du Pont	Johnson	Norris	Shields
Edge	Kellogg	Owen	Smith
Elkins	King	Page	Sutherland
Fernald	La Follette	Pittman	Watson, Ga.
Harrison	McKellar	Poindexter	Weller
Hitchcock	Newberry	Robinson	Williams

So Mr. GERRY's amendment to the amendment of Mr. BROUSSARD was rejected.

The PRESIDENT pro tempore. The question now is upon the amendment proposed by the Senator from Louisiana.

Mr. REED. I ask that the amendment be stated.

Mr. SIMMONS. I ask for the yeas and nays.

The PRESIDENT pro tempore. The yeas and nays are demanded. Is there a second?

The yeas and nays were ordered.

The PRESIDENT pro tempore. The Secretary will state the pending amendment.

The ASSISTANT SECRETARY. On page 95, line 18, after the word "degrees," it is proposed to strike out "1 16/100" and to insert in lieu thereof "1 45/100"; and on the same page, in line 20, after the word "test," to strike out "four one-hundredths" and insert in lieu thereof "five one-hundredths."

The PRESIDENT pro tempore. On the amendment the Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). On this amendment I am informed that my pair, if present, would vote as I propose to vote. Therefore I vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. McCUMBER (when his name was called). Transferring my general pair as on the previous vote, I vote "nay."

Mr. SIMMONS (when his name was called). Making the same announcement as before, I vote "nay."

Mr. STERLING (when his name was called). Making the same announcement as before, I vote "yea."

Mr. SUTHERLAND (when his name was called). Making the same announcement as before and stating that I am unable to secure a transfer, I withhold my vote. If at liberty to vote, I should vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

The roll call was concluded.

Mr. SUTHERLAND. I am advised that my pair, the Senator from Arkansas [Mr. ROBINSON], if present, would vote as I expect to vote on this matter, and I therefore feel released from my pair. I vote "nay."

Mr. CURTIS. I desire to announce that the Senator from West Virginia [Mr. ELKINS] has a general pair with the Senator from Mississippi [Mr. HARRISON], and that the Senator from California [Mr. JOHNSON] has a general pair with the Senator from Georgia [Mr. WATSON].

Mr. UNDERWOOD. I desire to announce the unavoidable absence of the junior Senator from Mississippi [Mr. HARRISON], and to state that if present and not paired he would vote "nay" on this question.

The result was announced—yeas 35, nays 37, as follows:

YEAS—35.

Ball	Gooding	Moses	Shortridge
Brandegee	Harreld	Nelson	Smoot
Broussard	Jones, N. Mex.	New	Spencer
Bursum	Jones, Wash.	Nicholson	Stanfield
Cameron	Kendrick	Norbeck	Sterling
Capper	Ladd	Oddie	Townsend
Curtis	McKinley	Phipps	Warren
Dillingham	McLean	Ransdell	Watson, Ind.
Ernst	McNary	Rawson	

NAYS—37.

Ashurst	Frelinghuysen	McCumber	Swanson
Borah	Gerry	Myers	Trammell
Calder	Glass	Overman	Underwood
Caraway	Hale	Pepper	Wadsworth
Colt	Harris	Pomerene	Walsh, Mass.
Culberson	Heflin	Reed	Walsh, Mont.
Cummins	Keyes	Sheppard	Willis
Dial	Lenroot	Simmons	
Edge	Lodge	Stanley	
Fletcher	McCormick	Sutherland	

NOT VOTING—23.

du Pont	Johnson	Norris	Shields
Elkins	Kellogg	Owen	Smith
Fernald	King	Page	Watson, Ga.
France	La Follette	Pittman	Weller
Harrison	McKellar	Poindexter	Williams
Hitchcock	Newberry	Robinson	

So Mr. BROUSSARD's amendment was rejected.

Mr. SMOOT. Mr. President, on line 18 I move to strike out "1 16/100" and insert in lieu thereof "1 25/100," and on line 20 I move to strike out "four" and insert "five." The rate will be 1 84/100.

The PRESIDENT pro tempore. The question is upon the amendment proposed by the Senator from Utah, which will be stated.

The ASSISTANT SECRETARY. On line 18, page 95, at the end of the line, it is proposed to strike out "1 16/100" and to insert in lieu thereof "1 25/100," and on line 20 it is proposed to strike out "four one-hundredths" and to insert "five one-hundredths."

Mr. SMOOT and Mr. SIMMONS called for the yeas and nays, and they were ordered.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. McCUMBER (when his name was called). Again transferring my pair as on the previous vote, I vote "nay."

Mr. STERLING (when his name was called). Making the same announcement as before, I vote "yea."

Mr. SUTHERLAND (when his name was called). Making the same announcement as before, it being stated that my pair if present would vote as I expect to vote on this question, I feel released, and therefore vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. SIMMONS. Making the same announcement as on the previous vote, I vote "nay."

Mr. CURTIS. I desire to announce the following general pairs:

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON].

Mr. UNDERWOOD. I desire to announce the unavoidable absence of the junior Senator from Mississippi [Mr. HARRISON], and to state that if present and not paired he would vote "nay" on this question.

The result was announced—yeas 37, nays 35, as follows:

YEAS—37.

Ball	Harreld	New	Stanfield
Brandegee	Jones, N. Mex.	Nicholson	Sterling
Broussard	Jones, Wash.	Norbeck	Townsend
Bursum	Kendrick	Oddie	Wadsworth
Cameron	Ladd	Phipps	Warren
Capper	McKinley	Ransdell	Watson, Ind.
Curtis	McLean	Rawson	Willis
Dillingham	McNary	Shortridge	
Ernst	Moses	Smoot	
Gooding	Nelson	Spencer	

NAYS—35.

Ashurst	Fletcher	Lodge	Simmons
Borah	Frelinghuysen	McCormick	Stanley
Calder	Gerry	McCumber	Sutherland
Caraway	Glass	Myers	Swanson
Colt	Hale	Overman	Trammell
Culberson	Harris	Pepper	Underwood
Cummins	Heflin	Pomerene	Walsh, Mass.
Dial	Keyes	Reed	Walsh, Mont.
Edge	Lenroot	Sheppard	

NOT VOTING—23.

du Pont	Johnson	Norris	Shields
Elkins	Kellogg	Owen	Smith
Fernald	King	Page	Watson, Ga.
France	La Follette	Pittman	Weller
Harrison	McKellar	Poindexter	Williams
Hitchcock	Newberry	Robinson	

So Mr. SMOOT's amendment was agreed to.

Mr. GERRY. I offer the amendment which I sent to the desk.

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 96, beginning with line 13, strike out all of paragraph 503 and insert in lieu thereof the following:

PAR. 503. Molasses and sugar sirups not specifically provided for testing not above 48 per cent total sugars, 15 per cent ad valorem; testing above 48 per cent and not above 56 per cent total sugars, 2½ cents per gallon; testing above 56 per cent total sugar, 4½ cents per gallon.

Mr. BROUSSARD. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state his inquiry.

Mr. BROUSSARD. I desire to inquire whether or not we have acted upon this paragraph before? My recollection is that we passed upon it.

Mr. SMOOT. We have passed on the paragraph. It has been agreed to.

Mr. LODGE. It was agreed to in Committee of the Whole.

Mr. SMOOT. It is not open to further amendment.

Mr. GERRY. I understood that it was passed on as far as committee amendments were concerned. I asked the Senator from Utah at that time if there was any opportunity to offer individual amendments to it.

The PRESIDENT pro tempore. The Senator from Louisiana has submitted an inquiry to the Chair, and the Chair rules that the amendment offered by the Senator from Rhode Island is in order. The question is upon agreeing to the amendment.

The amendment was rejected.

Mr. GERRY. I offer another amendment, which I send to the desk.

The PRESIDENT pro tempore. The Secretary will report the amendment.

The ASSISTANT SECRETARY. On page 96, line 20, the Senator from Rhode Island proposes to strike out "4" and to insert in lieu thereof "3"; and in line 22, to strike out "1½" and to insert in lieu thereof "1¼," so that if amended that portion of the paragraph would read:

PAR. 504. Maple sugar and maple sirup, 3 cents per pound; dextrose testing not above 99.7 per cent and dextrose sirup, 1¼ cents per pound.

The PRESIDENT pro tempore. Without objection, the two amendments will be treated as a single amendment. The question is upon agreeing to the amendment.

The amendment was rejected.

Mr. GERRY. I offer another amendment, which I send to the desk.

The PRESIDENT pro tempore. The Secretary will report the amendment proposed by the Senator from Rhode Island.

The ASSISTANT SECRETARY. In paragraph 505, page 97, line 8, the Senator from Rhode Island proposes to strike out the numeral "50" in the House text and to insert in lieu thereof the numeral "15."

Mr. GERRY. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. WALSH of Montana. I ask that the paragraph be read as proposed to be amended.

The PRESIDENT pro tempore. The Secretary will read as requested.

The Assistant Secretary read as follows:

PAR. 505. Adonite, arabinose, dulcite, galactose, inosite, inulin, levulose, mannite, d-talose, d-tagatose, ribose, melibiose, dextrose testing above 99.7 per cent, mannose, melezitose, raffinose, rhamnose, salicin, sorbite, xylose, and other saccharides, 15 per cent ad valorem.

The yeas were ordered, and the reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). I have a general pair with the senior Senator from Oklahoma [Mr. OWEN], and not being able to secure a transfer and not knowing how he

would vote, I withhold my vote. If permitted to vote, I would vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. McCUMBER (when his name was called). Transferring my general pair as on the previous vote, I vote "nay."

Mr. SIMMONS (when his name was called). Making the same announcement as before, I vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as before, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON], and

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON].

Mr. SUTHERLAND. I transfer my pair with the senior Senator from Arkansas [Mr. ROBINSON] to the senior Senator from Maryland [Mr. FRANCE] and vote "nay."

Mr. UNDERWOOD. The junior Senator from Mississippi [Mr. HARRISON] is unavoidably absent. If present and not paired, he would vote "yea."

The result was announced—yeas 21, nays 48, as follows:

YEAS—21.

Ashurst	Glass	Reed	Underwood
Caraway	Harris	Sheppard	Walsh, Mass.
Culberson	Heflin	Simmons	Walsh, Mont.
Dial	Myers	Stanley	
Fletcher	Overman	Swanson	
Gerry	Pomerene	Trammell	

NAYS—48.

Ball	Ernst	McKinley	Rawson
Borah	Frelinghuysen	McLean	Shortridge
Brandegee	Hale	McNary	Smoot
Broussard	Harreld	Moses	Spencer
Bursum	Jones, Wash.	Nelson	Stanfield
Calder	Kendrick	New	Sterling
Cameron	Keyes	Nicholson	Sutherland
Capper	Ladd	Norbeck	Townsend
Colt	Lenroot	Oddie	Wadsworth
Cummins	Lodge	Pepper	Warren
Curtis	McCormick	Phipps	Watson, Ind.
Dillingham	McCumber	Ransdell	Willis

NOT VOTING—26.

du Pont	Hitchcock	Newberry	Shields
Edge	Johnson	Norris	Smith
Elkins	Jones, N. Mex.	Owen	Watson, Ga.
Fernald	Kellogg	Page	Weller
France	King	Pittman	Williams
Gooding	La Follette	Poindexter	
Harrison	McKellar	Robinson	

So Mr. GERRY's amendment was rejected.

The PRESIDENT pro tempore. Does any Senator desire to offer an amendment to Schedule 5, the sugar schedule? If not, no further amendment will be received to that schedule, and the Senate will proceed with the consideration of paragraph 1635.

Mr. McCUMBER. To that paragraph I offer an amendment, which I send to the desk.

The PRESIDENT pro tempore. The Secretary will state the amendment.

The ASSISTANT SECRETARY. In paragraph 1635, page 230, the Senator from North Dakota proposes to strike out all of the House text after the word "for" in line 6, down to and including the word "duty" in line 14, and to insert in lieu thereof, on page 286, after line 16, the following new section:

SEC. 321. (a) That the Secretary of the Treasury is authorized and directed to pay to any person producing and selling within the United States between October 1, 1922, and October 1, 1927, crude potash produced from domestic brine or minerals, or from waste or by-products of domestic manufactures, a bounty on the actual potash (potassium oxide) content, as follows:

Two and one-half cents for each pound so produced and sold during the year ending October 1, 1923;

Two and one-half cents for each pound so produced and sold during the year ending October 1, 1924;

Two cents for each pound so produced and sold during the year ending October 1, 1925;

One and one-half cents for each pound so produced and sold during the year ending October 1, 1926; and

One cent for each pound so produced and sold during the year ending October 1, 1927.

For the purposes of this section any such potash produced and sold between October 1, 1922, and October 1, 1927, but not sold in the year in which produced shall be regarded as produced in the year in which it is sold.

(b) The Secretary of the Treasury is authorized to prescribe rules and regulations and to issue orders for the filing, proof, and payment of claims for a bounty, including the examination and production of books, accounts, records, and memoranda. Any person who refuses or fails to comply with any such rule, regulation, or order shall not be entitled to such bounty.

(c) Any person who, knowing that he is not entitled to a bounty under the provisions of this section, files a claim for or receives any money upon a claim for a bounty, or who makes a false statement or representation in relation to any such claim, or to the payment of any such bounty with intent to defraud the United States, shall upon conviction thereof be punished by a fine of not more than $5,000 or by imprisonment for not more than five years, or by both such fine and imprisonment.

(d) There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this section.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment proposed by the Senator from North Dakota.

Mr. McCUMBER. Mr. President——

Mr. UNDERWOOD. Mr. President, will the Senator allow me to ask him a question?

Mr. McCUMBER. Certainly.

Mr. UNDERWOOD. I had not seen the amendment before. I understand that it proposes to strike out of the bill the tax feature relating to potash and to put potash on the free list with a bounty.

Mr. McCUMBER. Yes.

Mr. UNDERWOOD. Not having seen the proposition, I desire to ask——

Mr. McCUMBER. The amendment has been printed for a number of days, I will state to the Senator. It was printed on August 3 and has been lying on the table ever since.

Mr. UNDERWOOD. It just had not come to my attention. Will the Senator allow me to ask him a question before he proceeds?

Mr. McCUMBER. Certainly.

Mr. UNDERWOOD. By inserting the provisions with reference to the bounty in the free-list sections of the bill, the Senator then concludes it will put potash on the free list?

Mr. McCUMBER. It will put potash on the free list.

Mr. UNDERWOOD. In the amendment, which I now have before me, I do not see anything which indicates that potash will go on the free list, because it is not named, as the amendment that I have merely begins—

SEC. 321. (a) That the Secretary of the Treasury is authorized—

And so forth.

Mr. McCUMBER. Paragraph 1635 is the free-list paragraph.

Mr. UNDERWOOD. I understand.

Mr. McCUMBER. Therefore, if we strike out the provision which begins in line 6 and ends in line 14 on page 230, we have left "potassium chloride or muriate of potash, potassium sulphate, kainite, wood ashes and beet-root ashes, and all crude potash salts not specially provided for." That means that all of those are on the free list.

Mr. UNDERWOOD. I understand that those are in the bill now.

Mr. McCUMBER. Yes.

Mr. UNDERWOOD. I merely wanted to be informed. Therefore, a vote against the present amendment would not be a vote against leaving potash on the free list, but it would be merely a vote against the bounty. Is that correct?

Mr. McCUMBER. I can not say that it is exactly correct. There can be any number of motions made. The first motion is simply to provide for a bounty by striking out the proviso in lines 6 to 14, inclusive, which, if it is carried, would leave potash on the free list with a bounty.

Mr. UNDERWOOD. But if the amendment is not agreed to it would leave potash on the free list without a bounty.

Mr. McCUMBER. No; it would leave it with a proviso.

Mr. LODGE. The present proviso would leave a duty on it.

Mr. McCUMBER. The motion is to strike out and insert.

Mr. FLETCHER. The question ought to be divided.

Mr. LENROOT. Mr. President, I would like to ask the Senator from North Dakota if he would not be willing to have the question divided. I understand the rule says such a question can not be divided, but it can be done by unanimous consent. Let us vote first upon the question of striking out the proviso and then upon the question of the substitute.

Mr. LODGE. Why does the Senator say the question can not be divided?

Mr. LENROOT. The rule says a motion to strike out and insert can not be divided.

Mr. LODGE. That is true.

Mr. UNDERWOOD. I hope the request of the Senator from Wisconsin will be agreed to.

The PRESIDENT pro tempore. Senators will be in order. Not more than one Senator will speak at the same time.

Mr. McCUMBER. Mr. President, if I have the floor, let me suggest that I thought there would be possibly no objection to the motion to strike out the proviso in lines 6 to 14, inclusive, as the first motion. We can vote on that motion without a roll call, I believe, and then we can determine whether we will insert the proviso for a bounty.

Mr. SIMMONS. That is the only fair way to do it.

The PRESIDENT pro tempore. The Chair desires to know what the understanding is.

Mr. McCUMBER. I simply desire to divide the amendment into two parts. The first part of it is to strike out the proviso, and we will vote on that first; and then vote upon the insertion of the matter which I have sent to the desk.

The PRESIDENT pro tempore. It is so understood, and the Chair will so consider it. The Secretary will state the first part of the amendment.

The ASSISTANT SECRETARY. In paragraph 1635, page 230, beginning in line 6, strike out the proviso down to and including line 14, as follows:

Provided, That for a period of five years beginning on the day following the passage of this act there shall be levied, collected, and paid on the actual potash (potassium oxide) content of all the foregoing a duty of 2½ cents per pound for the first two years; 2 cents per pound for the third year; 1½ cents per pound for the fourth year; and 1 cent per pound for the fifth year: *Provided further*, That thereafter the said potash content shall be free of duty.

Mr. McCUMBER. I think that can be voted on without a roll call.

The PRESIDENT pro tempore. The question is upon agreeing to that portion of the amendment.

Mr. LODGE. Let us have the yeas and nays.

Mr. SIMMONS. I do not believe we need the yeas and nays. I think everyone favors that.

Mr. LODGE. I think we had better have the yeas and nays. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. OVERMAN. Mr. President, I ask that the letter which I hold in my hand from a prominent citizen of North Carolina in regard to the potash question, a very able and interesting communication, be placed in the RECORD.

The PRESIDENT pro tempore. Without objection, the request is granted.

The letter is as follows:

WINSTON-SALEM, N. C., *July 10, 1922.*

Hon. LEE S. OVERMAN,
United States Senate, Washington, D. C.

DEAR SIR: I am coming to you in behalf of the proposed legislation which has a very important bearing on the fertilizer industry, namely, that involving tariff on imported potash salts. I believe I speak the mind of the agricultural class when I tell you that any tax that would be the means of their fertilizers costing them more than at present would be a distinct burden, especially as I feel that there is no class of our people who have suffered more in the last several years than the farmers of the South, especially so with those in the cotton belt.

As I understand it, this tax proposes to put a tariff on imported potash salts equivalent to $50 per ton for the first and second years, $40 for the third year, $30 for the fourth year, and $20 for the fifth year. It has been estimated that this would mean an additional cost to the farmers in the five years of between fifty and fifty-five millions of dollars, and I certainly do not believe that the farmers in the country are in a position to stand this tax at this time.

I suppose you are aware of the fact that approximately 75 per cent of the fertilizer used in the United States annually is consumed in the territory south of the Mason and Dixon line and east of the Mississippi River, or, I might say, in the Southeastern States. This is the section that has been particularly hard hit among the agricultural people, and I can speak very feelingly of their slow recovery, as I, like a large number of other fertilizer companies, am still carrying a tremendous amount of money over from the 1920 business, when the depression first hit our people. I certainly feel that these farmers of the South are entitled to get back on their feet before added burdens are put upon them, and I sincerely hope that you share this view; and it will be certainly most pleasing to see that you would oppose any such measure that would put an import tax on raw potash that is now being brought in from Europe.

With expressions of high esteem, believe me,

Respectfully yours,

UNION GUANO CO.,
W. H. MASLIN, *President.*

The PRESIDENT pro tempore. The yeas and nays have been ordered on the first part of the amendment proposed by the Senator from North Dakota [Mr. McCUMBER], which is to strike out the proviso in paragraph 1635, which has been read.

The reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). I understand that my pair, the Senator from Oklahoma [Mr. OWEN], if present would vote as I propose to vote. Therefore I am at liberty to vote. I vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. JONES of New Mexico (when his name was called). I understand that my pair, the senior Senator from Maine [Mr. FERNALD], would vote on this question as I shall vote. I vote "yea."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as before, I vote "yea."

Mr. SUTHERLAND (when his name was called). I understand that my pair, the senior Senator from Arkansas [Mr. ROBINSON], if present would vote as I shall vote. Therefore I feel at liberty to vote. I vote "yea."

The roll call was concluded.

Mr. WATSON of Georgia. I transfer my pair with the senior Senator from California [Mr. JOHNSON] to the senior Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. UNDERWOOD. The Senator from Mississippi [Mr. HARRISON] is unavoidably absent. If present and not paired he would vote "yea" on this question.

The result was announced—yeas 66, nays 1, as follows:

YEAS—66.

Ashurst	Gerry	McLean	Stanfield
Ball	Glass	McNary	Stanley
Brandegee	Gooding	Moses	Sterling
Bursum	Hale	Myers	Sutherland
Calder	Harreld	New	Swanson
Cameron	Harris	Nicholson	Townsend
Capper	Heflin	Oddie	Trammell
Caraway	Jones, N. Mex.	Overman	Underwood
Colt	Jones, Wash.	Pepper	Wadsworth
Cummins	Kendrick	Phipps	Walsh, Mass.
Curtis	Keyes	Pomerene	Walsh, Mont.
Dial	Ladd	Rawson	Warren
Dillingham	Lenroot	Reed	Watson, Ga.
Edge	Lodge	Sheppard	Watson, Ind.
Ernst	McCormick	Simmons	Willis
Fletcher	McCumber	Smoot	
Frelinghuysen	McKinley	Spencer	

NAYS—1.

Shortridge

NOT VOTING—28.

Borah	Harrison	Nelson	Poindexter
Broussard	Hitchcock	Newberry	Ransdell
Culberson	Johnson	Norbeck	Robinson
du Pont	Kellogg	Norris	Shields
Elkins	King	Owen	Smith
Fernald	La Follette	Page	Weller
France	McKellar	Pittman	Williams

So the first part of Mr. McCUMBER's amendment was agreed to.

The PRESIDENT pro tempore. The question is upon agreeing to the second part of the amendment offered by the Senator from North Dakota [Mr. McCUMBER], which the Secretary will state.

The ASSISTANT SECRETARY. On page 286, after line 16, insert a new section to be known as section 321.

Mr. McCUMBER. Mr. President, the amendment has already been read in full.

There are a few pertinent facts which I think ought to be entered in the RECORD upon the provision which is now pending. The first of those pertinent facts is that prior to the World War we produced practically no potash in the United States. We ought to remember that. Prior to the war potash was selling for about $40 a ton; but, being unable to produce it, when the war came we were at the mercy of the potash producers of the world outside the United States. The result of that merciless situation was that potash rose from $40 a ton to more than $500 a ton; and in the pending tariff bill the question is presented to the Senate whether or not we wish again to put the country in that condition at any time in the future or whether we shall take any steps whatever to develop that industry in the United States.

I call attention to the fact that the potash salts in which we are principally interested are kainite, muriate, and sulphate. The muriate and sulphate contain about 50 per cent of potash while the kainite contains about 16 per cent of potash. In 1918 the United States, with the encouragement which we had during the war, produced 50,000 tons of potash. On the basis of the 1918 production of 50,000 tons, the proposed bounty of 2½ cents per pound for the first year, 2¼ cents a pound for the second year, 2 cents a pound for the third year, 1½ cents a pound for the fourth year, and 1 cent per pound for the fifth year will amount to the following sums:

The first year it would be $2,500,000; the second year $2,500,000; the third year $2,000,000; the fourth year $1,500,000; and the fifth year $1,000,000, or a total of $9,500,000, which the American people would be called upon to pay in cash for the benefit of the producers of potash.

The war price of potash was $4.50 per unit of 20 pounds—I take the average war price—or $450 per ton. The 1921 price was $1.80 per unit of 20 pounds, or $180 per ton. Mr. President, I think it not uninteresting to note the effect of the war on prices, on importations, and the building up of the potash industry in the United States. I will take the year 1915. The production for that year in this country was 4,374 tons of crude potash. In 1918 we had increased our production from 4,374 tons to 207,686 tons, the available content of potash of which was 54,803 tons.

Mr. FLETCHER. Mr. President——

Mr. McCUMBER. I yield to the Senator from Florida.

Mr. FLETCHER. The Senator from North Dakota has stated the fact that we were producing 54,803 tons of potash in this country. I wish he would state where we are producing it and how it is being produced in the United States.

Mr. McCUMBER. We are producing it mostly in the West—in Nebraska, in Utah, and in California. I understand that about half of the production came from Nebraska in 1918. I desire, Mr. President, to insert in the RECORD the table which is found on page 16 of the United States Tariff Commission Survey A–16.

The PRESIDENT pro tempore. Without objection, permission is granted.

The table referred to is as follows:

Potash produced and sold in the United States, 1916–1919.

Year.	Number of producers.		Production.		Sales.[1]		
	Total.	Exclusive of producers of wood-ash potash.	Crude potash.	Available content of potash (K_2O).	Crude potash.	Available content of potash (K_2O).	Value f. o. b. plant.
			S. tons.	*Short tons.*	*S. tons.*	*Short tons.*	
1915[2]	5	5	4,374	1,090	4,374	1,090	$342,000
1916	70	25	35,739	9,720	35,739	9,720	4,242,730
1917	95	46	126,961	32,573	126,961	32,573	13,980,577
1918	128	77	207,686	54,803	140,343	38,580	15,839,618
1919[3]	77	45	119,736	32,418	.....	.....	.....

[1] Production and sales were practically the same from 1915 to 1917, and no distinction was made between them.
[2] Although no production was reported from wood ashes, it is probable that an appreciable quantity of potash was produced from that source in 1915.
[3] Supplied by the United States Potash Producers' Association.

Mr. FLETCHER. I desire to make one further inquiry of the Senator. What I had in mind was the effort which was being made to produce potash from some kind of seaweed, some vegetable of some kind or other, on the Pacific coast.

Mr. SMOOT. From kelp.

Mr. McCUMBER. There is no production of any importance from that source.

Mr. FLETCHER. I desire to ask the Senator from North Dakota if that effort has been a success, or whether that method of producing potash is still being prosecuted?

Mr. McCUMBER. I presume the Senator from Florida refers to the attempt to produce potash from kelp?

Mr. FLETCHER. Yes.

Mr. McCUMBER. I notice that the quantity produced from kelp in 1916 was 1,850 short tons—a very small amount.

Mr. President, taking muriate of potash—and I have stated that the important classes are muriate, sulphate, and kainite—in 1909 we imported free of duty 132,734 tons of muriate of potash. The importations grew up to 1914, when they amounted to 234,855 tons. Then came the war, and in 1916 we imported 2,126 tons of this potash to supply the entire American demand; in 1917 we imported 606 tons; and in 1918, 596 tons. The price continued to increase as the importations grew less. In 1909 the value per unit was $35.85; in 1917 it had jumped to $288.45 per unit. I will ask to insert the table relating to muriate of potash found on page 31 of the Tariff Information Surveys, A–16.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Without objection, it is so ordered.

The table referred to is as follows:

Imports for consumption.

POTASH, MURIATE OF.

Fiscal year.	Rate of duty.	Quantity (tons).	Value.	Value per unit of quantity.
1909	Free	132,740	$4,758,906	$35.85
1910	....do	174,935	5,640,541	32.24
1911	....do	191,324	6,449,575	33.71
1912	....do	216,101	7,235,728	33.48
1913	....do	199,854	6,737,757	33.71
1914	....do	234,855	7,925,781	33.75
1915	....do	102,882	3,660,353	35.58
1916	....do	2,126	460,888	216.78
1917	....do	606	174,806	288.45
1918	....do	596	156,979	263.38
1919	....do	1,677	201,307	120.04

Mr. McCUMBER. Again, Mr. President, taking sulphate of potash, we find that in 1909 the quantity that was imported for consumption was 27,239 tons; in 1917 it dropped to 656 tons; and in 1918 to 136 tons. It will be noted that while in 1909 the unit value was $42.17, in 1919 the unit value had advanced from $42.17 to $170.10.

I ask that the table on page 43, relating to "Imports for consumption of potash, sulphate of, crude or refined," may be printed in the RECORD.

The PRESIDING OFFICER (Mr. BRANDEGEE in the chair). Without objection, it is so ordered.

The table referred to is as follows:

Imports for consumption.

POTASH, SULPHATE OF, CRUDE OR REFINED.

Fiscal year.	Rate of duty.	Quantity (tons).	Value.	Value per unit of quantity.
1909	Free	27,239	$1,148,607	$42.17
1910	....do	37,933	1,399,915	36.90
1911	....do	47,441	1,952,370	41.15
1912	....do	45,134	1,853,235	41.05
1913	....do	42,877	1,798,399	41.94
1914	....do	7,596	315,029	41.47
1914	....do	37,389	1,572,462	42.06
1915	....do	21,705	1,071,623	49.37
1916	....do	2,427	197,808	81.50
1917	....do	656	20,538	31.30
1918	....do	136	19,837	145.86
1919	....do	137	23,304	170.10

Mr. McCUMBER. In the year 1909 we imported 344,525 tons of the kainite; in 1916, after the war broke out, we imported 64 tons; and in 1917 and 1918 we did not import a single ton, but the price was $5.73 in 1909, and in 1916 it advanced to $28.04 per unit. Now, I ask that the table on page 45 may also be inserted.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table referred to is as follows:

Imports for consumption.

KAINITE.[1]

Fiscal year.	Rate of duty.	Quantity (tons).	Value.	Value per unit of quantity.
1909	Free	344,525	$1,974,165	$5.73
1910	....do	470,241	2,268,363	4.82
1911	....do	586,474	2,637,105	4.49
1912	....do	479,817	2,400,589	5.00
1913	....do	466,184	2,149,689	4.61
1914	....do	526,112	2,579,619	4.90
1915	....do	79,124	444,996	5.62
1916	....do	64	1,795	28.04
1917	....do	.....	.....	.....
1918	....do	.....	.....	.....

[1] Entered in 1909 as "Kieserite," kyanite, or cyanite, and kainite.

Mr. McCUMBER. The committee was faced with this situation—a simple one, which any Senator can easily understand—if we raised the duty on potash undoubtedly it would be carried on to the consumer; but, while the consumers are paying the proposed bounty for a few years—I will not say how many, but under the provisions of the amendment as it was proposed the bounty will cease to be paid after five years—we would be developing an industry in the United States which would operate as a lever, at least, to preserve our own prices to some extent and to protect us against the possibility of another war, which would result in raising the price from $40 a ton to more $500 per ton. The committee, desiring both to assist the farmer in securing his potash at as reasonable a rate as possible and without raising that rate, agreed finally to place potash upon the free list and to recommend a bounty, as we did under the McKinley bill on sugar, for the purpose of developing the industry in the United States. It will be an investment, but, Mr. President, I think it will be a good investment, and therefore I support the provision.

Mr. OVERMAN. Mr. President——

Mr. McCUMBER. I yield to the Senator from North Carolina.

Mr. OVERMAN. I should like to inquire if the Senator's committee has estimated the amount of money that will be required to pay this bounty?

Mr. McCUMBER. Oh, yes; I gave it.

Mr. OVERMAN. I did not hear it.

Mr. McCUMBER. The estimate is two and a half million dollars the first two years, $2,000,000 the next year, $1,500,000 the next year, and $1,000,000 the next year, on the basis of 50,000 tons of production.

Mr. OVERMAN. I thank the Senator.

Mr. McCUMBER. That would make $9,500,000 that the American public would pay out of the Treasury for these five years in an attempt, possibly an experiment, to determine

whether or not we could so develop that industry that in all probability it would meet to a great extent the demands in the United States.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Kentucky?

Mr. McCUMBER. I yield to the Senator from Kentucky.

Mr. STANLEY. Suppose this industry does develop under the stimulus of this bounty, and produces not 50,000 but 200,000 tons of potash, what then? I see that we imported, in 1920, 120,000 tons of one form of potash, 15,000 tons of another, and 872,000 tons of another. Suppose that we produce 100,000 or 150,000 tons of potash, then the bounty would be three times the amount of the estimate, would it not?

Mr. McCUMBER. Yes; it would be if we produced that amount within those years; but the Senator notes, of course, that the bounty is fixed on a descending scale, and in order to get that higher bounty the amount that the Senator suggests would have to be produced between the first year and the second year, and I think that is an impossibility.

Mr. STANLEY. The first year the bounty is 2 cents a pound, is it not, on all potash produced?

Mr. McCUMBER. Two and a half cents a pound.

Mr. STANLEY. Suppose we produced 100,000 tons the first year?

Mr. McCUMBER. My statement is that I think that is an impossibility. I do not think we can reach a production beyond 50,000 tons. It is the opinion of the experts that we probably will not go, at least, very much beyond that.

Mr. STANLEY. Why do they estimate 50,000 tons?

Mr. McCUMBER. When we were not importing any at all, the highest production was about 54,000 tons.

Mr. STANLEY. When potash was worth four or five hundred dollars a ton?

Mr. McCUMBER. Yes.

Mr. STANLEY. Your estimate is, then, that no process has yet been developed which will produce potash in any great amount commercially within the cost of the potash imported from Germany under normal conditions?

Mr. SMOOT. Mr. President, I would not want to say that. I think that after they get in operation, and get established, more than likely they can. I will say to the Senator that down in Marysvale, Utah, we have mountains of it in the alunite mines there. There is no limit to it—simply mountains of it for miles and miles and miles—and they are beginning now to work it again.

They began during the war to work that ore; they also began on the south side of the lake, and on the north side of the lake; but they did not get the plants built until the war ceased, and until all demand for the potash had ceased. Without this bounty or a duty to enable them to get started, there would be no earthly use of their going to the extent of even completing their plants at an expense, I should say, of between ten and fifteen million dollars to establish this industry in the different parts of the West. They are lying there idle. There is not a single plant operating in the United States to-day. There is over $30,000,000 invested now, but, as I say, the plants are lying there uncompleted. They started to build, but the plants are uncompleted. They never ran any time at all.

Mr. STANLEY. Suppose we give them this duty, and they complete their plants: Will they produce potash then as cheaply as we can import it?

Mr. SMOOT. They can, with this bounty. If they do not, at the end of the term of the bounty they lose what they have invested; that is all.

Mr. STANLEY. Is there any well-established estimate as to the cost of producing a ton of potash at the end of two or three years compared with the cost of the foreign product?

Mr. SMOOT. If the system works out as they anticipate, I have not any doubt but that they can produce it from the waters of Salt Lake, and from the salt beds of Nevada, and also from the mountains of alunite that they can work and that they have already worked during the war. I have not any doubt about it at all.

Mr. STANLEY. The Senator has not any doubt about their producing potash as cheaply as it can be produced in Germany?

Mr. SMOOT. I do not know about producing it as cheaply as it can be produced in Germany.

Mr. STANLEY. Or within $24 a ton as cheaply?

Mr. SMOOT. Oh, yes; there is not any doubt about that.

Mr. OVERMAN. Some of the potash produced during the war was sent through the country to the farmers and destroyed their crops.

Mr. SMOOT. That was the potash from Searles Lake, where the first shipments had borax in them. I have the Government report upon it. That happened only just one year, and that was because of the fact that in refining the potash that year the borax was not taken out, and it did burn the crops in some cases a great deal.

Mr. OVERMAN. It destroyed the crops.

Mr. SMOOT. That, however, has all been corrected; and that only happened at one place in the United States, namely, Searles Lake, near where the greatest borax deposits in the world, I suppose, are located.

Mr. OVERMAN. In what State?

Mr. SMOOT. In California. The borax became a part of the deposits of potash there, and when they first produced potash they did not take out the borax, and they sold the potash with the borax in it, and when it was mixed for fertilizer it hurt the crops wherever it was put upon the ground; but that has all been done away with.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield; and if so, to whom?

Mr. McCUMBER. I yield to the Senator from Kentucky, and then to the Senator from Ohio.

Mr. STANLEY. I have one other question. Have they estimated the maximum output of the plants in which this $20,000,000 has been invested?

Mr. SMOOT. There is more than that invested.

Mr. STANLEY. Do they know about the number of tons of potash that they can produce if the plants were completed and operating?

Mr. SMOOT. The plants completed cost a little over $30,000,000. They were in operation during the war to their full capacity and produced 54,000 tons of potash; but, in addition to those plants that were operating, there are these other plants, on which I think at least $10,000,000 has been spent, that are in course of erection. They are not completed and never have produced potash in commercial quantities. They have produced it in a little testing plant there, so as to show that it really can be done; but as far as the product in the soil or the mountains in one case is concerned, and the product in the water and in the brine in the other, with the Searle Lake deposits, the Agricultural Department say that there is not any question but that they have a hundred years' supply for this country known to-day.

Mr. STANLEY. Did the experts make any estimate of the cost per ton of converting these deposits into potash by this means?

Mr. SMOOT. I will say to the Senator that that can not be well done with the new deposits. Improvements have to be made, I have not any doubt, before they can compete with the German product; but the men are perfectly willing to put in their money if they have this bounty for five years, and if they can not do it in that time they will have to lose all that they have to put in.

I want to say to the Senator that the opposition to the House provision of a duty came from the farmers of the country. Mr. Gray Silver was very much opposed to it and so were the representatives of all the other farm organizations. They are not opposing a bounty, because they want to be free from a condition that is existing to-day that I shall bring to the attention of the Senate. I want to read the contracts that Germany and France to-day are compelling the potash purchasers in America to sign. Germany takes contracts for 75 per cent of all that is consumed in this country; France takes contracts for the other 25 per cent. Their contracts are, word for word, alike and they will not sell a single pound of it unless the American purchasers sign contracts for the whole amount.

Mr. REED. Mr. President——

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Does the Senator from North Dakota yield to the Senator from Missouri?

Mr. McCUMBER. Yes.

Mr. REED. It appears, then, that France and Germany have no difficulty in getting together when it is a case of skinning America in a commercial transaction.

Mr. SMOOT. I will say to the Senator that I want to put copies of both of those contracts into the RECORD——

Mr. REED. I hope the Senator will.

Mr. SMOOT. And I want the Senate to read each contract, and I will read here the papers where the announcement was made that an agreement had been made between Germany and France for furnishing potash to this country.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. The Senator from North Dakota has the floor.

Mr. McCUMBER. I will yield for a moment to the Senator from Ohio, and then I desire to close my very brief statement on this subject.

Mr. POMERENE. Mr. President, I voted in favor of free potash. I feel that these fertilizers ought to be free to the agricultural interests of the country. I know, of course, something about the meager deposits that there are in Nebraska and Utah, and perhaps California. I do not think it has been demonstrated as yet that there is a sufficient quantity there to make the potash commercially profitable to produce. The same situation existed as to ferromanganese, tungsten, and other alloy metals. I think it was perfectly clear from the debates on the floor of the Senate that such ferromanganese and tungsten as we had, as well as the other alloy ores, are low-grade ores. There is a very great deal of uncertainty as to whether they can ever be produced from our deposits in commercially profitable quantities. Now, the question that occurred to me was this:

Why do you adopt the policy of a tariff to encourage the production of ferromanganese and tungsten, and then, when it comes to potash, discard the protective theory entirely and adopt the bounty system of encouraging production? If the one scheme is advisable as to the ores that are used for alloys, why not in the other; or, if the bounty system is advisable when it comes to potash, why not as to the other?

Mr. McCUMBER. I think the Senator fully understands the "why" of it, just exactly the same as we understood the "why" and the "wherefore" when we put a bounty upon sugar in the McKinley tariff bill. We did not want to raise the price of sugar to the public. We did want to develop the sugar industry in the United States. We regarded that as something of a national matter, and so we said in the McKinley bill that we would not impose that extra hardship upon the American people of paying the greater price, at least not upon all of them, but would make it a great national project, and would experiment with the raising of beet sugar in the United States. If it was a success, then we would lower our bounties, or take them away in time.

In this case we are faced with the problem of whether we shall continue to purchase all of our potash abroad, and be entirely dependent upon a foreign supply, or whether we are willing to pay the cost of the experiment; and I will say that, so far as I am concerned, I think it is more or less in the experimental stage. I think, however, we can produce it in sufficient quantities. The question is not so much a question of quantity and production, as it is a question of freight rates from the fields of production to the principal fields of consumption. I think we can produce the quantity.

Mr. POMERENE. With all due respect to my good friend, I do not think he has answered my question. Whether I accept it or not is a different proposition, I know what the argument was in favor of the sugar bounty. I can understand that if that is accepted, you want to apply it to potash, and so forth; but my question was why you want to have a different scheme when you come to ferromanganese?

Mr. McCUMBER. For one thing, we want to develop the industry. Assuming that is what we are after, I will answer the Senator. The only way we can develop the industry is either by a duty upon the product which will afford protection, or by a bounty. Let us suppose that the tariff proposition would be voted down—and we are satisfied that it would be voted down—then we are driven to the other method, if we desire to have the protection.

There is a difference between a thing of that kind and taxing the steel companies by a duty. The Senator can easily understand that the Senate and the House of Representatives might be induced to vote for a bounty on the production of an article, but would not be willing to vote for a tariff duty to be paid entirely by the agriculturists; and if it were a question whether the duty would be paid by the steel people, they might not be willing to do it. That is a fair statement of the case.

Mr. POMERENE. I am not clear about it.

Mr. McCUMBER. I think the Senator is.

Mr. POMERENE. It is not quite a fair statement to say that the burden is on the steel people. In one sense of the word, it is; they must pay this increased price. But that is passed on to the consumer.

Mr. McCUMBER. Sometimes. It depends.

Mr. POMERENE. It was conceded here in the course of the argument, I think, that the duty on the alloys would add $10,000,000 per year to the cost of steel to the consumers. I think those figures were generally admitted here. I was trying to get some reason which would satisfy my mind as to why the one system was adopted in one instance and another in the other. I want it distinctly understood that I am in favor of placing all of these fertilizers on the free list. I think the more we encourage the fertilizers to come in the more benefit we will be conferring on the farming interests of the country. I have not any doubt about that.

Mr. McCUMBER. The Senator is satisfied of one thing—that the Senate did vote to put a duty on ferromanganese?

Mr. POMERENE. I think it did.

Mr. McCUMBER. Suppose that instead of that duty we had proposed to give a bounty equal to that duty. The Senator knows just as well as I do that we could not have carried that through. It is not a question as to why we adopted this system.

Mr. POMERENE. I can settle that with entire satisfaction to myself, at least so far as my own vote is concerned. I do not think it has been demonstrated that you have deposits of ferromanganese or tungsten in this country which can be produced in commercially profitable quantities. Of course, I have no personal knowledge on this subject, and I am dependent on what the steel interests say with regard to it. They are convinced that such deposits do not exist, or, at least, that they have not been discovered in such quantities as will justify an attempt to produce them in this country. That is the situation.

The Senator from Utah has made the statement that the Agricultural Department said they thought there were vast quantities of this potash out in the West. It may be that they have eyes with which they can see into the interior of the earth and tell how much there is or how much there is in solution in water, or something of that kind. It may be that they have that power. We had predictions, 40 or 50 years ago, that by this time the coal deposits of this country would be exhausted. That was the wisdom of the day. That was departmental wisdom. Perhaps we have some more departmental wisdom; I do not know.

Mr. McCUMBER. I answered the question which the Senator propounded to me, and answered it fully. It does not make any difference whether the Senator agrees with me or not; he asked me why we adopted one course in one instance and another course in the other instance, and I say, frankly, it was so as to get the provision through. We hope to be able to give a bounty. We did not have much hope of carrying the provision for a protective tariff. We may be in error in both cases. But that was the theory, and the only theory, on which we abandoned the general tariff duty and adopted the proposition for a bounty.

Mr. POMERENE. The reason does not seem to satisfy my mind, but I certainly do appreciate the Senator's candor.

Mr. REED. Mr. President——

Mr. McCUMBER. I yield to the Senator from Missouri. I want to finish, however, in just a moment.

Mr. REED. If the Senator from Utah is going to discuss this question, I will wait, because I think he is perhaps going to answer the matter I was going to inquire about, and I will not take the Senator's time.

Mr. McCUMBER. I wanted to answer just one proposition with reference to the prospects of production in the United States.

The Senator from Ohio thinks that there is no method by which the geological surveys can form a fair estimate of the quantity, at least that in sight. The Senator knows that this product is found in old lake bottoms. It is very easy to determine, by sinking wells in different parts of a lake, the depth of it and how far down you can go and still have this product before you get to the original bottom of the lake, and therefore I think it quite a simple process of determining the number of cubic yards in a lake's bottom and the quantity of potash that may be extracted therefrom.

I want to read just a paragraph or two from the Survey of the Tariff Commission, from the same pamphlet from which I read a short time ago. On page 7 it is stated:

> Before the outbreak of the war there was practically no potash produced in this country. The domestic production during the war has been developed until in 1918 the output from all sources was about 54,000 short tons of actual potash (K_2O), or about 20 per cent of our normal pre-war consumption. About one-half of the domestic production in 1918 came from the saline lakes in Nebraska. The estimated productive capacity of the domestic industry in 1919 was 100,000 short tons of actual potash, but because of the uncertain market the actual production amounted to only 32,418 tons.

I especially call attention to this:

> It is estimated that the resources of the Nebraska lakes will be depleted in about 10 years at the rate of the 1918 production. Searles Lake, in California, is estimated to contain as much as 20,000,000 tons of actual potash.

The Senator from Utah undoubtedly is well informed as to the probabilities of securing potash in large quantities in his own State, and I will leave to him to discuss that feature of the case. The only question before us, really, is whether we want to try this experiment of developing the industry in the

United States and are willing to pay this much for that experiment. I believe it would be money well invested; but, after all, it is a question fraught possibly with some uncertainty.

Mr. LENROOT. Mr. President, I sincerely hope that the Senate will not adopt this amendment and embark upon the sea of bounties. If it does, if the door shall be here opened, as is proposed by the committee, the Treasury of the United States will have to be enlarged, because there will be demands for bounties similar to that which is here proposed from every quarter, from every part of the country.

If the precedent be set here to-day, we will have in the future pork-barrel bills composed of bounties compared to which river and harbor bills, which have been criticized severely in the past, will seem like nothing.

I am amazed that the committee, this committee which has under its care the protection of the Treasury of the United States, should bring to the Senate this proposition, and especially with so little foundation in merit. The chairman of the committee very frankly states that the only reason they have proposed this bounty was that they knew that the Senate would vote down a tariff rate upon this potash. That means that the chairman of the committee was satisfied that a majority of the Senate would be of opinion that the farmer, who utilizes this fertilizer, was not sufficiently interested in American production to be willing to pay the increased price of the fertilizer in order to secure it, and I think the chairman was correct in that estimate of the Senate, because I do not believe that the farmers of America are willing to pay the rates proposed in this bill in order to secure possible American production of this particular fertilizer. The chairman seems to be of the opinion that while the farmers who utilize the product would not be willing to pay the increased price of it the American people as a whole, who will not be directly interested in or benefited by it, would be willing to pay it out of the Treasury of the United States. That is the position the chairman of the committee occupies.

Mr. McCUMBER. Mr. President, if the Senator will allow me, the chairman of the committee does not occupy the position that the people of the United States are not directly interested in the preservation of an industry of this kind.

Mr. LENROOT. No; but the farmer whose success depends upon having fertilizer is not sufficiently interested, the chairman thinks, to pay the increased rate himself, and I agree with him. If the farmer is not sufficiently interested, why does the Senator think that the people of the United States as a whole are willing to do what the farmer himself would not be willing to do?

Oh, the chairman of the committee said it is only $9,500,000; $2,000,000 the first year, $2,000,000 the second year, and so on, and at the end of five years it will cease. What are the facts? He said we need it in case we should get into war again so that we would not be in the same predicament we were in during the last war. But about 50 per cent of this bounty, according to the report of the Tariff Commission, will go to the producers in Nebraska. The Tariff Commission have reported, and the chairman read the report, that the source in Nebraska will be entirely exhausted in 10 years, so that we would pay them $1,000,000 a year for four or five years; and the proposition is, therefore, to maintain an industry in Nebraska that has to go out of business in 10 years anyway.

Then we come to the only other known sources of supply, which are Searles Lake in California, and Salduro Salt Marsh in Utah, according to the report of the Tariff Commission. I will ask the Senator from Utah [Mr. SMOOT] what the freight rate is on this commodity from Utah to the South or Atlantic coast points, if he can tell me.

Mr. SMOOT. Mr. President, I will say to the Senator that I can not say definitely now, but I will look it up and tell the Senator before he concludes, if possible.

Mr. LENROOT. I would like to have it in the RECORD, because the committee has said that in five years the bounty shall no longer continue. The use of the fertilizer to-day is in the Central West, east of the Mississippi River, the Atlantic Coast States, and the South. Will the chairman of the committee say to the Senate how he expects Searles Lake, in California, or Salduro Marsh, in Utah, to compete with Germany at the end of five years with potash on the free list, paying the freight rate upon the commodity from Utah and California to the place where it is used? Of course that is a question that can only be answered in one way, and that is that after the bounty ceases, if it does cease, there will be no further market in the East for the Searles Lake and Utah product, and we will again depend upon Germany; but in the meantime the Treasury of the United States will have been drained of $9,500,000.

Then again, who will be the beneficiaries of the bounty? According to the report of the Tariff Commission there are two companies operating on Searles Lake and only two. They have all the deposits there.

Mr. SIMMONS. Mr. President——

Mr. LENROOT. I yield to the Senator from North Carolina.

Mr. SIMMONS. May I say to the Senator, before leaving the point he was just now discussing, that as I understand the data which I have here, of the total amount of potash consumed in the United States about 64 per cent is consumed in the States east of the Mississippi River and in the State of Maine.

Mr. LENROOT. Now, of course, at the end of five years, unless the bounty is again continued, the German potash will again supply that 64 per cent. That is inevitable. So far as the remaining 36 per cent is concerned, the potash that will be utilized in the Rocky Mountain States, they will have that market without the bounty and without a tariff rate because the freight rate, which is a bar against them sending their product to the Atlantic Coast States, will likewise operate as a bar against German potash entering the Rocky Mountain States, and for the same reason.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Ohio?

Mr. LENROOT. I yield.

Mr. POMERENE. If the bounty is to be for the direct benefit of the farmer, why would it not be wise for the Treasury of the United States to pay directly to the farmer so much per pound for every pound that he uses instead of giving it to the companies which are producing the potash?

Mr. LENROOT. I shall not undertake to answer that question. I want to come back to the Nebraska situation: The chairman of the committee has said that we need the production so that in case of war, if any war occurs again, we will have a supply of our own. If that be true we had better save that 10 years' supply in Nebraska and not exhaust it now, so that in case we do get into another war we will have the supply there that would be near the territory where it would have to be used—nearer than Utah or California. So that from the Senator's own standpoint, if we want to look out for the farmer in the future, let us not utilize the small supply we have that is now anywhere near the place where it could be used.

Coming back again to the question of who would be the beneficiaries of this bounty there are two companies that have all of the Searles Lake supply in California, which the Tariff Commission says amounts to something like 20,000,000 tons. One of the companies, I happen to know, was organized while potash was upon the free list, or at least became active during that time. Senators will remember that company was before the Congress of the United States, interested in legislation that would permit them to secure those deposits by leases. They went on before the war came on. They are going on to-day and they will have a limited market, of course, for whatever they can produce. That will be an increasing market, as fertilizer is required in that particular territory. But this bounty would be a gift to that company of 2½ cents per pound, or $50 a ton for every ton that they produce, without any resulting benefit to the American people or to the farmer. Does anyone suppose that company, with its 2½ cents a pound bounty, would sell its fertilizer to anyone in California or in the Rocky Mountain States for any less sum because they had secured $50 a ton out of the Treasury of the United States? They would get all they could, of course, and they would ship it as far east and as far west as they could meet German competition, and no farther.

As to the Utah company of the Salduro Salt Marsh, the Tariff Commission speaks of one plant that has possibilities and that will be the beneficiary of the bounty. Then the Tariff Commission speaks of three small companies trying to secure potash from the waters of Salt Lake, but up to this time they have not been very successful.

So, Mr. President, the $9,500,000 will go to three or four companies in California and Utah, and such production as there may be in Nebraska, which the Tariff Commission has said in any event will be exhausted inside of 10 years.

Mr. President, I am not going to make any argument upon the constitutionality of this provision except to say that in the sugar bounty case, which has been referred to, the Supreme Court of the United States, in the case of Field against Clark, expressly declined to rule upon the constitutionality of the sugar bounty because it said it was not necessary to the decision of that case, but I shall read just a paragraph:

> Appellants contend that Congress has no power to appropriate money from the Treasury for the payment of these bounties, and that the provisions for them have such connection with the system established by the act of 1890 that the entire act must be held inoperative and void.

The question of constitutional power thus raised depends principally, if not altogether, upon the scope and effect of that clause of the Constitution giving Congress power "to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States." (Article I, sec. 8.) It would be difficult to suggest a question of larger importance, or one the decision of which would be more far-reaching. But the argument that the validity of the entire act depends upon the validity of the bounty clause is so obviously founded in error that we should not be justified in giving the question of constitutional power, here raised, that extended examination which a question of such gravity would, under some circumstances, demand.

Later on the question came before the court in various forms. Senators will remember that Congress renewed the bounty for an additional year and that was sustained, the court said, upon the moral obligation that the sugar growers, by reason of the existence of the act, had been induced to make great expenditures, and that would be sustained irrespective, the court said, of whether the original act was constitutional or not.

So I say that we have a very grave constitutional question here, but we have a graver question of policy. I sincerely hope that the Senate of the United States, especially in times like these, with the burdens of taxation which are so great that there is criticism all over the country with reference to them, is not going to open the door here as is now proposed by the Committee on Finance by taking $9,500,000 out of the Treasury of the United States and by that action invite every special interest from one end of the country to the other to come to the Finance Committee of the Senate in the future and ask for bounties for their products such as they will have given to the potash industry.

Mr. SMOOT. Mr. President, I wish that each Senator had read in detail the testimony which was taken by the Finance Committee. If Senators had done so I think that those who are interested in seeing that America has potash for her agricultural necessities would decide that some action on the part of Congress must be taken if the agricultural interests of the United States are to keep out of the clutches of two powerful syndicates, one in Germany and the other in France, both working in complete harmony to control the potash which is produced in all the world.

Not only that, Mr. President, but the fertilizer manufacturers in this country are working hand in glove with those two syndicates. The vice president of the Virginia-Carolina Chemical Co., Mr. S. D. Crenshaw, who is interested in potash mines in Germany, testified before the Committee on Finance. In the report on the fertilizer industry issued in 1916 by the Federal Trade Commission, the Virginia-Carolina Chemical Co. is stated to be the owner of 50 per cent of the Gewerkshaft-Einigkeit, located at Fallersleben, Germany, and owning German potash mines. The Virginia-Carolina Chemical Co. is also stated to be the owner of 90 per cent of the Chemical Works-Schonebeck (Ltd.), situated at Schonebeck, Germany, and engaged in the chemical manufacturing business. Mr. Crenshaw was interested in having free potash, not, of course, for his financial benefit; oh, no; but for the benefit of the dear farmer. I wish Senators knew what his company has been doing to the farmer; not what the company charged for the potash alone, but what they charged for the other elements of which the manufactured fertilizer is composed.

H. A. Houston, a witness heard by the Finance Committee on the subject of potash, is the head of the German Kali Works, a corporation incorporated in 1909 under the laws of New York, and the recognized American branch of the German potash trust, or Kalisyndikat. The German Kali Works have acted as the propaganda agents in this country of the German syndicate, and Mr. Houston's duties have involved the dissemination of German propaganda with reference to German potash salts and experimentation looking to the increased use of German potash in the United States. The German Kali Syndicate has been back of recent propaganda designed to influence the farmers of the United States against American potash on the ground that the quality of American material was not up to the standard.

When Mr. Crenshaw was before the committee he stated that he represented 34 of the fertilizer manufacturers of the United States. In answer to questions which were asked him by members of the committee it developed that he had entered into a contract with the German producers which bound the fertilizer manufacturers of this country to buy from the German syndicate at least 75 per cent of all the potash they use for making fertilizer. In that contract, Mr. President, it is also provided that if they buy more than the 75 per cent they get certain discounts. I asked him to have sent to the committee a copy of the contract and the names of those who signed it, or of those in whose behalf he signed. A copy of that contract will be found on page 4731 of the hearings before the Finance Committee of the Senate in the volume covering the free list.

Mr. SIMMONS. May I ask the Senator from Utah what is the price named in the contract to which he has just referred? I understand those to be contracts between American importers and German and French producers.

Mr. SMOOT. Does the Senator wish me to take up the time of the Senate to read it?

Mr. SIMMONS. No; I merely wish to know the prices.

Mr. SMOOT. As to that I will read from the contract as follows:

Schedule 1, minimum purchases on 75 per cent basis: Muriate of potash 80–85 per cent, basis 80 per cent K. C. L.

In bags of 200 pounds even weight the price is $30.60, while in bulk the price is $29.17.

Then, I will say to the Senator, the strength of each of the various grades is given here. I will ask that the table may be inserted in the RECORD, so that Senators may examine it and see exactly what it is.

There being no objection, the table was ordered printed in the RECORD, as follows:

	In bags of 200 pounds even weight.	In bulk.
Schedule 1, minimum purchases on 75 per cent basis:		
Muriate of potash 80–85 per cent, basis 80 per cent K. C. L	$30.60	$29.17
Sulphate of potash 90–95 per cent, basis 90 per cent K_2SO_4	40.05	38.92
Double manure salt 48–53 per cent, basis 48 per cent K_2SO_4	20.47	19.35
Manure salt 30 per cent, basis 30 per cent K_2O	14.40	13.27
Manure salt 20 per cent K_2O	8.32	7.20
Kainit 12.4 per cent K_2O	4.05	3.82
Schedule 2, minimum purchases on 100 per cent basis:		
Muriate of potash 80–85 per cent, basis 80 per cent K. C. L	29.70	28.57
Sulphate of potash 90–95 per cent, basis 90 per cent K_2SO_4	38.70	37.57
Double manure salt 48–53 per cent, basis 48 per cent K_2SO_4	19.80	18.67
Manure salt 30 per cent, basis 30 per cent K_2O	13.95	12.82
Manure salt 20 per cent K_2O	8.32	7.20
Kainit 12.4 per cent K_2O	4.72	3.60

Mr. SIMMONS. That price is not based upon the potash content?

Mr. SMOOT. Yes; the price is based upon the potash content. The price of $29.17 per 200 pounds in bulk is on a basis of 80 per cent K. C. L.

Mr. SIMMONS. That is the price of the foreign article?

Mr. SMOOT. I am quoting the prices at which the foreign manufacturers are selling potash to buyers in this country.

Mr. SIMMONS. The figures do not represent the potash content in the article, but refer to the degree of strength of the article.

Mr. STANLEY. The article which is quoted at a price of $29.17 would contain about 17 per cent of potash.

Mr. SMOOT. I can not tell from this table just what the strength is, but I have read the manner in which the quality of the potash is designated.

Mr. SIMMONS. That is about 80 per cent.

Mr. SMOOT. It reads: "Basis 80 per cent K. C. L."

Mr. SIMMONS. At a price of $29.17.

Now, does not the Senator from Utah think, in view of the fact that what he quotes is the selling price in a foreign country, that we ought to pay a bounty, if we are going to pay a bounty, of 2½ cents per pound, which would be $50 a ton?

Mr. SMOOT. The price I am quoting is at the mines in Germany and for basis 80 per cent K. C. L., and I can not tell the Senator what it is going to cost to get it here.

Mr. SIMMONS. Water freight rates are not very high.

Mr. SMOOT. They are not so high as railway freights, I am quite sure.

Mr. SIMMONS. The point I am making is that the bounty proposed is practically twice as much as the price in the foreign country free on board.

Mr. SMOOT. That is abroad, but not twice as much.

Mr. SIMMONS. Yes; abroad.

Mr. SMOOT. The bounty of 2½ cents, I will say to the Senator, is on the potash content itself. The fertilizer usually manufactured contains only about 4 per cent of potash. It is true that fertilizer used for tobacco and potatoes has sometimes a potash content as high as 8 per cent; so that in a ton of fertilizer, on the basis of 4 per cent, there would be about 80 pounds of potash; so that a bounty of 2½ cents a pound, the rate for the first year, would be just $2 a ton.

Mr. SIMMONS. But if the Senator will pardon me, the foreign purchase is of salts which contain 80 per cent of pure

potash, and the proposed bounty is 2½ cents a pound upon the pure potash.

Mr. SMOOT. No, not on pure potash; and that is the rate for the first year.

Mr. SIMMONS. Of course, if it contained 100 per cent of potash the foreign article would be raised one-fifth in price, but the price would not go much beyond $35 a ton at best.

Mr. STANLEY. Does the Senator mean a long ton?

Mr. SIMMONS. No; a short ton.

Mr. SMOOT. Two thousand pounds.

Mr. SIMMONS. I should like to have the Senator give us his views as to why we should give a bounty very much more than the total cost of the foreign article abroad for the purpose of stimulating the industry in this country.

Mr. SMOOT. The prices abroad, as the Senator must know, are exceedingly low to-day. There were great quantities of potash held in this country for over a year, and there was so little call for it during that particular year, as the Agricultural Department states, that in 1921 it was forced upon the market and sold for almost any kind of price that could be obtained.

Mr. POMERENE. The Senator is not complaining about that, is he?

Mr. SMOOT. I am not complaining about that. There is quite a history attached to it, which, if I had the time, I could recite.

Mr. KENDRICK. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Wyoming?

Mr. SMOOT. I yield.

Mr. KENDRICK. I should like to ask the Senator if he can tell us how the price of potash to-day compares with the pre-war price?

Mr. SMOOT. Mr. President, the prices are so fluctuating I can not remember the prices for the various years, but the prices at present are lower than any I can remember, even lower than those prevailing before the war.

Mr. KENDRICK. Can the Senator tell us whether there has been any domestic production of potash since the decline in the price? Has not that decline had the effect of putting all our manufacturers of potash out of business?

Mr. SMOOT. The contracts to which I have referred, I will say to the Senator, were made before all ceased operations. When those contracts were made there was no need of a plant in the United States making any potash, no matter what the price, for the contracts provided that all the purchases should be made from foreign companies for the 34 companies.

Mr. KENDRICK. I ask the question, because my impression is that the decline in price closed up all of our potash plants in the West.

Mr. SMOOT. Yes; not only because of the decline in price but because of the contracts which were made. In the same hearings we find that under the peace treaty certain potash mines formerly owned by Germany were turned over to France, and now there are agreements fast and hard that Germany shall supply 75 per cent and France 25 per cent. The contracts are almost word for word the same, and they could not have been drawn in that way unless there had been an understanding between the producers of potash in Germany and the producers of potash in France. They got together that close, and those contracts have been made and they have been signed, and the RECORD shows the names of the fertilizer manufacturers that have entered into those contracts.

Mr. STANLEY. Those were contracts dividing the amount sold in this country between those two competing concerns?

Mr. SMOOT. The German contract is for 75 per cent and the French contract is for 25 per cent.

Mr. STANLEY. That is, the contracts provide that purchasers in this country shall take one-fourth from France and three-fourths from Germany?

Mr. SMOOT. That is the program.

Mr. STANLEY. That is just a division of output among themselves.

Mr. SMOOT. Among themselves.

Mr. STANLEY. That does not affect us, one way or the other.

Mr. SMOOT. Not at all, with this exception: If they can destroy all of the potash production in the United States, what will be the contract price next year? These contracts are only for one year.

Mr. STANLEY. Do those contracts provide that the purchasers here shall take 100 per cent of their demands from Germany and France—25 per cent from Germany and 75 per cent from France?

Mr. SMOOT. Seventy-five per cent from Germany and 25 per cent from France.

Mr. STANLEY. And if they purchase potash elsewhere, they can not get potash from Germany and France?

Mr. SMOOT. They would not allow any to be sold to them elsewhere.

Mr. STANLEY. They sell to this country only on condition that we purchase our entire needs from those two sources. Is that it?

Mr. SMOOT. Yes; and I have here the list of the names of the signers of the contracts. I can put them into the RECORD without reading, or I can read them.

Mr. STANLEY. What I am coming to is this: If they can enforce a contract of that kind, prohibiting certain distributors of potash from purchasing elsewhere than from these mines in France and Germany, what is the use of our offering bounties to concerns that can not find a market?

Mr. SMOOT. Mr. President, all that is produced in the United States, of course, will be sold to the other few fertilizer manufacturers of the country, or directly to the farmers, if they want it; but what the committee thought was this: Knowing what has taken place this year, knowing that the trade has been divided between the two countries, knowing that Germany would not sell that potash unless we agreed to take 75 per cent of all of the potash used by these companies from Germany, knowing that they had contracts with France for the other 25 per cent, and knowing that the contracts were almost word for word the same in the two countries, there is only one conclusion to draw, and that is that they are going to close up all of the potash mines in the United States, and that is what they have done. Not one of them is operating.

Mr. KENDRICK. In other words, the purpose was to leave us just as dependent upon those countries as we were before the war?

Mr. SMOOT. Yes; absolutely. Not only that, Mr. President, but do not think for a minute that this contract has been made for 10 years at these prices. It is only for one year. What will be the demand of those producers next year? Suppose we are not producing any potash in this country, and suppose that all of the plants have gone to wrack and ruin—and it will not take many years for them to do so—at what price do you think you are going to buy potash from Germany and France next year with an agreement of that kind?

Mr. KENDRICK. Mr. President, will the Senator yield?

Mr. SMOOT. Yes; I yield.

Mr. KENDRICK. I have no doubt the Senator is fully informed as to the supply of potash in the country, but in any event the amount is entirely unlimited, as nearly so as can be imagined. In my State alone it is estimated that in one place there is a sufficient supply to furnish the world with potash for 180 years.

Mr. SMOOT. Let me say to the Senator that we have enough in Utah, at Marysvale, in those alunite deposits, to furnish the world with potash for I do not know how many years.

Mr. SIMMONS. Mr. President, may I ask the Senator one question? In what form is that potash in Utah?

Mr. SMOOT. It is found in ore in the mountains; in fact, it is a mountain of ore. It can be mined the same way as you would remove a mountain in one place and put it somewhere else, and in the transfer you take out the potash.

Mr. SIMMONS. Is it in the form of a salt?

Mr. SMOOT. No; it is not a salt. That found around and in the Salt Lake is extracted from a salt brine.

Mr. SIMMONS. What is it?

Mr. SMOOT. It is a potash ore called alunite.

Mr. SIMMONS. What are the other contents of the ore?

Mr. SMOOT. I can not say. Perhaps it is dirt, perhaps talc, or some other material that it is mixed with.

Mr. SIMMONS. What per cent of it is potash?

Mr. SMOOT. That I do not know.

Mr. SIMMONS. How does the Senator know whether or not it is there in commercial quantities?

Mr. SMOOT. I know it is there in commercial quantities, because it has been produced, and a mill was started and was running until the low price interfered with its operation.

Mr. POMERENE. Mr. President, if it is in such vast quantities in the form of a salt, why in the world are we trying to extract it from the water, from the lakes, and so forth?

Mr. SMITH. Mr. President, if the Senator will allow me, it is not in the form of a salt. It is in rock formation, a whole mountain of it.

Mr. SMOOT. Potash has been extracted for a number of years in a small way.

Mr. SMITH. I know it has, but not in anything like commercial quantities——

Mr. SMOOT. Oh, yes.

Mr. SMITH. And not in any way to compete with the cheap form of potash known as German kainite. That does not need any treatment at all. It is taken right out of the mines and simply ground and shipped to the agriculturists throughout the country. I myself have been a large user and importer of potash in the form of what we call kainite, and I was a little surprised to see that the Tariff Board calls attention to that form of potash. It is taken out and shipped without any treatment, without any evaporation or any processing at all, except just to break up the lumps in which it occurs. One German geologist estimates that there is enough available right there to last the world, at the rate of 5,000,000 tons a year, for 600,000 years. Of course, those are big figures. There is no place upon the face of the earth that can compete with that kind of a deposit; and if we put a bounty or a tariff on the production of potash in this country it means that the farmers of this country who are dependent upon that one ingredient that is not found outside the red lands of the Piedmont regions of the country, will have to burden themselves with whatever tax is imposed, either in the form of a tariff or a bonus, in order to procure the necessary crops in this country.

Mr. SMOOT. If they mine that the same as they do copper at the Utah copper mines, and handle it in the way that they extract copper, Germany will have no advantage at all in lifting her ore a thousand feet or more.

Mr. POMERENE. Mr. President, let me ask the Senator a question. Does the Senator really think we ought to adopt this bounty system now, so far as potash is concerned?

Mr. SMOOT. The only reason why I would support the bounty for the few years that are proposed is because I want to see those establishments within the next five years demonstrate whether or not they can make enough potash in the United States to supply the demands of the United States. If they can, I want to say to the Senator now that the payment of this bounty would be the cheapest possible thing for the American people.

Mr. POMERENE. Mr. President, the Senator has just given to the Senate absolute assurance that there are deposits of potash in Utah sufficient to supply the farming communities of this country for hundreds of years. He does not seem to have any doubt about that; so it would seem to me that there is not any necessity for this bounty for the next three or four or five years.

Mr. SMOOT. The Senator knows that these German and French producers control the industry of the whole world; and does the Senator think for a moment that they are going to allow any industry to be established in the United States that is going to interfere with them if they can help it?

Mr. POMERENE. Mr. President, I have not a great deal of detailed knowledge on that subject, but I do know that it costs them just as much to get potash from the Atlantic coast into the interior of the country as it costs the people westerly to get it to the place where it will be consumed.

Mr. SMOOT. I think when it runs through a mill, and the pure potash is extracted, the freight rate is not going to have the disadvantages that the Senator thinks.

Mr. POMERENE. This freight rate is a very peculiar thing. It is a dreadful burden in certain instances and no burden at all in other instances, as it would seem.

Mr. SMOOT. I suppose the Senator is referring to magnesite. That is a heavy earth and shipped by the ton.

Mr. POMERENE. In what form does potash exist in these mountains in Utah?

Mr. SMOOT. I have already stated that. It is in the form of a mineral in the earth that forms the mountains.

Mr. SMITH. It is in the form of rock, is it not?

Mr. SMOOT. Sometimes it is in the form of rock and sometimes it is in loose deposits—in fact, the whole mountain contains potash.

Mr. SMITH. Mr. President, if the Senator will allow me——

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from South Carolina?

Mr. SMOOT. I do.

Mr. SMITH. This German potash has been coming to the United States ever since we began to use commercial fertilizers, and the price of it in this country, except during the period of the war, when we had an embargo on German potash, was in a way negligible.

Mr. SMOOT. It was not so when a few years ago before the war some Americans went to Germany, because the price of potash had risen so high, and purchased two mines in Germany, and then they found out that the German Government would not allow them to export it. The Senator must remember the action that President Roosevelt took at that time.

Mr. SMITH. But, Mr. President, in the spring of this year German kainite, which during the war and during the embargo went to almost fabulous prices for the potash contained in the kainite——

Mr. SMOOT. They had an embargo on it.

Mr. SMITH. Oh, I understand; but I want to call the Senator's attention to the fact that this spring it could be sold on the market for about eleven or twelve dollars a ton, which was back to the pre-war price. It was offered freely all through the South Atlantic States, or at least in my State, at practically the pre-war price, in any quantity that you desired to get, and that was already available for fertilizer purposes.

Right in this connection, let me say that I was interested in listening to the Senator a moment ago when he spoke about the fertilizer companies using this ingredient and then charging a high price for the balanced fertilizer. The truth of the matter is that nearly all the farmers who use the potash use it directly from the ship. I do not suppose there are more than 10 per cent of the farmers of the South Atlantic States but that use their potash—either the muriate, which runs 25 to 30 per cent, or the kainite, which runs about 12½ to 15 per cent—just in the form in which it is imported; that is, in the South Atlantic States. I suppose more backward people——

Mr. POMERENE. For cotton?

Mr. SMITH. For tobacco, for potatoes, for truck of all sort; the fact of the matter is, for general agricultural purposes. There is what is called the balanced fertilizer. That is where the factory will put it up in the form of these mixed ingredients, three of them—the ammonia, or, in other words, potash, and phosphoric acid, and nitrate; but most of them buy their ingredients. For instance, they get cottonseed meal for their nitrogen content, or blood and tankage, or they will use nitrate of soda, and buy the muriate of potash or the kainite and the phosphoric acid, what they call acid phosphate. They take those and mix them in just whatever proportions they see fit. The phosphoric acid comes directly from the mines where they crush the rock and treat it with the sulphuric acid to produce phosphoric acid, and then they get their kainite direct from ship side and their nitrate of soda direct from ship side, and, of course, there are vast quantities of the fertilizer mixed for the convenience of individuals. They mix it for them, sometimes, according to order.

The PRESIDENT pro tempore. Will the Senator from Utah permit the Chair to make an observation?

Mr. SMOOT. Certainly.

The PRESIDENT pro tempore. It may be believed by Senators that this question can be debated by any Senator for two hours. That is not the opinion of the Chair. No Senator can speak more than one hour upon it.

Mr. SMOOT. Mr. President, I am perfectly aware of that, and I do not want to take the full hour, although half of my time has been taken up by others.

The story told by the Senator from South Carolina is a beautiful one. Everybody knows that the fertilizer manufacturers of this country use the great bulk of potash shipped into this country. There may be a farmer, like the Senator from South Carolina, who mixes it himself; but everybody knows that the American fertilizer manufacturers put the potash into fertilizer. I think there is generally four units of potash in a ton of fertilizer.

Mr. SMITH. Mr. President, the Senator certainly has misrepresented the facts, unintentionally, of course.

Mr. SMOOT. No; I have not misrepresented the facts.

Mr. SMITH. I do not know about the Senator's section of the country, where they do not, perhaps, use it at all; but I am right in the center of the fertilizer-using district of America, and I state here that up to the time of the war the farmers mixed practically 70 per cent of their fertilizer; and they have done so since the war.

Mr. SMOOT. Mr. President, potash which comes into the United States from Germany is under contract with the fertilizer manufacturers of the United States. They do not bring potash in here to sell. They bring potash into the United States to mix into fertilizer, and then they sell the fertilizer.

Mr. SIMMONS. Mr. President, I would like to ask the Senator a question.

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from North Carolina.

Mr. SMOOT. Yes; I yield.

Mr. SIMMONS. During the war we developed factories for the manufacture of potash, and made somewhere between forty and fifty thousand tons a year. That was under the protection of the embargo.

Mr. SMOOT. Germany embargoed it. None of it came out of Germany.

Mr. SIMMONS. During the war there was practically an embargo on it, and under the operation of the embargo we developed that industry. When the embargo was taken off and German competition restored, as I understand the Senator, many of these factories closed up and went out of business.

Mr. SMOOT. They have not gone out of business——

Mr. SIMMONS. They have stopped operations.

Mr. SMOOT. They have stopped operations.

Mr. SIMMONS. Suppose we start them into operation again by allowing them a bounty of $50 a ton, and, under the stimulus of that bounty, they build up quite an industry here during these five years you propose to give them that bounty. Just as in the case of the embargo, at the end of the five years German competition will be opened up again, we will assume. Does the Senator have any apprehension that those factories will again close, again go out of business, and all the bounties we have paid for the purpose of developing this industry go for naught——

Mr. SMOOT. No; I do not think that.

Mr. SIMMONS. Simply because they could not stand up against German competition then, any more than they can stand up against German competition now?

Mr. SMOOT. There is quite a difference between an industry that is wholly developed and one that is just starting. It is easier for the German cartel to kill an industry in its infancy, before it can get started, than if it allows it to get started and get upon its feet. As far as I am concerned, I want to say now that if this bounty is granted—and I would not vote for a general bounty—and that industry can not be established and stand upon its feet at the end of five years, I never shall say another word in advocacy of a bounty.

Mr. TOWNSEND. Mr. President, why did the committee fix the rate at 2½ cents per pound?

Mr. SMOOT. Because of the fact that to get started and established, it will take a greater protection at the beginning to put them on their feet than when they have successfully established and perfected their plants and organization.

Mr. TOWNSEND. How did the committee fix upon the original rate of 2½ cents?

Mr. SMOOT. That is the rate the House fixed; they claimed that if they were given that rate they could meet the competition of Germany under conditions existing then.

Mr. POMERENE. Mr. President, I want to ask the Senator a question. The process by which they produce this potash——

Mr. SMOOT. From a salt brine in most cases.

Mr. POMERENE. From the brine, are well determined and defined?

Mr. SMOOT. We have what is termed "an unlimited supply."

Mr. POMERENE. What I am getting at is that the processes have been well determined——

Mr. SMOOT. No; not the processes. The product is well defined.

Mr. POMERENE. I am talking about the processes. That is what I am trying to get at. Does the Senator think that the present processes are not profitable?

Mr. SMOOT. Take the plant at the north end of the lake at Salt Lake City, for instance. They barely got their mills started, their ponds perfected, before the present prices prevented them from operating. The process is to extract the potash by separating it from the salt after the sun has evaporated the water.

The first process they had was not a success. They secured chemists who had had experience with this product in a foreign country. They just got a new process started, and never worked it to any extent before the present condition came about, and they had to close down.

If they can not in five years develop a process which will separate the potash from the salt profitably, so that they can ship the pure potash itself, then they are not going to make a success of it, and if they are willing to spend their millions of dollars in order to further try, with a view of furnishing potash to consumers, the committee feel they ought to be encouraged to the extent of the bounty granted in the bill.

Mr. POMERENE. I asked my question for two purposes, and the one the Senator has answered. But the other purpose was this: We provided for the appointment of a commission to estimate and determine the damages which were sustained by those who had gone into the development of these alloy ores, and, as I recall, it covered potash, too?

Mr. SMOOT. It did not cover potash in the condition in which it is made from the lake, and only in cases where they were directed by the officials of the Government to undertake it.

Mr. POMERENE. But some of them were directed. Were these companies of which the Senator speaks in that number?

Mr. SMOOT. They were not. The Salduros Co. started with a view of establishing a permanent business. They spent about $12,000,000 at the south end of the lake. They have never made any claim against the Government of the United States.

Mr. POMERENE. Then it must be true that they went into it as an enterprise of their own?

Mr. SMOOT. They did.

Mr. POMERENE. And now we are expected to help them along by this bounty?

Mr. SMOOT. It is not only helping them; it is providing for the production of potash in America, which will regulate somewhat in the future the price at which potash shall be sold in the United States. That is all there is to this proposition.

I think I stated before that the farm organizations of the country are against the duty upon potash.

Mr. POMERENE. I agree with them.

Mr. SMOOT. Evidently the Senator does. I knew that without having him say so.

Mr. POMERENE. I wanted to impress it upon the Senator.

Mr. SMOOT. If there is no potash produced in the country, and two syndicates in the world control all the output of potash which will be used in this country and the world; when that condition arises what is the farmer going to pay for his potash? All there is for the Senate to decide is whether they want to say now to all of the potash producers in the United States, "Scrap all your machinery. Don't think of your investments hereafter. They are lost." Or say, "You have thirty to forty million dollars invested. You claim that if we give you time you will produce potash at the end of five years in competition with Germany, and if you can not do that at the end of five years all that you have invested will be lost, and you will take it the same as any other loss you have sustained in any other line of business."

If it were only for the protection of the men who had put their money into the enterprise and lost it, Congress should not act in a case like that. If that were all there was to it, nobody would be here asking that a bounty be given on this product. That is not what the bounty is for. The bounty is for the purpose of demonstrating to the people of the United States and to the consumers of potash that if time is allowed American producers can compete with the German and the French syndicates.

Mr. President, this aid was given to the sugar industry, and it was given to the production of other things in the United States, and I am in hopes that it will be given to potash. But I want to say frankly I could not be induced to put a dollar into a potash plant with the feeling that there is against the industry and the belief that we can depend entirely upon Germany and France for our supplies. But that is for the Senate to say.

Mr. POMERENE. Does the Senator feel that at the expiration of the time for which the bounty is to be given they will not ask for any further bounty?

Mr. SMOOT. I do, because they say they have no intention of doing so; and not only that, but in the meantime, if they can not produce it as cheap and make a profit, they will not want to operate longer. Men will not operate at a loss; that is, for very long. They can do it for this year, or two years, or three years, if there is some prospect of success in the future; but if there is not, men are not going to operate very long at a loss.

Mr. REED. Mr. President, I should like to ask the Senator a question.

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Missouri?

Mr. SMOOT. I was through, I will say to the Senator, but I shall be glad to answer his question.

Mr. REED. I have been compelled to be out of the Senate during nearly all the Senator's remarks and he may have covered the question. If so, I am not going to ask him to repeat it. The Senator called my attention to the fact that there appears to be some sort of mutuality of interest between American importers and the foreign holders of these deposits.

Mr. SMOOT. Yes.

Mr. REED. Has the Senator spoken of that?

Mr. SMOOT. I have covered it.

Mr. REED. Very well; I shall not ask the Senator to repeat it.

Mr. SMOOT. I call the Senator's attention to the fact that the very man, Mr. A. D. Crenshaw, who appeared as a witness before the committee, is vice president of the Virginia-Carolina Chemical Co., which owns works in Germany. He is the man who made the deal for the 34 fertilizer manufacturers of the United States that they should take 75 per cent of the potash they use in the manufacture of fertilizer in the United States from Germany. The record also shows that the same contract

was made by the same 34 people with the French syndicate, almost word for word, for the other 25 per cent. In other words, it means that those 34 manufacturers of fertilizer in the United States are not going to buy one pound of potash from any producer in the United States.

Mr. REED. May I ask the Senator whether he does not think a situation of that kind ought to be dealt with by a direct statute?

Mr. SMOOT. I think something ought to be done in a legislative way. If not, just as soon as they scrap the potash plants in the United States—and if they do not scrap them, time will do it in a very few years, indeed, because the machinery would deteriorate more while lying idle than it would if it were in operation—the American people will pay whatever these two great syndicates dictate.

Mr. REED. I am not passing on the question. I may say by way of parentheses that I regret the agreement to vote on the schedule, as I understand, to-night. Is not that the agreement?

Mr. SMOOT. That is the unanimous-consent agreement, I will say to the Senator.

Mr. REED. I would like to ask if we can not by unanimous consent modify the agreement so that we may have a little more time to discuss this item. I think it is very important. I, of course, have been away, and I have no right to ask any indulgence, but it seems to me, if the Senator has described the situation accurately, as I believe he has, that the bill ought to carry with it a positive enactment of law which will reach the sort of combination he has spoken of, if it is not already covered by the antitrust statute.

Mr. SMOOT. In the hearings I called attention to that fact when Mr. Crenshaw testified. I will say to the Senator, however, there is no need of getting unanimous consent to-night, because when the bill reaches the Senate it will be open to amendment at that time.

Mr. SIMMONS. It will be open to amendment when we arrive at the 11th or 12th of August.

Mr. SMOOT. That is also true.

Mr. REED. But we must vote on this question to-night, and I do not like to vote on it before I have time to go into it thoroughly. As I said, I have no right to ask the Senate to delay because of my prolonged absence. I would like to say that it is utterly wrong in principle and the thing, in my judgment, is intolerable that American dealers should be permitted to sign contracts with foreign producers which exclude or have a tendency to exclude American producers from the market. That is a trust practice in its worst form.

My judgment is that any American manufacturer who will do it ought to be sent to jail for a good, long term, because he is not only cornering American trade and depressing competition but he is doing it in the interest of foreign producers as against all American producers. I think a practice of that kind, when it affects a product so essential to the farmers of a considerable portion of the United States, is something which is deserving of passing notice in this body.

Mr. SMOOT. In the hearings before the committee, on page 4730, when Mr. Crenshaw was before the committee, I made this statement:

Senator SMOOT. I desire at this place in the record to have a copy of the contract put in, because I think the committee will find out that it evades all of our antidumping laws.

Mr. CRENSHAW. It does; that is, it provides for the Germans to pay it.

Senator SMOOT. It evades all the antidumping laws we may pass. It evades all of the laws passed against combinations or trusts, and I want it to go into the record. I want the American people to understand what these people that are talking against an American industry are undertaking to do with a foreign country. I have no more to say right at this time, but I will when I go onto the floor of the Senate, perhaps.

I ask that the contract of the American Agricultural Chemical Co. and others with the Deutsches Kalisyndikat, G. m. b. H., dated September 28, 1921, with the terms, may be printed in the RECORD. I also ask that the contract of the American Chemical Co. and others with the Societe Commerciale des Potasses D'Alsace, dated November 17, 1921, may be printed in the RECORD.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The contracts referred to are as follows:

Contract of the American Agricultural Chemical Co. and others with Deutsches Kalisyndikat, G. m. b. H., dated September 28, 1921.

Agreement, made this 28th day of September, A. D. 1921, by and between Deutsches Kalisyndikat, G. m. b. H., Berlin, a corporation of Germany, herinafter called the "seller," party of the first part, and the American Agricultural Chemical Co., Virginia-Carolina Chemical Co., International Agricultural Corporation, Armour Fertilizer Works, Swift & Co., F. S. Royste Guano Co., Arkansas Fertilizer Co., Baugh & Sons Co., Berkshire Fertilizer Co., Carnleigh Phosphate & Fertilizer Co., Barling & Co., E. Rauh & Sons Fertilizer Co., Federal Chemical Co., F. W. Tunnell & Co., Georgia Fertilizer & Oil Co., G. Ober & Sons Co., Griffith & Boyd, Gulf Fertilizer Co., I. P. Thomas & Sons Co., Miller Fertilizer Co., Mutual Fertilizer Co., Olds & Whipple, Piedmont-Mount Airy Guano Co., Read Phosphate Co., Reliance Fertilizer Co., Richmond Guano Co., Robertson Fertilizer Co. (Inc.), Rogers & Hubbard Co., Smith Agricultural & Chemical Co., Southern Fertilizer & Chemical Co., W. B. Tilghman Co. (Inc.), Wuichet Fertilizer Co., Wilson & Toomer Fertilizer Co., York Chemical Works, a group hereinafter called the "buyer," as several parties of the second part, the individual members of which group are hereinafter sometimes called "participants"; and

Whereas the participants desire to purchase potash salts from the seller and avail themselves of the highest discounts, as shown by schedules hereinafter set forth; and

Whereas no one of the participants desires to purchase sufficient quantities to entitle it to the highest discount named hereinafter; and

Whereas the participants, by uniting their purchases under this contract, are able to buy at least the quantity which carries the highest discount, as shown by schedules hereinafter set forth; and

Whereas seller is willing to give a discount to the participants making up a group of buyers under this contract on the basis of aggregate quantity purchased.

Now, therefore, for value received, and each in consideration of the agreements by the other herein set forth, the parties agree with each other as follows:

ARTICLE I.—TERM.

The term of this contract shall be from the date hereof to and including April 20, 1922.

ARTICLE II.—QUANTITIES.

Each participant agrees to purchase from the seller at least 75 per cent of its entire purchases of potash salts for the term hereof at the prices set forth in Schedule 1 of Article III hereof, subject to the conditions, discounts, and limitations hereinafter set forth.

The buyer has the right, through S. D. Crenshaw and H. H. Lippincott, to notify the seller within two weeks from the date hereof, by a writing, mailed or delivered to seller at 42 Broadway, New York City, of its intention to purchase from the seller 100 per cent of the entire purchases of the participants of potash salts for the term hereof, in which event each of the participants agrees to purchase from the seller 100 per cent of its entire purchases, and in such event the prices shall be the lower prices set forth in Schedule 2 of Article III of this contract. Whenever notice is required in this contract notice by registered mail or delivery is sufficient.

Each participant agrees that the 75 per cent of its purchases which it is obligated to purchase hereunder shall be a minimum of the number of tons (of 2,000 pounds each) K_2O which is set opposite its name at the end of this article under the caption of "Minimum purchases on 75 per cent basis," it being understood that the remaining 25 per cent may be purchased by participants from any American or foreign sources. Each of the participants further agrees that if it elects to purchase 100 per cent of its entire purchases, such 100 per cent shall be a minimum of one and one-third times the number of tons (of 2,000 pounds each) K_2O which is set opposite its name under the caption of "Minimum purchases on 75 per cent basis," and the seller agrees to sell such minimum quantities which each of the participants is obligated to take.

Seller further agrees to sell to each of the participants, in addition to such quantities, additional quantities not in excess of 33⅓ per cent of such quantities as such participants shall require.

The seller also agrees to sell to each of the participants any further quantities required by them, provided that at the time of the delivery of shipping instructions and during five days thereafter the exchange rate of the German mark shall be not higher than 1.35 cents per 1 mark. If any participant shall through the operation of the condition contained in the preceding sentence not be entitled to receive from the seller the full percentage of its purchases which it has agreed to purchase from seller, it shall be free to purchase such additional quantities from other sellers.

Minimum purchases on 75 per cent basis.

	Tons.
The American Agricultural Chemical Co	10,000
Virginia-Carolina Chemical Co	6,000
International Agricultural Corporation	3,375
Armour Fertilizer Works	2,000
Swift & Co	4,500
F. S. Royster Guano Co	2,000
Arkansas Fertilizer Co	49
Baugh & Sons Co	1,500
Berkshire Fertilizer Co	150
Caraleigh Phosphate & Fertilizer Co	165
Darling & Co	75
E. Rauh & Sons Fertilizer Co	38
Federal Chemical Co	169
F. W. Tunnell & Co	592
Georgia Fertilizer & Oil Co	235
G. Ober & Sons Co	150
Griffith & Boyd	272
Gulf Fertilizer Co	400
I. P. Thomas & Sons Co	529
Miller Fertilizer Co	182
Mutual Fertilizer Co	37
Olds & Whipple	200
Piedmont-Mt. Airy Guano Co	413
Read Phosphate Co	165
Reliance Fertilizer Co	12
Richmond Guano Co	38
Robertson Fertilizer Co. (Inc.)	100
Rogers & Hubbard Co	188
Smith Agricultural & Chemical Co	150
Southern Fertilizer & Chemical Co	50
W. B. Tilghman Co. (Inc.)	338
Wuichet Fertilizer Co	113
Wilson & Toomer Fertilizer Co	1,275
York Chemical Works	220
Total	35,680

It is understood that the above minimum quantities include deliveries of potash salts since June 1, 1921.

ARTICLE III.—*Price and payment.*

	In bags of 200 pounds even weight.	In bulk.
Price schedule No. 1:		
Muriate of potash, 80-85 per cent, basis 80 per cent K. C. L.	$37.00	$35.75
Sulphate of potash 90-95 per cent, basis 90 per cent K_2SO_4	47.50	46.25
Double manure salt 48-53 per cent, basis 48 per cent K_2SO_4	25.75	24.50
Manure salt 30 per cent, basis 30 per cent K_2O	19.00	17.75
Manure salt 20 per cent, basis 20 per cent K_2O	12.25	11.00
Kainit 12.4 per cent K_2O	8.50	7.25
Price schedule No. 2:		
Muriate of potash 80-85 per cent, basis 80 per cent K. C. L.	36.00	34.75
Sulphate of potash 90-95 per cent, basis 90 per cent K_2SO_4	46.00	44.75
Double manure salt 48-53 per cent, basis 48 per cent K_2SO_4	25.00	23.75
Manure salt 30 per cent, basis 30 per cent K_2O	18.50	17.25
Manure salt 20 per cent K_2O	12.25	11.00
Kainit 12.4 per cent K_2O	8.25	7.00

Per 2,000 pounds net weight in good order ex-vessel Boston, New York, Philadelphia, Baltimore, Norfolk, Wilmington (N. C.), Charleston, Savannah, Brunswick, Fernandina, Jacksonville, Tampa, Mobile, Pensacola, New Orleans, Galveston, St. John (N. B.), or Halifax (N. S.), provided quantities ordered for each respective port are sufficient to obtain freight room at reasonable freight rates.

Freight: Freight to be deducted from the invoice and paid by participants on discharge at port of destination in accordance with charter party and/or bill of lading.

Analysis and weight: Participants agree to accept seller's weights, tares, and analyses; seller agrees to furnish certificates of analyses for potash salts packed in bags and certificates of analyses and of weights for potash salts in bulk.

If manure salt 20 per cent shall test by seller's analysis more than 20 per cent K_2O, or kainit 12.4 per cent more than 12.4 per cent K_2O, such excess is free of charge; but if the two above-mentioned grades shall test by seller's analysis less than 20 per cent and 12.4 per cent K_2O, respectively, then seller agrees to make a pro rata allowance.

If participant shall at any time with reason claim that an error in weight or in analysis has been made, seller agrees through its New York office to give the matter its prompt attention and proper consideration and to adjust the same without unreasonable delay.

Payment: The amount of each invoice, less freight, shall be paid by each of the participants in cash in New York City. Each participant shall, within 14 days after the date of this contract, furnish to seller a detailed estimated statement of quantities and grades of potash salts constituting the minimum quantity of K_2O which it shall at the time be obligated to take hereunder, and shall within said 14 days furnish to seller a confirmed irrevocable letter of credit on a New York City bank or banker to be approved by seller, to continue in effect until final payment for such minimum quantity, at the following rates per ton of 2,000 pounds of potash salts, so specified, as per following schedules, to wit:

	In bags of 200 pounds even weight.	In bulk.
Schedule 1, minimum purchases on 75 per cent basis:		
Muriate of potash 80-85 per cent, basis 80 per cent K. C. L.	$30.60	$29.17
Sulphate of potash 90-95 per cent, basis 90 per cent K_2SO_4	40.05	38.92
Double manure salt 48-53 per cent, basis 48 per cent K_2SO_4	20.47	19.35
Manure salt 30 per cent, basis 30 per cent K_2O	14.40	13.27
Manure salt 20 per cent K_2O	8.32	7.20
Kainit 12.4 per cent K_2O	4.05	3.82
Schedule 2, minimum purchases on 100 per cent basis:		
Muriate of potash 80-85 per cent, basis 80 per cent K. C. L.	29.70	28.57
Sulphate of potash 90-95 per cent, basis 90 per cent K_2SO_4	38.70	37.57
Double manure salt 48-53 per cent, basis 48 per cent K_2SO_4	19.80	18.67
Manure salt 30 per cent, basis 30 per cent K_2O	13.95	12.82
Manure salt 20 per cent K_2O	8.32	7.20
Kainit 12.4 per cent K_2O	4.72	3.60

Each participant shall, within 40 days after the date of this contract, furnish to seller a detailed revised and corrected statement of quantities and grades of potash salts constituting its minimum tonnage of K_2O, and the total amount of the letter of credit issued as above provided shall be readjusted accordingly.

Whenever any participant shall have paid for the aggregate minimum tonnage of K_2O which participant is obligated to purchase under this contract, said letter of credit shall be released and seller agrees to notify the bank or banker to that effect.

Whenever credits thus established by any participant shall have been exhausted or so released, such participant shall thereafter, either before or at the time of delivery of shipping orders, furnish additional like letters of credit covering quantities so ordered at the above rates per ton of 2,000 pounds of potash salts.

Seller agrees to deliver in exchange for payment seller's invoice, consular invoice, certificate of analysis, certificate of weights (for crude salts only), bill of lading, and charter party (if any). In case any of the foregoing documents are delayed and not obtainable on the day of presentation to the New York bank or bankers, seller will present invoice and delivery order and proof of arrival of steamer at port of destination, and agrees and guarantees to furnish the foregoing documents as soon as they come to hand, and in any event within 21 days, and each of the participants agrees to instruct its bank or banker accordingly. Each of the participants, however, shall have the right to give seller a bank acceptance maturing four months from the date of presentation of documents or delivery order and bearing interest at the rate of 6 per cent per annum in lieu of cash; and in such a case seller agrees to repay to such participants one-half of 1 per cent for the bank-acceptance commission. Seller agrees, if so desired by any participant, not to present the documents to the New York bank or bankers before the steamer has arrived at port of destination.

ARTICLE IV.—SHIPMENT.

Shipments are to be made according to shipping instructions to be delivered to seller at 42 Broadway, New York, N. Y., at any time during the term hereof. Each of the participants agrees to order shipments as early as possible. Goods shall be ordered in quantities of not less than 200 tons of bulk goods and/or 50 tons of bag goods to a shipment. Seller agrees to make prompt shipments at such times as participants shall direct.

Seller agrees to pay a discount of 1½ per cent (to be calculated on the prices set forth in the schedules in Article III) on all shipments ordered by any participant prior to October 15, 1921, for September/October shipment, 1921. This discount is to be deducted from each invoice.

Seller has the right to make deliveries ex-store Atlantic and Gulf ports in place of shipments from abroad, and in that case the term "ex-store" shall be equivalent to the term "ex-vessel," provided that cost shall be not greater to the participants at their respective works than if delivered ex-vessel, and in such case seller shall furnish public sworn weighers' weights and analysis certificate of Stilwell & Gladding of sample drawn by public sampler, or certificate of any other reputable chemist selected by seller and approved by participant.

Discharge of goods: Participants shall receive potash salts as per bill of lading and charter party (if any) as soon as steamer is ready to discharge, after having secured proper berth, in northern ports as fast as steamer can discharge; in southern ports, south of Baltimore, at the rate of not less than 400 tons of 2,240 pounds each per day, Sundays and holidays excepted and weather permitting. On shipments to southern ports seller agrees to stipulate in charter parties that the steamer shall discharge at two wharves as designated by respective participants, provided there is a sufficient depth of water at such wharves. If possible, seller shall also stipulate for discharge at a third wharf, but in such a case participant shall pay the expense of removal of the steamer from the second to the third wharf. Any lighterage at port of discharge is for participants' account, but participants guarantee only 19½ feet of water at Wilmington, N. C., Charleston, and Savannah, and only 20 feet at Mobile, Ala. Seller shall provide in charter party that respective participants shall have privilege of stevedoring at current rates of port.

ARTICLE V.—DISCOUNTS.

QUANTITY DISCOUNT.

Seller represents to buyer that its scale of quantity discounts is:

	Tons K_2O.
1 per cent upon purchases of	1,000
3 per cent upon purchases of	5,000
5 per cent upon purchases of	10,000
8 per cent upon purchases of	20,000
10 per cent upon purchases of	30,000

Inasmuch as the total minimum quantities which participants are obliged to take hereunder which include the quantities heretofore purchased by the participants since June 1, 1921, from the seller under contracts whereby the seller agreed to protect the participants against any subsequent decline in price, aggregate in excess of 30,000 tons, seller agrees to give participants a quantity discount of 10 per cent (to be calculated on the prices set forth in the schedules in Article III). This discount shall be deducted from each invoice.

Seller agrees not to give to any other buyers of potash salts in the United States (Atlantic and Gulf ports) and/or Canada any higher discounts for the respective quantities than above stated or any lower prices or better terms than herein contained.

SPECIAL DISCOUNT.

Seller further agrees to pay a special discount of 2 per cent (to be calculated on the prices set forth in the schedules in Article III) on all quantities of potash salts sold hereunder which shall be resold by any participant to dealers and/or consumers in unmixed form. Any participant making such resales shall upon furnishing to the seller an affidavit of the total tonnage of each grade of such sales, be entitled to receive such discount within 60 days after April 30, 1922.

SEPARATE DISCOUNT.

Seller agrees to pay to any of the participants a separate discount of 1 per cent (to be calculated on the prices set forth in the schedules in Article III) on all deliveries made to such participants, provided:

(1) Such participant shall state in its price lists that potash salts can now be had in all required quantities, and that it is advisable to buy mixed goods containing as high a percentage of potash as is suitable to the respective crops; and

(2) Such participant shall instruct its selling organization and salesmen to sell and recommend mixed goods containing as high a percentage of potash as is suitable to the respective crops.

Any such participant shall, upon furnishing to seller an affidavit stating that it has fully complied with the above conditions, be entitled to receive such discount within 60 days after April 30, 1922. Failure of any participant to comply with such conditions shall not deprive any other participant of its right to such separate discount.

ARTICLE VI.—PROTECTION OF PARTICIPANTS.

In case seller during the term of this contract shall sell to any purchaser of potash salts in the United States to or through Atlantic and Gulf ports and/or Canada any grade or grades of potash salts, whether mentioned in this contract or not, at lower prices and/or allow or pay to any such purchaser higher discounts or better terms than those named in this contract, then and in such event, such lower prices and/or higher discounts and/or better terms shall also apply to this contract with retroactive effect as though such lower prices and/or higher discounts and/or better terms had originally been contained in this contract; provided that nothing herein contained shall preclude the seller from selling to other groups of buyers and allowing discounts on the basis of

the aggregate purchases of such groups under contracts containing similar provisions to those of this contract.

In the event that potash salts should be offered to any participant at lower net prices than those named in this contract, such participant shall be entitled to buy such salts, provided:

(1) That the quantity so offered to such participant shall be bona fide and substantial, aggregating approximately 1,000 tons K_2O.

(2) That notice of the net price at which such potash can be purchased shall have been given to the seller in New York, at 42 Broadway, and the seller shall not within five days thereafter have notified the participant that it intends to meet such lower price by reducing the prices named in this contract to such price offered to the participant.

In case the seller should elect so to reduce the net prices specified in this contract, such reduction shall apply to all participants and to all quantities not yet shipped to the participants, during the entire remainder of the term of this contract. No quantity discount from such reduced prices shall be allowed.

In the event that the seller should not elect to reduce its prices for the remainder of the term of the contract to meet the prices offered to any participant, then any such participant shall have the right on notice to the seller given to it in New York, at 42 Broadway, to cancel and to terminate so much of the contract as shall cover so much of the grade of potash salts for which such offer at a reduced price has been received and accepted, and which reduction of price the seller is unwilling to meet as above set forth.

In the event that the seller should determine not to reduce its prices, but to permit any participant to purchase such salts at such reduced prices from other sellers, it shall not in any wise affect the right of such participant or of any other participant to receive the quantity discount of 10 per cent to which each participant is entitled hereunder, and each participant shall be entitled to receive such discount notwithstanding it shall make such purchases from other sellers of potash salts.

In the event that seller shall not reduce its price in the event of a lower price being offered to any participant, and shall permit such participant to purchase potash salts from others as herein provided, seller agrees immediately to notify the bank or banker issuing the letters of credit hereinabove referred to that the credit of such participant has been reduced by an amount to be determined by multiplying the number of tons (of 2,000 pounds) of the grade of potash salts as to which the contract is so canceled by the rate applicable to the grade as specified in the table of rates set forth in this contract above in paragraph entitled "Payment."

In the event that seller shall reduce its price to meet the prices offered by others, seller agrees immediately to notify the bank or banker issuing the said letters of credit of such reduction of price and of the corresponding reduction in the liability of each and every participant under said letters of credit to an amount to be computed as follows: The tonnage of each grade which such participant shall at the time still be obligated to purchase shall be multiplied by the reduced price applicable; from each such sum thus obtained there shall be deducted an amount equal to the number of tons (of 2,000 pounds each) of such grade multiplied by $2.70.

The prices named in Article III and the discounts named in Article V of this contract shall also apply to all quantities received or ordered by participants since June 1, 1921, and such quantities shall be deemed to be included within the terms and conditions of this contract.

The seller further agrees that if the prices in Article III shall hereafter be reduced, as above provided in the first paragraph of Article VI, such reduced prices shall then be applicable to the purchases referred to in the preceding sentence.

In the event of war, revolution, fire, flood, strike, accident, or any other contingencies beyond the control of the participants happening to such number of the factories owned and operated by any participant or its branches that the operation thereof shall be interfered with or interrupted in such manner as to prevent such participant from using all the merchandise agreed to be purchased by it under this agreement, such participant has the right to cancel such portion of this contract as may be affected thereby by giving notice to the seller in New York to that effect, provided said goods shall not have been shipped or vessels to carry the same shall not have been chartered prior to notice being given to seller of the existence of such impediments. Such cancellation shall not deprive the participant so canceling, or any other participant, of the quantity discount which it is entitled to hereunder.

ARTICLE VII.—PROTECTION OF SELLER.

In case of war, revolution, fire, flood, strikes, accidents, or any other contingencies beyond the control of the seller happening to such number of the mines or works represented by it as to make impossible the production or transportation of the goods herein described, seller shall have the right to cancel this contract with reference to the shipments which may be so affected or to make these shipments after the said impediments and contingencies shall have been removed, provided the respective participants who shall have ordered such shipments agree thereto. Should seller notify any participant that it is prevented from making deliveries in case of war, etc. (as above), such participant shall have the right to buy the quantities so affected from other sellers of potash salts. The quantity discount to which the participants are entitled hereunder shall not be reduced because of such cancellation and such purchases from other sellers of potash salts.

Each participant agrees expressly to use or sell potash salts bought from seller under this contract only in the United States, Canada, Cuba, and Porto Rico. Shipments to Cuba and Porto Rico may be ordered direct to those countries by participants at the same prices and discounts named in this contract except as to difference in freight. Deliveries of mixed fertilizer goods containing potash may be made to any country.

This contract embraces only shipments of potash salts to Atlantic and Gulf ports of the United States and Canada.

This contract further embraces only shipments of potash salts for agricultural purposes. Shipments for chemical purposes are excluded from this contract, but seller agrees to bind such buyers as buy potash salts for chemical purposes not to resell them for agricultural purposes.

ARTICLE VIII.—TAXES AND DUTIES.

Seller hereby assumes and agrees to pay any tax or duty which may be imposed or assessed by the German Government in any way affecting deliveries under this contract. However, if the German Government shall impose or assess any new tax or duty, seller shall have the right or option to cancel any unshipped part of the contract, except as to the minimum quantities which each participant shall be then obligated to take hereunder.

Seller hereby also assumes and agrees to pay any tax or duty affecting deliveries under this contract which may be imposed or assessed by the United States Government under the antidumping act of 1921 or any amendment thereto which may be hereafter enacted, provided, however, in case of such amendment seller shall not be required to pay any tax or duty in excess of amount of tax payable under existing provisions.

On the other hand, each of the participants hereby assumes and agrees to pay any other tax or duty which may be imposed or assessed by the United States Government and/or any war-risk insurance affecting deliveries to it under this contract. However, if the United States Government shall impose or assess any additional tax or duty, each participant shall have the right or option to cancel any unshipped part of the contract except as to the minimum quantity which each participant shall be then obligated to take hereunder and except as to any quantity for which steamers have already been chartered.

ARTICLE IX.

It is hereby expressly provided, anything herein contained to the contrary notwithstanding (subject to the provisions of Art. VI hereof), that in case any participant shall have failed prior to April 1, 1922, to have given to the seller shipping orders or instructions for the full amount of the minimum quantities which it is obligated to purchase set opposite its respective name, that seller shall have the right nevertheless to ship to such participant a quantity of K_2O equal to the difference between such minimum quantity and the quantity for which shipping instructions or orders shall have been so given to the seller. Such quantity of K_2O shall be distributed in any grades whatsoever that the seller may select and shall be shipped to such participant at the port nearest to its factory, and the seller shall be authorized to draw drafts for the purchase price of such potash shipments under the said letter of credit given by such participant under the terms of this agreement, and upon receipt of the documents as hereinbefore provided the bank shall pay such drafts for shipments made under the terms of this paragraph in all respects the same as if the shipments had actually been directed by the participant.

ARTICLE X.

This agreement may be executed in several counterparts.

In witness whereof seller has caused these presents to be executed in its behalf by its managers, W. Forthmann and H. Duehrssen, thereunto duly authorized, and each of the buyers has caused these presents to be executed in its behalf by its officers thereunto duly authorized the day and date first above mentioned.

Contract of the American Agricultural Chemical Co. and others with Societe Commerciale des Potasses D'Alsace, dated November 17, 1921.

Agreement made this 17th day of November, A. D. 1921, by and between Societe Commerciale des Potasses D'Alsace, a body corporate of France, hereinafter called the "Seller," party of the first part, and the American Agricultural Chemical Co., Virginia-Carolina Chemical Co., International Agricultural Corporation, Armour Fertilizer Works, Swift & Co., F. S. Royster Guano Co., Arkansas Fertilizer Co., Baugh & Sons Co., Berkshire Fertilizer Co., Carleigh Phosphate & Fertilizer Co., Darling & Co., E. Rauh & Sons Fertilizer Co., Federal Chemical Co., F. W. Tunnell & Co., Georgia Fertilizer & Oil Co., G. Ober & Sons Co., Griffith & Boyd, Gulf Fertilizer Co., I. F. Thomas & Sons Co., Miller Fertilizer Co., Mutual Fertilizer Co., Olds & Whipple, Piedmont Mount Airy Guano Co., Read Phosphate Co., Reliance Fertilizer Co., Richmond Guano Co., Robertson Fertilizer Co. (Inc.), Rogers & Hubbard Co., Smith Agricultural Chemical Co., Southern Fertilizer & Chemical Co., W. B. Tilghman Co., Wuichet Fertilizer Co., Wilson & Toomer Fertilizer Co., York Chemical Works, who are to purchase from seller not less than 12,500 tons of potash salts (K_2O) as hereinafter provided, together with the following-named persons, who are to purchase additional quantities of potash salts (K_2O) as hereinafter further provided: The Acme Manufacturing Co., A. D. Adair & McCarthy Bros., Anderson Fertilizer & Oil Co., Capital Fertilizer Co., Grasselli Chemical Co., Hubbard Fertilizer Co., Meridian Fertilizer Factory, Savannah Guano Co., Southern States Phosphate & Fertilizer Co., Tupelo Fertilizer Factory, Pelham Fertilizer Co., Charles W. Priddy & Co. (Inc.), a group hereinafter called the "Buyer," as several parties of the second part, the individual members of which group are hereinafter sometimes called "participants"; and

Whereas the participants desire to purchase potash salts from the Seller and avail themselves of the highest discounts, as shown by schedule hereinafter set forth; and

Whereas no one of the participants desires to purchase sufficient quantities to entitle it to the highest discount named hereinafter; and

Whereas the participants, by uniting their purchases under this contract, are able to buy at least the quantity which carries the highest discount, as shown by schedule hereinafter set forth; and

Whereas seller is willing to give a discount to the participants making up a group of buyers under this contract on the basis of aggregate quantity purchased:

Now, therefore, for value received and each in consideration of the agreement by the other herein set forth, the parties agree with each other as follows:

ARTICLE I.—TERMS.

The term of this contract shall be from the date hereof to and including April 30, 1922.

ARTICLE II.—QUANTITIES.

Each participant severally agrees to purchase from the seller, and the seller agrees to sell to each participant, the number of tons (of 2,000 pounds each) of K_2O which is set opposite the name of each participant at the end of this article under the caption "Quantities," at the prices set forth in the schedule in Article III hereof, subject to the conditions, discounts, and limitations hereinafter set forth.

Seller further agrees to sell to each of the participants, in addition to such quantities, additional quantities, not in excess of 33⅓ per cent of such quantities, if any of such participants shall at any time or times during the term hereof so desire.

The seller also agrees to sell to each of the participants any further quantities required by them, provided that at the time of the delivery of shipping instructions and during five days thereafter the exchange rate of the French franc shall be not higher than 7.7 cents per 1 franc. If any participant shall, through the operation of the condition contained in the preceding sentence, not be entitled to receive from the seller such additional purchases which it has agreed to purchase from seller, it shall be free to purchase such additional quantities from other sellers.

	Tons of 2,000 pounds.
The American Agricultural Chemical Co	3,240
Virginia-Carolina Chemical Co	2,140
International Agricultural Corporation	1,185
Armour Fertilizer Works	714
Swift & Co	1,620
F. S. Royster Guano Co	820
Arkansas Fertilizer Co	17
Baugh & Sons Co	540
Berkshire Fertilizer Co	54
Caraleigh Phosphate & Fertilizer Co	60
Darling & Co	27
E. Rauh & Sons Fertilizer Co	13
Federal Chemical Co	60
F. W. Tunnell & Co	263
Georgia Fertilizer & Oil Co	28
G. Ober & Sons Co	154
Griffith & Boyd	98
Gulf Fertilizer Co	144
I. P. Thomas & Sons Co	895
Miller Fertilizer Co	66
Mutual Fertilizer Co	13
Olds & Whipple	25
Piedmont Mt. Airy Guano Co	148
Read Phosphate Co	59
Reliance Fertilizer Co	27
Richmond Guano Co	13
Robertson Fertilizer Co. (Inc.)	36
Rogers & Hubbard Co	72
Smith Agricultural Chemical Co	54
Southern Fertilizer & Chemical Co	27
W. B. Tilghman Co. (Inc.)	121
Nuichet Fertilizer Co	41
Wilson & Toomer Fertilizer Co	158
York Chemical Works	97
Total	12,529
The Acme Manufacturing Co	30
A. D. Adair & McCarty Bros	27
Anderson Fertilizer & Oil Co	43
Capital Fertilizer Co	27
Grasselli Chemical Co	65
Hubbard Fertilizer Co	540
Meridian Fertilizer Factory	30
Savannah Guano Co	27
Southern States Phosphate & Fertilizer Co	30
Tupelo Fertilizer Factory	32
Pelham Fertilizer Co	27
Chas. W. Priddy & Co. (Inc.)	75
	953
Total	13,482

It is understood that the above quantities include deliveries of potash salts since June 1, 1921.

ARTICLE III.—*Price and price schedule payment.*

	In bags of 200 pounds even weight.	In bulk.
Muriate of potash 80/85 per cent, basis 80 per cent K. C. L.	$37.00	$35.75
Manure salt 20 per cent, basis 20 per cent K_2O	12.25	11.00
Kainit 14 per cent, minimum K_2O	9.43	8.18

Per 2,000 pounds net weight in good order ex-vessel Boston, New York, Philadelphia, Baltimore, Norfolk, Wilmington, N. C., Charleston, Savannah, Brunswick, Fernandina, Jacksonville, Mobile, Pensacola, New Orleans, Galveston, St. John, New Brunswick, or Halifax, Nova Scotia, provided quantities ordered for each respective port are sufficient to obtain freight room at reasonable freight rates.

FREIGHT.

Freight to be deducted from the invoice and paid by participants on discharge at port of destination in accordance with charter party and/or bill of lading.

ANALYSIS AND WEIGHT.

Participants agree to accept seller's weights, tares, and analyses; seller agrees to furnish certificates of analyses for potash salts packed in bags and certificates of analyses and weights for potash salts in bulk.

If manure salt 20 per cent shall test by seller's analysis more than 20 per cent K_2O, or kainit 14 per cent more than 14 per cent K_2O, such excess is free of charge, but if the two above-mentioned grades shall test by seller's analysis less than 20 per cent and 14 per cent K_2O, respectively, then seller agrees to make a pro rata allowance.

If participant shall at any time, with reason, claim that an error in weight or in analysis has been made, seller agrees, through its New York agent, to give the matter its prompt attention and proper consideration and to adjust the same without unreasonable delay.

PAYMENT.

The amount of each invoice, less freight, shall be paid by each of the participants in cash in New York City. Each participant shall, within 14 days after the date of this contract, furnish to seller a detailed estimated statement of quantities and grades of potash salts constituting the minimum quantity of K_2O which it shall at the time be obligated to take hereunder, and shall within said 14 days furnish to seller a confirmed irrevocable letter of credit on a New York City bank or banker to be approved by seller, to continue in effect until final payment for such minimum quantity, at the following rates per ton of 2,000 pounds of potash salts, so specified, as per following schedule, to wit:

Schedule.

	In bags of 200 pounds even weight.	In bulk.
Muriate of potash 80/85 per cent, basis 80 per cent K. C. L.	$30.69	$29.47
Manure salt 20 per cent K_2O	8.32	7.20
Kainit 14 per cent K_2O	5.79	4.66

Each participant shall within 30 days after the date of this contract furnish to seller a detailed revised and corrected statement of quantities and grades of potash salts constituting its tonnage of K_2O, and the total amount of the letter of credit issued as above provided shall be readjusted accordingly.

Whenever any participant shall have paid for the aggregate tonnage of K_2O, which participant is obligated to purchase under this contract, said letter of credit shall be released and seller agrees to notify the bank or banker to that effect.

Whenever credits thus established by any participant shall have been exhausted or so released, such participant shall thereafter, either before or at the time of delivery of shipping orders, furnish additional like letters of credit covering all additional quantities so ordered at the above rates per ton of 2,000 pounds of potash salts.

Seller agrees to deliver in exchange for payment: Seller's invoice, consular invoice, certificate of analysis, certificate of weights (for crude salts only), bill of lading, and charter party (if any). In case any of the foregoing documents are delayed and not obtainable on the day of presentation to the New York bank or bankers, seller will present invoice and delivery order and proof of arrival of steamer at port of destination and agrees and guarantees to furnish the foregoing documents as soon as they come to hand, and in any event within 21 days, and each of the participants agrees to instruct its bank or banker accordingly. Each of the participants, however, shall have the right to give seller a bank acceptance maturing four months from the date of presentation of documents or delivery order and bearing interest at the rate of 6 per cent per annum, in lieu of cash; and in such a case seller agrees to repay to such participants one-half of 1 per cent for the bank-acceptance commission. Seller agrees, if so desired by any participant, not to present the documents to the New York bank or bankers before the steamer has arrived at port of destination.

ARTICLE IV.—SHIPMENT.

Shipments are to be made according to shipping instructions to be delivered to seller's agents, H. J. Baker & Bro., at 81 Fulton Street, New York, N. Y., at any time during the term hereof. Each of the participants agrees to order shipments as early as possible. Goods shall be ordered in quantities of not less than 200 tons of bulk goods and/or 50 tons of bag goods to a shipment. Seller agrees to make prompt shipments at such times as participants shall direct.

Seller has the right to make deliveries ex-store Atlantic and Gulf ports in place of shipments from abroad, and in that case the term "ex-store" shall be equivalent to the term "ex-vessel," provided that cost shall be not greater to the participants at their respective works than if delivered ex-vessel, and in such case seller shall furnish public sworn weighers' weights and analysis certificates of Stillwell & Gladding of sample drawn by public sampler, or certificate of any other reputable chemist selected by seller and approved by participant.

DISCHARGE OF GOODS.

Participants shall receive potash salts as per bill of lading and charter party (if any) as soon as steamer is ready to discharge after having secured proper berth, in northern ports, as fast as steamer can discharge; in southern ports south of Baltimore at the rate of not less than 400 tons of 2,240 pounds each per day, Sundays and holidays excepted and weather permitting. On shipments to southern ports seller agrees to stipulate in charter parties that the steamer shall discharge at two wharves as designated by respective participants, provided there is a sufficient depth of water at such wharves. If possible, seller shall also stipulate for discharge at a third wharf, but in such a case participant shall pay the expense of removal of the steamer from the second to the third wharf. Any lighterage at port of discharge is for participants' account, but participants guarantee only 19½ feet of water at Wilmington, N. C., Charleston, and Savannah, and only 20 feet at Mobile, Ala. Seller shall provide in charter party that respective participants shall have privilege of stevedoring at current rates of port.

ARTICLE V.—DISCOUNTS.

QUANTITY DISCOUNT.

Seller represents to buyer that its scale of quantity discounts is:
1 per cent upon purchase of 1,000 tons K_2O.
3 per cent upon purchase of 5,000 tons K_2O.
5 per cent upon purchase of 10,000 tons K_2O.
10 per cent upon purchase of 12,500 tons K_2O.

Inasmuch as the total minimum quantities which participants are obligated to take hereunder, which include the quantities heretofore purchased by the participants since June 1, 1921, from the seller aggregate in excess of 12,500 tons, seller agrees to give participants a quantity discount of 10 per cent (to be calculated on the prices set forth in the schedules in Article III). This discount shall be deducted from each invoice.

Seller agrees not to give to any other buyers of potash salts in the United States (Atlantic and Gulf ports) and/or Canada any higher discounts for the respective quantities than above stated or any lower prices or better terms than herein contained.

SPECIAL DISCOUNT.

Seller further agrees to pay a special discount of 2 per cent (to be calculated on the prices set forth in the schedule in article 3) on all quantities of potash salts sold hereunder which shall be resold by any participant to dealers and/or consumers in unmixed form. Any participant making such resales shall, upon furnishing to the seller an affidavit of the total tonnage of each grade of such sales, be entitled to receive such discount within 60 days after April 30, 1922.

SEPARATE DISCOUNT.

Seller agrees to pay any of the participants a separate discount of 1 per cent (to be calculated on the prices set forth in the schedule in article 3) on all deliveries made to such participants, provided (1) such participant shall state in its price that potash salts can now be had in all required quantities, and that it is advisable to buy mixed goods containing as high a percentage of potash as is suitable to the respective crops; and (2) such participant shall instruct its selling organization and salesmen to sell and recommend mixed goods containing as high a percentage of potash as is suitable to the respective crops.

Any such participant shall, upon furnishing to seller an affidavit stating that it has fully complied with the above conditions, be entitled to receive such discount within 60 days after April 30, 1922. Failure of any participant to comply with such conditions shall not deprive any other participant of its rights to such separate discount.

ARTICLE VI.—PROTECTION OF PARTICIPANTS.

In case seller during the term of this contract shall sell to any purchaser of potash salts in the United States to or through Atlantic and Gulf ports and/or ex-warehouse and/or Canada any grade or grades of

potash salts, whether mentioned in this contract or not, at lower prices and/or allow or pay to any such purchaser higher discounts or better terms than those named in this contract, then and in such event such lower prices and/or higher discounts and/or better terms shall also apply to this contract with retroactive effect as though such lower prices and/or higher discounts and/or better terms had originally been contained in this contract, provided that nothing herein contained shall preclude the seller from selling to other groups of buyers and allowing discounts on the basis of the aggregate purchases of such groups under contract containing similar provisions to those of this contract.

In the event that potash salts should be offered to any participant at lower net prices than those named in this contract, such participant shall be entitled to buy such salts, provided (1) that the quantity so offered to such participant shall be bona fide and substantial, aggregating approximately 1,000 tons K_2O; (2) that notice of the net price at which such potash can be purchased shall have been given to the seller's agents in New York, H. J. Baker & Bros., at 81 Fulton Street, or to the seller at its office at 25 West Forty-third Street, and the seller shall not within five days thereafter have notified the participant that it intends to meet such lower price by reducing the prices named in this contract to such price offered to the participant.

In case the seller should elect so to reduce the net prices specified in this contract, such reduction shall apply to all participants and to all quantities not yet shipped to the participants, during the entire remainder of the term of this contract. No quantity discount from such reduced prices shall be allowed.

In the event that the seller should not elect to reduce its prices for the remainder of the term of the contract to meet the prices offered to any participant, then any such participant shall have the right on notice to the seller's agents given to them in New York, at 81 Fulton Street, to cancel and to terminate so much of the contract as shall cover so much of the grade of potash salts for which such offer at a reduced price has been received and accepted, and which reduction of price the seller is unwilling to meet as above set forth.

In the event that the seller should determine not to reduce its prices, but to permit any participant to purchase such salts at such reduced prices from other sellers, it shall not in any wise affect the right of such participant or of any other participant to receive the quantity discount of 10 per cent, to which each participant is entitled hereunder, and each participant shall be entitled to receive such discount notwithstanding it shall make such purchases from other sellers of potash salts.

In the event that seller shall not reduce its price in the event of a lower price being offered to any participant, and shall permit such participant to purchase potash salts from others as herein provided, seller agrees immediately to notify the bank or banker issuing the letters of credit herein above referred to, that the credit of such participant has been reduced by an amount to be determined by multiplying the number of tons of 2,000 pounds of the grade of potash salts as to which the contract is so canceled by the rate applicable to the grade as specified in the table of rates set forth in this contract above in paragraph entitled "Payment."

In the event that seller shall reduce its price to meet the prices offered by others, seller agrees immediately to notify the bank or bankers issuing the said letters of credit of such reduction of price and of the corresponding reduction in the liability of each and every participant under said letters of credit to an amount to be computed as follows: The tonnage of each grade which such participant shall at the time still be obligated to purchase shall be multiplied by the reduced price applicable; from each such sum thus obtained there shall be deducted an amount equal to the number of tons of 2,000 pounds each of such grade multiplied by $2.70.

The prices named in Article III and the discounts named in Article V of this contract shall also apply to all quantities received or ordered by participants since June 17, 1921, and such quantities shall be deemed to be included within the terms and conditions of this contract.

The seller further agrees that if the prices in Article III shall hereafter be reduced, as above provided in the first paragraph of Article VI, such reduced prices shall then be applicable to the purchases referred to in the preceding sentence.

In the event of war, revolution, fire, flood, strike, accident, or any other contingencies beyond the control of the participants happening to such number of the factories owned and operated by any participant or its branches, that the operation thereof shall be interfered with or interrupted in such manner as to prevent such participant from using all the merchandise agreed to be purchased by it under this agreement, such participant has the right to cancel such portion of this contract as may be affected thereby, by giving notice to the seller's agents in New York to that effect; provided said goods shall not have been shipped or vessels to carry the same shall not have been chartered prior to notice being given to seller's agents of the existence of such impediments. Such cancellation shall not deprive the participant so canceling or any other participant of the quantity discount which it is entitled to hereunder.

ARTICLE VII—PROTECTION OF SELLER.

In case of war, revolution, fire, flood, strikes, accidents, or any other contingencies beyond the control of the seller happening to such number of the mines or works represented by it, as to make impossible the production or transportation of the goods herein described, seller shall have the right to cancel this contract with reference to the shipments which may be so affected or to make shipments after the said impediments and contingencies shall have been removed, provided the respective participants who shall have ordered such shipments agree thereto. Should seller notify any participant that it is prevented from making deliveries in case of war, etc. (as above), such participant shall have the right to buy the quantities so affected from other sellers of potash salts. The quantity discount to which the participants are entitled hereunder shall not be reduced because of such cancellation and such purchases from other sellers of potash salts.

Each participant agrees expressly to use or sell potash salts bought from seller under this contract only in the United States, Canada, Cuba, and Porto Rico. Shipments to Cuba and Porto Rico may be ordered direct to those countries by participants at the same prices and discounts named in this contract, except as to difference in freight. Deliveries of mixed fertilizer goods containing potash may be made to any country.

This contract embraces only shipments of potash salts to Atlantic and Gulf ports of the United States and Canada.

This contract further embraces only shipments of potash salts for agricultural purposes. Shipments for chemical purposes are excluded from this contract, but seller agrees to bind such buyers as they buy potash salts for chemical purposes not to resell them for agricultural purposes.

ARTICLE VIII.—TAXES AND DUTIES.

Seller hereby assumes and agrees to pay any tax or duty which may be imposed or assessed by the French Government in any way affecting deliveries under this contract. However, if the French Government shall impose or assess any new tax or duty, seller shall have the right or option to cancel any unshipped part of the contract, except as to the minimum quantities which each participant shall be then obligated to take hereunder.

Seller hereby also assumes and agrees to pay any tax or duty affecting deliveries under this contract which may be imposed or assessed by the United States Government under the antidumping act of 1921 or any amendment thereto which may be hereafter enacted; provided, however, in case of such amendment seller shall not be required to pay any tax or duty in excess of amount of tax payable under existing provisions.

On the other hand, each of the participants hereby assumes and agrees to pay any other tax or duty which may be imposed or assessed by the United States Government and/or any war-risk insurance affecting deliveries to it under this contract. However, if the United States Government shall impose or assess any additional tax or duty each participant shall have the right or option to cancel any unshipped part of the contract except as to the minimum quantity which each participant shall be then obligated to take hereunder and except as to any quantity for which steamers have already been chartered.

ARTICLE IX.

It is hereby expressly provided, anything herein contained to the contrary notwithstanding (subject to the provisions of Article VI hereof), that in case any participant shall have failed prior to April 1, 1921, to have given to the seller shipping orders or instructions for the full amount of the quantities which it is obligated to purchase set opposite its respective name that seller shall have the right nevertheless to ship to such participants a quantity of K_2O equal to the difference between such minimum quantity and the quantity for which shipping instructions or orders shall have been so given to the seller. Such quantities of K_2O shall be distributed in any grades whatsoever that the seller may select, and shall be shipped to such participant at the port nearest to its factory, and the seller shall be authorized to draw drafts for the purchase price of such potash shipments under the said letter of credit given by such participant under the terms of this agreement, and upon receipt of the documents as hereinbefore provided the bank shall pay such drafts for shipments made under the terms of this paragraph in all respects the same as if the shipments had actually been directed by the participant.

ARTICLE X.

Whereas seller recognizes an obligation to the participants following (but to no participant other than those named): The American Agricultural Chemical Co., Armour Fertilizer Works, International Agricultural Corporation, F. S. Royster Guano Co., Swift & Co., Virginia-Carolina Chemical Co., Acme Manufacturing Co., A. D. Adair & McCarty Bros., Anderson Phosphate & Oil Co., Arkansas Fertilizer Co., Baugh & Sons Co., Berkshire Fertilizer Co., Capital Fertilizer Co., Caraleigh Phosphate & Fertilizer Co., Darling & Co., Federal Chemical Co., Georgia Fertilizer & Oil Co., Grasselli Chemical Co., Griffith & Boyd Co., Gulf Fertilizer Co., Meridian Fertilizer Factory, Miller Fertilizer Co., Mutual Fertilizer Co., G. Ober & Sons, E. Ruah & Sons Fertilizer Co., Read Phosphate Co., Reliance Fertilizer Co., Richmond Guano Co., Robertson Fertilizer Co., Rogers & Hubbard Co., Savannah Guano Co., Smith Agricultural Chemical Co., Southern Fertilizer & Chemical Co., Southern States Phosphate & Fertilizer Co., I. P. Thomas & Sons Co., W. B. Tighman Co., (Inc.), Tupelo Fertilizer Factory, Wuichet Fertilizer Co., York Chemical Works, Chas. W. Priddy & Co. (Inc.), growing out of last year's business with them by which the seller has agreed to refund 6,023.42 metric tons of K_2O to said participants in proportion to the quantities of potash taken by them in 1920–21, and the seller hereby agrees with each of such participants, but only if participants shall make purchases of potash salts from seller as hereinafter set forth to deliver to each of such participants in proportion to the amounts set after their names hereafter in this article, free of cost, in good order, ex-vessel, at any of the ports named in article 3 hereof which may be designated by the participants, provided the quantities for each respective port are sufficient to obtain freight room at reasonable freight rates, the following amounts of K_2O of the grades specified by the participants:

1. During 1922–23 a total tonnage free of cost of K_2O equal to 10 per cent of the purchases by each of such participants during such year not in excess of the amounts hereafter set opposite the names of such participants.

2. If any such participant shall not purchase during 1922–23 the full amount hereafter set opposite its name, it shall then be entitled to a tonnage free of cost during the year 1923–24 consisting of a total tonnage of K_2O equal to 10 per cent of such portion of the amount hereafter set opposite its name as it shall not have purchased during 1922–23, and as it shall purchase during 1923–24: *Provided, however*, That the total tonnage free of cost during 1923–24 which any participant shall be entitled to hereunder shall in no case exceed 2.5 per cent of the amount hereafter set opposite its name, even though such 2.5 per cent shall be less than 10 per cent of its purchases during 1923–24, and it shall have no right in or claim to any balance remaining and to which it shall not have become entitled by reason of its purchases made as aforesaid. The failure of any participant to purchase during the periods mentioned in this article the quantity of K_2O set opposite his name shall not in any wise prejudice the right of the other participants to receive the said free tonnage.

Seller agrees to quote as low net prices for K_2O as the lowest net prices at which such grades of potash salts shall be offered to any participant by any seller outside of the United States, it being also understood that in computing such net prices the K_2O to be delivered free of cost as hereinbefore provided shall not be taken into consideration.

If for any reason whatsoever no contract shall be entered into between the parties for the year 1922–23 and for the following year of 1923–24, the obligation of the seller shall be a continuing one and the said participants shall be entitled to receive the free-of-cost tonnage to the extent and upon the terms and conditions hereinbefore set forth, upon the entering into of contracts between the parties hereto for the purchase of K_2O whenever such contracts may be entered into.

The amount of tonnage which is the basis of computing the amount of free tonnage to which each of such participants shall be entitled is as follows:

	Metric tons.
American Agricultural Chemical Co	12,305.90
Armour Fertilizer Works	4,151.40
International Agricultural Corporation	7,947.10
F. S. Royster Guano Co	4,966.00

	Metric tons.
Swift & Co	3,397.00
Virginia-Carolina Chemical Co	7,860.60
Acme Manufacturing Co	214.20
A. D. Adair & McCarty Bros	894.60
Anderson Phosphate & Oil Co	643.50
Arkansas Fertilizer Co	639.90
Raugh & Sons Co	1,947.50
Berkshire Fertilizer Co	150.70
Capital Fertilizer Co	473.90
Caraleigh Phosphate & Fertilizer Co	347.80
Darling & Co	247.20
Federal Chemical Co	491.10
Georgia Fertilizer & Oil Co	1,127.90
Grasselli Chemical Co	529.60
Griffith & Boyd Co	581.60
Gulf Fertilizer Co	108.70
Meridian Fertilizer Factory	659.20
Miller Fertilizer Co	237.20
Mutual Fertilizer Co	858.40
G. Ober & Sons Co	380.30
E. Rauh & Sons Fertilizer Co	425.50
Read Phosphate Co	789.70
Reliance Fertilizer Co	581.90
Richmond Guano Co	1,221.90
Robertson Fertilizer Co	496.90
Rogers & Hubbard Co	136.80
Savannah Guano Co	621.00
Smith Agricultural Chemical Co	75.40
Southern Fertilizer & Chemical Co	1,016.00
Southern States Phosphate & Fertilizer Co	111.60
I. P. Thomas & Sons Co	876.20
W. B. Tilghman Co. (Inc.)	785.30
Tupelo Fertilizer Factory	287.70
Pelham Fertilizer Co	260.00
York Chemical Works	405.70
Charles W. Priddy & Co. (Inc.)	981.80
Total metric tons	60,234.20

if seller should fail to meet competitors' prices (as aforesaid) and for this reason.

It is agreed that in the event that contracts between the seller and such participants shall not have been entered into and the seller shall sell to other persons in the United States potash salts at net prices equal to or lower than those offered by any seller outside of the United States, then the seller shall be obligated to deliver to each such participants the free of cost tonnage of K_2O hereinbefore referred to, even though no contract for the sale of K_2O shall be entered into between the seller and such participants, in such event each of such participants shall be entitled to obtain delivery from the seller of tonnage of K_2O free of cost to which it is entitled as hereinbefore provided, in manner following: Not exceeding 75 per cent thereof during the first year and not exceeding 25 per cent thereof during the second year succeeding such sale to other persons in the United States.

It is further agreed that if the seller shall enter into any contract or arrangement with any other foreign producers by which directly or indirectly the marketing of the product from the seller shall be pooled or an agreement made for its disposition in connection with the products of such other foreign competitors in such a manner that the seller shall be unable to sell to participants as contemplated, before the participants shall have received the free-of-cost tonnage to which they are entitled to hereunder, then the seller agrees that it shall be obligated to deliver to each such participant the free-of-cost tonnage of K_2O hereinbefore referred to, even though no contracts for the sale of K_2O shall be entered into between the seller and such participants. In such event each of such participants shall be entitled to obtain delivery from the seller of tonnage of K_2O free of cost to which it is entitled as hereinbefore provided in manner following: Not exceeding 75 per cent thereof during the first year and not exceeding 25 per cent thereof during the second year succeeding the entering into such contract or arrangement with such other foreign producers.

ARTICLE XI.

This agreement may be executed in several counterparts.

This contract shall be binding on such of the parties hereto who execute the same, even though all of the parties named as several parties of the second part shall fail to execute the same: *Provided, however*, That a sufficient number of parties of the second part mentioned on page 1 who are to purchase from seller not less than 12,500 tons execute this contract so that the total quantities set opposite the names of such parties so executing under Article II hereof shall at least equal an aggregate of 12,500 tons.

Seller agrees that all details in the performance of this contract in its behalf may be arranged by participants through seller's agents, H. J. Baker & Bro.

This contract shall be binding on the successors and assigns of the parties hereto.

In witness whereof seller has caused these presents to be executed in its behalf by its director Gustave Lenable, thereunto duly authorized, and each of the buyers has caused these presents to be executed in its behalf by its officers thereunto duly authorized the day and date first above mentioned.

Executed and delivered in the presence of

SOCIETE COMMERCIALE DES POTASSES D'ALSACE,
By ——, *Director*.

The words "the above quantities include" having been restored, the words "shall be adjusted as to prices, terms, and conditions of this contract" on page 4 having been stricken out, the words "which include the quantities heretofore purchased by the participants since June 1, 1921, from the seller," on page 5, having been restored, and the words "the seller should fail to meet competitors' prices (as aforesaid) and for this reason" having been inserted at the top of page 17 before execution by participants, and such changes having been made by cable authority from Mr. Lenable.

H. J. BAKER & BRO.,
For SOCIETE COMMERCIALE DES POTASSES D'ALSACE.

Mr. SHORTRIDGE. Mr. President, I appreciate the hour and the desire of Senators to proceed to a vote. The facts as applicable to this question have been very fully stated by different Senators. I should be very glad indeed if all the Senators were familiar with the facts as they were developed before the committee and as they are authoritatively stated by the various briefs and documents which were submitted. Much now has by consent been carried into the RECORD, and I hope that before the matter is finally disposed of each and every Senator, quite regardless, quite indifferent to political affiliations, will familiarize himself with those records. I say that very earnestly, indulging myself in the belief or the thought that Senators will come to the conclusion that the American industry needs the aid which is here proposed to be given.

If, Mr. President, posterity shall take any note whatever of this day's transaction in this body, it will be seen that I stood here solitary and alone in voting against substituting a bounty for a tariff. In very brief words, I desire to say that I think a mistake was made in abandoning a principle in which I believe. I firmly believe that the industry should be encouraged, should be developed, so that we may be independent of foreign nations in times of peace, commercially and economically, and certainly in time of danger, if danger shall ever threaten or come upon us.

So, believing that the industry should be encouraged not for the immediate benefit of those directly engaged in it but for them and the whole country, and with great deference to others for whose opinions I have genuine, not feigned, respect, I thought and think that the proper way to protect and encourage the industry was by way of a tariff; wherefore I voted against attempting to substitute a bounty instead of a tariff duty. In the wisdom of the Senate, however, they have turned from the protective theory or method, and it is for us to determine whether we shall adopt the bounty system for the limited period of five years.

I listened, though at a distance and with some difficulty, to the Senator from Utah [Mr. SMOOT] when he said that, given this bounty, if within a five-year period the industry had not become, so to speak, self-sustaining and able to compete with the foreigner or unable to sustain itself in competition, he would never vote to continue this method of aid or assistance. I want to say for myself that I do not anticipate five years and commit myself to what I shall then do. I reserve for myself always the right to shape my conduct according to the exigencies of the times. I hope that the Senator from Utah may be here five years from now in the full vigor of his great intellect. Anticipating that time, it might well be that he and every one of us would not only wish to give this aid but increase it; for we would not desire nor would any of these patriotic Senators around about me desire that our country should once more become dependent upon a foreign enemy.

Mr. SMOOT. By that time we shall know whether a bounty will accomplish the object or whether we shall have to come to protection.

Mr. SHORTRIDGE. We might then turn from bounty to protection; but, in any event, with great respect—and I do not say this to embarrass any Senator or to get into controversy on a collateral thought—I do not think it wise or the part, pardon me, of a statesman to commit himself to an act to occur possibly in the distant future.

Much has this day been said here in regard to this industry; I need not repeat it. I could detain Senators for hours in stating what the record discloses; but I think there is an erroneous idea abroad in the land, perhaps it is entertained here, that the deposits of potash in my State of California are limited. Those deposits are inexhaustible. The evidence of that would be all conclusive before any court, before any tribunal whose ministers would be governed by the evidence. We could prove beyond reasonable doubt that with modern inventions and the use of modern machinery the deposits—to use that word—in California are practically inexhaustible; that they would certainly not be exhausted for 100 years; and that there is a quantity there sufficient, if developed, to supply America for probably 100 years.

Mr. REED. Mr. President——

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Missouri?

Mr. SHORTRIDGE. Certainly.

Mr. REED. Will the Senator tell us whether the deposit to which he refers is rich enough so that it may be successfully worked?

Mr. SHORTRIDGE. My answer is "yes," but it can not be worked in competition with foreign trusts or combinations that would temporarily depress prices, in order to put us out of business, and would then hold us at their mercy.

Mr. REED. At what price can potash be produced there?

Mr. SHORTRIDGE. I have not the exact figures in my mind in relation to that, I will say to the Senator from Missouri.

Mr. REED. Can it be produced at the present market prices?

Mr. SHORTRIDGE. I should doubt that very much.

Mr. REED. For how much above the present market price can it be produced?

Mr. SHORTRIDGE. I am not, on my feet, able to answer the Senator's question and state the exact figures.

Mr. REED. Why can it not be produced as cheaply as it can be produced in Germany?

Mr. SHORTRIDGE. Because of the cost of labor, broadly speaking.

Mr. REED. What proportion of the cost of the finished product is labor?

Mr. SHORTRIDGE. The cost of producing it might be said to commence, as I do commence, with the capital invested; thence on down through all the processes to its completion.

Mr. REED. What I am trying to get at is whether, if this industry is thoroughly established, it is then going to be able to operate and to produce as cheaply as we can buy abroad and make a reasonable profit, or whether it has got to be fed with a spoon forever?

Mr. SHORTRIDGE. I do not propose to feed that or any other industry with a spoon.

Mr. REED. Well, with a scoop shovel, I presume.

Mr. SHORTRIDGE. Nor with a scoop shovel; but, answering the distinguished Senator, who comes back with laurels upon his brow——

Mr. REED. I am merely trying to get information.

Mr. SHORTRIDGE. I will give the Senator my theory as to how we propose to help this industry, as I would help every other industry, whether it be in California or in Missouri. I am not here saying that we ever can carry on this industry in the United States in direct competition with like industries in foreign countries. I say that in respect to hundreds of industries in America; I say it in respect to the rice industry, the sugar industry, the bean industry, the citrus fruit industry, and many other industries of field and shop that I could name. We differ, perhaps, radically as to these theories. As for me, I think—and I venture to add, "I think I know"—that the prosperity of a great industry in Missouri—and there are reasons not now disclosed why I feel very kindly toward that State—would be of benefit to my State of California or to my native State of Iowa, just to the north of Missouri. I think it is to our interest, and, as American Senators, we should strive by all legal means to build up industries in America, to multiply them, to diversify them, so that all men, women, and also children of proper age, shall find employment; for without employment at reasonably remunerative wages there are want and misery and tears and suicide; but when the people of Missouri, or of North Dakota, or of Utah, or of my own dear, incomparable State of California are all employed, all engaged in legitimate labor, then prosperity goes laughing through the fields and through the shops; then happiness is in the hearts of men; women sing, children laugh, and fathers are proud and happy.

I believe it is my duty to aid this industry by way of tariff, or in this instance by way of a bounty. I am familiar with the geography and topography and the geology, and so forth, of my State. I know that in this industry there have already been invested millions of capital; that it has heretofore employed many men in profitable labor. I know that now for reasons which have been stated all is paralysis. I know that merchants, Democrats and Republicans, and men of other type politically, all join in calling upon me to aid this industry. I speak their matured mind, not their selfish, narrow, unpatriotic mind.

Mr. REED. Mr. President——

Mr. SHORTRIDGE. I will ask the Senator to pardon me for a moment. In a communication which I have here, and which, if time permitted, I would gladly read, because it is a splendid and logical argument, addressed to me by the Inyo Chemical Co., its president speaks of "pioneers and patriots." They were, indeed, pioneers and patriots in the development of this important American industry. I ask consent, Mr. President, that the letter may be printed in the RECORD without reading.

The PRESIDENT pro tempore. The Senator has a right to read it.

Mr. SHORTRIDGE. I will not take the time to read it. Perhaps, however, having said so much concerning it, reading a paragraph or two may not be uninteresting to Senators. I speak with a certain degree of embarrassment because of the hour and of the desire of the Senate to speed on its work, but I hope Senators will indulge me. The writer of the letter says—and I address myself to the intellect of those who listen—

> It has been repeatedly stated that America can not compete with Germany in the production of potash and other chemicals. These statements have been so numerous and so forceful and insistent that even the best friends of American industry have come to believe they are true.
>
> The Inyo Chemical Co. is the owner of a potash deposit situated in Deep Springs Valley, Inyo County, Calif. This company has been carrying on a system of exploration, development, and scientific research for a period of four years. The best engineers, chemists, and scientists available have been giving profound and careful thought and study to the problems that have to do with quantity, quality, and economic reclamation of the chemicals locked up in the vast storehouse of this deposit.

Here [exhibiting], Senators, are some pictures illustrative of Searles Lake and of the deposits referred to in the letter from which I am now quoting.

> Therefore, when we come to you and say that American producers of potash and other chemicals can compete with Germany or any other country in the world we have positive experience and facts back of our statements.
>
> First, let me say that scientific exploration of this property began as early as November, 1917, and that since that time we have been constantly engaged in exploration, development, and construction. We have had a corps of chemists and engineers working almost constantly since that time.

I will read from another paragraph of the letter:

> Experiments in connection with this plant, which was of the capacity of about one-half ton per day and built only for experimental purposes, extended into 1921. We are now engaged in building a 10-ton unit for the production of high-grade potash, carbonate of soda, and borax.
>
> Right here let me say that all the natural potash brines so far discovered in the United States, including the lakes in Nebraska and California, contain valuable by-products in the form of carbonates and sulphates, and that the brines of the potash lakes of California contain an added chemical in the form of borax. It has been stated that the presence of these chemicals is detrimental to the potash. I am about to say to you positively that all the various chemicals in the potash brines of the California lakes can be separated, and that instead of the other chemicals being a detriment the by-products that can be reclaimed from the potash brines of California will eventually be made to pay the entire cost of production.

Mr. REED. May I ask the Senator to read the last sentence again?

Mr. SHORTRIDGE. I will read it with pleasure.

> I am about to say to you positively that all the various chemicals in the potash brines of the California lakes can be separated, and that instead of the other chemicals being a detriment the by-products that can be reclaimed from the potash brines of California will eventually be made to pay the entire cost of production.

Mr. REED. That seems to answer my question as to whether or not this could ever be made an industry to stand on its own feet.

Mr. SHORTRIDGE. It might be so, Senator.

Mr. REED. That would seem to indicate it.

Mr. SHORTRIDGE. It would so indicate unquestionably. If they succeed along the lines this writer points out, this industry will be self-sustaining in the years to come.

I turn now particularly to that part of the letter dealing with the investments made there, why, and when—but first this paragraph:

> In connection with this propaganda relative to a $34,000,000 duty, permit me to direct your attention, first, to the fact that before the war our total importation of potash from Germany amounted to about $18,000,000 per year, not to exceed $20,000,000 at any time, and on which importation German producers nor American importers paid not one cent. Next, let me call your attention to the fact that due to the necessity of war with Germany, American patriots and pioneers invested in property, plants, machinery, communities, etc., approximately $50,000,000. This investment of $50,000,000 at its best can not produce more than 20 per cent, or one-fifth, of the potash required for consumption in the United States, therefore it is safe to say that in order to produce all the potash that will be required for United States consumption it will eventually mean an investment of five times that amount, or $250,000,000.

I am sure Senators follow the thought of the writer—that up to the date mentioned $50,000,000 were invested, which, he argues, had been sufficient by way of development to produce approximately one-fifth of the consumption in America, and the thought he advances further is that with the industry growing and developing, by the investment of five times that amount there would be an investment of $250,000,000, which, wisely administered, would furnish the supply for the American demand; but he states that to follow it by this further thought, which struck me as quite intelligent, and, I think, logical:

> In an article which I wrote in 1919 I estimated that it would require $360,000,000 in investments to produce all the potash consumed in this country within 10 years after the war. Now let me call your attention to an item of taxation—

I pause here. I think it is nine and a half millions that this bounty provides for, is it not?

Mr. SMOOT. A total of that amount.

Mr. SHORTRIDGE A total of nine and a half millions over a period of five years; and while it is quite true, as the Senator from Wisconsin [Mr. LENROOT] with some vehemence remarked, that this Nation is staggering under the burden of taxation, I do not think its back will break by reason of imposing nine and a half millions additional during the coming five years.

This writer says, however—and I repeat—

Now let me call your attention to an item of taxation: The $50,000,00 invested by American potash pioneers and patriots was not exempt from taxation. The industry was employing many people and building up new empires, yet they were expected to pay not only the Federal taxes but also the State, county, and other taxes that are spread upon the tax rolls. I don't know what the total in percentage on the investment would be, but it is safe to figure a gross of 5 per cent to cover all the various taxes which an American farmer, manufacturer, or business man must pay in order to maintain our several governments, build roads, harbors, etc. Therefore the amount that would have to be paid by an industry with a total investment of $250,000,000 would actually amount to $12,500,000 per year, and an industry of this magnitude would, in its various ramifications of employees, subindustries, consumption of supplies, fuel, etc., maintain a still larger investment that must also pay taxes.

Perhaps I can not emphasize his thought by any words of my own; but I gather from the writer and I submit to the Senate that if we should invest, if you please, if the Government should invest nine and a half millions in this enterprise, if you may so call it, and it should result in investment of two hundred and fifty or three hundred and sixty-odd millions, it would bring about investments and taxable properties which through taxes would repay many, many times over the investment of nine and a half millions. That is one thought which I think, while not of course determinative of the problem, is worth consideration.

Mr. TRAMMELL. Mr. President——

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Florida?

Mr. SHORTRIDGE. Certainly; with pleasure.

Mr. TRAMMELL. Does the writer give any information there indicating that the maintenance and the fostering of this industry will bring about a reduction in the price of potash to the producers of this country, passed on, of course, to the consumers? Is there any hope for the producers, the farmers of the country, that they will get potash cheaper on account of the Government fostering this industry?

Mr. SHORTRIDGE. I think so; for if our industry is put out of business, and the German and the French producers of potash, which manifestly are trusts or combinations, control the situation, we will have higher prices, unless science shall make some great and miraculous discovery.

Mr. TRAMMELL rose.

Mr. SHORTRIDGE. May I go on just a little further, by the Senator's leave, to answer him? However, I stand ready for another question.

Mr. TRAMMELL. I was going to ask why, then, in anticipation of somebody else's advance of prices, we should take action here that will result in an immediate advance of prices in order to try to foster the industry in this country?

Mr. SHORTRIDGE. I do not think it would follow; but if it did, temporarily, for the ultimate good I would favor it.

Responding to the thought of that question, I say to the Senator from Florida that that same thought is involved in every item in this tariff bill. Why, Senators, I come from California. We look out upon the Pacific Ocean, the greatest ocean on earth. The ocean was once regarded as a barrier and a protection for a nation. We now know that the ocean is an avenue of approach. We look across there to the islands, to Hawaii, and on to the Philippines, and to Japan, and to China, and farther on to India. We have in California an American type of civilization, men and women from every State in the Union, the pioneers of '49, who came, indeed, from Florida and Maine—brave men, courageous women.

They went around the Horn in small sailing vessels or across the Isthmus with the dangers of natives and of miasma, or across the plains with Indians to fight and the wild forces of nature; but they carried civilization there; they carried the Christian religion there; they carried the American flag there, and there they have builded the great Commonwealth of California. Our schools, colleges, universities, our fields, our factories, all are there as the result of the brave men and the braver women who crossed to that favored land. I say this not merely to pay tribute to the State I love, but to emphasize that we can not compete with the oriental. The American farmer, with wife, with children of his affection, with schools and colleges, with our type and standard of civilization, can not compete with the Japanese or with the Chinese coolie. We can not do it. You may say, then, let us perish. No, no; I know you will not say that. I know you love that State as you do your own. We are American Senators here, and our hearts are big enough to hold in loving care every State in this Union. We can not compete with the Chinese or the Japanese in our own fields, nor can we compete with the product of their labor when that product is produced yonder in Japan, or in China, or in Mongolia, or in Manchuria, or in farther India. We can not do that.

But you say, "Well, how can Government help?" Government can help, as every nation knows, as every statesman ought to realize, by imposing appropriate and adequate tariff duties upon the products of foreign countries, whereby we derive revenue for our own Government and protection to our own people. It is not a theory. It is in many instances a concrete, tragic fact. Therefore when I am asked the question, "Can we ever produce as cheaply as the foreigner?" I answer you, "I do not think we can." We never can compete here in America, with our type of civilization, with the poor, the downtrodden, the oppressed, the miserable, the unhappy peoples of many of the lands of the earth.

Ah, you may say to me that we should endeavor to do so; that God made us of one blood; that whether we be Hottentots or Shakespeares we are brothers. I do not know how you feel about this. Loving all mankind as I do, hating none, not desiring to injure any people on this earth, nevertheless I think of my own country and our people first; and in everything, in every bit of legislation affecting our domestic affairs or affecting our foreign relations I have in mind always, first and forever, the welfare, the dignity, the honor, the glory of our Nation and the happiness of our people.

My fellow Senators, this potash industry very directly affects California. There are more than two companies interested. There are many companies interested in this industry. The deposits, to come back to that thought, are said to be almost inexhaustible. Millions of dollars have been invested in machinery, in appliances, in the starting and the development of this industry, and, as has been stated, they are idle to-day, and the men of California, quite regardless of politics, quite regardless of partisanship, indifferent to that phase of this matter, are unanimous in saying that this industry is of vast importance to the State and needs aid from the Government.

Mr. REED. How many men does it employ?

Mr. SHORTRIDGE. At present very few.

Mr. REED. How many men has it employed since the period of building the works outside of the construction of the works?

Mr. SHORTRIDGE. Directly and indirectly, I would safely say thousands.

Mr. REED. I mean, now, outside of the construction of the works, how many did it employ in the manufacture or production of potash?

Mr. SHORTRIDGE. In carrying supplies, in erecting machinery——

Mr. REED. I said excluding the construction of the works.

Mr. SHORTRIDGE. The Senator can not force my answer.

Mr. REED. I am not trying to force an answer.

Mr. SHORTRIDGE. I do not know, on the spur of the moment, the exact number of men immediately employed in and about the works, but there is hauling and teaming and all sorts of labor. Probably other Senators can furnish the definite information.

Mr. REED. The Senator will understand that when I speak about employment in the works, I mean how many men are employed in this industry outside of the matter of constructing the buildings. Of course, the construction of the plant is one thing. When that is done, it is over. With the plant constructed, how many men were employed at any one time in the works; I mean by that haulers, teamsters, and everything that goes with it.

Mr. SHORTRIDE. I will not undertake to answer when the figures are not definitely in my mind, but I promise the Senator that I will look up the data and endeavor to answer him and the Senate before the matter is disposed of. There was some reference in this letter, I think, to the fact that this one company in its preliminary stages had employed several hundred.

With the indulgence of Senators, I will presume to read a little further from this letter.

However, the above will illustrate the point that I want to bring out, namely, that if the potash industry of this country is developed to an extent that it will produce all the potash consumed in the United States, it will pay into the treasuries of our various governmental departments $12,500,000 per year. Therefore, if the industry is not developed and the potash, which is an absolute necessity, come in free of any kind of taxation, that $12,500,000 per year must be paid by other industries, farmers, merchants, manufacturers, and citizens.

When one looks at the propaganda, such as the clipping above, made for the purpose of deception—false, dishonorable, and misleading—he wonders how long the American people will stand for this sort of thing.

If importations of potash paid 25 per cent ad valorem duty that would only be paying $4,500,000 per year on the total amount of potash consumed per year previous to the war.

I read another paragraph:

We have had war. Every American citizen is being called upon to pay taxes. Why should we permit the foreigner to take advantage of our fine roads, harbors, and other facilities for making sales and de-

deliveries of their product without asking him to pay, with reasonable equality, the same proportion that our own citizens are asked to pay for these facilities and advantages?

I have here a letter addressed to me by the West End Chemical Co., which presents the views of that company, with which I agree, and I ask permission that it may be carried into the RECORD. (See Appendix.)

I also have a letter from the Western Industries Co., with headquarters in San Francisco, upon the same subject, and from which I will venture to read one paragraph:

Our plant, if it could be operated to capacity, would give steady employment to over 100 men and would turn out 600 tons of potash per month. It and similar other plants throughout the country are lying idle or working on very limited capacity. We all need all of the protection we can get if we are to remain in the field against foreign importation.

I have here also a respectful letter addressed to me by the Whitney Chemical Co., of San Francisco, from which I take the liberty of reading one short paragraph:

There has been a great development in this industry on the Pacific coast in the last few years as a by-product of the salt plants and a duty such as proposed in this bill is essential to the industry. We sincerely hope you will support the duty on these products, and we will be pleased to give you any further information if you wish.

We have in that State the county of San Bernardino, in so-called southern California. I read a telegram addressed to me by the board of supervisors of that county. It reads:

SAN BERNARDINO, CALIF.

Senator SAMUEL SHORTRIDGE,
Washington, D. C.:

Millions of dollars are invested in this county in potash. The successful operation of the potash industry depends entirely upon the temporary protection given in the proposed tariff bill. We request your influence to retain potash schedule in proposed House bill.

BOARD OF SUPERVISORS SAN BERNARDINO COUNTY, CALIF.

I happen to know, I think personally, each and every member of that board. They are high-class men. They are not grafters; they are not dreamers; they are practical men, representative men, chosen by the people of the county to speak for them in domestic matters, and they express these thoughts.

I trouble you with saying this in the hope that Senators of Democratic faith may see that this is, if you will and if you choose to so call it, an exception to your fundamental views upon tariff. Very reputable, very honorable Members of the Senate, for reasons sufficient to them, have voted, generally speaking, against the bill as proposed by the committee. On the other hand, for reasons which to them seemed good and all sufficient, they have voted for tariff duties on certain imported articles. All who listen know to whom I refer. I have no criticism but high praise for such Senators, and I am hoping that Members on the Democratic side of the Chamber, where I have the honor temporarily to stand, will see in this industry such merit as will persuade them that it will be wise and proper to give this temporary assistance or aid.

In so doing, they do not stultify themselves, not at all. The Senator from Alabama [Mr. HEFLIN] did not stultify himself nor do himself any dishonor when he voted for a tariff duty on certain products of his State, and I can say the same of other Senators—the Senator from Wyoming, the Senators from Louisiana, the Senators from Arkansas, the Senator from Montana, the Senator from New Mexico, and Senators from other States. For reasons good and sufficient, they did as they did, and I am hoping that in respect to this industry, which so vitally concerns the people of my State and I think almost as vitally concerns the people of every State—for we are one Nation, not 48 States—I am hoping that this industry will be supported and aided, if you please, not forever, as some might think, but for the temporary period of five years, at a total cost to the Government of $9,500,000.

It will not bankrupt Uncle Sam. While I believe in curtailing expenses, in cutting down expenses, in lopping off many unnecessary offices, and decapitating a great many unnecessary officers, this is an instance where I think it will be helpful not only to Nebraska, to Utah, to California, but, in the larger view, helpful to America to incur expenses. I never again wish to see my country dependent upon any foreign country for any article which by our labor and genius we can produce, whereby American men and women may receive profitable employment. I never wish to see my country dependent and terror-stricken in time of war.

God grant that war may never come again to this Republic, a prayer which I think every good man and every Christian mother utters every day and every hour; but the ways of Providence are mysterious, beyond our comprehension, and it may be that our Nation, righteous as it is, and smitten with a love of peace, shall again be embroiled in danger. I do not say this in fear or trembling, but as a precaution against dependency on foreign and possibly hostile nations. In time of peace or war we should, I submit, accord this protection and aid and assistance to this important American industry.

APPENDIX.

INYO CHEMICAL CO.,
San Francisco, Calif., December 30, 1921.

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

DEAR SIR: As Senator from the great State of California and a representative of the people of California and the United States I am sure you will be interested in having before you some facts about the chemical industry and the potash industry of the United States that are not generally known.

It has been repeatedly stated that America can not compete with Germany in the production of potash and other chemicals; these statements have been so numerous and so forceful and insistent that even the best friends of American industry have come to believe they are true.

The Inyo Chemical Co. is the owner of a potash deposit situated in Deep Springs Valley, Inyo County, Calif. This company has been carrying on a system of exploration, development, and scientific research for a period of four years. The best engineers, chemists, and scientists available have been giving profound and careful thought and study to the problems that have to do with quantity, quality, and economic reclamation of the chemicals locked up in the vast storehouse of this deposit. Therefore when we come to you and say that American producers of potash and other chemicals can compete with Germany or any other country in the world we have positive experience and facts back of our statements.

First let me say that scientific exploration of this property began as early as November, 1917, and that since that time we have been constantly engaged in exploration, development, and construction. We have had a corps of chemists and engineers working almost constantly since that time.

In 1919 about 5,000 gallons of brine of the Deep Springs Valley Lake was sent to the laboratories of the University of Michigan, where experiments were made under the direction of our engineers.

In 1920 we built a complete plant on the property for the purpose of making potash and extending experiments in a practical way. The results of the work in this plant were an unqualified success in that the crude potash produced by the plant showed an analysis of 98 per cent pure potassium chloride, and that by a very simple and inexpensive process other chemicals contained in the brine could be reclaimed in a high state of purity in addition to the unprecedented high grade of the crude potash.

Experiments in connection with this plant, which was of the capacity of about one-half ton per day and built only for experimental purposes, extended into 1921. We are now engaged in building a 10-ton unit for the production of high-grade potash, carbonate of soda, and borax.

Right here let me say that all the natural potash brines so far discovered in the United States, including the lakes in Nebraska and California, contain valuable by-products in the form of carbonates and sulphates, and that the brines of the potash lakes of California contain an added chemical in the form of borax. It has been stated that the presence of these chemicals is detrimental to the potash. I am about to say to you positively that all the various chemicals in the potash brines of the California lakes can be separated and that instead of the other chemicals being a detriment, the by-products that can be reclaimed from the potash brines of California will eventually be made to pay the entire cost of production.

We have a process whereby the borax is separated from the potash by the simplest possible method, and at an infinitesimal cost. We have also discovered in our research work a process for reclaiming the sodium carbonate, which can be readily converted into sodium bicarbonate and soda ash.

The other constituents of the California brines are principally sodium sulphate and common salt. These may also be separated in a high state of purity and can be made available for market when freight rates will permit.

Please keep in mind the presence of valuable by-products in the potash brines of California and at the same time take note that the potash salts from German mines do not contain valuable by-products. Also please note that while the crude potash as manufactured by the Inyo Chemical Co. is 98 per cent potassium chloride, equal to 61.7 per cent potassium oxide, the German crude potash salts run from 12 to 20 per cent potassium oxide, or K_2O.

It has been unfortunate that the high price of potash during the war and the absolute necessity for this product at that time stimulated the building of large and expensive plants for the purpose of getting a production, no matter what the cost, because it was not then a question of quality but one of quantity. The word had gone out that the country must have potash at any cost and the pioneers and patriots got busy. The result was the investment of a large capital in plants to produce potash that were not only expensive to build but also inefficient to operate. Therefore when the war ended and our ports were thrown open and foreign-produced potash permitted to come in without any taxation whatever the pioneers and patriots who saved the country during the war were asked to continue paying their taxes on a basis of war-time investments, with the result that an industry with a total investment of $50,000,000 has been throttled.

Fortunately, or unfortunately, the Inyo Chemical Co. did not have available funds to build a large plant promptly upon the discovery of the immense deposit in Deep Springs Valley; we have therefore been compelled to proceed slowly and give our available funds to research and scientific work.

I can say to you without reservation that the results we have achieved can be achieved in the same proportion by other potash producers in the State of California. I can say to you positively from scientific explorations made in the Deep Springs Valley and Searles Lakes that there is a supply of potash in these two lakes sufficient to supply the entire United States for more than a hundred years. It only remains for the legislators of this country to become possessed of a knowledge of the true facts in order that this immense wealth which has laid dormant for so many years becomes available and a part of the trade, commerce, and vitality of our own people.

The following is a clipping which I received in the mail from one of my friends in Boston yesterday:

[From the Bridgeton Evening News, Wednesday, December 7, 1921.]

SAVE DOMESTIC POTASH BY CLAPPING A $34,000,000 DUTY ON ITS IMPORTATION FROM ABROAD AND LET THE CONSUMING PUBLIC GO HANG IS THE NEWEST ALTRUISTIC PIECE OF LEGISLATION.

"Here he is again. Little old Mr. Special Interest is out in the legislative limelight waving the flag and calling for protection for another war-time baby. We're great protectionists. We'll just naturally protect anything with the old high tariff. Going to slap it on importation of potash now. That will save the domestic industry—maybe.

"That's one side. When you slap a $34,000,000 duty on something somebody has to pay. This time it's the farmer first and then the consuming public. The farmer has been battling with unequal price levels, and then with high freight rates. Just as he begins to see the markets ahead along comes a little scheme to add about $3 to the cost of production on every acre of his ground. He can't pay it, so he'll quit using potash. Presto—no potash, poor crops—the public pays.

"How do they do it? A little group, these domestic potash producers, but they've pushed their duty through the House in the Fordney tariff bill, and now it's up to the Senate.

"The best the domestic industry can produce is less than one-fifth of the country's demand for potash, but they're going to shove a $34,000,000 bump in front of the farmer's market truck. That's the spirit. No one ever heard of bringing down the cost of living by soaking a duty on potash when potash is one of the three necessary ingredients of fertilizer, and fertilizer is imperative for good crops. Watch potatoes, cotton, fruit, beets, tobacco, and a lot of other commodities soar if the potash duty goes over. Who cares? We've saved another war-time baby, and one that realized handsome profits in its time, too."

In connection with this propaganda relative to a $34,000,000 duty, permit me to direct your attention, first, to the fact that before the war our total importation of potash from Germany amounted to about $18,000,000 per year, not to exceed $20,000,000 at any time, and on which importation German producers nor American importers paid not one cent. Next let me call your attention to the fact that due to the necessity of war with Germany, American patriots and pioneers invested in property, plants, machinery, communities, etc., approximately $50,000,000. This investment of $50,000,000 at its best can not produce more than 20 per cent, or one-fifth, of the potash required for consumption in the United States; therefore it is safe to say that in order to produce all the potash that will be required for United States consumption, it will eventually mean an investment of five times that amount, or $250,000,000. In an article which I wrote in 1919 I estimated that it would require $360,000,000 in investments to produce all the potash consumed in this country within 10 years after the war.

Now let me call your attention to an item of taxation; the $50,000,000 invested by American potash pioneers and patriots was not exempt from taxation. The industry was employing many people and building up new empires, yet they were expected to pay not only the Federal taxes but also the State, county, and other taxes that are spread upon the tax rolls. I don't know what the total in percentage on the investment would be, but it is safe to figure a gross of 5 per cent to cover all the various taxes which an American farmer, manufacturer, or business man must pay in order to maintain our several governments, build roads, harbors, etc. Therefore the amount that would have to be paid by an industry with a total investment of $250,000,000 would actually amount to $12,500,000 per year, and an industry of this magnitude would, in its various ramifications of employees, subindustries, consumption of supplies, fuel, etc., maintain a still larger investment that must also pay taxes.

However, the above will illustrate the point that I want to bring out, namely, that if the potash industry of this country is developed to an extent that it will produce all the potash consumed in the United States, it will pay into the treasuries of our various governmental departments $12,500,000 per year. Therefore, if the industry is not developed and the potash, which is an absolute necessity, comes in free of any kind of taxation, that $12,500,000 per year must be paid by other industries, farmers, merchants, manufacturers, and citizens.

When one looks at the propaganda, such as the clipping above, made for the purpose of deception—false, dishonorable, and misleading—he wonders how long the American people will stand for this sort of thing.

If importations of potash paid 25 per cent ad valorem duty, that would only be paying $4,500,000 per year on the total amount of potash consumed per year previous to the war.

I ask of you in all fairness, why should any commodity, no matter what it is, whether we can produce it in this country or not, come into the United States without paying, as near as can be, the same rate of taxation imposed upon our own citizens—farmers, manufacturers, and merchants?

Taxes are assessed and paid in proportion to the facilities and advantages furnished by the Commonwealth. If there are no facilities, the taxes should be proportionate, e. g., if you enjoy concrete roads, you expect to pay taxes proportionate to the advantages.

The Hottentot of Timbuctoo is the man John Stuart Mill had in mind when he wrote that celebrated chapter on international free trade, because the Hottentot has no fine roads, harbors, facilities, advantages, or taxes, and therefore the importer to such a country is not getting "something for nothing," and consequently is entitled to free entry.

We have had war. Every American citizen is being called upon to pay taxes. Why should we permit the foreigners to take advantage of our fine roads, harbors, and other facilities for making sales and deliveries of his product without asking him to pay, with reasonable equality, the same proportion that our own citizens are asked to pay for these facilities and advantages?

In conclusion, let me say to you that if the legislators of the United States Senate and House of Representatives will put a duty on potash and other chemicals that are now being imported into the United States sufficient to cover all the taxes that would be paid by these industries when in operation we will furnish to the American farmer and to other American industries potash at a lower price than they have ever purchased it heretofore.

Neither the American farmer nor the American statesman need have any fear as to the ultimate outcome.

I am attaching hereto some cuts and photographs that will give you some idea of the magnitude of the Deep Springs Lake deposit. The Searles Lake deposit, on which four plants were built, is many times larger than this one.

Thanking you in advance for any interest you may see fit to take in giving the information which I hand you to your friends and colleagues, I am,

Yours very truly,

H. W. CARR,
President Inyo Chemical Co.

SAN FRANCISCO, CALIF., *July 18, 1921.*

Hon. SAMUEL MORGAN SHORTRIDGE,
United States Senate, Washington, D. C.

DEAR SIR: We wish to urge your support of the Fordney tariff bill as applying to magnesium chloride and potash.

There has been a great development in this industry on the Pacific coast in the last few years as a by-product of the salt plants, and a duty such as proposed in this bill is essential to the industry. We sincerely hope you will support the duty on these products and we will be pleased to give you any further information if you wish.

Yours very truly,

WHITNEY CHEMICAL CO.,
LESLIE D. WHITNEY, *President.*

—

WESTERN INDUSTRIES CO.,
San Francisco, Calif., July 13, 1922.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: The present tariff bill which is under discussion before the House carries the following duties on potash materials of interest to us:

"Potassium chloride or muriate, potassium sulphate, kainit, wood ashes and beet-root ashes, and all crude potash salts not specially provided for for a period of five years beginning on the day following the passage of this act there shall be levied, collected, and paid on the actual potash (potassium oxide) content of the foregoing a duty of 2½ cents per pound for the first two years, 2 cents per pound for the third year, 1½ cents per pound for the fourth year, and 1 cent per pound for the fifth year, and thereafter free of duty.

"Potassium bichromate, 2½ cents per pound."

We would like your active support on the above duties.

We were the first concern in the United States to develop a potash supply after the German supply was cut off during the war.

We have over $200,000 invested in the potash department of our plant.

Our plant, if it could be operated to capacity, would give steady employment to over 100 men, and would turn out 600 tons of potash per month. It and similar other plants throughout the country are lying idle or working on very limited capacity. We all need all the protection we can get if we are to remain in the field against foreign importation.

Sincerely,

K. S. MARYANSKI,
Assistant Secretary.

—

OAKLAND, CALIF., *July 13, 1921.*

Hon. SAMUEL MORGAN SHORTRIDGE,
United States Senate, Washington, D. C.

DEAR SIR: There is now pending before the Houses of Congress a permanent tariff bill, which, if passed, will establish a duty on potash ranging from 2½ cents per pound the first year to 1 cent per pound the fifth year and thereafter duty free.

We believe you are well informed regarding the potash industry and the hardships and vast expenses entailed in locating deposits in America at a time when it was vital to the interest of the entire country that potash be found here on account of the foreign supply being cut off and our crops and lands suffering for lack of it when so much depended on those crops.

Due largely to conditions caused by the present rates of foreign exchange and to the differential of labor rates, foreign labor is obtainable at a rate of approximately 50 cents (American money), whereas, as you know, rates in this country are many times in advance of that amount, it is prohibitive to try and compete with the foreign market without some protection by tariff.

This company entered the search for potash at the time it was so greatly needed, and we have established a very large plant at Searles Lake in the Mojave Desert in California for the reclaiming of potash from the salt brine of the lake. We have spent a million dollars in developing a process of refining that has now reached the point where we feel certain of being able to produce potash in competition with the foreign market if given the very small protection for the short time called for in the bill now pending.

There are many other companies besides ourselves that put forth their millions in money as well as their time and effort to aid their country in the time of need, and there are many thousands of people whose investment and living is dependent on the continued operation of the industry.

We feel certain that you will give this potash tariff your deep consideration, and that you will vote for its passage.

Very truly yours,

WEST END CHEMICAL CO.,
NORMAN P. ELLIS, *Acting Secretary.*

Mr. SIMMONS. Mr. President, I know every Senator is extremely anxious to dispose of this paragraph to the end that we may proceed to the consideration of the other paragraphs which we must finish, under the rule, before we recess this afternoon. This is no time, therefore, for discussion. I think the subject has been pretty well covered by the debates which we have had.

I have here certain data, with comments, furnished me by experts of the department. I ask unanimous consent to incorporate them in the RECORD at the close of my remarks.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SIMMONS. Mr. President, I simply want to say this and nothing more. I should have liked to discuss the question rather fully because it is an important one. It has been said that we will only have to pay $9,500,000 during the five years. That depends upon the amount of fertilizer potash that is made. I anticipate that with the $50 per ton bounty potash will be made in the United States not for the potash but in order to get the bounty. In that way a large amount will be made, and in the end, instead of $9,500,000, we may have to pay out of the Treasury many times that sum.

The proposition of giving bounties is to my mind always obnoxious. It is one of the most evil suggestions that has been

made in connection with our legislation. I think it is indefensible whenever applied, but when we apply that principle to the creation and fostering and nourishment and development of an industry when we know, after we shall have spent millions of dollars in bounties to put it upon its feet, that as soon as those bounties are withdrawn the industry will necessarily fall to pieces because it can not for natural reasons compete with a like industry in a foreign country, it is doubly obnoxious. That is the character of industry we are now proposing to foster with a bounty. During the war, under the influence of the embargo, the industry did develop, but developed very slowly. Although the price was very high, still it developed very slowly. At the end of the war the bounty was withdrawn and the factories were practically closed.

Those who had entered into it had gone out of business. They made large profits while in business during the war because of the high prices prevailing while the embargo was in force. Now we are proposing to give that industry for five years a further practical monopoly and practical embargo upon their products in America; that is to say, we are proposing to subsidize them to the extent of $50 a ton for their fertilizer, nearly twice the price of the foreign product.

At the end of the five years, just as surely as I stand here, if that bounty shall be withdrawn, the industry that we shall have developed will go to pieces in the face of the foreign competition—and why? It must be apparent to Senators on both sides of the Chamber, from the facts which have developed in the discussion, that it is absolutely impossible for us to make in the United States, by artificial means and by expensive processes, a potash that can be sold in competition with the potash that is found abroad in inexhaustible quantities in the soil and needs only to be dug up, as we would dig up sand. So it is proposed to build up an industry with foreknowledge that as soon as we get it built up and withdraw the fostering care that builds it up it will go to wreck again and that all the money we shall have invested in building it up and developing it will be thrown away and the American people who will have gone down into their pockets to furnish the bounties will have nothing to show for the money that has been legislated out of their pockets into the hands of these people.

APPENDIX.

POTASH.

USES.

About 95 per cent of all potash is used for fertilizer purposes. It is used principally in the growing of cotton, tobacco, potatoes, citrus fruits, and garden truck.

MARKET.

The principal market is located in the South Atlantic States, which consume over half of the annual yearly consumption in the United States.

FOREIGN RESOURCES.

Prior to the war Germany held an almost complete monopoly on the world's trade in potash. This monopoly was made possible by the possession of the only known large deposits of soluble potash salts, located near Stassfurt and in Alsace. With France now in possession of Alsace sharp competition between these two deposits for the world's trade in potash may be expected.

DOMESTIC PRODUCTION.

Before the outbreak of the World War there was practically no potash produced in this country. The domestic production during the war has been developed until in 1918 the output from all sources was about 54,000 short tons of actual potash (K_2O), or about 20 per cent of our normal pre-war consumption. About one-half of the domestic production in 1918 came from the saline lakes in Nebraska.

DOMESTIC CONSUMPTION.

For several years before the outbreak of the war the imports of potash salts averaged about 1,000,000 tons. This quantity represents a normal pre-war consumption of approximately 270,000 short tons of actual potash (K_2O). Over 99 per cent of this import came from Germany.

FUTURE OF AMERICAN POTASH INDUSTRY.

It is questionable if the recovery of potash on the present scale from the natural brines of Nebraska and California, from kelp, and from the leucite hills of Wyoming can be continued after the resumption of foreign competition. The raw materials are not as suitable for cheap production of potash as are the minerals of the Stassfurt, Germany, and Alsace, France, deposits. The American sources are far from the chief markets—South Atlantic States—which places them at a large disadvantage in regard to freight rates.

NEED OF POTASH.

Potash is essential to the growth of all plants. In the United States the cotton crop needs and has in the past taken by a substantial margin more commercial potash than any other crop. A large proportion of the cotton-growing area is greatly benefited by its use. The lack of potash in the soil can not be compensated for by the addition of other fertilizers.

IMPORTS.

The imports into the United States of potash salts for several years prior to the outbreak of hostilities had averaged about 1,000,000 tons, valued at a little less than $15,000,000. The actual potash (K_2O) content of these salts from 1906 to 1914, in short tons, were as follows:

1906	155,974
1907	144,351
1908	136,057
1909	173,220
1910	279,780
1911	274,446
1912	253,678
1913	270,720
1914	207,089

DOMESTIC PRODUCTION COMPARED WITH IMPORTS.

A comparison of the yearly production of potash during and since the World War with total imports in short tons were as follows:

Year.	Domestic production.	Imports for consumption.
1914	.....	207,089
1915	1,090	48,867
1916	9,720	7,885
1917	32,573	8,100
1918	54,803	7,957
1919	32,474	39,619
1920	48,077	224,792
1921	10,171	81,017

All the above are official Government figures.

PRESENT CONDITION OF AMERICAN POTASH INDUSTRY.

By the end of 1920 many of the domestic producers of potash had closed their plants and at present the industry is at a standstill. Quoting from "Potash in 1921," by M. R. Nourse, in "Mineral Resources of the United States" (Geological Survey), "The general business depression, the peculiarly disorganized condition of the fertilizer business, the high freight rates, and the low price of foreign potash are given by former producers of domestic potash" as the causes for the rapid decline of the industry in the United States.

DOMESTIC CONSUMPTION.

In the following table are given for the years 1913 to 1921 the total consumption of fertilizer in the United States, the total potash (K_2O) used, the average percentage potash content in the fertilizer, and the increased cost which an addition of 2½ cents per pound would entail on the potash actually consumed:

Year.	Fertilizer sold in United States.	Potash consumed.	Average potash.	Total increased cost, at 2½ cents per pound.	
				On potash actually consumed.	If 5 per cent potash content were used.
	Short tons.	*Short tons.*	*Per cent.*		
1913	6,544,340	273,124	4.2	$13,655,700	$16,360,850
1914	7,240,320	178,610	2.5	8,930,500	18,100,800
1915	5,573,200	60,204	1.1	3,010,200	13,933,000
1916	5,390,540	17,605	.3	880,250	13,476,350
1917	6,206,540	40,673	.6	2,033,650	15,516,350
1918	6,756,740	62,760	.9	3,138,000	16,891,850
1919	6,891,320	61,034	.9	3,051,700	17,228,300
1920	7,654,220	247,252	3.2	12,362,600	19,135,550
1921	4,500,000	71,997	1.6	3,599,850	11,250,000

From the preceding table it can be readily seen that during the World War the use of potash in fertilizer was curtailed to such an extent that the productivity of our soil was necessarily considerably diminished. From an average of over 4 per cent in 1913, the potash content in the fertilizer fell to three-tenths of 1 per cent in 1916. If there had been a duty of 2½ cents per pound on potash imported in 1913 an additional cost would have resulted to the farmer of over $13,500,000, and in 1920 of over $12,000,000. If, during these nine years, 5 per cent potash had been used in the fertilizer (a normal need) the increased cost at 2½ cents to the American farmer would have averaged yearly about $15,750,000.

FARM EXPENDITURES FOR FERTILIZER.

The following table shows the expenditures by the farmers of this country, according to the United States Census Office, for 1909 and 1919 for fertilizers, and several leading States:

	1919		1909	
	Value.	Per cent of total, United States.	Value.	Per cent of total, United States
Total for United States	$326,399,800	.....	$114,882,541	.....
South Carolina	52,546,795	16.1	15,162,017	13.2
North Carolina	48,796,694	14.9	12,262,533	10.7
Georgia	46,196,434	14.3	16,860,149	14.7
Virginia	17,277,705	5.3	6,932,455	6.0
Other South Atlantic States	20,882,549	6.4	8,407,976	7.3
Total South Atlantic States	185,700,177	57.0	59,625,130	51.9
Total southern east of Mississippi River	211,177,032	64.7	72,525,369	63.1
Maine	7,759,067	2.4	4,089,479	3.5

It can be readily seen from the preceding table that the Southern States are the dominant factor in the fertilizer of the country. The South Atlantic States in 1909 consumed by value about 52 per cent, and in 1919 57 per cent, of the total of the country, and the Southern States east of the Mississippi River purchased 63 per cent in 1909 and 64.7 per cent in 1919.

POTASH CONSUMPTION BY STATES.

The latest available figures for a normal year of potash consumption are for 1910, which are as follows:

State.	Potash consumption.	Per cent potash content in fertilizer.	Fertilizer consumption.	Per cent of United States consumption of potash.	Cultivated acres.	Pounds of potash consumed per 100 acres cultivated.
	Short tons.		*Short tons.*			
North Carolina	28,909	4.1	630,095	10.0	5,737,037	1,007.8
Maine	8,334	6.4	116,085	2.8	1,588,065	1,049.6
Florida	15,086	7.8	172,641	5.4	1,223,078	2,466.9
New Jersey	9,234	6.9	120,000	3.3	1,114,903	1,656.5
Massachusetts	4,408	6.1	64,000	1.6	654,844	1,346.3
Connecticut	2,925	6.5	40,000	.1	534,846	1,093.8
South Carolina	42,706	3.6	1,048,806	15.3	5,152,845	1,657.6
Georgia	44,650	3.5	1,134,000	16.0	9,662,383	924.2

The preceding table gives an idea of the high percentage of potash contained in the fertilizers consumed in some of the Eastern States where intensive cultivation is engaged in, running as high as 7.8 per cent in Florida, 6.9 per cent in New Jersey, 6.5 per cent in Connecticut, and 6.4 per cent in Maine. For 1910 the total fertilizer consumed in the entire country was over 6,000,000 tons, which contained about 280,000 short tons of pure potash, which averaged therefore nearly 4.6 per cent content of potash.

PRICES.

Prices of imported and domestic potash (pure K_2O) for comparative purposes are rather difficult to obtain, as the price depends somewhat upon the grade and amount of potash contained in the potash salts. The figures given below were obtained from "Mineral Resources of the United States" (Geological Survey), and the prices are per unit (20 pounds) of potash (K_2O):

Year.	Imported—Average price at point of origin for year.	Domestic—Average sales price f. o. b. plant for year.
1913	$0.52	
1914	.55	
1915	.77	$3.14
1916	2.62	4.37
1917	3.75	4.29
1918	4.50	4.11
1919	1.46	2.31
1920	1.71	1.80
1921	1.21	1.02

Since the middle of 1921 to the middle of 1922 the prices of imported potash have decreased from 20 per cent to 50 per cent. The prices quoted above are for potash which is to be used chiefly for fertilizers. With the prices of foreign-bought potash back to the pre-war levels the proposed duty of 2½ cents per pound or 50 cents per unit of 20 pounds will mean an ad valorem equivalent of nearly 100 per cent.

PRICES OF IMPORTED POTASH VERSUS DOMESTIC FREIGHT RATES.

Allow me to quote from the hearings of 1922 before the Senate Finance Committee (p. 4740) regarding the discussion with Mr. S. D. Crenshaw, of Richmond, Va., representing the National Fertilizer Association, as follows:

"Senator JONES. What is your contract price for the German potash per unit? What does it amount to?

"Mr. CRENSHAW. The price of muriate of potash is $37 per ton for 50 units.

"Senator JONES. How much would that be per unit?

"Mr. CRENSHAW. From that has to come off discount, making it $31.64, divided by 50. That is 63 and a fraction over—between 63 and 64 cents a unit.

"Senator JONES. Then you get potash here almost for the cost of transportation?

"Mr. CRENSHAW. That is what I say is one of the difficulties of the western producers.

"Senator JONES. The western producer never could get rid of this freight charge.

"Mr. CRENSHAW. Of course, he can hope to have a reduction in it.

"Senator SMOOT. Were the prices you quoted on the product delivered here, or are they German prices?

"Mr. CRENSHAW. Delivered in United States ports.

"Senator MCLEAN. Is the supply in Germany inexhaustible?

"Mr. CRENSHAW. Absolutely, Senator.

"Senator MCLEAN. Of course, if that were true they would have an incentive to sell all that they can and at a fair profit."

Mr. Crenshaw continues: "Freight from the Nebraska lakes, which run from 22 per cent to 25 per cent K_2O content, to main fertilizer consuming points is $15 to $16 a ton, or 60 cents a unit (20 pounds) of pure potash. From California freight on 32 per cent K_2O was $23.25 per ton, or 70 cents per unit, of potash." Thus we can get potash delivered at American ports almost as cheap as the cost of transportation from Nebraska and cheaper than from California.

DIFFICULTY WITH AMERICAN POTASH.

I wish to quote from a brief filed by Mr. J. D. Cameron Bradley, vice president of the American Agricultural Chemical Co., during the Senate hearings of 1922 (p. 4725):

"I do not believe that this country can successfully compete with German or French potash unless actual deposits of potash salts are discovered. The potash produced from the Nebraska lakes is low grade and inferior in quality to the German article either for direct application or for use in mixed fertilizers. The California product contains a certain amount of borax, which is deleterious to plant life, and this company is unwilling to risk its use. Other companies who have used it have suffered heavy losses in consequence of the borax injuring the crops. It is now claimed that the amount of borax has been reduced to a safe percentage, but of this fact we are not as yet sufficiently convinced to risk using it in our fertilizers.

"I can not believe that Congress will consent to levy a tax upon the products of the soil and indirectly upon the very sustenance of every citizen."

Allow me to quote again from Mr. Crenshaw, of Richmond, Va., regarding the many practical reasons that militate against American potash:

"No producer in America can furnish kainit, which is the form of potash salt that is most largely used by the American farmers in an unmixed state. The muriate of potash (K_2O content about 50 per cent) produced from the largest American source—Searles Lake, Calif.—still bears the prejudice of the consumer and the fear of the fertilizer manufacturer as to the use of it, because of experiences with it in the past, when they produced a muriate of potash so high in borax as to injure crops and cause innumerable damage suits that cost many fertilizer manufacturers immense sums. The product of the Nebraska lakes is good for its grade, except for the fact of its being so alkaline as to prevent practically the use of certain important ammoniates in manufacturing complete mixed goods, because it causes loss of ammonia."

Boiled down, the essence of the facts is:

"(1) In spite of five years of war, which gave the American producers a monopoly, and which they exercised to arbitrarily charge the highest prices obtainable, even to the extent of six or seven times the pre-war and present prices of potash—say, approximately $4.50 per unit—they were never able to produce the equivalent of over 54,000 tons of pure potash in any one year. Therefore, I repeat, there is no reason to expect that they can produce the normal American requirements at present prices even plus proposed tariff, say, about $1.10 per unit, when they could not produce more than about 25 per cent of the normal American requirements with prices practically four times as high.

"(2) Should the farmers of this country be taxed a sum estimated by American producers at approximately $54,000,000 in the effort to nurture a war-time business baby to self-supporting manhood, when it looks hopeless to successfully accomplish this?

"(3) Much propaganda has been published to the effect that the present price of German potash is due to the low value of the German mark, but the fact is that many years ago, when the German mark was normal, we made a contract for German potash at about 30 per cent lower than the present prices.

"(4) In May, 1920, some fertilizer manufacturers bought the equivalent of about 12,500 tons of pure potash from certain American producers at what they claimed to be cost prices, because they stated that bankruptcy would otherwise result to many of them, and, furthermore, that they had worked out in research laboratory new methods to reduce their costs and save by-products that made it certain they would be able to meet foreign competition as to price. Now, 19 months later, instead of having fulfilled their prophecies, they ask for tariff protection for five years at the expense of the farmer.

"(5) The use of potash is not confined to farmers who grow any single crop or to any special section of our country. The interest is identical with growers of potatoes in Florida, the Carolinas, Virginia, New York, Maine, Michigan, etc. The same is true of producers of wheat, corn, etc., whether North, South, East, or West. Florida citrus fruits would reach you in poorer condition unless the grove owners feel that potash prices not only justify their using it, but using it in the form of sulphate. Without potash especially the sandy lands of the South can not produce normal yields of cotton. The tobacco crops of Florida, the Carolinas, Pennsylvania, Connecticut, Massachusetts, Wisconsin, Kentucky, Porto Rico, etc., are all dependent on potash. Porto Rico could not successfully grow sugar cane without it. Peaches, apples, strawberries, vegetable crops, wherever grown, require it.

"(6) Certain forms of potash much used and desired in the United States can not be produced in this country.

"(7) One of the difficulties of the American production is that the freight rates from producing to consuming points average some 40 to 50 cents per unit of potash, or nearly as much as the cost of foreign potash delivered at American ports."

INADEQUACY OF AMERICAN SUPPLY OF POTASH.

Quoting again from Mr. Crenshaw, on page 4739 of the Senate hearings, as follows:

"Mr. CRENSHAW. I said that the representatives of the American potash producers met November 14, 1921, when I had an interview with them. I have already told you that I asked them to please make a showing as to what the possible production in America would be at the end of a five-year tariff protection. They promised to give it to me, as I have stated, but I have never heard from them since.

"Senator SMOOT. They may do it at this hearing.

"Mr. CRENSHAW. One minute. At the same interview I asked them what was the productive capacity of the United States——

"Senator SMOOT. To-day?

"Mr. CRENSHAW. In the next year, and here it is. This is a memorandum that I dictated after our meeting was over. All this is in tons of K_2O. They estimated that Trona could produce 20,000 tons; Salduro, 10,000 tons; what we call the Nebraska Lakes, 12,500 tons; the Alunite of Utah, 6,000 tons; the United States Alcohol Co., 3,000 tons; the cement companies, 3,000 tons; the beet-sugar companies, 5,000 tons; the West End Chemical Co., at Searles Lake, 1,500 tons, making a total of 61,000 tons. That, they say, is their ability to produce now."

In the Senate hearings before the Finance Committee, on pages 4747–4749, we have the statement of Hon. JOHN S. BENHAM, a Representative in Congress from the State of Indiana:

"Representative BENHAM. I represent the fourth district of Indiana in the House, and when not acting as a Member of Congress my most serious business is agricultural pursuits.

"During probably 10 years prior to my becoming a Member of the Sixty-sixth Congress my main business was buying run-down, worn-out farms that nobody wanted and attempting to refertilize them, repair buildings, and, in short, I was something of a doctor of sick farms. I relied on two agencies—the very liberal use of potash and, of course, the use of clover. I have made quite large use also of commercial fertilizer rich in this one element, potash, and using from a few pounds of potash per acre up to 100 pounds, owing to the crop I wanted to produce, the condition of the soil, and the time I had for building up the farm.

"The whole delegation from Indiana in the House, including myself, are high protectionists. I do not need to give out any family secrets. I am speaking on the potash question from the standpoint

of a high protectionist for all promising American industries. However, the element potash is protected at the rate of 25 per cent ad valorem in the chemical schedule, which we agriculturists do not oppose.

"I am speaking against the tariff on agricultural potash, because I do not believe—I have seen no evidence, no statistics anywhere that makes me believe—that it is or is likely to become a promising American industry."

I do not find any evidence of any single year where the American producers have produced more than one-eighth of the amount demanded and needed. The largest amount produced in any one year in the United States was about 54,000 tons. On the other hand, 375,000 tons have been used by the American farmer, and a vastly greater amount is now needed, owing to the fact that not enough potash was used during the war.

EFFECT OF PROPOSED RATE UPON FARMER.

Hon. JOHN S. BENHAM continues:

"The tariff of 50 cents a unit would be a burden on the American farmer of from 50 cents to $50 per acre.

Allow me to add also from the hearings on page 4752 the statement of Dr. Frank App, representing New Jersey Federation of County Boards of Agriculture and New Jersey State Grange, Trenton, N. J.:

"The tomato farmer finds it very hard on him because he is usually not so large a farmer, but it means $20 per farm for the tomato grower who grows the normal amount in the tomato section. And the same is true of sweet potatoes. They use about the same amount for sweet potatoes, or $20 for a man who grows the normal acreage. The farmer opposes the tariff as it exists, first, because of the excessive cost to the farmer when you are charging him about $12,500,000 to $15,000,000 for protection to an industry to the extent of $2,500,000—in other words, you are not only protecting the man who is going to make the potash, but you are also charging over and above that quite a large amount—and, second, because of the poor distribution, as the man who grows potatoes and other vegetables pays an excessive amount of this tariff."

It may also be interesting to note the increased cost to several of the chief fertilizer consuming States which the duty of 2½ cents per pound would entail. Using consumption figures of a normal year—1910—before the war, this duty would cost both Georgia and South Carolina over $2,000,000 each, North Carolina nearly one and one-half million dollars, Alabama over a million, etc. These increased costs will be borne first by the American fertilizer manufacturer, then by the farmer, and lastly by the American consumer. It has been figured that for the entire country the increased duty would be over $14,000,000.

FINAL.

In conclusion allow me to mention again Hon. JOHN S. BENHAM, on page 4750 of the hearings, as follows:

"In the hearings before the Ways and Means Committee of the House the potash producers and the potash distributors in America were heard. They presented their case very well, indeed. The farmers who are paying the bills directly were not for any considerable length of time heard. The people who finally pay the bills, the 100,000,000 Americans who are interested in both the price and the quality of the fruits, the grains, and vegetables have not been heard. It is a well-known fact that not only are fruits and vegetables produced much more cheaply by the use of potash, but their keeping qualities are very much improved.

"I had thought just a little of telling some secrets, and yet I think possibly it is not desirable to do so. I should like to state only this: We agriculturists of the House had the understanding, after a talk with one of the members of the Ways and Means Committee, that this element in which we were interested was to be on the free list. We learned later on that there was a tariff of 2½ cents per pound, or $50 per ton. We then asked that this one item be submitted to a vote of the House, and that request was refused.

"I have only this one request to make, that the Senate return this bill to the House in a shape that will allow the rank and file of the Members of the House to have a square vote as to whether this item shall or shall not be taxed."

Mr. STANLEY. Mr. President, I simply wish to make one statement to the chairman of the committee. It would be a pity not to let the committee complete the iniquity. The only iniquitous thing they have left out of this tariff bill is a bounty. They have embargoes, they have indefensible duties. If they can just get a bounty there will be nothing abominable left out, and for the sake of symmetry I am almost hoping they will do it.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the Senator from North Dakota [Mr. MCCUMBER].

Mr. REED. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HALE (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER], and vote "yea."

Mr. LODGE (when his name was called). I have a general pair with the Senator from Alabama [Mr. UNDERWOOD], and I withhold my vote.

Mr. MCCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. SIMMONS (when his name was called). I wish to state that I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG]. I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK], and vote "nay."

The roll call was concluded.

Mr. EDGE. I transfer my pair with the senior Senator from Oklahoma [Mr. OWEN] to the senior Senator from Minnesota [Mr. NELSON], and vote "nay."

Mr. SUTHERLAND. Transferring my pair with the senior Senator from Arkansas [Mr. ROBINSON] to the Senator from Vermont [Mr. PAGE], I vote "yea."

Mr. FLETCHER (after having voted in the negative). I have a general pair with the Senator from Delaware [Mr. BALL], who is absent. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and let my vote stand.

Mr. GERRY. I wish to announce that the junior Senator from Mississippi [Mr. HARRISON] is unavoidably absent. If present and not paired, he would vote "nay."

I also wish to announce the necessary absence of the senior Senator from Alabama [Mr. UNDERWOOD]. He is paired with the senior Senator from Massachusetts [Mr. LODGE]. If present and voting, the Senator from Alabama would vote "nay."

The result was announced—yeas 30, nays 32, as follows:

YEAS—30.

Brandegee	Frelinghuysen	McKinley	Shortridge
Bursum	Gooding	McLean	Smoot
Calder	Hale	McNary	Spencer
Cameron	Jones, N. Mex.	Moses	Stanfield
Colt	Kendrick	New	Sutherland
Curtis	Keyes	Pepper	Warren
Dillingham	Ladd	Phipps	
Ernst	McCumber	Ransdell	

NAYS—32.

Ashurst	Gerry	Oddie	Sterling
Borah	Glass	Overman	Swanson
Capper	Harris	Pomerene	Townsend
Caraway	Heflin	Reed	Trammell
Cummins	Jones, Wash.	Sheppard	Wadsworth
Dial	Lenroot	Simmons	Walsh, Mass.
Edge	McCormick	Smith	Walsh, Mont.
Fletcher	Myers	Stanley	Willis

NOT VOTING—33.

Ball	Hitchcock	Nicholson	Shields
Broussard	Johnson	Norbeck	Underwood
Culberson	Kellogg	Norris	Watson, Ga.
du Pont	King	Owen	Watson, Ind.
Elkins	La Follette	Page	Weller
Fernald	Lodge	Pittman	Williams
France	McKellar	Poindexter	
Harreld	Nelson	Rawson	
Harrison	Newberry	Robinson	

So Mr. MCCUMBER's amendment was rejected.

The PRESIDENT pro tempore. Is there any further amendment to be offered to paragraph 1635? If not, the Secretary will report the amendment in paragraph 1636.

The READING CLERK. On page 230, paragraph 1636, the committee proposes to strike out "cyanide" and insert "nitrate or saltpeter, crude," so as to read:

PAR. 1636. Potassium nitrate or saltpeter, crude.

Mr. MCCUMBER. Mr. President, I assume there will be no objection to the amendment. We have put cyanide potassium on the free list, and this puts potassium nitrate or saltpeter, crude, on the free list.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDENT pro tempore. Is there any further amendment to be offered to the paragraph 1636? If not, the Senate will proceed to consider paragraph No. 1.

Mr. MCCUMBER. Mr. President, the only question is on lines 24 and 25, near the bottom of page 2, which read:

Arsenious acid or white arsenic, 2 cents per pound.

SEVERAL SENATORS. Vote!

Mr. SMITH. What is the amendment, Mr. President?

The PRESIDENT pro tempore. The Chair desires to observe that the unanimous-consent agreement relates to amendments hereafter offered. Does any Senator desire to offer an amendment to paragraph No. 1?

Mr. SMITH. Yes, Mr. President; I desire to offer an amendment striking out the Senate committee amendment on line 25 providing for a duty of 2 cents a pound on white arsenic. The House provided a rate of 25 per cent ad valorem, but the Senate has agreed to the committee amendment imposing a duty of 2 cents per pound. I am not going to take the time of the Senate to argue all the reasons why the provision should be stricken out. I merely wish to state the main facts in reference to the matter.

White arsenic is the basis of what is known as calcium arsenate, which is used for the destruction of insects which prey upon the field and the garden crops of this country, and the forests as well; on our fruits and vegetables as well as other growing crops such as potatoes, tobacco, and, latterly, the great cotton crop of this country.

The supply of this article is absolutely inadequate; the need of it is absolutely imperative. The potato growers of the East and South, and of the whole Atlantic seaboard—in fact, of the whole country—are dependent upon this ingredient for the control of the potato bug; the fruit growers of the country are absolutely dependent upon it for the protection of their orchards; the growers of field crops are absolutely de-

pendent upon it for protection against the unprecedented ravages of insects. In view of the fact that there is not enough of this article produced, possibly, in the world to meet the crying demands, why the Congress should place upon it a duty of 2 cents a pound and retard its importation from abroad, when it is an imperative necessity, passes my comprehension.

I may say in conclusion, Mr. President, that the bulk of this article which is produced in this country is a by-product from the refining and smelting of certain ores such as lead, zinc, and copper. The fact of the matter is that in this country if there is an article that should be placed upon the free list, that should be brought into this country from every known source, it is this ingredient. It is, therefore, monstrous to propose that just now, while the country is suffering, perhaps, more from the inroads of insects than ever before in its history, we should impose an additional burden on those who are striving to produce our food.

I have certain letters here before me now from different agricultural organizations in reference to this subject. One of them is from an agent of the Department of Agriculture who is supervising the field work at Tallulah, Ala., calling attention to the fact that the need of this article is so very great and the supply so small that a large part of the cotton crop will suffer because of its lack, not from boll weevil alone but from the caterpillar that is now ravaging it, a misfortune which occurs from year to year.

I think if the Senate wishes to go on record as lending whatever legitimate aid may be rendered by the Congress of the United States to the struggling farmers of the country, it should not only vote to place this article upon the free list but should use every method within its power to procure an adequate supply of this ingredient.

Mr. President, I hope that the Senate will not agree to the Senate committee amendment, but will allow this article to go upon the free list. I ask for the yeas and nays on my amendment.

The PRESIDENT pro tempore. The Chair desires to suggest that he is inclined to believe that the vote by which the amendment of the committee was adopted must be reconsidered before the amendment proposed by the Senator from North Carolina may be received.

Mr. SIMMONS. I ask unanimous consent that the vote by which the committee amendment was adopted be reconsidered.

Mr. McCUMBER. There is no objection to that.

The PRESIDENT pro tempore. The Senator from North Carolina asks unanimous consent that the vote by which the amendment on page 2, line 25, providing a duty of 2 cents per pound on white arsenic, may be reconsidered. Is there objection? The Chair hears none. Does the Senator from South Carolina propose to strike out the words—

Arsenious acid or white arsenic 2 cents per pound?

Mr. SMITH. I move to strike out the Senate committee amendment inserting the words "2 cents per pound."

Mr. WILLIS. What would be the effect of that amendment if it should be agreed to?

Mr. SMOOT. The duty of 25 per cent ad valorem will remain.

The PRESIDENT pro tempore. The Chair does not understand exactly how the clause would stand should the amendment of the Senator from South Carolina be agreed to.

Mr. SMITH. I merely wish to have a vote on the Senate committee amendment. Later, in the Senate, there will be a motion made to strike out the duty of 25 per cent ad valorem. All I desire now is to have a vote against the Senate committee amendment providing for a duty of 2 cents a pound.

The PRESIDENT pro tempore. The question is on the motion of the Senator from South Carolina [Mr. SMITH].

Mr. SMITH and Mr. HEFLIN called for the yeas and nays.

Mr. WILLIS. Mr. President, I rise to a parliamentary inquiry. Is the question upon agreeing to the Senate committee amendment, or what is the question?

The PRESIDENT pro tempore. The question is upon the amendment proposed by the Senator from South Carolina, which is to strike out the words "2 cents per pound" in line 25, on page 2.

Mr. SMITH. Mr. President, then those in favor of striking out the words will vote "yea." I move to strike out the words "2 cents per pound."

The PRESIDENT pro tempore. The Chair assumes that Senators know that.

Mr. McCUMBER. Mr. President, we do not as yet know what the Senator's motion is.

Mr. WADSWORTH. Mr. President, I think the Presiding Officer has recognized me. As I understand, the Chair has just announced that the pending question is whether or not the words "2 cents per pound" shall remain in the bill.

Mr. SMOOT. That is as I understand it.

The PRESIDENT pro tempore. The attention of the Chair was diverted for a moment. Will the Senator from New York please restate his question?

Mr. WADSWORTH. I understand that the question has been stated to this effect, whether or not the words "2 cents per pound," in line 25, shall remain in the bill.

Mr. CURTIS. Mr. President——

Mr. SMITH. Mr. President, I should like to state my proposition clearly.

Mr. WADSWORTH. Just a moment. I wish to inquire——

The PRESIDENT pro tempore. The Senate will be in order.

Mr. WADSWORTH. A parliamentary inquiry. If the words "2 cents a pound," as proposed by the committee, are not agreed to, that will leave the language reading:

Arsenious acid or white arsenic, formic acid, 4 cents per pound.

What becomes of the first semicolon, in line 25, after the word "pound"?

The PRESIDENT pro tempore. It is not for the Chair to construe the effect of the amendment.

Mr. SMITH. The amendment I proposed was simply to strike out the committee amendment at the beginning of line 25, inserting the words "2 cents per pound."

Mr. SMOOT. That has not been agreed to as yet.

Mr. WADSWORTH. We have reconsidered that.

Mr. SMOOT. We have reconsidered it.

Mr. WADSWORTH. So those words are not now in the bill.

The PRESIDENT pro tempore. The Chair desires to say that if any Senator shall raise the point of order the Chair will be constrained to hold that the amendment is not in order. The proper proceeding is to disagree to the Senate committee amendment.

Mr. SMITH. Very well; that is all right.

Mr. WADSWORTH. I rise to another parliamentary inquiry.

The PRESIDENT pro tempore. The Senator will state it.

Mr. WADSWORTH. If the Senate committee amendment is disagreed to, how will the bill then read?

The PRESIDENT pro tempore. The Secretary will state how the bill would then read.

The reading clerk read as follows:

Arsenious acid or white arsenic, formic acid, 4 cents per pound.

Mr. WADSWORTH. Then, if the Senate committee amendment is rejected the rate will be double that suggested by the committee.

Mr. LENROOT. Exactly.

The PRESIDENT pro tempore. The Chair does not understand the Senator to propound that as a parliamentary inquiry.

Mr. WADSWORTH. I state it as a fact, then.

Mr. SIMMONS. Mr. President——

Mr. SMITH. There is a semicolon which divides the two clauses. If it were in order, were the bill in the Senate, I would move to strike out the clause "arsenious acid or white arsenic, 2 cents per pound." Then, if the motion were agreed to, it would automatically go to the free list.

Mr. LENROOT. The Senator may make such a motion now.

Mr. SMITH. If I may do that now I will amend my amendment by moving to strike out the words "arsenious acid or white arsenic, 2 cents per pound," in line 24 and a part of line 25.

The PRESIDENT pro tempore. The Chair desires to suggest to the Senator from South Carolina that the words "2 cents per pound" are not in the bill.

Mr. LENROOT. May I suggest that if the Senate committee amendment shall be disagreed to and the Senator from South Carolina then moves to strike out the words "arsenious acid of white arsenic," he will accomplish what he desires.

Mr. SMOOT. Or, if the Senator from North Carolina will simply withdraw his request to reconsider and leave the provision just as it was originally agreed to by the Senate, the Senator from South Carolina can then move to strike out the clause, and it will all go out.

The PRESIDENT pro tempore. The question is upon agreeing to the committee amendment.

Mr. SIMMONS. Mr. President, as the Chair puts the question, as I understand, we are to vote upon agreeing to the committee amendment which imposes a duty of 2 cents per pound upon white arsenic. I think that is correct.

Mr. McCUMBER. Question!

Mr. LENROOT. May I make a parliamentary inquiry?

The PRESIDENT pro tempore. The Senator will state it.

Mr. LENROOT. What is the state of the record at the present time? What is the question?

The PRESIDENT pro tempore. The state of the record at the present time is that the vote by which the committee amendment was agreed to has been reconsidered.

Mr. SMITH. Let me make a parliamentary inquiry. If the request for unanimous consent to reconsider shall be withdrawn, then the words will be in the bill, because the Senate will have acted upon it, and then it will be in order for me to move to strike out the whole clause.

Mr. SMOOT. That is what I said.

The PRESIDENT pro tempore. The Chair is of the opinion that it would be in order.

Mr. SMITH. Very good; then, I ask the Senator from North Carolina to withdraw the request to reconsider the vote whereby the committee amendment was agreed to inserting the words "2 cents per pound," and then let me move to strike out the whole clause, and we will have a direct vote as to whether or not white arsenic will go on the free list.

Mr. SIMMONS. Mr. President, I should like to inquire of the Senator from New York what he meant when he said a little while ago that if we struck out the words "2 cents per pound" it would double the rate.

Mr. WADSWORTH. I meant to say that the committee amendment inserts the words "2 cents per pound." If that amendment is disagreed to, the remaining language of the bill will then be "arsenious acid or white arsenic, formic acid, 4 cents per pound."

Mr. LODGE. There is no doubt of that.

Mr. WADSWORTH. So that the rate will be double that now provided by the committee.

Mr. SIMMONS. The proposition now is to strike out the whole clause.

Mr. WADSWORTH. That was not the question pending at the time I made my observation.

Mr. SIMMONS. I withdraw my request for unanimous consent to reconsider the vote whereby the committee amendment was agreed to.

Mr. SMITH. I move to strike out on lines 24 and 25——

The PRESIDENT pro tempore. The Chair suggests that there must be something more than the withdrawal of the request to reconsider the vote. The Senate has reconsidered the vote, and that action must be rescinded before the suggestion of the Senator can be entertained.

Mr. LENROOT. The easiest way is to disagree to the committee amendment, and then let the Senator from South Carolina move to strike out the words "arsenious acid or white arsenic."

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the committee. [Putting the question.] The Chair is in doubt. Those in favor of the amendment will rise, and stand until they are counted.

Mr. SMOOT. Mr. President, there is no need of having a division. If we are going to have a division, let us have the yeas and nays. It seems to me that if we will agree to the committee amendment, leaving the provision exactly as it was, then the Senator from South Carolina may move to strike it all out, and, if the motion to strike out is agreed to, white arsenic will necessarily go to the free list. What is the use of having a roll call?

Why does not the Senate agree now to the committee amendment, and then let the Senator from South Carolina move to strike it all out, including the semicolon?

Mr. SMITH. If that will expedite matters, let us do that, and get some action on it. We could have withdrawn the unanimous consent. If that is all right, let us do that, though I am not going to agree——

Mr. WALSH of Montana. I object.

Mr. McCUMBER. Mr. President, the question before the Senate now is on agreeing to the committee amendment. I ask for the yeas and nays on whether or not we shall agree to the committee amendment. Let us vote.

The PRESIDENT pro tempore. The yeas and nays are demanded on the committee amendment. Is the demand seconded?

The yeas and nays were ordered.

Mr. FLETCHER. Mr. President, I want to make a parliamentary inquiry. If the committee amendment is agreed to, will it then be in order to move to strike out the words "arsenious acid or white arsenic, 2 cents per pound"?

Mr. LODGE. It will be in order in any event.

Mr. SWANSON. Mr. President, do I understand that the Senate amendment reduces the rate from 4 cents to 2 cents?

Mr. LODGE. No.

Mr. FLETCHER. It does not reduce it at all.

The PRESIDENT pro tempore. The question is upon the committee amendment.

Mr. FLETCHER. Mr. President, I asked the Chair that parliamentary question because on the answer to it depends how I shall vote on this proposition. I want to vote for the committee amendment provided I have the opportunity to vote for the proposed amendment afterwards.

The PRESIDENT pro tempore. The Chair already has expressed the opinion that if the committee amendment is agreed to the entire clause can then be stricken out upon motion.

Mr. SIMMONS. Mr. President, I suggest that we have a viva voce vote on agreeing to the committee amendment. I hope the committee amendment will be agreed to, and then that we will vote to strike it out.

The PRESIDENT pro tempore. The Secretary will call the roll. The Senator from North Dakota has asked for the yeas and nays and the demand has been seconded, and unless that demand is withdrawn the roll must be called.

Mr. McCUMBER. Mr. President, the yeas and nays have been ordered, and I should like to have the roll called.

Mr. LODGE. On what?

Mr. McCUMBER. On the committee amendment.

Mr. SIMMONS. Mr. President, I want to say to the Senator from North Dakota that my understanding was that we were not to have any practical division in agreeing to the committee amendment; that it would be agreed to, and then we would have a roll call on a motion to strike it out.

Mr. McCUMBER. The reason I asked for a vote was to get the matter settled——

Mr. SIMMONS. This will settle it.

Mr. McCUMBER. And that seems to be the only method of settling it.

Mr. SIMMONS. I think on a viva voce vote we will all agree to the committee amendment, and then the Senator can move to strike it out.

Mr. McCUMBER. I will withdraw the request for the yeas and nays.

The PRESIDENT pro tempore. The demand for the yeas and nays is withdrawn. The question is upon agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. SMITH. Now, Mr. President, on line 24, after the semicolon, I move to strike out the words "arsenious acid or white arsenic," and on line 25, "2 cents per pound" and the semicolon.

The PRESIDENT pro tempore. The Secretary will state the amendment offered by the Senator from South Carolina.

The READING CLERK. On page 2, lines 24 and 25, it is proposed to strike out "arsenious acid or white arsenic, 2 cents per pound."

Mr. SWANSON. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). I transfer my general pair with the Senator from Oklahoma [Mr. OWEN] to the Senator from Maryland [Mr. FRANCE] and will vote. I vote "nay."

Mr. FLETCHER (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "yea."

Mr. GLASS (when his name was called). I transfer my general pair with the Senator from Vermont [Mr. DILLINGHAM] to the Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Arizona [Mr. ASHURST] and will vote. I vote "yea."

Mr. LODGE (when his name was called). I have a general pair with the Senator from Alabama [Mr. UNDERWOOD] and withhold my vote.

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "nay."

Mr. SIMMONS (when his name was called). I am advised that my pair, the junior Senator from Minnesota [Mr. KELLOGG], if present would vote as I shall vote. Therefore I vote "yea."

The roll call was concluded.

Mr. HALE. Making the same announcement as before, I vote "yea."

Mr. SUTHERLAND. Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. GERRY. I desire to announce that the Senator from Alabama [Mr. UNDERWOOD] is necessarily absent, and is paired with the Senator from Massachusetts [Mr. LODGE]. If the Senator from Alabama were present he would vote "yea" on this question.

I also desire to announce that the Senator from Mississippi [Mr. HARRISON] is necessarily absent, and is paired with the Senator from West Virginia [Mr. ELKINS]. If present the Senator from Mississippi would vote "yea" on this question.

The result was announced—yeas 29, nays 25, as follows:

YEAS—29.

Capper	Harris	Ransdell	Townsend
Caraway	Heflin	Reed	Trammell
Cummins	Jones, N. Mex.	Sheppard	Walsh, Mass.
Dial	Jones, Wash.	Simmons	Walsh, Mont.
Fletcher	Keyes	Smith	Willis
Gerry	Lenroot	Stanley	
Glass	McKinley	Sterling	
Hale	Overman	Swanson	

NAYS—25.

Ball	Edge	McNary	Stanfield
Brandegee	Ernst	Moses	Sutherland
Bursum	Frelinghuysen	Oddie	Wadsworth
Calder	Gooding	Pepper	Warren
Cameron	Kendrick	Phipps	
Colt	McCormick	Shortridge	
Curtis	McCumber	Smoot	

NOT VOTING—41.

Ashurst	Hitchcock	New	Robinson
Borah	Johnson	Newberry	Shields
Broussard	Kellogg	Nicholson	Spencer
Culberson	King	Norbeck	Underwood
Dillingham	Ladd	Norris	Watson, Ga.
du Pont	La Follette	Owen	Watson, Ind.
Elkins	Lodge	Page	Weller
Fernald	McKellar	Pittman	Williams
France	McLean	Poindexter	
Harreld	Myers	Pomerene	
Harrison	Nelson	Rawson	

So Mr. SMITH's amendment was agreed to.

Mr. SMITH. Now, Mr. President, if it is in order, I should like to move to add, on page 209, as paragraph 1506, "arsenious acid or white arsenic."

Mr. SMOOT. Mr. President, will not the Senator put it as paragraph 1513a, following "sulphide of arsenic," so that we will have them together?

Mr. SMITH. I have no objection to that. On page 211, just add the words "arsenious acid or white arsenic."

The PRESIDENT pro tempore. The Chair is of the opinion that that can be done only by unanimous consent. The Chair does not mean that the motion must be assented to unanimously, but the Senate can not take up the free list until the Senate gives unanimous consent.

Mr. SMITH. I ask unanimous consent that it be done.

The PRESIDENT pro tempore. Is there objection? The Chair hears none. The amendment offered by the Senator from South Carolina will be stated.

The READING CLERK. On page 211, after line 17, it is proposed to insert a new paragraph, paragraph 1513a, to read:

Arsenious acid or white arsenic.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment offered by the Senator from South Carolina.

The amendment was agreed to.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

PETITIONS AND MEMORIALS.

Mr. LADD presented a resolution adopted by the Wisconsin State Federation of Labor, at Milwaukee, Wis., favoring the recognition of the present Soviet Government of Russia and the making of a trade agreement with such Government restoring facilities for communication and commerce between the United States and Russia, etc., which was referred to the Committee on Foreign Relations.

He also presented resolutions adopted by the North Dakota Pharmaceutical Association, at Fargo, N. Dak., favoring inclusion in the pending tariff bill of a prohibition against the importation of merchandise bearing any trade-mark, label, print, or other mark, registered in the United States Patent Office and owned by any person domiciled in the United States unless imported by such owner, provided the owner shall file with the Secretary of the Treasury a certified copy of the registration of the mark, which were referred to the Committee on Finance.

He also presented a resolution adopted by the Mandan Federated Shop Crafts, of Mandan, N. Dak., favoring the prompt taking over and operation by the United States of the railroads and coal mines so as to safeguard the welfare, comfort, and safety of all the people, which was referred to the Committee on Interstate Commerce.

Mr. EDGE presented resolutions adopted by an executive meeting at Jersey City, N. J., of the National Disabled Soldiers' League of New Jersey, protesting against the enactment of legislation incorporating the Disabled American Veterans of the World War, unless the wounded, gassed, and disabled soldiers, sailors, marines, and nurses of the National Disabled Soldiers' League are accorded the same privilege, which were referred to the Committee on the Judiciary.

FRANK AYERS.

Mr. CALDER introduced a bill (S. 3897) for the relief of Frank Ayers, which was read twice by its title and referred to the Committee on Pensions.

CARE FOR DEPENDENT CHILDREN.

Mr. CALDER introduced a bill (S. 3898) to provide home care for dependent children, which was read twice by title.

Mr. CALDER. Mr. President, this bill provides home care for dependent children in the District of Columbia. It is in line with legislation in many of the larger and more progressive States in the Union. Under its terms a mother having a child dependent upon her for support who is unable without aid to maintain a suitable home and provide proper care for such child shall be given a monthly allowance by the District of Columbia in a sum deemed necessary.

In many States where orphan asylums and charitable organizations took these children in their care the State usually allowed a certain sum to provide for them. Under this system the child remains with its mother, to be brought up under proper home environment. In New York State, where this new system has been in effect for a number of years, it has worked splendidly. It not only tends to the contentment of the mother, but it is of the greatest value for the future of the child. In New York to-day there are very few orphan asylum children.

This measure is of such great importance to the future of our District children that I am hopeful the chairman of the committee to which I ask that this bill be referred may give it his attention at the earliest possible moment.

I move that the bill be referred to the Committee on the District of Columbia.

The motion was agreed to.

EXECUTIVE SESSION.

Mr. LODGE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 6 o'clock and 50 minutes p. m.) the Senate, under the order previously entered, took a recess until to-morrow, Wednesday, August 9, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate August 8 (legislative day of August 3), 1922.

COAST AND GEODETIC SURVEY.

Robert Winn Byrne, of Ohio, to be aid with relative rank of Ensign in the Navy in the Coast and Geodetic Survey, vice C. K. Green, promoted.

COAST GUARD.

Lieut. (junior grade) Charles G. Roemer to be a lieutenant in the Coast Guard of the United States, to rank as such from July 10, 1922, in place of Lieut. Frank L. Austin, retired.

This officer has passed the examination required by law.

APPOINTMENT, BY TRANSFER, IN THE REGULAR ARMY.

AIR SERVICE.

First Lieut. John Ferral McBlain, Cavalry, with rank from July 2, 1920.

PROMOTIONS IN THE NAVY.

Capt. George W. Williams to be a rear admiral in the Navy from the 3d day of June, 1922:

The following-named commanders to be captains in the Navy from the 3d day of June, 1922:

Franck T. Evans.	Hayne Ellis.
Ward K. Wortman.	Ernest J. King.
Charles R. Train.	Alfred G. Howe.
Byron A. Long.	Allen Buchanan.
Daniel P. Mannix.	

The following-named lieutenant commanders to be commanders in the Navy from the 3d day of June, 1922:

Chester H. J. Keppler.	Augustin T. Beauregard.
John H. Hoover.	Claud A. Jones.

Lieut. Robert H. English to be a lieutenant commander in the Navy from the 11th day of February, 1922.

Lieut. Thomas L. Gatch to be a lieutenant commander in the Navy from the 3d day of June, 1922.

Lieut. (Junior Grade) Hugh St. Clare Sease to be a lieutenant in the Navy from the 1st day of July, 1920.

Lieut. (Junior Grade) Sidney B. Blaisdell to be a lieutenant in the Navy from the 19th day of April, 1922, to correct the date from which he takes rank as previously nominated and confirmed.

Ensign Gerald L. Schetky to be a lieutenant (junior grade) in the Navy from the 1st day of July, 1920.

The following-named ensigns to be lieutenants (junior grade) in the Navy, from the 7th day of June, 1922:

Moultrie Moses.	Raymond W. Holsinger.
William L. Eagleton.	Herbert P. Schubert.
Eugene T. Aldridge.	Harold E. Peifer.
Selden Chapin.	Alexander J. Couble.
William A. Rice.	Frederick B. Kauffman.
Herbert L. MacBride.	Frederick W. McMahon.
Thomas B. Brittain.	Royal W. Abbott.
John E. Whelchel.	Robert H. Hargrove.
Jerome F. Donovan, jr.	Samuel H. Arthur.
Roy W. M. Graham.	Maurice E. Browder.
Forrest M. O'Leary.	Thomas H. Binford.

Civil Engineer George A. McKay to be a civil engineer in the Navy with the rank of captain, from the 2d day of December, 1921.

Boatswain Frederick B. Webber to be a chief boatswain in the Navy, to rank with but after ensign, from the 16th day of December, 1921.

Gunner George H. Kellogg to be a chief gunner in the Navy, to rank with but after ensign, from the 3d day of December, 1921.

POSTMASTERS.

CONNECTICUT.

Harry N. Prann to be postmaster at Centerbrook, Conn. Office became presidential July 1, 1922.

Howard A. Middleton to be postmaster at Broad Brook, Conn., in place of A. W. Tyler, removed.

FLORIDA.

William W. Rees to be postmaster at Tavares, Fla., in place of O. E. Hannah, resigned.

ILLINOIS.

Louis R. Kelly to be postmaster at Duquoin, Ill., in place of M. C. Cook, resigned.

Kelly A. Cardiff to be postmaster at Hoopeston, Ill., in place of William Finley, resigned.

INDIANA.

Fred D. Price to be postmaster at Plymouth, Ind., in place of L. G. Harley, removed.

IOWA.

Ralph M. Tyler to be postmaster at Ladora, Iowa, in place of R. N. Seydel, deceased.

MAINE.

Velorus T. Shaw to be postmaster at Prouts Neck, Me. Office became presidential January 1, 1922.

MINNESOTA.

Margaret E. Gillespie to be postmaster at Carlton, Minn., in place of M. E. Gillespie. Incumbent's commission expired April 16, 1922.

Arch Coleman to be postmaster at Minneapolis, Minn., in place of E. A. Purdy, resigned.

Otis T. Wentzell to be postmaster at Moorhead, Minn., in place of E. L. Flaten. Incumbent's commission expired August 7, 1921.

MISSOURI.

Emmet L. Gaffney to be postmaster at Craig, Mo., in place of W. H. Hambaugh, resigned.

Addie Erwin to be postmaster at Thayer, Mo., in place of W. D. Meeke. Incumbent's commission expired January 24, 1922.

NEW HAMPSHIRE.

Bertrand N. Hill to be postmaster at Dixville Notch, N. H. Office became presidential January 1, 1921.

Herbert E. Walbridge to be postmaster at Enfield, N. H., in place of G. H. Laffee. Incumbent's commission expired March 16, 1921.

NEW JERSEY.

Frederick R. Dixon to be postmaster at Bellemead, N. J. Office became presidential January 1, 1922.

Charles H. Updike to be postmaster at Trenton, N. J., in place of E. F. Hooper, resigned.

NEW YORK.

Charles A. Van Sise to be postmaster at Syosset, N. Y. Office became presidential July 1, 1922.

Henry W. Koster to be postmaster at Narrowsburg, N. Y., in place of J. E. Purcell. Incumbent's commission expired July 3, 1920.

NORTH CAROLINA.

John G. Frazier, jr., to be postmaster at Guilford College, N. C. Office became presidential October 1, 1920.

NORTH DAKOTA.

Elvin J. Elstad to be postmaster at Rugby, N. Dak., in place of J. F. Tibbs, resigned.

OKLAHOMA.

Frederick W. Hunn to be postmaster at Crowder, Okla. Office became presidential October 1, 1920.

Charles F. Rice to be postmaster at Texola, Okla. Office became presidential July 1, 1920.

Everette L. Richison to be postmaster at Bokoshe, Okla., in place of B. B. Woodward, resigned.

William W. Wagner to be postmaster at Orlando, Okla., in place of I. W. Bebout, removed.

PENNSYLVANIA.

Margaret E. Warnock to be postmaster at Darlington, Pa. Office became presidential April 1, 1921.

Mark M. Merritt to be postmaster at Granville Summit, Pa. Office became presidential April 1, 1921.

Ralph H. Scott to be postmaster at Conway, Pa., in place of H. J. Bock, resigned.

George F. Carling to be postmaster at Sayre, Pa., in place of Daniel Clarey. Incumbent's commission expired February 4, 1922.

TENNESSEE.

William A. Langley to be postmaster at Petros, Tenn. Office became presidential January 1, 1921.

Clarence V. Gwin to be postmaster at Hartsville, Tenn., in place of R. E. Cullom, resigned.

TEXAS.

Willie L. Gottschalk to be postmaster at Gulf, Tex. Office became presidential April 1, 1920.

Albert T. Cook to be postmaster at Manor, Tex., in place of A. F. Loftis. Incumbent's commission expired January 24, 1922.

Hugh G. Koether to be postmaster at Shiner, Tex., in place of Edmund Herder, resigned.

UTAH.

Frank Beesley to be postmaster at Eureka, Utah, in place of T. L. Sullivan, removed.

WEST VIRGINIA.

Woodford G. Whitman to be postmaster at Monaville, W. Va. Office became presidential July 1, 1922.

WISCONSIN.

Charles S. Brent to be postmaster at Oconomowoc, Wis., in place of J. F. Flanagan. Incumbent's commission expired January 24, 1922.

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 8 (legislative day of August 3), 1922.

AGENT BEFORE THE ARBITRAL TRIBUNAL.

Fred K. Nielsen to be agent before the Arbitral Tribunal.

PROMOTIONS IN THE NAVY.

To be commander.

Matthias E. Manly.

To be lieutenant commanders.

Harry H. Forgus.	Glenn B. Strickland.
Jay K. Esler.	Donald C. Godwin.

To be lieutenants.

Julius C. Delpino.	John N. Walton.
Edward Sparrow.	

To be lieutenants (junior grade).

Edward Sparrow.	Herbert C. Rust.
Matthias B. Gardner.	Rene F. A. Bucholz.
Richard B. Tuggle.	Charles B. McVay, 3d.
Van Fitch Rathbun.	Richard H. Cruzen.

To be surgeon.

John Buckley.

To be passed assistant dental surgeons.

Eric G. Hoylman.
Joseph A. Kelly.

To be paymasters.

Ernest H. Barber.
Oscar W. Leidel.
Herman G. Bowerfind.
John J. Gaffney.
Richard S. Robertson.

To be chief boatswains.

Edwin W. Hill.
William A. James.
John A. Pierce.
William R. McFarlane.
James Roberts.
Eugene J. Frieh.
Julius G. Sanders.
Charles A. Dannenmann.
Andrew N. Anderson.
Thomas M. Buck.
William Martin.

To be chief gunners.

Charles A. Kohls.
Daniel McCallum.
Robert Semple.
Jesse J. Alexander.

To be chief machinists.

Cyrus S. Hansel.
Ernest J. Leonard.
Alfred E. Raue.
Albert H. Mellien.

POSTMASTERS.

ALABAMA.

Levi A. Knapp, Auburn.
Charley N. Thompson, Piedmont.

COLORADO.

Robert B. Kerr, Stonington.

IOWA.

Arthur Ingraham, Conesville.
Blinn N. Smith, Coon Rapids.
Ralph K. Russell, Cushing.
Harry L. Emerson, Kenwood Park.
Arvin C. Sands, Mallard.
Freda L. Thompson, Oto.
Ferdinand J. Ruff, South Amana.
Tibbals G. White, University Park.

KANSAS.

Anna E. Waterman, Healy.
Thomas G. Armour, Hutchinson.

MICHIGAN.

Minnie McGuineas, Elberta.

OKLAHOMA.

John W. Bishop, Fairview.
Governor Everidge, Fort Towson.
Thomas J. McNeely, Goltry.

TEXAS.

Art E. Frieze, Silverton.
Ralph H. Kelly, Stanton.

SENATE.

WEDNESDAY, *August 9, 1922.*

(Legislative day of Thursday, August 3, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Ernst	McKinley	Shortridge
Ball	Frelinghuysen	McLean	Simmons
Borah	Gerry	McNary	Smith
Brandegee	Glass	Moses	Smoot
Bronssard	Gooding	Myers	Spencer
Bursum	Hale	New	Sterling
Calder	Harreld	Newberry	Sutherland
Cameron	Harris	Norbeck	Townsend
Capper	Heflin	Oddie	Trammell
Colt	Jones, Wash.	Overman	Wadsworth
Culberson	Kendrick	Pepper	Walsh, Mass.
Cummins	Keyes	Pomerene	Warren

Mr. CURTIS. I wish to announce that the Senator from Minnesota [Mr. NELSON] is absent on account of a death in his family.

Mr. GERRY. I wish to announce that the junior Senator from Mississippi [Mr. HARRISON] is unavoidably absent.

The PRESIDENT pro tempore. Sixty Senators have answered to their names. There is a quorum present.

Mr. STERLING. I submit an amendment intended to be proposed to section 315 of the pending bill, which I ask may be printed and lie on the table.

The PRESIDENT pro tempore. The amendment will be printed and lie on the table. The Senate under the unanimous-consent agreement will proceed to the consideration of the committee amendment, being paragraph 1427a on page 192, which will be read.

The ASSISTANT SECRETARY. On page 192, after line 2, the committee proposes to insert a new paragraph to read as follows:

PAR. 1427a. Hides of cattle of the bovine species, raw or uncured, or green or pickled, 2 cents per pound; dried, 4 cents per pound.

Mr. WALSH of Massachusetts. Mr. President, my objections to the levying of a duty upon hides and the consequent levying of compensatory and protective duties upon leather, boots and shoes, and other leather manufactures, briefly stated, are as follows:

First. The benefit to the cattle raiser is negligible, as the duty on each hide, even if effective in increasing the price of cattle, will amount to only 1.65 per cent of the value of the animal.

Second. Whatever benefit will inure to any individual or group of individuals by reason of a duty on hides will be chiefly to the packers, as they handle 65 per cent of the domestic hide production, which also constitutes the best quality.

Third. The benefit to the farmer from the tax on hides by the possible insignificant increase in the value of cattle which he may receive through the generosity of the packers will be more than offset by the increased cost which he will have to pay for boots and shoes, harness, and other leather manufactures.

Fourth. The domestic manufacturer of boots and shoes has absolutely no foreign competition; therefore a protective duty on boots and shoes, except for the duties on hides and leather, is unnecessary and will be ineffective. Of course, the duty on hides will increase the cost of production, which the consumer will have to pay.

Fifth. The increased cost of boots and shoes and other leather manufactures by reason of the duty on hides will result in reducing and restricting the expanding export business developed by shoe and leather manufacturers.

Sixth. The increased cost to the consumer and purchaser of shoes and other leather products will result in an unnecessary and indefensible drain of $110,000,000 on the public for the benefit of the few engaged in the packing business.

Seventh. Many of the progressive farm organizations and practically all manufacturers of boots and shoes desire and have petitioned for free hides, leather, and boots and shoes.

Eighth. It will tend to break up if not destroy the independent tanning industry and extend the packers' growing monopoly of the tanning business.

Ninth. The general public welfare would seem to dictate a policy of free hides, free leather, and free shoes.

Mr. President, two-thirds of the domestic hides are marketed by the packers, and these so-called packer hides are of the better grade because of the more efficient manner in which they are removed. The packers do not buy hides from the cattle raisers. They buy cattle on the hoof, and hides are one of the by-products.

The amount which packers charge up as the proportion for hides in estimating the cost of cattle is an average of 11 per cent. A duty of 2 cents per pound on hides at a price of 14 cents per pound is equivalent to 15 per cent ad valorem, and can only increase the price of cattle on the hoof 15 per cent of 11 per cent, which is 1.65 per cent of the total value of the cattle.

In view of the fact that the duty will amount to such an insignificant increase in the value of the cattle, it is almost certain that it will not be reflected in an increased price of cattle to the cattle raiser. Even if fully reflected it would only amount to an average of $1.35 per head of cattle at an average price of $80 a head.

It is very certain, however, in view of the large volume of hides controlled by the packers, that the duty will be reflected in the increased price of hides to the tanners and manufacturers.

It would seem, therefore, that the argument that the farmer will receive an increased price for his cattle—and it is the only argument advanced in favor of the tariff on hides—is most fallacious. Indeed, many progressive and well-informed farm-

ers, fully realizing the effect of a protective duty on hides, do not favor such a tax.

It may be urged that the packers have large packing plants in South America, and because they import hides they will not receive any special benefit from this duty. The fact is that the packers import only a minor portion of the total volume of hides that are imported. As they control about two-thirds of the entire domestic production, the best class of domestic hides, it can be easily seen that they are in a position to make the duty effective by increasing the domestic price to the amount of the tariff. Whatever duty they will be obliged to pay upon their imported hides will be more than offset by the increased price of the domestic hides. Indeed, rather than the farmer receiving any benefit from the increased price of domestic hides, the packers will be in a position to use the increased revenue on the domestic hides to offset the duty which they will be obliged to pay on their imported hides.

Under all the circumstances it does not seem possible that the cattle raiser will receive by reason of a duty on hides any appreciable increase in the price of cattle which he sells to the packers.

But assuming that he does, in view of the fact that the farmer must buy for himself and family boots, shoes, harness, and other manufactures, how is a duty upon hides, which at most will only increase the price of cattle 1.65 per cent, going to be of any permanent benefit to him?

COST OF DUTY TO THE PUBLIC.

Mr. President, the duty on cowhides affects several branches of the leather industry—the shoe industry and leather used in harness, bags, upholstery, and belting. Experts of the Tariff Commission (see Appendix A) have estimated that the proposed duty of 2 cents per pound on hides will result in an increase of 25 cents per pair in the price of shoes made of cowhide in upper and sole and an increase of 15 cents per pair in the price of shoes made with uppers of leather other than cowhide, and not therefore dutiable, but with cowhide soles, heels, and welts, which are dutiable.

According to the census of 1919 the production of shoes included 107,359,294 pairs made of cowhide uppers and soles, which at an increased cost of 25 cents per pair would amount to $26,839,824 to the consumer. The census for the same year records a production of 214,718,589 pairs made with uppers of leather other than cowhide but with cowhide soles, heels, and welts, which at an increased cost of 15 cents per pair would amount to $32,207,788 to the consumer. Adding these two amounts together, we find that the total annual cost of the duty on hides—based upon the production of 1919—would be to the ultimate consumers of shoes $59,047,612.

Since about 6 per cent of the shoe output of this country is exported, it would be more accurate to deduct 6 per cent of this amount, or $3,542,856, leaving a remainder of $55,504,755 as the annual increased cost of shoes to the American public as a consequence of the proposed duty on hides.

But it must be borne in mind that the Senate bill levies duties also on leather of various kinds, other than cowhide leather, which, if effective, will make the cost of these leathers higher to the manufacturers of shoes than those made chiefly of cowhide.

Thus, Mr. President, when we have been talking about the increased cost of 25 cents per pair on shoes by reason of the duty upon hides we have had in mind only shoes made chiefly of cowhides.

When we come to consider the cost to the consumer of shoes made chiefly of kid, Russia calf, patent colt, patent calf, and kangaroo we must add the protective duty levied upon the various kinds of shoe leathers, and that means that on shoes the uppers of which are made of these skins and whose soles are made from cowhides the protection which the manufacturer is given is 6 cents per pair, while the materials bear a duty as follows:

In shoes made of—	Cents.
Patent colt	34
Patent calf	40
Russia calf	24
Kid	33
Kangaroo	35

I have stated heretofore that shoes the uppers of which are made chiefly of cowhides are in value about one-third of the total production, but in pairs amount to fully one-half.

It is to be noted, therefore, that fully one-half of the shoes in use by the American people will bear a tax to the consumer, if the duties on leather are effective, much greater than 25 cents per pair, and probably will average 40 cents per pair, as stated by Congressman HAWLEY, Republican member of the House committee that drafted this bill.

In view of this exposé, how absurd is the claim that a protective tariff is for the benefit of the workingmen of America, when the leather used by the shoe manufacturers bears a tax of from 24 to 40 cents per pair and the finished shoe can be imported for a tax of only 6 cents.

The duty upon harness and saddlery in the pending bill is 35 per cent ad valorem. Harness is made entirely of cowhides and so is a great part of saddlery. The combined production is estimated as valued at $84,000,000 in 1919, and on this amount the duty of 35 per cent in the pending bill will increase the cost of harness and saddlery about $29,400,000.

The domestic production of miscellaneous leather goods in 1919 was valued at $53,000,000, and at a 40 per cent duty, as provided in the pending bill, the increased cost would be $21,200,000.

Therefore, the aggregate cost to the public of the duties on hides, leather, boots, and shoes will be about $110,000,000 without any allowance being made for the increase by reason of the duty on leathers other than that of cowhide. Estimating the farming population at about 30 per cent, the portion which the farmers will have to pay will be $33,000,000, again excluding the increased cost of those shoes made of leather other than cowhide.

On the other hand, what can the farmers at most hope to receive from the increased costs which the public will have to pay? There are slaughtered annually about 12,000,000 cattle, of an average value of $80 per head, making a total value of $960,000,000 received by the cattle raisers. An increase of 1.65 per cent in the price of cattle to the cattle raisers, assuming they will receive the full benefit of the proposed duty on hides, will amount to $15,840,000, and of course only a small percentage of the farmers of the country are engaged in the raising of cattle.

Thus we find that the farmers, who can only hope to receive at the most $15,840,000 in increased prices for their cattle as a result of the proposed duties, are certain to be taxed considerably more than $33,000,000 for the leather products they require.

THE FINANCE COMMITTEE'S ESTIMATE INCORRECT.

Mr. President, of course this estimate will be questioned; in fact, on May 17, in addressing the Senate, the Senator from North Dakota, chairman of the Senate Finance Committee, made the following astounding statement:

> Mr. President, there is one thing in relation to the tariff upon hides which the American people generally do not understand. * * *
> There is a general impression that if a duty of 2 cents per pound on raw hides or 4 cents per pound on dried hides shall be imposed the price of all shoes will thereby be increased. The country does not generally understand that the shoes that the American people wear are not made of cowhide; nothing but the heels and soles are of cowhide. * * *
> I think that practically 99 per cent of the shoes that are made and worn in the United States have for their uppers calfskins or some other material. The only part that is taxed or affected by reason of the tariff is the sole and the heel; and I do not think that that will, as a rule, add more than 8 cents on a pair of shoes—

And so forth.

It seems incredible that the chairman of the Finance Committee would make such a statement in the light of the well-known and easily obtainable facts. He evidently is wholly misinformed on this subject. Of course, such a statement repudiates and invalidates the whole hide and leather schedule of this bill. If the information on which the committee acted is that the duties levied on hides and leather will affect only the uppers of 1 per cent of the shoes manufactured in this country, it is evident that the committee did not write the leather schedule, or if they did they did it without obtaining any accurate information as to the very great extent and importance of the use of cowhides in the manufacture of shoes.

It seems almost asinine to have to controvert such a statement, for, in addition to this duty on hides, the paragraph levying duties upon leather fastens a tax upon every pair of shoes made in America.

The duty upon hides affects chiefly shoes made of cowhide, which constitute over one-half of the total production, instead of 1 per cent; but the leather duties will put a tax upon every kind of leather, which, of course, means that the shoe manufacturers will have to pay more for every kind of leather used in shoes if the duties become effective.

If the Senator doubts my statement about the crass inaccuracy of his statement as to the general use of cowhide for uppers, I could submit letters from leading manufacturers (see Appendix B), numerous references and discussions of the subject by the Tariff Commission, and an authoritative statement from the Tanners' Council, which represents the active members of the leather trade, giving accurate figures showing the various kinds of leather produced in the country during the six months from October 1, 1921, to April 1, 1922.

These figures show that there was made during that period and used in the United States—exports having been deducted—

194,209,557 feet of leather made from cowhides and 163,315,049 feet of leather made from calf, kip, veal, kid, and goat skins. Over 54 per cent of the leather made was cowhide.

THE DUTY ON SHOES AN ABSURDITY.

The absurdity of a protective tariff on boots and shoes based upon the theory of meeting the difference between the manufacturing costs in America as compared with the foreign manufacturing costs, which is claimed by Republicans to be their theory of protection, can be fully appreciated when we realize that there is practically no importation of boots and shoes made of cattle hides. Indeed, we are exporting very heavily, for we are making shoes so cheap and so superior in America that we are meeting all foreign competition.

The shoe and leather industry originated and developed in New England and has proved one of the greatest steps forward, industrially, that has characterized this era of industrial progress. Perhaps many of this body have not in mind the fact that until New England inventive genius developed the modern shoemaking machinery the old-fashioned hand methods of making shoes prevailed throughout the world. When the "forty-niners" left the East for the gold fields of California shoes were being made everywhere substantially as they were being made when Columbus discovered America. The process was so slow and expensive that very few of the people were properly shod. The making of shoes by machinery in large factories as now conducted in all the advanced countries of the world is wholly the result of American initiative and American invention, and the cradle of the art was in Plymouth County, Mass.

In consequence of the achievement of these American shoemakers the people of the United States have been better shod and at a less cost—though during and following the war the prices became exorbitant—than any people in the world, and to-day the manufacturing countries of the Old World have adopted our methods and our machinery and are sharing in the blessings that have been provided for them by the shoemakers of New England.

At the present time the New England method of making shoes has spread itself very generally over the whole country.

Shoes are now manufactured in many different States, Pennsylvania, Ohio, Missouri, Wisconsin, and New York being the largest producers outside of New England, so that it is true that, while every part of the country is interested to oppose this mischievous tax, to New England and the shoe and leather industries centered there it is of supreme importance. Besides supplying the home market, the manufacturers of shoes and leather in all sections of the country have built up a very considerable export trade in their commodities. At this time, when some exchange of goods with our foreign neighbors seems to be absolutely essential to the welfare of the world, anything that interferes with the business already established or hinders its development is clearly against public policy and should not be encouraged. That the proposed tax on hides will produce this result is beyond question.

THE SHOE INDUSTRY UNEXCELLED IN EFFICIENCY.

Mr. President, the shoe industry in the United States leads the world in efficiency, in quality, and in volume of output.

The points of leadership in the shoe industry in the United States may be summarized as follows:

1. Better machines.
2. Leadership in styles.
3. Superior organization.

The foreign industry's only advantage is its lower wage scale. But shoe operatives in the United States are admittedly much more efficient than labor in foreign factories.

It is not out of place to call attention at this time to the fact that there is probably no industry in this country outside of some branches of the steel industry where higher wages are paid.

Census statistics indicate that wages in the shoe industry are among the very highest paid in the country. It is also undisputed that women operatives in the shoe factories are paid higher wages than in any other industrial occupation in which women are employed.

The hours of labor, sanitary conditions, and general living conditions in the communities where the shoe industry exists are unexcelled in any other industrial community.

It is significant that this industry has, with practically no tariff protection, developed into one that provides more comforts and better conserves the health of its operatives and pays much higher wages than the industries which have enjoyed for years high protection.

It is also to be noted that the absence of protective duties has kept the industry upon a strictly competitive basis and, unlike many other industries, free from monopolistic control.

TAX ON HIDES WILL DESTROY FOREIGN MARKET.

Shoes can not be made from taxed hides as cheaply as from free hides. The foreign markets for shoes which have recently been acquired by our New England merchants and manufacturers were formerly in the possession of the English and German manufacturers. The ease and completeness with which they will recover these markets if we tax our manufacturers out of the business is not a pleasant thing for the American people to contemplate. At a time also when industries are idle, many of our people are unemployed, and the public generally is refusing to buy in normal quantities to meet the necessities of life, for the reason that prices are still too high to correspond with their income, it is a very serious matter to levy a tax which will increase the cost of shoes for every family in every community and in every State in the Union.

This tax, if levied, would increase the cost of the manufacturers' raw material by approximately thirty millions of dollars. I am figuring that the imported hides, amounting to millions of pounds, would, of course, pay the tax, while the holders of hides in this country would naturally market them on the basis of the foreign price with the duty added. There can be no question as to this result. This is what the tax is put on for. The proposers of this tax claim that by it they can increase the price of hides, and so make the animal bearing the hide of greater value to the farmer. I believe this theory is a mistaken one, and the tax will ultimately result to the farmer's disadvantage; but assuming they are correct, it is clearly beyond dispute that they are going to increase the cost of the raw material of the shoemaker by many millions of dollars.

It is obvious, then, that in addition to the loss to our merchants of their export business the people of the country must be taxed many millions for their boots and shoes. A share of this amount added to the daily cost of living of every family and bearing more heavily on the poor than on the rich creates a condition which the Senators advocating this bill will have hard work to justify. They should show first that it protects some struggling infant industry that without its help would perish. They can show no such thing. No man in this country ever embarked in the business of raising or producing hides. Hides are the by-product of the cattle-raising industry.

Mr. President, the proposal to tax hides is an imposition on the American public. By this duty the leather industries of the country would be seriously crippled, the workmen of the country would be deprived of needed employment, and the people of the country would sustain a tremendous loss through their family expenses, and all for the benefit of some intangible, unknown beneficiary. Such a proposition is so uneconomic as to be preposterous and does not deserve the serious consideration of this body.

Mr. President, a protective duty levied for the benefit of the manufacturer of boots and shoes is camouflage. It can not be effective. It is a fake. There are no imports and the domestic business is on a competitive basis.

The duty on hides, however, will be effective. It will be effective first to the manufacturer who will have to pay more for the hides that are used in the manufacture of shoes and ultimately it will be effective to the consumer when he purchases shoes; it will also be effective in crippling the tanning industry.

Instead of levying an ineffective protective duty for the alleged benefit of the manufacturers, if Congress really wanted to help the shoe industry it would provide for free hides and lower the duties on the other materials used in the manufacture of shoes instead of placing a duty on hides and increasing all other duties.

EFFECT ON TANNING INDUSTRY OF DUTY ON HIDES.

Mr. President, the tanning industry, which this duty on hides will seriously affect, is divided into two groups, (1) the packer tanners and (2) the independent tanners.

The independent tanning industry is one of the oldest industries of this country. The industry has been so well managed and has progressed to such an extent that we have developed a very extensive export trade of tanned leather, especially kid. The reputation of the American tanning industry for superiority of workmanship has become recognized throughout the world, and this has been due to the initiative and enterprise of the independent tanners.

It is estimated that there are about 700 of the so-called independent tanning establishments scattered throughout the country, principally located in the vicinity of Chicago and the Atlantic seaports. Most of them are small concerns employing comparatively few employees; but among them are two large companies that have been organized by combining smaller concerns. These two companies—the American Hide & Leather Co., which tans upper leather, and the United States Leather Co., which tans sole leather—are in active competition with each

other and all other tanners. Throughout the entire industry there is genuine competition without any suspicion of combining to control prices or to stifle competition.

About 15 years ago the packers of Chicago entered into the business of tanning hides, which was undertaken to give them a more complete control of the hide market; that is, when they could not obtain a price as high as they thought they should receive they could tan the hides. This branch of the packers' business has rapidly developed owing to the packers' control of the tanners' raw material. The hides that are taken off in their own establishments can be tanned or sold as best suits their interest, while the independent tanner must go into the market and buy either the high-priced hides from the packers or buy the inferior hides from the local cattle slaughterers. It is apparent, therefore, that the packer tanners have a decided advantage by reason of having control of the higher grades of raw material.

To what extent the packers are able to influence and control the tanning business can be appreciated when we understand that 60 per cent of the hides produced in America are taken off by the packing houses. In addition to this their subsidiary agencies throughout the country buy hides that are taken off locally. The advantage of the control of this raw material has enabled them to expand rapidly and extensively their tanning industry. It is estimated that they now tan at least 50 per cent of the heavy leather of the country and from 20 to 30 per cent of the lighter leathers used for uppers.

The brief of the National Boot and Shoe Manufacturers' Association on "Free hides in relation to leather and shoe industries" confirms these assertions:

> Very briefly stated, the situation is this: The packer comes into the possession of his hides when he buys his animals for beef, and the price paid for the hides is, of course, the same as paid for the remainder of the carcass. The price of the complete animal is invariably less than the price of the hide. Consequently, if steers are bringing 12 cents a pound on the hoof, the hide costs the packer 12 cents, while the market price of the hide at that moment may be 16 cents, and the independent tanner must purchase it at 16 cents. If the packer sees fit to charge up these hides to his own tanneries or tanning accounts, he can charge them at any price he sees fit, and the loss, if any, in the price of the hide may be distributed over the price of the other parts of the animal where competition may not at the moment be so close. Under such conditions the temptation to manipulate the market is irresistible.
>
> If prices of hides are low and the demand inactive, the packer can dispose of his hides readily to his own tanneries and stock the tanneries of other tanners who will tan for him at a fixed price per pound. When trade becomes more active and there is a demand for hides, he can put up his price and force his competitor, the independent tanner, to pay materially more than his hides stand him in his own tanneries. When the leather is finished he can undersell his competitor and make a round profit on the transaction, while the situation of his competitor, as far as profit is concerned, is hopeless.

The Federal Trade Commission, speaking on this subject, said:

> This situation raises a serious question as to how far this extensive encroachment on a basic industry in which they virtually control the raw material is safe for the public interest. They can place every tanner using the more desirable grades of hides, particularly the heavier hides, in a position of paying the price that they may ask or of taking the risk of encountering further competition in the leather industry from them. They may not be able to put a tanner out of business at once, but they have the power to do it if they are so disposed.

Mr. President, the development of the tanning business among the packers has been so great that it is safe to say that in the year 1921 an independent tanner could hardly be found who was not tanning hides for the packers.

In addition to this very great advantage enjoyed by the packer tanners over the independent tanners, the levying of a tariff duty on hides will still further handicap, if not ruin, the independent tanners.

The packers will not be injured by the tariff, because they never buy hides and will not have to pay any duty. The independent tanners buy all of their hides and will have to pay the world price plus the duty.

The only way the packer can be affected would be by a reflection of the duty upon hides in increasing the price of cattle; but as the packer controls the price of cattle on the hoof, the levying of a tariff duty would be without effect so far as he is concerned.

Will the producers benefit by this duty upon hides? This question has been discussed pro and con and many divergent opinions have been expressed, but the best answer can be found in the brief of the American Farm Bureau Federation, filed with the Senate Finance Committee (page 4491 of the hearings):

> Cattle production needs stimulation, but the increased return from 15 per cent on 6½ per cent of the weight of the animal is so small as to be of no importance as a means of increasing cattle production. The cost to consumers of leather products would more than offset the increased return to hide producers even if all the increased price was passed on to the producers, of which there is no assurance. Therefore we believe that hides, leather, and leather products should remain on the free list.

As evidence that there is and has been in the past no genuine competition between packers in fixing the price of cattle, the report of the Federal Trade Commission for 1919 or the revision of that report for 1921 may be cited, wherein it was demonstrated that packers fixed prices at the different yards and that the prices were all uniform.

It requires no mental acumen to understand that the effect of levying the proposed duties upon hides means a death blow to the independent tanning industry and another step to extend and stabilize the packers' monopoly by clinching their hold upon the tanning industry and consequently placing the American leather industry at their mercy.

RAMIFICATIONS OF PACKERS IN CONTROLLING THE MARKET PRICE OF CATTLE AND SHEEP.

There is a growing belief in the country that the packers have been loaning large sums of money to sheep and cattle raisers through the commission dealers that buy the cattle and sheep from the raisers for the packers. Evidence is available that this method is in operation between the packers and sheep raisers, and there is little doubt but that the same method is being practiced in the cattle industry.

To what extent the American public is at the mercy of the packers can be appreciated when we realize that their ramifications run from the financing of the stock raisers to the marketing of the tanned hides to the shoe and leather industries of the country. Indeed they have even gone so far as to threaten to go into the manufacture of shoes and other branches of leather manufacturing.

Are the representatives of the American people to aid the Packers' Trust to strangle all the tanning, leather, and other kindred industries of this country by levying tariff duties on hides? Is there to be no check placed on the tendrils of this octopus reaching out to destroy or corral all the little tanning and leather plants located in all parts of the country?

The survival of the independent tanning industry and the independent leather manufacturers of this country depend more than anything else upon the privilege of purchasing hides and leather wherever they please, in a free, open, and competitive market. The placing of a protective tariff duty on hides, plus the other advantages which the packers enjoy by reason of their control of the domestic supply of hides, will put the packers in an impregnable position to create a tanning and leather goods monopoly. A vote for a duty on hides is a vote for the packers—a vote against the interest and prosperity of the tanning, boot and shoe, and leather industries as heretofore conducted, and an invitation to the packers to exploit, crush, and destroy the numerous small and independent industries competing with each other in the tanning of hides and manufacture of leather products.

EFFECT ON SHOE INDUSTRY OF DUTIES ON OTHER LEATHERS.

Mr. President, it is apparent from an examination of the duties levied in the Senate bill on the various kinds of leather and the compensatory and protective duties levied in the interest of the shoe manufacturer, as well as the statement made by the chairman of the committee in discussing the tariff on hides, quoted above, that the committee was without any accurate information or specific knowledge of the boot and shoe industry.

The only duty levied for the benefit of the manufacturer of boots and shoes is as follows:

> Boots and shoes, made wholly or in chief value of leather made of hides of cattle of the bovine species, 12 cents per pair and 5 per cent ad valorem; all other boots and shoes made wholly or in chief value of leather, not specially provided for, 6 cents per pair.

This means that the heavier shoes, worn largely by workmen and mechanics, are protected in proportion to the duty on the material from which they are made, but the duty of 6 cents per pair on all other shoes covers the shoes made of calf, kid, patent leathers, kangaroo, and other kinds of fine upper leathers from which the more expensive shoes are made and in which the labor cost is very great. These shoes are protected by a tariff of but 6 cents per pair, which we assume is compensatory for the increased cost to the manufacturer because of the increased cost the hide tax puts upon the sole leather used in this class of shoes.

It is to be noted, however, that shoes made of patent colt, patent calf, Russia calf, kid, kangaroo, are given no compensatory duty except in so far as the 6 cents per pair covers the compensatory duty by reason of the duty on the cowhide used in the soles.

Yet the Senate bill, in addition to a duty levied upon cowhides in the sole, fixes a duty upon all other kinds of skins used in the manufacture of shoes when they are imported as leather.

These duties levied on finished leathers other than cowhide would, if effective, increase the cost of this class of shoes from 18 cents per pair to 34 cents per pair.

In other words, the manufacturer of shoes made of these leathers must bear a protective duty ranging from 18 cents to 34 cents and no compensatory duty at all has been provided.

Of course, the manufacturer will not suffer unless serious foreign competition develops, but his cost of production will be increased and he will pass this cost on to the consumer.

It would seem as if what I have already said would be sufficient to consign this entire schedule to oblivion, but unfortunately this is not the end.

An examination of the bill shows a long list of articles used in the manufacture of leather and shoes on which existing tariff rates have been increased. Included in this list are the hides and leather to which I have already referred, but, in addition, there are many other items, such as cotton drilling, rubber heels, shoe pegs, shoe buttons, cement, etc.

TARIFF DUTIES INCREASED UPON MATERIALS USED IN MANUFACTURE OF SHOES.

Mr. President, the shoe industry is another illustration of the extent the industries of the country are to be burdened by increased tariff duties upon materials used in manufacturing their finished product.

Fifty commodities used in the manufacture of shoes are taxed. Twenty-five of these commodities have heretofore been on the free list, but under the pending bill are to be placed upon the dutiable list. The rates on 25 other articles used by shoe manufacturers which are already on the dutiable list have been increased on the average of 92 per cent, three rates have been increased 200 per cent or more, eight rates have been increased 100 per cent or more, and eight have been increased between 50 and 100 per cent, leaving only six increases of 50 per cent or less.

In view of these increased duties on the materials necessary in the manufacture of shoes, who dares to predict what will become of this industry? Surely the export business will disappear, for the foreign trade will not pay the advance in prices necessitated by the increase in the cost of production; and of course the price of shoes in this country will be very materially advanced.

The following table contains some of the principal materials used in the manufacture of shoes and indicates the increased rates of duty levied in the pending bill:

Increase of tariff duties upon materials used in manufacture of shoes.

Commodity.	Senate rate.	Present rate.	Increase over present rate.	Per cent of increase.

Hides of cattle, dried.	4 cents per pound.	do	4 cents per pound.	Do.

CONCLUSION.

Mr. President, if you think the manufacturers of boots and shoes are deceived or misled by the picayune protective duty you propose to levy upon boots and shoes, and will accept without a protest the high duties on the materials they use, you evidently have not a very high estimate of their intelligence and spirit.

If the interest of the domestic consumer does not concern Congress may I again urge that we do nothing here to destroy the large export business which has been built up by this industry—an export business amounting during the first nine months of 1921 to about $22,000,000.

How little this industry needs protection from foreign competition may be fully comprehended when we realize that forty-four times as many shoes are exported as the total importation which was less than $500,000 in value in 1919 as compared with a total domestic production of over $1,000,000,000.

Of course, the higher the cost of production the less likely the American manufacturers will be able to increase, or indeed hold, their former export business.

Mr. President, the manufacturers of shoes very frankly and, I believe, patriotically ask that they be given free hides in order to further expand and develop the shoe industry. They ask for no protective duty. Above and beyond the interest of the manufacturers or packers or cattle raisers is the American public, and they unhesitatingly and emphatically demand that no duty be levied on hides, leather, or boots and shoes.

Mr. President, I ask unanimous consent to insert as an appendix to my remarks, in 8-point type, a memorandum showing the additional cost of boots and shoes, and so forth, if the proposed duty on hides shall be adopted; and also certain letters bearing upon the subject under discussion.

The PRESIDENT pro tempore. Without objection, it is so ordered.

APPENDIX A.

MEMORANDUM PREPARED BY EXPERTS SHOWING THE ADDITIONAL COST OF BOOTS AND SHOES DUE TO THE DUTY ON HIDES, DUTIES ON TANNING MATERIALS, AND ADDITIONAL INTEREST CHARGES FOR CARRYING HIDES AND TANNING MATERIALS AT HIGHER PRICES.

The number of boots, shoes, and slippers made in the United States in 1919 was 330,644,202 pairs. Of this number, 8,566,321 pairs were slippers. Deducting the number of slippers, the total number of boots and shoes was 322,077,881 pairs. It is estimated that of this number one-third had uppers made of cowhide leather. The data given by the Census Bureau did not show the cost of the different kinds of material which go into the manufacture of boots and shoes; consequently the estimate is based on the census figures for the upper leather manufactured in this country in 1919. The units of quantity are not all the same, and therefore the value of the leather produced was taken as the basis of the proportion. The total value of all kinds of upper leather made in 1919 was $425,768,151. The value of upper leather made of cowhide, the greater part of which was the so-called "side upper leather," was $142,276,588, of 33 per cent of the value of all the upper leather made.

The duty on green hides has been fixed at 2 cents per pound under the present bill. The compensatory duty on shoes made in chief value of cowhide has been placed at 12 cents a pair, because it takes about 6 pounds of hide to produce the leather used in making one pair of shoes. The compensatory duty on

shoes made in chief value of leather other than cowhide has been placed at 6 cents a pair. The value of the upper is usually about the same as the value of the sole, including the inner sole, welt, and heel. The compensatory duty on shoes made in chief value of leather other than that made of cowhides is compensatory for the increased price of the sole due to the duty on cattle hides.

The average hide which is used for shoe leather weighs about 60 pounds green. The additional cost per hide on account of the duty should therefore be figured at $1.20. Since 6 pounds of hides are necessary to make one pair of shoes, on the average, the number of pairs which can be obtained from a hide is 10. The additional cost per pair would therefore be 12 cents, the amount fixed as compensatory duty. It is true that only the better part of the hide can be used for soles and in the case of the lighter cowhides for uppers, but the offal—i. e., waste parts from around the edge of the hide—can be used for inner soles, heels, and so forth. All parts of a hide are therefore suitable for some part of a shoe. The cutters of boot and shoe stock utilize every part of the hides which they cut. It is accurate to say, for example, that a thousand pairs of shoes can be made from a hundred hides. It is just as nearly correct to figure in this way as it would be to figure the cost of first-class soles or uppers and to deduct therefrom the amount received for the offal.

We have as a basis, therefore, an additional cost of 12 cents per pair of shoes with both the upper and sole made of cowhide and 6 cents per pair as additional cost on account of the duty on shoes with only the soles made of cowhide. A certain amount must be added to this for the additional interest charge for carrying the hides, leather and shoes at higher prices. The hide will cost $1.20 more on account of the duty. The tanner carries the hide in stock for about six months before he sells it in the form of leather. The interest on this additional cost, figured at 6 per cent per year, is $0.036. He must sell the leather therefore for $1.236 extra. Every leather merchant to whom he sells leather must figure interest for six months, at the same annual rate, because leather is usually carried for that length of time before it is made into shoes. This makes the additional cost to the shoe manufacturer $1.273. The shoes are usually carried in stock by manufacturer or dealer for six months before being sold to the consumer, entailing another interest charge. The additional cost of the hide when it is finally sold to consumers in the form of shoes is therefore $1.31. The additional cost on account of the duty alone has already been figured at $1.20, so that the extra amount due to the interest is $0.11, or 1.1 cent per pair on shoes made entirely of cowhide and fifty-five one-hundredths of 1 cent per pair on shoes which have soles of cowhide and uppers of some other kind of leather.

The interest element must also be considered in connection with the cost of tanning materials. The tanning materials used in the manufacture of sole leather cost about 3½ cents per pound of leather. This includes the tanning extract, oils and greases, and necessary dyestuffs—which are not used in the manufacture of sole leather but are used in the making of most kinds of upper leather. Oils, greases, and tanning extracts were free under the act of 1913. Oils and greases, such as are used in manufacturing leather, are dutiable under paragraphs 49 and 50 of the present bill at 20 per cent ad valorem. The duty on tanning extracts is 25 per cent ad valorem under paragraph 36. The duties on the different kinds of dyes vary considerably, but on some kinds is considerably in excess of 100 per cent.

There are 8 square feet of upper leather in the average pair of shoes; at 2 cents per square foot the cost of the materials in the uppers of a pair of shoes would be 6 cents. There are 2 pounds of leather in the outer and inner soles, heels, and welts of the average pair of shoes. Army field shoes and heavy working shoes weigh about 4 pounds per pair. At 3½ cents per pound of leather, the cost of the tanning materials in the soles of the average pair of shoes is 7 cents. Adding together the 6 cents for the uppers and the 7 cents for the soles, the total value of the tanning extracts, oils, greases, and dyestuffs in a pair of shoes is 13 cents. The cost of these materials will be increased about 25 per cent by the duties mentioned above, or 3¼ cents per pair of shoes. This increase is the same on shoes with uppers made of cowhide as on shoes with uppers of some other kind of leather.

Adding together the 12 cents additional cost per pair of shoes with uppers of cowhide due to the duty of 2 cents per pound on hides, the 1.1 cents on account of interest charges for carrying leather and shoes, the hides at higher prices, and the 3¼ cents per pair on account of the duties on tanning materials, and the result is 16.35 cents additional per pair. Adding to the original 6 cents per pair on shoes with uppers of other than cowhide leather the fifty-five one-hundredths of 1 cent per pair for interest charges and 3¼ cents per pair for additional costs of tanning materials, the result is 9.8 cents additional cost per pair.

It is a well-known fact that the prices of shoes are increased by gradations in which multiples of 5 cents are frequently used, the cheaper shoes usually increasing about 5 cents, 10 cents, or 15 cents per pair and the better shoes by 20 cents or 25 cents or more per pair. It is not probable, therefore, that shoes made of cowhide would increase by exactly 16.35 cents per pair, or that shoes with uppers made of leather other than cowhide would increase by exactly 9.8 cents per pair. It is more likely that shoes of the first-named variety would increase 25 cents per pair and shoes of the second-named variety would increase by about 15 cents per pair. There are certain other elements of cost which have not been included, as, for example, increased interest charges for carrying tanning materials at higher prices, increased cost of thread due to high duties, and so forth.

If the 107,359,294 pairs of shoes made chiefly of cowhide were to be increased in price by 25 cents per pair, the additional price per year paid by consumers would be $26,839,824. If the 214,718,587 pairs made in chief value of leather other than cowhide—that is, having cowhide soles, heels, and welts and uppers of calfskin, goatskin, and so forth—were to be increased in price by 15 cents per pair, the additional cost to the consumers would be $32,207,788. Adding these two amounts together, we find that the total annual cost of the duties to consumers of shoes would be $59,047,612.

Since about 6 per cent of the shoe output of this country is exported, it would be more accurate to deduct 6 per cent of this amount, or $3,542,856, leaving a remainder of $55,504,755 as the increase in annual cost. If the shoes made in chief value of cowhide leather should be increased in price only 20 cents per pair and the balance of the domestic production only 10 cents per pair, after making deduction for the 6 per cent of the output which is exported, the total increase in cost to consumers would be $40,367,095.

APPENDIX B.

INTERNATIONAL SHOE CO.,
St. Louis, Mo., June 5, 1922.

Mr. CHARLES H. JONES,
The Commonwealth Shoe & Leather Co., Boston, Mass.

DEAR MR. JONES: As you know, our company manufactures a general line of shoes, both dress and work shoes, for men, boys, women, girls, and children. Our production is probably the most representative in America to meet the universal demand and consumption of shoes.

We are operating a large number of factories and seven tanneries, three of which are upper leather, four sole leather. These tanneries are operated exclusively on cowhides.

Based on our actual upper-leather requirements for last week, which was a normal week with all of our factories in operation, our consumption of upper leather was as follows:

	Per cent.
Cowhides (sides)	53
All other upper leathers	47

Estimating that outsoles, insoles, counters, heels, etc., require footage equal to that consumed in uppers, the percentage of shoes made from cow and steer hides or cattle hides weighing more than 25 pounds would be approximately—

	Per cent.
Cowhides	77
All other leathers	23

I hope the above figures may be of service to you.

Yours truly,

F. C. RAND.

FARM BUREAU FEDERATION BRIEF.

In the last paragraph of this brief, found on page 4493, they sum up the situation in the following words:

"Cattle production needs stimulation, but the increased return from 15 per cent on 6½ per cent of the weight of the animal is so small as to be of no importance as a means of increasing cattle production. The cost to consumers of leather products would more than offset the increased return to hide producers even if all the increased price was passed on to the producers, of which there is no assurance. Therefore we believe that hides, leather, and leather products should remain on the free list."

THE COMMONWEALTH SHOE & LEATHER CO.,
Boston, April 25, 1922.

Hon. DAVID I. WALSH,
Washington, D. C.

DEAR MR. WALSH: You probably have in mind the many and somewhat bitter attacks that have been made on the shoe and leather industry in consequence of the high price of shoes during the war. I know of no subject that has been more seriously misrepresented. Shoes were high, of course, but not as high in proportion as most other commodities.

If you wish to enlarge somewhat upon the fairness with which the shoe manufacturers of New England have treated the public during the boom in prices which occurred in 1918 and 1919 it would be well to point out that the finished calfskins, which are used very largely for the uppers of men's and women's medium and fine shoes, increased in price from 30 cents per foot in 1914 to $1.50 per foot in July, 1919. The high price amounted to five times the normal price.

You will also find that the average price of Chicago native steer hides for the entire period when the tariff was on before, namely, from 1897

to 1908, was 12.7 cents per pound. These were quoted in August, 1919, at 54.3 cents per pound, the high price being four and one-half times the average price for the whole tariff period.

At the same time you may state that shoes advanced in no case beyond three times their normal price; that is, a man's fine shoe that sold at retail for $5 was sold for a very brief period at $15. This was the extreme advance on any class of shoes, so far as I have ever heard. Men's working shoes advanced to twice their normal price, from $2.50 to $5, so that if the facts were fairly appreciated it would be seen that hides, which have been characterized by the Finance Committee as the "farmer's finished product," advanced in a much greater percentage than the finished shoes of the New England manufacturer. And still the Congress has passed exclusively for the benefit of the farmer an emergency tariff bill, and is now considering a schedule on agricultural products calling for protection, ranging from 28 per cent on wheat up to 45 per cent on corn, and similar rates on all other grains, as well as heavy duties on fresh beef, live sheep and goats, fresh mutton and lamb, butter, milk, beans, potatoes, flaxseed, and everything else the farm produces.

The claim will probably be made that the farmer was hard hit and suffered more than other classes of producers. Neither is this, I believe, borne out by the facts. The enormous number of failures in business, together with the statements continually being filed, of the largest manufacturers and producing companies, showing losses of millions and millions of dollars in consequence of the sudden shrinkage of values, is a complete and sufficient answer to this claim.

It appears from the publications of the leading mercantile agencies that the failures in the shoe and leather trades have increased enormously. The month of January is the critical month in each year.

In 1918 there were 101 in January; 1919, 51 in January; 1920, 53 in January; 1921, 353 in January; and 1922, 626 in January.

It will appear from this that there have been more failures in January, 1922, in the shoe and leather industry than in the whole four previous years. Among the larger manufacturers there were embarrassments reported for January in 1918 amounting to 33; in 1919, 18; in 1920, 38; in 1921, 86.

This again tells its own story.

The shoe and leather trade, in consequence of conditions for which it was in no way responsible, has suffered as severely as the farmer.

There is no community in which there is not some business wreck, brought about by present conditions; and still our wise lawmakers in the Finance Committee propose to put a tax on our hides, an additional tax on tanning materials, a tax on leather of all kinds, and protection of 6 cents a pair on men's fine shoes, on which the labor cost in this country will amount to between $1.20 and $1.75. One of the most ardent advocates of protection in the shoe trade, when he saw that schedule, remarked, "To hell with their protection; I would rather have everything free."

It is obvious that such a protective duty as that on the only class of shoes that is at all likely to come into this country is so ridiculously inadequate as to be ludicrous. It seems as if the Finance Committee had deliberately tried to penalize the only American industry that has produced for the American people cheaper goods and better goods than can be bought abroad, and has asked no corresponding protective duties.

Yours very truly,

CHAS. H. JONES.

P. S.: I have asked Mr. E. A. Brand, secretary of the tanners' council, to inform you in relation to the increased duty on tanning materials.

—

THE NATIONAL SHOE TRAVELERS' ASSOCIATION (INC.),
Boston, Mass., April 12, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: We wish to call your attention to the proposed duty of 15 per cent on hides, and wish to express our opinion on the same to the extent that we feel it will be detrimental to the interest of the shoe industry and thereby increase the cost of footwear to the public.

For that reason we would be pleased if you would give this your positive attention, that the same be not favorably passed through any influence of yours.

Very truly yours,

T. A. DELANY, *Secretary.*

—

LYNN, MASS., *March 29, 1922.*

Senator DAVID I. WALSH,
Senate Office Building, Washington, D. C.

DEAR MR. SENATOR: I am instructed to inform you that this organization is strongly opposed to proposed duty of from 15 per cent to 20 per cent ad valorem on the hides of cattle imported from foreign countries. We believe that this country will never produce sufficient hides for its tanning industry and that the imposition of any duty on hides places upon the American tanner a serious handicap in his competitive buying of foreign hides with the tanners of other nations. We further believe that such a duty will seriously and injuriously affect our commerce with foreign nations, particularly those of South America, and largely decrease our export trade. It will have a tendency to destroy the business of independent tanners and throw the control of the tanning industry of the country into the control of the large packers. In our judgment, it will not result in any perceptible added price to the farmer for his cattle but will result in a largely increased price which he will have to pay for the various leather products which he himself uses. We still further believe that it will inflict upon the American public a substantial increase not only in the cost of shoes but all other leather products, and bearing in mind how closely Massachusetts is allied with both shoes and leather, we hope you can see your way clear to oppose any effort to place a duty on hides.

Very truly yours,

LYNN CHAMBER OF COMMERCE,
W. H. DAY, Jr., *Secretary.*

—

NORTH ABINGTON, MASS., *March 30, 1922.*

Senator DAVID I. WALSH,
Washington, D. C.

MY DEAR SENATOR WALSH: It is disappointing that we feel it necessary to take up your time with matters of legislation, but we can not help feeling that the tariff bill, relative to hides and skins, is merely a project to favor especially the packing interests and to raise the price to the public on shoes and manufactured leather goods.

Shoe manufacturers have been cutting every possible point for the purpose of putting shoes on the market at a low price and many of them have lost very heavily, cutting into their surplus and capital in an endeavor to get their prices down to where the public felt they should be.

Very few people have suffered due to the fact that hides of cattle have come into this country free, but millions of people have profited because the free hides of cattle made it possible for them to obtain cheaper footwear.

We feel that we can compete with foreign markets in supplying this country with boots and shoes with hides of cattle on the free list, and the 10 per cent duty on boots and shoes made wholly or in chief value of leather made from hides of cattle of the bovine species would not in any way compensate for the duty on the hides of 15 per cent.

Paragraph 1601, which places boots and shoes not made from hides of cattle of the bovine species on the free list, makes it very probable that boots and shoes made from hides of cattle will be so doctored that it will be impossible to tell them from the other boots and shoes upon their entry into this country, and consequently there will be a tremendous amount of fraud practiced in introducing boots and shoes made from hides of cattle.

As this appears to be an attempt at class legislation, may we urge you to protest vigorously against the passage of the bill in question?

With many thanks in advance for your courtesy, may I remain,

Very truly yours,

AUSTIN S. KIBBEE,
General Manager of Lewis A. Crossett Co.

—

BOSTON, *April 28, 1922.*

Hon. DAVID IGNATIUS WALSH,
United States Senator from Massachusetts,
Washington, D. C.

DEAR SIR: I beg your indulgence in calling your attention to the proposed hide duty of 15 per cent, which I understand is proposed to incorporate into the new tariff bill. The writer believes beyond doubt that this is most unjust and that the only one that will benefit by the imposition of such a duty will be the large slaughterhouses who, the writer has not the slightest doubt, will immediately advance their prices very materially when such a law might become in force and that inevitably it must advance the cost of shoes and all articles in which leather is used in the manufacture.

It appeals to the writer as strictly a class legislation in favor of a few and distinctly against the interest of the country and the public as a whole, and the writer earnestly hopes that you will use your influence to defeat the same.

Hoping you may give this communication your favorable consideration, I beg to remain,

Yours respectfully,

T. F. RUSSELL CO.
T. F. RUSSELL.

—

BROCKTON, MASS., *April 5, 1922.*

Hon. DAVID I. WALSH,
United States Senator, Washington, D. C.

DEAR SENATOR: It has come to the attention of the shoe workers of the city of Brockton that there is a possibility of the Senate imposing a tax on hides in the tariff bill now pending before the Congress of the United States. Shoe manufacturers in Massachusetts have consistently opposed a duty on hides, believing that such action would constitute a serious handicap to the shoe industry of this section.

Anything that affects shoe production and burdens it in any way seriously affects the standard of home living of workers engaged in the shoe industry of Massachusetts. For many years employer and employee have joined in opposing a duty on hides, believing that such a tax would prove harmful to the best interests of each. Employers' associations in the shoe industry and labor organizations among the employees have believed in the wisdom of opposing such action for many years. They have merged their opposition to such a measure on the ground that it would prevent the best progress and development of the shoe industry in this State.

Convinced of the wisdom of these reasons, we urge you to exercise your great influence in preventing the fixing of a tariff duty on raw hides.

The Joint Shoe Council No. 1, of the Boot and Shoe Workers' Union, of Brockton, represents 13,000 men and women employed in the shoe factories of this city. Its action on this matter is distinctly representative and it is authorized to speak with authority on questions of this kind. At its meeting held on April 5, 1922, it was unanimously voted to ask you to place your vote and influence on record against the imposition of a tariff tax on raw hides.

Very truly yours,

PATRICK O'BYRNE, *President.*
JAMES O'CONNELL, *Secretary.*

—

BOSTON, MASS., *March 11, 1922.*

Hon. DAVID I. WALSH,
Washington, D. C.

DEAR SIR: Representing the center of the world's leather market, you have no doubt given thoughtful consideration to the pending tariff legislation affecting this industry.

Without going into details as to the extremely difficult period that tanners are going through to-day, we are writing just to emphasize the importance of you, as a Senator, taking a definite stand for free hides when that item of the pending tariff bill arises in the Senate.

The tariff on hides is but a repetition of former attempts to close the world's markets to our industry and penalize the consuming public. Refer, if you will, to Blaine's letter to Hon. William McKinley, dated April 10, 1890, on this question, which to our mind is an intelligent review of the situation even as it exists to-day. Remember, also, the measures to which ex-President Taft was forced.

Is President Harding to find himself confronted with making decisions on vital issues, such as this, because Members of the Senate are not willing to take an open stand. We think there are men of broad vision in the Senate, unblinded by the plea of private interests for tariff or profit to the few, who will strongly support a measure of profit to no one group but of benefit to the entire Nation.

The tanning industry believes you to be the man to take the lead in a clear-cut, intelligent fight to place hides on the free list. Tariff on hides means the complete elimination of independent tanners in this country and the control of the leather industry by the packers. This can not be denied. Are you willing this should happen?

You men in Congress, representing this Nation, are passing through a period when individual, group, sectional, and party interests must be submerged by measures of national and world benefit. The industries of the United States now as never before depend on the continuous exchange of merchandise in the world's markets unhampered by tariff. The world economic conditions demand this, and shutting this country up behind a high tariff wall is but postponing the world adjustment for which there is such a dire need.

Review the past few years and imagine, if you can, the detriment to the tanning industry which would have resulted with a hide tariff excluding us from operating in the world's hide markets. These markets must be kept open, in which to obtain our raw materials and in which to sell our finished product. We as an industry are willing to compete with the world's tanners when able to operate in an open market, and we firmly take our stand for free hides, free leather, and free shoes.

It behooves you to give this serious thought, and as our representative from this district, we request from you a definite statement as to the exact stand you are planning to take on this issue.

Yours very truly,

KISTLER LESH & CO. (INC.).
H. FREDERICK LESH, *President*.

BOSTON, MASS., *September 2, 1921*.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR MR. WALSH: Free hides are essential to the life of the independent tanners. An import duty on hides would not do justice to the best interests of the public for the reason that it would reflect in increased costs of finished leather, shoes, and harness.

The hide market is world wide in scope. In the United States the slaughter of cattle hides does not exceed 50 per cent of the requirements of the domestic tanners. The remaining 50 per cent must be imported, and should therefore be admitted free of duty. A duty on hides will not help the farmer. A tariff on hides could not make cattle raising more profitable in this country; instead, it will allow the domestic packer to increase the price of his hides. Independent tanners are finding it difficult to get their supply of hides at home so they are compelled to go into foreign markets for a large percentage of their supplies, inasmuch as tanning packers use a large portion of their own hides. Now, if the independent tanners have to pay a duty on hides they can not compete with tanning packers, and it is then just a question of time until all small tanners have to go out of business. Free hides are, therefore, the only salvation of the independent tanner.

Two-thirds of all the domestic hides that go to the tanners come from the slaughterhouses of the packing concerns.

Hides are a basic raw material, and it must be remembered that hides are a by-product and cattle are not raised for the hides they will produce and the farmer will not receive one cent more for his cattle due to a duty being put on hides.

A tariff on cattle hides is economically unsound.

When we set up a tariff of this kind we protect only the packer; in short, a tariff on cattle hides is fundamentally wrong and against the best interests of this country inasmuch as the public would be taxed with this additional burden in the finished product. At this time the whole Nation is looking for relief from excessive high prices.

We summarize briefly why hides should be free:

a. Hides are a by-product; a 2,000-pound steer yields a 60-pound hide.
b. Cattle are bought and sold on the basis of beef value.
c. Higher prices for hides never have caused higher prices for cattle.
d. Tariff on hides would not protect the farmer.
e. Tax hides and shoes will cost more.
f. Domestic supply of hides is 50 per cent too small.
g. Tanners import 50 per cent of the hides they tan.
h. Foreign hides needed to keep tanners and shoe factories running.
i. Sixty-six per cent of the domestic hides are produced by packing concerns, 34 per cent by farmers.
j. Hide tax will help nobody, but hurt everybody.

We sincerely trust that you will agree with our position and that we will have your assistance in this important matter. We would like to have an expression from you as to your position in this respect.

Very truly yours,

LEAS & MCVITTY CO.,
JAMES P. MAHER, *Manager*.

During the speech of Mr. WALSH of Massachusetts,

The PRESIDENT pro tempore. The time of the Senator from Massachusetts has expired.

Mr. McCUMBER rose.

Mr. WALSH of Massachusetts. Does the Senator object to my continuing?

Mr. McCUMBER. Oh, no.

Mr. WALSH of Massachusetts. I will say to the Senator that I desire to discuss two paragraphs together so that I need not take the floor later. Of course, I can, if desired, stop now and when the paragraph on leather and boots and shoes is reached renew my discussion, but I thought it would save time and be more enlightening to the Senate to discuss the duty on hides and leather and boots and shoes at one time, because they are all interlocked. It is possible to have all the discussion take place at one time and then have a vote on the two paragraphs, one following the other.

I intend at the proper time to make a motion to put hides upon the free list. I think the best way, however, is to have a vote upon the committee amendment and, if that is rejected, place hides upon the free list. That is the simpler and better way. The test vote is whether or not the Senate proposes to accept the committee amendment. I can now discuss the second paragraph. I ask unanimous consent that I may be permitted to make my argument now on paragraph 1431.

Mr. McCUMBER. I think there can be no objection to the Senator discussing one paragraph right after the other and taking an hour on each if he so desires.

The PRESIDENT pro tempore. The unanimous-consent agreement provides——

Mr. WALSH of Massachusetts. I do not want to press the matter, but I do not see why it is not going to expedite business to discuss together two or three paragraphs, rather than have one paragraph taken up at a time and spend an hour on it and then have another paragraph come up, and have the discussion largely repetition. The purpose I have in mind is to confine my whole discussion to these two paragraphs and then not say anything more and have the vote upon them. You can not discuss hides without discussing leather and you can not discuss leather without discussing boots and shoes and the duties upon them.

The PRESIDENT pro tempore. The Senator from Massachusetts will appreciate, however, the very difficult position in which the Chair is placed. A unanimous-consent agreement has been entered into which it is impossible literally to enforce, so the Chair is doing the best he can to give the unanimous-consent agreement a reasonable interpretation.

Mr. WALSH of Massachusetts. I ask unanimous consent that I may proceed at this time to discuss paragraph 1431 under the rule.

The PRESIDENT pro tempore. Is there objection? The Chair hears none.

Mr. McCUMBER. I understand, of course, that the Senator from Massachusetts may occupy an hour in the discussion of any one of these paragraphs, but after they shall have been discussed, if we give unanimous consent to go from one to the other and for the Senator to discuss them consecutively it will not be granting to the Senator an extra hour on these schedules.

The PRESIDENT pro tempore. The Chair can not anticipate that contingency. The Senator from Massachusetts asks unanimous consent——

Mr. WALSH of Massachusetts. Of course, I can pursue this course: There are five paragraphs, and I can take an hour on each paragraph and go over the same thing again and again. It seems to me that these paragraphs align themselves into two natural divisions—hides and leather and boots and shoes being in one class, and, second, gloves, harness, and other leather goods—and that, therefore, two arguments would cover the entire subject. Gloves involve an entirely different question from hides; they are made from a leather which is entirely different from cowhide leather. I will try to save time by arguing the two paragraphs on hides and leather at once, and then, so far as I am concerned, I shall say nothing further.

The PRESIDENT pro tempore. The matter is not open to debate. The Senator from Massachusetts asks unanimous consent that he may discuss at this time paragraph 1431, as the Chair understands. Is there objection? The Chair hears none. The Senator from Massachusetts has now an hour on paragraph 1431.

Mr. WALSH of Massachusetts. I appreciate the courtesy extended me by the Senate, but I am not going to take an hour. I shall be able to finish in 15 minutes, I am sure.

After the speech of Mr. WALSH of Massachusetts,

Mr. McCUMBER. Mr. President, I find it exceedingly difficult to follow the Senator from Massachusetts [Mr. WALSH] in his discussion of any of these schedules. I have no difficulty in finding from the Senator's argument what he is against; but what I should like to ascertain, if possible, is what he is for.

The Senator recognizes the necessity of raising funds to meet the appropriations that are made each year by Congress. I know of nothing that has been proposed that the Senator does not object to. I wish he would suggest in some of his arguments just how he would raise the funds to carry on the Government of the United States. He has told us how to tear down a structure. He has not informed us how to erect one. He has shown us what he considers defects in this bill. He has shown no real remedy for those defects.

I will admit that every tax is onerous. I will admit that every tariff is an imposition upon the public, who have to pay that tariff in some form; but I really would like to find some way in which we could carry on the Government without any taxation and without levying any duties. In every one of the schedules the Senator from Massachusetts has followed one line of philosophy, and that has been that if we levy a duty at the source, of course it is reflected many times over before the article upon which the duty is imposed reaches the ultimate consumer, and therefore, if we collect one dollar in duty, it is reflected in three or four or five dollars to the ultimate consumer.

Mr. President, is not that true if you levy a tariff for revenue only? Is not the philosophy exactly the same, and is not the Senator driven by his process of consideration to the ultimate

result that there should be no duty levied upon any article for revenue or for any other purpose? Where there is one importer of fabrics there are 10,000 people who must buy those fabrics; where there is one importer of the raw material there are 10,000 people who must purchase that raw material; and therefore the Senator would be forced by the logic of his own arguments to vote against a tariff duty upon any product. He would be compelled to favor a direct sales tax, so that whatever is paid is paid by the ultimate consumer and is paid but once; or, in lieu of that, he would have to go to the system of direct taxation, and the Senator is not in favor of any of them. Consequently, I am at a loss to know what he is in favor of as a means of raising revenue to carry on the Government.

The Senator's argument is like a double-edged sword. He says that the price of a steer is not affected whether there is a duty on the hide or whether there is not any duty; that the producer of the steer is at the mercy of the packer. Following the line of his argument, a packer will pay just as much for a steer without a hide as he will pay for one with a hide. Following the philosophy of his argument, a packer will pay just as much for a steer that has not a pound of tallow inside of him as he will pay for one that has 50 pounds of tallow inside of him. There is nothing in the argument that the farmer will get no benefit. If the duty has the effect of raising the price of raw hides 2 cents per pound in the United States, the farmer will get on the average $1.35 more than he is getting now for a hide.

I am not arguing what effect the duty is going to have upon the price of shoes or harness, but simply the one question, first, Will the farmer get a benefit? If he gets no benefit, it will be because the importer absorbs the added price of the hide by reason of the tariff, that is all; and if that be true, then we get the revenue from the foreign importer, and we are paying nothing for it. I will go further than that, however, and admit that it will undoubtedly to some extent raise the price of the hide.

Now, Mr. President, I want to consider the question of whether or not the duty on hides will affect the price of a pair of shoes. Of course, while there are comparatively few men who skin steers, there are 110,000,000 people in the United States who wear shoes; and if we are to adopt the philosophy of the Senator from Massachusetts we should give no tariff upon hides, and under the same principle we should have no duty for revenue or otherwise upon any article which is consumed by a greater number than the same article is produced by in the United States.

I want, first, to call attention to the fact, which most people do not understand, that a calfskin is not a hide according to the construction that has been given for many years to the hide schedule. If a hide weighs more than 25 pounds it is a cowhide. If it weighs less than that it is a calfskin, and does not come under the definition of hides.

Mr. LODGE. The Senator has referred to revenue. I just want to inquire of him if any estimate has been made of the amount of revenue on hides? Of course, he would have to take also the estimate of the revenue on boots and shoes.

Mr. McCUMBER. We would simply have to get the number of pounds, and I have not it here, to determine just what the revenue would be upon the hides which are imported into the United States. About 55 per cent of all of the hides that are used in the United States, both calfskin and otherwise, are produced here, and about 45 per cent are imported.

Mr. LODGE. The Senator puts the importations as high as that?

Mr. McCUMBER. That is the Tariff Commission's report.

Mr. LODGE. That ought to be correct, of course.

Mr. McCUMBER. About 45 per cent. The expert informs me that it would amount to about $15,000,000 in duty.

Let us remember, second, that the shoes which are worn by the American people are not all composed of cowhide. Probably ninety-odd per cent of them, at least, have uppers of calf, and the rest is sole leather, which is made of hides.

The leather in a pair of shoes will not amount to more than 1.5 pounds for the soles and 1.3 pounds for the other parts of the heavier leather that is used; so that not more than 2.8 pounds of the leather that goes into an ordinary pair of men's shoes will bear this taxation of 2 cents per pound. That will bring it, when we have carefully considered the number of pounds of the raw hide that will make the 2.8 pounds of leather, to about 6 cents, a little less than 6 cents on a pair of shoes.

Does anyone having a sane mind and knowing anything about the retail price of shoes believe for a single moment that this matter of duty of 6 cents upon the leather which goes into those shoes is going to fix the price of the pair of shoes just 6 cents higher than it otherwise would be? If you will get the profits in the manufacture of a pair of shoes you will find that that 6 cents is absorbed many, many times over. It will not affect the price. What will affect the price? Ability to purchase. What will the trade stand? So much for a pair of shoes. When they get too high, people will wear their old shoes a little longer, and then the price of shoes has to come down, or there will cease to be a lively and a healthy movement in the shoe line. That is true of every other product. To show you that it is measured by the ability of the public to pay rather than the mere cost of the leather that is in those shoes, or the cost of the hides, let me call your attention to the fact that in 1919—I think that was the high point—when raw hides were worth about 19 cents a pound, shoes, of course, went up very high. The price fell to 12 cents per pound, practically the pre-war price; but has anyone bought a pair of shoes at the pre-war price? Hides have gone down, and gone down to about pre-war prices, but we all know that shoes have not gone down to anywhere near pre-war prices.

Mr. LENROOT. Does the Senator think that other costs of production have gone down to pre-war figures?

Mr. McCUMBER. Not quite.

Mr. LENROOT. Anywhere near?

Mr. McCUMBER. Yes; as to some things. In the production of a pair of shoes, nearly everything is machinery. The machinery has not raised its scale of wages. The man who operates one of a dozen machines which are grinding out ready-made shoes may have had his wage raised to some extent, but the machine producing those shoes has not raised its wage one penny, and the principal item in the cost of making shoes is not the labor but the material from which they are made.

Mr. LENROOT. Does the Senator take the position that the cost of production has nothing to do with the price of the product?

Mr. McCUMBER. The Senator should not ask me a question of that sort.

Mr. LENROOT. The Senator stated, as I understood him, that the price paid by the consumer depended wholly upon ability to pay, and if that be true, does the Senator take the position that the cost of manufacturing shoes might be one-quarter what it is to-day, and yet the price of the shoes to the consumer be the same?

Mr. McCUMBER. Mr. President, I do not know, and the Senator does not know, whether they would be sold at a lower price than the present price if it cost a half or a quarter to produce them what it does to-day. I assume the price would go down the same extent if they could be produced for such an abnormally low price. But I do say that if you reduce the cost of producing your shoes 10 per cent to-day the price to the final purchaser will not go down 10 per cent. I think I can make that figure 20 per cent and say it would not affect the retail price of a pair of shoes, and that is what the purchaser is interested in.

I have here a statement which I want to read into the RECORD. It is a very careful estimate by an expert of the Government of the effect of a tariff of 2 cents a pound upon the raw hide, the green hide, and it is definitely and fully worked out for the purpose of determining whether or not it increases the price of a pair of shoes, as stated by the Senator from Massachusetts. It was given in evidence but a very short time ago that a farmer in the State of Idaho, whose Senators must be acquainted with the facts, took the hide of a steer to market and got for it half the price he had to pay for a pair of shoestrings made out of leather. This statement reads:

METHOD OF DETERMINING THE COMPENSATORY DUTY ON BOOTS AND SHOES.

From data submitted by a prominent tanning company with a cut-stock department the estimate of average number of pairs of soles for shoes per whole hide is 35. On the basis of average weights and yield of domestic and foreign green and dry salted hides the average weight of sole leather per hide is approximately 40 pounds. This would give an average of 1.2 pounds of outer sole leather per pair of shoes.

The average amount of upper leather per pair of shoes is 3½ feet for men's shoes and 3 feet for women's shoes. In addition to the sole leather and upper leather other leather is required for welting, insoles, counters, etc. This other leather represents on an average from 20 to 25 per cent of the total leather of a shoe.

Another large manufacturer figures on about 3¼ feet of upper leather and 2¼ pounds of sole leather for men's work shoes and makes no extra allowance for welting, insoles, counters, etc. Upper and sole leather figures are supposed to be large enough to take care of the remainder.

On the basis of 85 square feet of upper leather per 100 pounds of hides or skins and assuming 3¼ feet of upper leather necessary for one pair of men's shoes, 3.8 pounds of green hides would be necessary for uppers. Then, taking 1.2 pounds of outer sole leather, on the basis of 80 per cent yield, the amount of green hide necessary for the sole would be 1.5 pounds. As the sole and uppers represent 80 per cent of the total hides and skins in a shoe, the total amount of raw stock for the entire shoe would be the equivalent of 6⅝ pounds of green hides or skins. This may be taken for a man's ordinary shoe. To average men's, women's, and children's high and low cut shoes together, 6 pounds would probably be a fair figure for all the hides or skins in a pair of shoes.

Leather and raw stock necessary to make one pair of men's shoes.

Kind.	Amount of leather.	Yield of leather from 100 pounds green hides or skins.	Amount of raw hides or skins.
			Pounds.
Upper	3¼ square feet	85 square feet	3.8
Sole	1.2 pounds	80 pounds	1.5
Welting, insoles, counter, etc.	20 to 25 per cent of total required, or about 1.3 pounds.		1.325
Total			6.625

So the sole leather which would go into that pair of shoes would amount to 2.8 pounds, with a calfskin upper, and at 2 cents per pound the duty would amount to the enormous sum of a little less than 6 cents upon a pair of shoes.

We have some evidence upon the subject of the change of a rawhide into a pair of shoes which I think ought to go into the RECORD. I will quote from a statement of Frank B. McClain, vice president of the National Livestock Exchange, Chicago, Ill. He said:

Take the subject of leather goods, for instance. A pair of shoes for his 4-year-old child costs him more than he receives for the hide of a 1,300-pound steer that he slaughters for his family use or divides the carcass of with his neighbor.

Senator MCCUMBER. That hide will make how many pairs of those shoes?

Mr. MCCLAIN. The hide of a 1,300-pound steer when green will weigh 75 pounds. When salted and ready for the tanner the same hide will weigh 65 pounds and will make from 40 to 45 pounds of finished leather. A pair of shoes for a 4-year-old child will weigh (made of leather) not more than 6 ounces.

Senator MCCUMBER. About 3 or 4 ounces?

Mr. MCCLAIN. Certainly not more than 6 ounces.

Take the cost of a set of harness for one horse. Why, it represents the value of the hides of a fair-sized drove of steers. Is there any equity in that?

Mr. Chairman and gentlemen of the committee, I do not believe that what has come to be called "normalcy" or "dawn of the new day" can be or will be arrived at until the dollar of the farmer buys as much of the things he must have as the dollar that buys from him the things that be produces.

That is a pretty good philosophy, but we have never yet followed it in the United States.

Therefore, to correct social and economic ills we must have a common denominator; we must put producers of all commodities essential in our living on a parity, whether that commodity comes from the soil, the loom, the lathe, the furnace, or the factory.

All of the arguments for and against placing hides on the free list can be stated concisely. On the one hand we have far more than a million live-stock producers urging a duty on hides. On the other hand we have perhaps a thousand manufacturers of shoes requesting that hides be placed upon the free list, in order, no doubt, that they may continue their plundering practices of 1919 and 1920, which practices embraced the manufacturer, the jobber, and the retailer alike and were a "stick up," compared with which train robbery was equally respectable, more hazardous, and less profitable. They were not content to be Robin Hoods and take only from the rich or well-to-do; instead, they were Captain Kidds and plundered all, taking their toll even on the footwear of the day laborer's little children.

Then, again, we have that vast army composed of the general public, who are the consumers. If the result of placing hides on the free list would be giving the consumer cheaper footwear, the argument of the live-stock producers might have less effectiveness, but experience has demonstrated that cheap hides do not mean cheap shoes. As proof of this, I submit to you gentlemen that hides are to-day and have been throughout the year 1921 not only down to pre-war prices but actually below pre-war prices.

I do not want to bore you with statistics, nor will I submit to you evidence from sources prejudiced against the hide, leather, and shoe business; instead, I will present the statement of a publication which is certainly favorable to the leather and shoe business, because it is their trade organ, and the name of that publication is the Hide and Leather Journal. The said Hide and Leather Journal, under date of August 20, 1921, presents the following comparisons in hide prices during the weeks ending August 20 in each of the 10 years from 1912 to 1921 (which table of prices I submit as part of my remarks).

Without reading them, because they are further commented upon, I ask to have these two tables inserted as a part of my remarks at this point. They will be found in the tariff hearings at pages 4461 and 4462.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Comparative prices of Chicago packer hides for 10 years, week ending August 20.

[Hide and Leather, Chicago, August 20, 1921.]

	Spready steers.	Heavy native steers.	Heavy Texas steers.	Light Texas steers.	Extra-light Texas steers.	Butt brands.
	Cents.	*Cents.*	*Cents.*	*Cents.*	*Cents.*	*Cents.*
1912	21 –22	19½	17½	17½	16½–16¾	17½

Mr. MCCUMBER. I read further:

Senator MCCUMBER. Do you desire to make the table you submit from the Hide and Leather Journal part of your testimony and have it inserted in the record?

Mr. MCCLAIN. I do; and in connection with the same, let me call to your attention that in 1912—

That was before the war—

heavy steer hides sold at 19½ cents; in 1913 they sold for 19 cents; in 1914 they sold for 21 cents; in 1915 they sold for 27 cents; in 1919 they sold for 53 cents; and to-day, in 1921, the maximum price at which they are selling is 14 cents.

That is, as against 19½ cents in 1912 and 1913.

Let me further call your attention that in 1912 light native cowhides sold at 17½ cents; in 1913, 18 cents; in 1914, 20 cents; in 1915, 25 cents; with the price steadily increasing each year until 1919, when they sold for 61 cents; and to-day the maximum price at which this same grade of hides is selling is 12 cents per pound. (These prices apply, of course, to salted hides.) Are shoes lower in price than they were in 1912, 1913, 1914, or 1915? It goes without saying that the answer is "No." On the other hand, hides are lower and very much lower, as the statement of the Hide and Leather Journal sets forth. What, in the name of God, I ask, do they make shoes from? Do they make them from wall paper, burlap, or leather, or what? If they make them from leather, and they tell us they do—the wearing qualities of some of them seem to indicate they don't—the public certainly are justified in securing shoes for less than the prices at present charged for them.

I admit that there has been a reduction in the price of shoes to the public during the present year as compared with the prices of 1920. Manufacturers and retailers tell us that the reduction in prices has been 40 per cent, but investigation seems to indicate that the statement of the manufacturers and the retailers in this matter is somewhat exaggerated.

Again he was asked:

Senator MCCUMBER. Assuming that there are 2½ pounds of leather in a pair of men's shoes, to what extent would a 30 per cent tariff on hides—

That is double what the tariff is now—

increase the price of that pair of shoes? Have you made any computation of that?

Mr. MCCLAIN. It is not hard to figure out, taking the weight of finished leather that a 65-pound or 70-pound salted hide will yield and divide the same with the average weight of a pair of men's shoes, and as well with the average weight of a pair of women's shoes, which, of course, will be lighter in weight than the shoes of the male.

Senator MCCUMBER. The object of my question is to ascertain whether there would be enough in the tariff you suggest to increase the cost of a pair of shoes 5 cents?

Mr. MCCLAIN. Hardly that much on children's shoes.

Senator McCUMBER. I have made such estimates myself, and I do not think there would be a difference of more than 4 to 5 cents.

Mr. McCLAIN. A tariff of 30 per cent on hides would not increase the cost of a pair of adult's shoes (averaging men's shoes and women's shoes) more than 7 cents.

Now, if we cut that in two, his average estimate would be about 3½ cents on a pair of shoes.

Now, Mr. President, it seems to me, taking into consideration the state of agriculture in this year of 1922, taking into consideration the very bad conditions of the cattle raiser, when he is buying everything at a cost ranging from 50 to 150 per cent higher than he paid in 1912 and is selling the hides on his cattle for not more than 75 per cent of what he received in 1912, that the American people can well assist him, if this will assist him, in getting the little $1.35 more for the hide of a 3-year-old steer, even though it does load upon the American public an additional cost of 3½ cents upon a pair of children's shoes or the enormous sum of 6 cents upon a pair of men's shoes.

The PRESIDING OFFICER (Mr. BROUSSARD in the chair). The question is on agreeing to the committee amendment on page 192 proposing to insert paragraph 1427a.

Mr. WALSH of Massachusetts. On that I ask for the yeas and nays.

Mr. JONES of New Mexico. Mr. President, the paragraph which we are now discussing is 1427a. It levies a duty of 2 cents per pound upon green or pickled hides of cattle and 4 cents per pound upon dried hides. The modesty of this duty must be apparent to everyone.

We have just listened to a very learned address from the Senator from North Dakota [Mr. McCUMBER], the chairman of the committee, in which he has described to us the very small amount by which the price of shoes should be approximately increased by reason of this very small tariff upon hides. I should be astonished, when the vote is cast upon this paragraph, if anyone who has heretofore been voting for duties upon imported articles should cast his vote against this paragraph. Not a single argument has been made in favor of a single duty in the bill which can not be applied to this paragraph. That it is an essential industry no one can deny. That the industry is in a depressed condition no one can deny. That the supply of animals to produce the food for this country is at the present time just about the number required to meet the necessities of the country no one can deny. The relative supply is decreasing from day to day. The time was when this country was a great exporter of beef products. That time is just about disappearing. There are small importations of meat into this country, but the supply of beef cattle is constantly on the decrease. Just prior to the war, in 1913 and 1914, according to the report of the Tariff Commission, we had just about reached the point where this country would have to import beef if it met the supply demanded by our consumers. During the war, owing to the necessities and the increased prices of meat, the number of beef cattle in this country increased, but since that time the number in this country has decreased about 2,000,000 head.

While the population of the United States has been increasing the relative or proportionate number of beef cattle has been decreasing. We have not now a sufficient number to meet the demands of the American people for beef. The industry, of course, must be considered as a whole. The hide is just as much a part of the producer's product as is the meat. There can be no question about that. It is true that one could not grow the hide without growing the meat. On the other hand, one could not grow the meat without growing the hide.

Mr. President, recognizing this as an essential industry, one which must be carried on for the good of the country, then let us apply to that industry the same principles which have been applied from time to time by everyone who has been supporting the duties in this bill. Time and again we have been told that we should impose a duty upon an essential industry equal to the difference between the cost of production in the United States and abroad. If we examine that question we find that in this instance the duties are not only justified but, if anything could be said against them, they are decidedly too low.

In the first place, during the last 10 years the cost of production of beef cattle in the United States has greatly increased. The cost of land, the cost of pasture, the cost of labor, the cost of everything which the producer must buy has increased, and the business to-day is almost in the throes of desperation. I do not believe there is a cattleman in the United States who is making any considerable profits at the present time. The western ranges have been disappearing; the lands have gotten into private ownership; taxation has increased; and every cost which the producer must incur has greatly risen during the last 8 or 10 years, and is continually increasing.

The hides which are brought into this country from abroad, chiefly from Argentina and other South American countries, come to us from ranges which cost the producer but little. No one has undertaken to state upon the floor that there is not a vast difference between the cost of the production of meat products and hides in the United States and in Argentina. So we have these elementary principles admitted: First, that this is an important industry; and, second, that there is a vast difference in the cost of production here and abroad. Many times we have heard it argued here that those are the only elements which should be taken into consideration in levying a tariff. It is admitted by Senators; and if we are going to put a tariff upon other articles for those reasons, I would ask anyone who has supported those taxes why he does not support this?

It is not a question here of whether there shall be free trade generally, whether there shall be a tariff for revenue or a tariff for protection; but the pending bill is based—at least, it is so pretended—upon the principles which I have stated. If Senators are going to apply them to the great bulk of the articles which are produced in the United States, I ask why they should not be applied in this case?

Merely to give a little idea of the state of the industry, I will now read a couple of paragraphs from a speech made by the Senator from Wyoming [Mr. KENDRICK] on June 28 last, in which he said:

> In 1900 we had 50,000,000 beef cattle. In 1910 we had 41,000,000, and because of the increased activity and encouragement that producers had to redouble their efforts contingent upon the war and after the war, there was an increase of about 2,000,000 head, making 43,000,000 in 1921. These figures are better understood when we consider them in connection with the fact that during the intervening time from 1900 to 1920, as I recall the figures, our population had increased about 20,000,000, which suggests a very much smaller per capita supply of beef products. In 20 years we had increased our population 20,000,000 people and we had decreased our number of beef cattle about 7,000,000.
>
> As another illustration of how the industry has been affected by the reconstruction period, I want to give a few figures in reference to the decline in the value of the product. In 1921 the meat animals, as marketed through the central markets of the country, returned to the producers $1,968,000,000 as against $2,913,000,000 in 1920, showing a shrinkage in the income of live-stock producers of nearly $1,000,000,000 that year. The cattle producers contributed about $447,000,000, swine producers $460,000,000, and the sheepmen $37,000,000.

There is not any doubt about the facts. There is no question here about prices. Time and again we have levied duties under the present bill upon hundreds and thousands of articles the prices of which to-day in the American market are 50 per cent and sometimes 100 per cent higher than those which obtained prior to the war. In fact, as I stated on yesterday, the average prices to-day of manufactured articles in the United States are 72 per cent above the prices of 1913. When we come to the prices of beef and hides we find that as to meat the price is but little above the pre-war price. When we take the price of hides, however, we find that it is away below the pre-war price. If anything could be said in favor of levying additional duties or of levying duties at all upon the products which are selling 72 per cent above the pre-war prices, I ask Senators how they can justify themselves in refusing to vote for a duty upon an essential commodity which is selling for one-third less than it was prior to the war?

Mr. President, I have listened with attempted patience to the argument which has been advanced as to the increase of prices on finished articles as a reason for not imposing this duty. It must be apparent to everyone that the increase would be small, but I agree that there would be an increase. However, is not that true of every other article mentioned in this bill on which a tariff has been levied? The duties on clothing, glassware, earthenware, chemicals, paints, metals, and all classes of metal production have been increased. Why was that done? Because it was either desired to increase the price or else maintain a high price which already existed. How can anybody justify his action who has voted for such duties upon all those products and then turn around and vote against a little insignificant duty upon hides?

The Senator from New Jersey has insisted here day after day upon high duties upon everything produced in his State by manufacturers. He has done so because he hoped to increase prices or maintain existing prices.

Mr. FRELINGHUYSEN. Mr. President——

Mr. JONES of New Mexico. I should like to ask the Senator or anybody else who is going to vote against the duty on hides how he can reconcile his vote, which I understand he will cast, upon this subject with his vote upon the others?

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDING OFFICER (Mr. CAMERON in the chair). Does the Senator from New Mexico yield to the Senator from New Jersey?

Mr. JONES of New Mexico. I am glad to yield.

Mr. FRELINGHUYSEN. Mr. President, the Senator is unfair when he states that I have asked for higher duties on the products of New Jersey simply because I wished the industries of that State to make excessive profits. That is not true. I have insisted on proper rates, as I believed them to be, in order that the industries might be properly protected, not that they might make extortionate profits; and there is nothing in my attitude on this floor or in the committee which would merit such a conclusion by the Senator, and he knows it.

Mr. JONES of New Mexico. Mr. President, may I ask the Senator from New Jersey, then, if he thinks that this would be an unwise duty to put on hides?

Mr. FRELINGHUYSEN. Mr. President, I do not think a duty on hides will help in any way whatsoever the raiser of cattle or live stock. I do not believe that hides enter to any extent into the return to the farmer. The question as to hides is one that relates, in my opinion, entirely to the meat products, and I do not believe a duty on hides will benefit the farmer in the slightest degree.

Mr. JONES of New Mexico. Mr. President, the Senator will have a very difficult task to convince the farmers of the country of the reasonableness of what he has just said. I think I may state, also, that in many instances under this bill we have been told that the prices would not be increased, and that the producers would not get the benefit, but Senators have insisted upon the duty just the same.

Mr. President, what the Senator from New Jersey has just said is undoubtedly intended to embody the argument which has been made here regarding the control of this product by the packers of this country. I wish to say that if it is controlled by the packers, that situation should be dealt with in an entirely different manner. If there is a trust here which controls the meat product, the meat supply, the hide supply, the Attorney General should be advised of it; it should be dealt with under the antitrust laws of the country; but no man can stand on this floor and sustain the argument that in the absence of a trust the producer will not get the benefit of a duty on hides.

Mr. LENROOT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Wisconsin?

Mr. JONES of New Mexico. I yield to the Senator.

Mr. LENROOT. I should like to ask the Senator, then, if he is as willing to vote for a high duty on a product that is controlled by a monopoly as he is for a product that is independently produced? He says that the remedy is in another direction.

Mr. JONES of New Mexico. Mr. President, I have made no statement that I intended, at least, to be understood in that way; but what I have said is that in this bill we are not legislating with respect to monopolies. It is absolutely denied that there is any monopoly.

Mr. LENROOT. But in the consideration of a duty, does the Senator take no account whatever of the fact, if it be a fact, that a commodity is controlled by a monopoly in this country?

Mr. JONES of New Mexico. Mr. President, that is, of course, a hypothetical question; and I am very glad to say that if I knew that there was a monopoly that controlled any product I would not be in favor of increasing the duty upon the article produced by such a concern.

Mr. LENROOT. But the Senator has just said that if the beef packers are able to get all the benefit, and not give the producer any of it, that is a matter to be dealt with in another direction. If it is true of the beef packers, why is it not true of every other monopoly?

Mr. JONES of New Mexico. I do not say it is true of the meat packers. I have not made that statement, and I do not believe that the Senator from Wisconsin believes that that is the fact. I ask the Senator from Wisconsin if he believes that there is a packers' trust in this country?

Mr. LENROOT. I was simply calling attention to the Senator's argument. Referring to the statement of the Senator from New Jersey that the cattle growers receive no benefit from the duty because of the beef packers, the Senator said in response to that that if that be true the beef packers should be dealt with in another way; and if the beef packers should be dealt with in another way, why should not any other monopoly be dealt with in another way, having no relation to tariff rates? I do not agree with either statement, of course.

Mr. JONES of New Mexico. Mr. President, that raises purely a hypothetical question which I do not care to dwell upon and take time in discussing.

Mr. LENROOT. If the Senator will yield again, I should like to ask him a question growing out of his question to the Senator from New Jersey.

Mr. JONES of New Mexico. I gladly yield.

Mr. LENROOT. Does the Senator from New Mexico indorse the Republican theory of protection?

Mr. JONES of New Mexico. Mr. President, I think that is wholly aside from this question.

Mr. LENROOT. Oh, I think that is a fair question.

Mr. JONES of New Mexico. I will state to the Senator that I do oppose the Republican theory of protection, if this bill is an expression of it.

Mr. LENROOT. The Senator has voted for high protective duties for the products of his own State. He has voted generally, I think, against protective rates for other products. I think that is a fair statement, is it not?

Mr. JONES of New Mexico. I do not think it is.

Mr. LENROOT. I wish to be entirely fair to the Senator.

Mr. JONES of New Mexico. In all of the amendments I have proposed to this bill the Senator must have observed one thing—that I never proposed a single amendment or advocated a single measure which, in my judgment, would have injured any of the essential industries of this country.

Mr. LENROOT. That is quite aside from the question; but the question I wanted to ask the Senator was this: Suppose he had been successful in reducing all other rates to the level of the Underwood law, but had been successful in increasing all rates which he favored, would he then vote for the bill?

Mr. JONES of New Mexico. I certainly would have.

Mr. LENROOT. So, then, the Senator would vote for protection to his own industries which he would deny to others?

Mr. JONES of New Mexico. Mr. President, the question was broad and my answer was equally broad, and, I think, unfortunately so. There are many duties in the Underwood bill, in the existing law, which are too high, and which are not needed by any of the industries for any kind of reasonable protection.

Mr. LENROOT. I agree with the Senator upon that. May I then put the question in another way? If the Senator could reduce all duties that he thinks ought to be reduced, and yet increase upon the basis of a protective principle the rates upon hides, upon wool, and upon other things that the Senator has voted for, would he then vote for the bill?

Mr. JONES of New Mexico. I will answer the Senator in this way: If I could have the arrangement of the rates, I certainly would vote for the bill; and I want further to state that there is no such thing as a free-trade tariff. Any tariff is an obstruction, pro tanto, upon imports, and where there is a similar commodity produced in the United States it is, pro tanto, a protection to that industry; and under the existing law, the so-called Underwood-Simmons law, the tariffs are levied in great measure, I would say to the greater extent, upon articles which are produced in the United States and which compete with foreign articles, and in every such case that duty is a protective tariff, if you enjoy that phrase better than any other. It can not be escaped; and when the time came that this country took off its duties upon tea and coffee and other articles which were not produced in the United States and retained them upon articles which were produced in the United States in competition with foreign articles the idea of a tariff solely for revenue disappeared.

Mr. LENROOT. Mr. President, may I ask the Senator another question?

The PRESIDING OFFICER. Does the Senator from New Mexico further yield to the Senator from Wisconsin?

Mr. JONES of New Mexico. I yield.

Mr. LENROOT. Would the Senator vote in favor of a rate of duty upon a given article which would produce the largest amount of revenue from that article?

Mr. JONES of New Mexico. If the Senator will do me the honor to read the address which I delivered in the Senate yesterday morning, I think a great many of the questions that apparently are troubling him now will disappear.

Mr. LENROOT. Mr. President, I want to say that my questions were propounded in the hope that we would be able to welcome the Senator from New Mexico to the Republican theory of protection, but from the Senator's answers I am very much afraid that he is against the Republican theory of protection generally but is in favor of it for the industries of his own State.

Mr. JONES of New Mexico. If the Senator will do me the honor to read the address which I delivered yesterday morning I think he will discover that it is my opinion that the Republican Party has no theory of protection. The Senator will discover that there is no single theory of protection running

through this bill. When the very first item in the bill came up for consideration that fact was made perfectly apparent. You talk about a tariff levied for protection on the theory of the difference in the cost of production at home and abroad. I say that you have not applied that doctrine to more than a very infinitesimal number of the items mentioned in this bill. You have no theory of protection, if this bill is an expression of what you think that theory is.

The Senator from Wisconsin time and again has stated on this floor as to many items that they did not conform to the Republican theory of protection.

Mr. LENROOT. Mr. President, will the Senator yield further?

Mr. JONES of New Mexico. I gladly yield.

Mr. LENROOT. The Senator certainly has not understood, from any question I asked, that I was defending the rates in this bill. I was talking about the different theories, the Republican theory and the Democratic theory of tariff duties.

Mr. JONES of New Mexico. I assumed that the Senator from Wisconsin represented and expressed what he thought was the Republican theory of protection.

Mr. TRAMMELL. Mr. President, will the Senator yield?

Mr. JONES of New Mexico. I yield.

Mr. TRAMMELL. Did not the Senator from Wisconsin also say, some two or three weeks ago, that unless the bill was re-formed he would not vote for it?

Mr. JONES of New Mexico. I believe I remember that statement made by the Senator from Wisconsin.

Mr. LENROOT. I did not catch the statement of the Senator from Florida.

Mr. TRAMMELL. I understood the Senator from Wisconsin to say, in discussing the bill here some two or three weeks ago, that if it was not re-formed he would not support the bill.

Mr. LENROOT. The Senator correctly understood me. I did state that.

Mr. JONES of New Mexico. Mr. President, after we heard that theory announced—the difference in the cost of production at home and abroad—the Senators supporting this bill were forced to abandon it and say that they had never attempted to ascertain the cost of production at home or abroad as to a single item in the bill. That is your supposed Republican protective theory; but there is a confession from every Senator on the other side of the Chamber that that theory has not been applied to the rates in this bill, and I imagine the Senator from Wisconsin is going to vote for it with all of the iniquities which he himself has pointed out.

After being driven from the theory of the difference in the cost of production at home and abroad, they then undertook to tell us something about difference in prices, and they sent out the Reynolds commission to ascertain that difference in prices. They came back here and reported that as to a number of items the price of the foreign article in this market was higher than the price of the domestic article; but, notwithstanding that, you proceeded to increase duties upon them. Where is your Republican theory of protection as manifested in this bill?

But, Mr. President, what I wanted to emphasize was this: Whatever theory of this bill may be adopted by any individual supporter of the bill, whatever your theory may be, I ask you how you can apply it and not put a duty on hides. No one on the other side of the Chamber has yet undertaken to answer that question, and I submit there will be no satisfactory answer to it from any side of this Chamber.

Senators talk about increased costs. Do you not increase the costs of everything else? Do you hesitate to admit that? If the purpose, as I have said, is not to increase prices or maintain increased prices, then I ask you what in the name of heaven are you doing this thing at all for?

Mr. President, I did not intend to discuss this question at any considerable length. It seems to me that a simple, short statement would convince any man who expects to vote for this bill on its final passage that there should be a tariff duty on hides. A number of different theories have been stated, but I submit that any theory of protection, whatever it may be, upon which any Senator expects to vote for this bill, if applied to this item, will force that Senator to vote for a duty on hides.

As to the producer of hides, you have increased the duties upon substantially everything he must buy. You have increased them upon all of his hardware, you have increased them upon his tableware, upon his kitchen ware, upon his clothing of every conceivable kind, class, or design. You do not hesitate to do that. Clothing they must have, as well as shoes. I ask, what difference does it make if you raise the price of the clothing which covers the body and contend that the shoes which cover the feet should not meet with like treatment? In discussing the duties on a number of articles it has been said that the amount was small, and that was given as an excuse for levying duties. I remind Senators that, measured even by that statement, they will have to put a duty on hides.

Mr. President, I do not know what the vote upon this item is going to be, but I do ask those Senators who expect to vote for the bill how they are going to reconcile their consciences to voting against this paragraph.

Mr. LENROOT. Mr. President, I do not expect to occupy very much time in the discussion of this amendment, but I do want to say a few words preliminarily with reference to the attitude of Senators upon the other side of the aisle.

I want to commend the Senator from New Mexico for his frankness in stating the position he occupies upon this bill, and I wish that other Senators who, like himself, have voted for high duties upon the products of industries in their own States and voted against protective duties throughout the rest of the bill would be as frank as he has been. I have thought, from the Senator's statement, that the inevitable conclusion was that he had discarded the doctrines of the Democratic Party of either free trade or a tariff for revenue, and that he really and sincerely believed in the Republican theory of a protective tariff.

I asked the Senator whether he would vote for the bill if he could get a decrease in all of the duties in this bill against which he had voted and could get an increase in all of the duties for which he had voted, those duties being based upon a protective theory, and he said yes. Of course, that meant just one thing, that the Senator from New Mexico was a Republican, upon the protectionist doctrine, for industries in his own State, but that he was a tariff-for-revenue Democrat for the industries of every other State. No other conclusion was possible.

Mr. JONES of New Mexico. Mr. President, of course I am in the Senate Chamber, and I should not sit quietly by and permit the remarks of the Senator from Wisconsin to pass without some reply.

Mr. LENROOT. I yield for that purpose, because I do not wish to be unfair to the Senator from New Mexico.

Mr. JONES of New Mexico. I should not be considered as acquiescing in the statement the Senator has made, and I want to disclaim any acquiescence in his conclusions as to what my position is.

Mr. LENROOT. We will let it go at that. Other Senators, like the Senator from New Mexico, have defended their votes for rates even higher than those proposed by the Committee on Finance itself upon the statement that industries in their own States were vitally involved, and they have attempted to excuse themselves by saying that if we were going to have the theory of protection in this bill, they proposed to have that theory uniform and vote for protective duties for their own industries, but that they intended to vote against the bill.

What I want to commend the Senator from New Mexico for is that he has been franker than his Democratic colleagues, and he has honestly stated that if he could get protective duties for his own State and Democratic duties for other States, he would vote for that kind of a bill.

Mr. JONES of New Mexico. Mr. President, I desire again to dissent from the statement the Senator from Wisconsin has made. I have said nothing which was at least intended to even imply or hint at the statement which the distinguished Senator has just made.

Mr. LENROOT. Did not the Senator state, in response to my question, that if this bill carried the duties which he has been voting for—like the proposed duty upon wool, like the proposed duty upon hides, and the duties upon certain minerals the Senator has voted for, if I recollect correctly—and if he could have his way with reference to lowering duties throughout the rest of the bill, he would vote for the bill? Did he not state that to me?

Mr. JONES of New Mexico. I think that is substantially what I said.

Mr. LENROOT. Then there is no disagreement between us.

Mr. JONES of New Mexico. If you will let me write the duties in the bill I shall vote for it.

Mr. LENROOT. Very well, then. But the Senator has justified voting for high duties on the products of industries in his own State because he said the Republicans were voting for high duties upon other products, and if they were going to do that in the case of other products he was justified in doing it for his own State. Now he says that if we wipe out all those high duties for other States, and will give him his high duties

for his own State, then, instead of voting against the bill, he will vote for it. I do not think there can be any misunderstanding between us, and I understand that there are about 18 Democratic Senators who occupy exactly that position. All I ask is that if a Democratic Senator stands for protective duties for industries in his own State he should stand for protective duties on industries of other States; that is all.

Mr. JONES of New Mexico. Mr. President, I simply reply by making practically a restatement of what I said in my opening remarks, that whenever a tariff duty is levied upon any article imported into the United States, and a comparable article is produced in the United States, that duty is, pro tanto, a protective tariff.

Mr. LENROOT. Exactly; I agree with the Senator to that extent.

Mr. JONES of New Mexico. As to every item in the existing law putting a duty upon any importations, where there is a comparable article produced in the United States, it is a protective law.

Mr. LENROOT. Exactly; to that extent. The Senator must also agree, however, that the higher the rate the less the revenue, in a great many cases, and that if you are standing upon the Democratic theory, you can not go beyond a rate which will produce the greatest amount of revenue from the given commodity.

Mr. JONES of New Mexico. Mr. President, I would like to remind the Senator of one other thought in connection with his question. He has referred to the rates in the existing law. In a general answer to the Senator's inquiry some little time ago I said that I would support the present rates, and my answer, of course, was a general answer, based upon the proposition that under the existing law there is not a single industry in the United States which is being injured to any measurable extent by importations from abroad.

Mr. LENROOT. Under the Underwood law?

Mr. JONES of New Mexico. Yes; under the present law. I ask the Senator to point to a single industry in the United States of any material consequence which is being injured to-day by reason of extensive imports.

Mr. LENROOT. Mr. President, surely the Senator from New Mexico, having made a thorough study of the pending bill, must have forgotten this morning all of his previous studies, because a most cursory examination of imports and exports and the reports of the Tariff Commission must convince any Senator, Democrat or Republican, that there are many industries in the United States which are being seriously injured by reason of excessive imports, and in some cases factories are entirely closed down.

Mr. JONES of New Mexico. Of course, we can not settle the question here and now, but I want to have it go out as my statement, after all the study I have made of this question, that the statements of the Senator from Wisconsin are unjustified by the facts.

Mr. LENROOT. Mr. President, I hold in my hand a pair of German gloves, which are being imported into this country to-day for half of what they can be made for, and the factories in this country are closing down. Does the Senator take into account any such evidence as that?

Mr. JONES of New Mexico. I did not understand to what article the Senator refers.

Mr. LENROOT. I hold in my hand a pair of ladies' gloves, the invoice price of which is $3.56 a dozen pair, or about 30 cents a pair. Does the Senator seriously say that the importation of that glove is not interfering with or injuring American industry?

Mr. JONES of New Mexico. Mr. President, the story about gloves is somewhat lengthy, but the Senator upon examination of the question will find that it does. I do not know the class of glove he has exhibited, but I assume it is a high-grade glove.

Mr. LENROOT. It is.

Mr. JONES of New Mexico. I do not know where it was made.

Mr. LENROOT. It was made in Germany.

Mr. JONES of New Mexico. With regard to that high-grade kid glove made in Germany, the facts are that in this country we have never been able to produce that quality of kid glove at a reasonable price.

Mr. WADSWORTH. Mr. President, will the Senator from Wisconsin permit me to answer the Senator from New Mexico?

Mr. LENROOT. Certainly.

Mr. WADSWORTH. I have in my hand two pairs of the very kind of glove which the Senator from Wisconsin has exhibited, and which are made in this country.

Mr. JONES of New Mexico. Oh, yes; they are made here, but I said at a reasonable price.

Mr. WADSWORTH. The Senator probably forgets that men's gloves have had a higher rate of protection than women's gloves. If the same rate of protection were given to women's gloves that is given to men's gloves, we could make the women's gloves here just as well. When a higher protection was given to men's gloves, we showed our ability to make them and reduce the price. With the same tactics employed with reference to women's gloves, they could be made here as well as the men's gloves and the price would be reduced accordingly. We have never had a chance to make the women's gloves.

Mr. LENROOT. Mr. President, I know the Senator from New Mexico made that general statement in good faith, but I know that if he will refresh his recollection and study, as I know he has studied, the imports, he will remember that there are many articles as to which the imports are very excessive and where the American industry, unless they have some relief, will be very seriously injured. I think I can fairly say that because, Republican as I am, I have stood upon this floor, and propose to stand here until the tariff bill has been finally disposed of, fighting against what I believe to be excessive rates.

Mr. JONES of New Mexico. Mr. President, another point which should not be overlooked in this connection is the fact that the pair of gloves which the Senator produced came from Germany. We all know that, owing to the rapid decline in the gold value of the German mark, many shipments of commodities from Germany were made at excessively low prices.

But I want to remind Senators that if the tariff bill is to be framed upon conditions in Germany the foundation is one of sand. Everybody knows that Germany is in an industrial collapse; that she has not since the war been able to produce more than 60 per cent of what she was producing prior to the war, and her exports are only 40 per cent, and that of those exports altogether there came to the shores of America only 7.1 per cent. Yet because of that unfortunate condition in Germany it is proposed to disturb business industries of whatever character all over the United States. The Republicans have built up these duties by reason of that unstable, uncertain foundation which is claimed to exist in Germany.

Mr. LENROOT. All I have to say in response to that suggestion is that if a man dies of a disease he is not very much interested in the post-mortem to ascertain what caused his death.

Now, Mr. President, to get down to the question before the Senate, the Senator from New Mexico [Mr. JONES], in opening his remarks, stated that whatever contention might be made as to whether the farmer would receive the benefit from a tariff on hides, the fact was that the farmers were all insisting upon having it. The largest farm organization in my section of the country is the American Farm Bureau, and I am going to read the closing paragraph of their brief submitted to the Finance Committee wherein they said:

> The cost to consumers of leather products would more than offset the increased return to hide producers even if all the increased price was passed on to the producers, of which there is no assurance. Therefore, we believe that hides, leather, and leather products should remain on the free list.

The American Farm Bureau is a very respectable farm organization with a very large membership. It does happen, I know, to be constituted almost wholly of small farmers and perhaps has no membership of the large cattle growers, with their thousands and thousands of cattle.

Now, Mr. President, I am opposed to the duty on hides, first, because I am convinced that so far as the average farmer is concerned, if there be any benefit accruing to the farmer——

Mr. BURSUM. Mr. President——

Mr. LENROOT. Just a moment. If there be any increase in the price of hides the cost to the farmer in the shoes and leather products that he must buy will be very much greater than any possible increase in price that he may receive for his hides.

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LENROOT. I yield.

Mr. BURSUM. The Senator from Wisconsin stated that some farm bureau favors free hides. May I ask the Senator what farm bureau that was?

Mr. LENROOT. I quoted from a brief filed with the Senate Finance Committee by the American Farm Bureau Federation, of which Mr. Howard is president, and of which Mr. Gray Silver, whom I think every Senator knows, is secretary, having headquarters in Washington. It is perhaps the most active farm organization that there is in looking after the interests of the farmers in legislation.

Mr. BURSUM. We have a farm bureau in my State, and no such request has been made by it.

Mr. LENROOT. That may be; but this is the national federation about which I am talking. I am not talking about some little organization that the Senator may have in New Mexico.

Mr. BURSUM. If the Senator please, I would advise him that New Mexico is a part of the Union.

Mr. LENROOT. I understand that; but there are more members of this farm bureau in one county in my State than there are in the entire State of New Mexico.

Now, Mr. President, I want to ask the Senator from New Mexico, if I may trespass upon his good nature, whether he is in favor of the proposed 5 per cent duty upon shoes?

Mr. BURSUM. Is the Senator inquiring of me?

Mr. LENROOT. Yes. Is the Senator from New Mexico in favor of the committee amendment imposing a 5 per cent duty upon shoes?

Mr. BURSUM. I will say to the Senator from Wisconsin that for the present it would be advisable to stick to the subject pending. We are just now discussing the duty on hides.

Mr. LENROOT. So the Senator from New Mexico declines to answer whether he is in favor of the 5 per cent duty upon shoes which is proposed by the committee.

Mr. BURSUM. Whenever we get to that proposition and the matter is up for action, the Senator from New Mexico will not hesitate to state his position.

Mr. LENROOT. But the Senator declines to express himself upon that subject now. I commend the Senator from New Mexico for his discretion because I understand very well that the reason why the 5 per cent duty is proposed upon shoes, in addition to the compensatory duty, is the hope of those back of the proposition, representing primarily the cattle range States, that they will be able to get the votes of New England Senators for a tariff upon hides in return for their votes for a 5 per cent duty upon shoes. The Senator from New Mexico well understands that if he should say now at this stage of the controversy that he is opposed to a 5 per cent protective tariff upon shoes he would not be nearly so likely to get the votes of New England Senators for a tariff upon hides. So I commend his discretion.

Mr. JONES of New Mexico. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LENROOT. I yield.

Mr. JONES of New Mexico. The Senator was rather criticising some of us for voting because our constituents live in a cattle-raising State.

Mr. LENROOT. No; the Senator misunderstood me. I did not. What I have criticized was voting on one principle for industries that the Senator's constituents wanted and voting upon another principle against duties that other constituents want. That was my criticism.

Mr. JONES of New Mexico. The Senator from Wisconsin has just referred to the fact that a farm bureau of his State does not want a duty on hides. I ask him upon what principle he is voting against the duty on hides?

Mr. LENROOT. If the Senator will have just a little patience, I assure him he will find out. I referred to the National Farm Bureau, with organization headquarters in Washington, which, representing the national organizations, took its position before the Finance Committee. Now, answering the Senator's question, I am opposed to the duties upon hides, first, because, so far as the average farmer is concerned, so far as 99 per cent of the farmers of America are concerned—conceding for the moment that the duty would increase the price of hides—the price that they will have to pay for shoes and other leather products which they must buy will be a great deal more than the benefit they will receive from a tariff upon hides.

Mr. POMERENE. Mr. President——

Mr. LENROOT. I yield to the Senator from Ohio.

Mr. POMERENE. The Senator has indicated that if this duty were placed on hides, of course it would tend to increase the cost of shoes to the consumer. I agree with that proposition. Has the Senator's investigation gone to the extent that he would be willing to make a statement as to what the average increase would be per pair of shoes?

Mr. LENROOT. I shall go into that later. If I do not remember it, I shall be obliged to the Senator if he will call my attention to it later, because I intend to discuss that subject very briefly.

In the second place, Mr. President, I am opposed to this duty because I am satisfied that the chief beneficiaries will be the packers of the United States and not the farmers, nor even the cattle growers; that there will be no substantial increase in the price which the cattle grower, even of the range States, will receive for his cattle.

I am opposed to it, in the next place, because, giving this benefit to the beef packers of Chicago, the inevitable result will be to drive out of business the independent tanning industry of the country and concentrate it in the hands of the beef packers of the United States, who to-day have a very large control of it.

Mr. STANFIELD. Mr. President——

Mr. LENROOT. I yield to the Senator from Oregon.

Mr. STANFIELD. I should like to ask the Senator from Wisconsin what per cent of the hides the so-called Packers' Trust controls?

Mr. LENROOT. About 65 per cent, I am told.

Mr. STANFIELD. Does the Senator think the other 35 per cent would enter into combine with the packers and that the packers would receive all the benefits of the duties on hides?

Mr. LENROOT. In the first place, as the Senator knows, the country hides are inferior in quality. I think he will agree with me on that as a general rule.

Mr. STANFIELD. The country hide?

Mr. LENROOT. Yes; which represents the other 35 per cent.

Mr. STANFIELD. The Senator is undoubtedly aware that outside of the so-called packers' combine, which is composed of four or five of the principal packing concerns, there is over 40 per cent, although the Senator said 35 per cent, of the industry in the hands of others not associated with the so-called packers' combine, if there be such a thing.

It is a well-known fact, I wish to say for the enlightenment of the Senator, that every time there is a fluctuation in the price of the by-products of the slaughterhouse, the by-products of cattle, sheep, and hogs, the live-stock market fluctuates proportionately, so that if hides go up, live stock goes up; if wool goes up or sheepskins go up, the live-stock market goes up proportionately.

Mr. LENROOT. I am not going to enter into that field of controversy with the Senator. The Senator does know that practically every farm organization of the United States has asserted time and time again that the beef packers control the price and pay the farmer, pay the cattle grower, pay the sheep grower such prices as they choose to pay. It is absolutely under their control.

Mr. STANFIELD. I do not believe that the investigations have revealed such a condition as that.

Mr. LENROOT. I say I am not going to get into that field of controversy now. I simply make the statement, to which the Senator must agree, that that has been the position of the farm organizations.

Mr. STANFIELD. I can not agree with that, because so far as the live-stock organizations of the United States are concerned, 75 per cent of them are on record as saying that such a condition does not exist.

Mr. LENROOT. Mr. President, that may be so of late——

Mr. STANLEY. Will the Senator yield to me?

Mr. LENROOT. No; I wish to finish my statement. But a couple of years ago and for many years prior to that time I was very closely concerned with reference to that very subject. We have a National Livestock Association, and I talked with their president here year after year, and the members of that association did not agree with the statement which has been made by the Senator from Oregon.

Mr. STANFIELD. I will say, then, that the Senator probably refers to one of the so-called national live-stock organizations, for the National Wool Growers' Association have always been on record denying that such a condition existed; the Northwestern Cattle Growers' Association have always been on record to the same effect and have always indorsed resolutions of that tenor whenever the question was presented.

Mr. LENROOT. Yes; but there has been a very thorough investigation, as the Senator knows, by committees of this Congress. I wish to say to the Senator that some of the methods which were pursued in order to secure testimony favorable to the packers were not very creditable. However, I am not going into that now, for my time is running, and I have only a few moments remaining.

Mr. STANFIELD. Right in line with that thought I want to make one further remark, and that is that the packers, to whom the Senator clearly refers, are the largest importers of hides of any of those who are concerned in the leather business; so that if there is anyone, it seems to me, who would be interested in free hides it is the packer, because he surely would want to bring his products from his slaughter and packing houses in South America, Australia, and New Zealand into the United

States free of duty. It is only consistent and reasonable that he should.

Mr. LENROOT. When the packer, utilizing 65 per cent of the hides that are produced in this country, can add 2 cents a pound to their price, he can well afford to pay the additional duty on the 35 or 40 per cent of imported hides, or even on all the imported hides; but to a very large degree the importers are the independent tanners, and not the packers.

Mr. STANFIELD. I should like to remark to the Senator that the outside leather is largely controlled by the so-called large packers. That the Senator must admit. Does he mean to say that the large packers turn their hides over to the independent tanners when they are engaged in the leather business, as he has asserted here? Is it reasonable that they would do such a thing?

Mr. LENROOT. I have not the time to go into the question of the control of the tanning industry by the packers. My time is running short; I can not go into that. But I do give it as my profound conviction that the duty that is proposed here upon hides will drive the independent tanners out of business in the United States and concentrate control in the packing industry.

Mr. President, I have wondered why it was that the committee in reporting their amendment imposing a duty upon hides were not content to provide merely a compensatory duty on boots and shoes—and that I shall speak of in a moment—but they also gave a 5 per cent ad valorem protective duty. When one looks at the imports of boots and shoes and examines the exports of boots and shoes there can be but one conclusion, and that is that 5 per cent ad valorem duty was put on there as a bait to get votes for the tariff upon hides. I wish to call attention to the fact, because I want to know from the committee before this debate is concluded how they justify putting a 5 per cent protective duty upon boots and shoes.

Our total imports of boots and shoes for 11 months ending in May, 1922, amounted to 118,000 pairs, valued at $558,000. For the 11 months ending in May of 1921 there were 203,000 pairs imported, valued at $775,000. In 1921 our exports of children's shoes amounted to 2,000,000 pairs, valued at $3,340,000; our exports of men's shoes during the same period amounted to 5,173,000 pairs, valued at $16,319,000; our exports of women's shoes during the same period were 1,767,000 pairs, valued at $5,016,000, or a total export of over $25,000,000, as against imports of a little over half a million dollars; and yet the committee have proposed a duty of 5 per cent ad valorem upon shoes.

Mr. STANFIELD. Does not the Senator think that that was a poor method of attempting to trade for votes? If the shoe manufacturer does not need the duty, why would the New England Senators or Senators from other shoe manufacturing States vote for a duty on hides?

Mr. LENROOT. I think they used very poor judgment, because I do not believe they caught the New England Senators in their attempt.

Mr. STANFIELD. Does the Senator think that they would have listened to the importunities of the cattle-growing sections and the farming sections if they had made such a proposal as that to them?

Mr. LENROOT. Well, Mr. President, I am reminded of a statement which Senator Aldrich made in the consideration of the Payne-Aldrich bill. I am afraid I have it not at hand; but he very frankly stated that in order to get the duties for New England that he wanted he had agreed with western Senators to stand for a duty on hides; that, although he thought it was wrong, it was necessary to make that combination. I am afraid there are some people who thought that such a combination could be made now.

Mr. STANFIELD. I do not believe the Senator——

Mr. LENROOT. I do not mean that in the sense of being corrupt or anything of that kind, of course not; but the Senator knows as well as I do that there does exist on the floor of the Senate this feeling, "I have got to vote for duties which another Senator wants, even though I believe they are too high, in order to get the duties that I want for the industries of my own State." Does the Senator deny that?

Mr. STANFIELD. Yes; I do. I believe that it is the opinion of the consistent protectionist that the protective tariff is not a local question, and that if he is going to be a consistent protectionist, he must grant protection to the industries or producers of another section whose interests are different from those in his section.

Mr. LENROOT. I agree as to that.

Mr. STANFIELD. To that extent, I think there are those who subscribe to the interpretation suggested by the Senator; but they do not vote simply for duties on the products of their own sections; they are beyond voting merely for protection for localities.

Mr. LENROOT. But does the Senator think it is right for a Senator if he believes a proposed duty involving another State than his own is too high that he should vote for that duty because he fears if he does not there will be retaliation upon him?

Mr. STANFIELD. No; I do not believe that is right, and I do not believe that such a condition as that exists here at this time.

Mr. LENROOT. The Senator has not been very familiar with the conditions in the Senate during the past few months if he does not know that condition does exist.

Mr. GOODING. Mr. President, I think, in all fairness——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I yield.

Mr. GOODING. I think, in all fairness, that the Senator ought to name those Senators who have taken that position, and not make his statement general.

Mr. LENROOT. I am not going to name them.

Mr. GOODING. It is, I think, due to Senators here that the Senator from Wisconsin should give the names, because it seems to me that there has been one thing clearly demonstrated here, and that is that there never has been any understanding between what is called the tariff bloc of the Senate and the Committee on Finance.

Mr. LENROOT. I am not charging that there has been any such agreement.

Mr. GOODING. But it has been charged upon this floor.

Mr. LENROOT. I have not charged it.

Mr. GOODING. It seems to me that time after time the votes have demonstrated that there is no truth in that charge.

Mr. LENROOT. I want to say that the Senator from Idaho is not one of the men to whom the statement I have made could possibly refer, because there has not been any duty which has been proposed during this entire debate that was too high to suit the Senator from Idaho.

Mr. GOODING. Mr. President, I want to say in that respect that the Senator is entirely correct.

Mr. LENROOT. Certainly; I knew I was correct.

Mr. GOODING. I do not believe that, based on foreign valuation, this bill is going to afford, so far as that is concerned, the degree of protection which should be afforded to some of the industries of this country.

Mr. LENROOT. I knew I was correct.

Mr. GOODING. The Senator is absolutely correct.

Mr. LENROOT. So the Senator is completely absolved from any possible imputation that he has been voting high duties because he was afraid that he would not get the duties that he thought he ought to have in his own State. The sky is the limit for the Senator from Idaho.

Mr. President, I said to the Senator from Idaho that I would discuss to some extent what the cost of this duty would be to the consumer, and I am going to try to be extremely conservative. In the first place, the chairman of the committee stated that the leather which is the product of hides now under controversy only entered into the soles and the heels of shoes. Mr. President, I can not put it in the RECORD, I am sorry to say, but I hold in my hand something like a dozen samples of leather that are the product of these hides. They are split leathers in many cases. Here is a leather [exhibiting] which any Senator would be perfectly willing to buy and as to which he would make no complaint if he found that leather in a very expensive shoe that he wore. It is not true that this kind of leather goes only into soles and heels; on the contrary, it is true as to practically all of the heavy working shoes used by the farmers of the United States in their daily work and by other laboring men that the heels, the soles, the uppers, and all the rest of the shoe are made of the leather which is produced from these hides.

Let us see what the judgment of the committee itself is upon the question of the cost to the consumer by reason of this duty upon hides. For the purpose of this argument, Mr. President, I am going to take the judgment of the Finance Committee, and let us see where we will land.

The Finance Committee, in the amendment that is pending, proposes that there shall be levied upon boots and shoes, made wholly or in chief value of leather made of hides of cattle of the bovine species, a duty of 12 cents per pair. That is the judgment of the Finance Committee as to the compensatory duty that must be allowed the manufacturer of the shoe wherever that shoe is made wholly of this kind of leather—12 cents a pair. The junior Senator from North Dakota [Mr. LADD],

in a speech made some time ago, very erroneously assumed that the compensatory duty that might be provided, whatever it was, would be the extra charge paid by the consumer. Of course, there is not a Senator but that knows that is not true. Assuming the case of a heavy workman's shoe made altogether of this kind of leather, the committee says the manufacturer must have a compensatory duty of 12 cents a pair. Very well. Then the cost of that shoe to the manufacturer has been increased 12 cents, certainly, on each pair. The manufacturer must have his profit, must he not? That 12 cents a pair is a part of the manufacturer's cost of production. What is a reasonable profit for the manufacturer? I am going to be just as conservative in my estimates as one can possibly be, so that no Senator can rise upon this floor and say that I have placed my estimates too high. We will give the manufacturer a profit of 10 per cent. That would bring this duty upon hides—1.2 plus 12—to 13.2 cents, would it not? Now we will assume that it does not go to a jobber at all—which is not a fair assumption, but I am giving the estimate as low as it possibly can be made—but it goes directly to the retailer. I think it is generally admitted that the retailer's margin will run around 50 per cent—not his profit, but his margin, out of which he has to pay all his overhead expense, the cost of running his business, and his profit. Fifty per cent of 13.2 cents is 6.6 cents. That brings us up to 20 cents on a pair of these heavy, cheap workmen's shoes that the farmer uses and that the laboring man uses. I am sure no one will contend that that is too high an estimate.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I do.

Mr. GOODING. I am going to contend that it is entirely too high. An addition of 50 per cent every time a merchant turns over a pair of shoes—and he turns over his capital in some cases, I think, several times a year—is entirely too high, unreasonably high. It can be properly called, in my estimation, profiteering.

Mr. LENROOT. Does the Senator say that the retailer does not mark up his goods 50 per cent?

Mr. GOODING. I think in some cases he does; I think maybe that is true; and in some cases 100 per cent; and I notice that some of the department stores mark them up 3,000 per cent.

Mr. LENROOT. Who pays that—the consumer?

Mr. GOODING. I do not think there is any question of doubt about the consumer paying it; but you are not going to charge it up to the farmer, are you?

Mr. LENROOT. Who is talking about charging it up to the farmer? I am talking about what this is costing the consumer.

Mr. GOODING. We are discussing now the duty on hides.

Mr. LENROOT. Yes; and I am talking about what a duty on hides will cost the consumer. Does the Senator from Idaho understand that?

Mr. GOODING. Thoroughly.

Mr. LENROOT. Very well. Does the Senator deny that it will cost the consumer at least 20 cents a pair?

Mr. GOODING. I will agree with the Senator that it may cost him that, but it ought not to; and if the Senate will do its duty and stop profiteering in this country the consumers will not have to pay the prices that they are paying for the necessities of life.

Mr. LENROOT. The Senator can make himself a public benefactor, and monuments will be erected to his memory in generations to come, if, after we have concluded the consideration of this tariff bill, he can devise legislation and get it through the Congress of the United States that will stop profiteering in the United States.

Mr. GOODING. I will say to the Senator that I shall be glad to help try, and I know I shall have the Senator's assistance.

Mr. LENROOT. The Senator certainly will. If he can devise a way to do it he will have my cordial cooperation.

Mr. GOODING. I would suggest to the Senator that we start in and fill what penitentiaries we have in America, and build a few more and fill them up, and we will stop it very quickly.

Mr. LENROOT. Yes, Mr. President; but, unfortunately, Senators can not fill penitentiaries.

Mr. GOODING. They can make laws that will fill them.

Mr. LENROOT. It requires juries of the United States, composed of citizens of the United States, to find men guilty, before penitentiaries can be filled.

Mr. President, I think it will have to be conceded, therefore, that the very least the consumer will have to pay upon a rough working shoe is 20 cents a pair by reason of this proposed duty upon hides.

In the testimony of Mr. Frank B. McClain, vice president of the National Live Stock Exchange, Chicago, he said:

> The question of a tariff on hides not only has direct relation to the ranchman with his tens of thousands of head of cattle, but, as well, has relation to the small farmer who keeps only one cow for his family use.

This gentleman, when he made that statement, spoke more truly than he realized. It has a relation to the farmer who has only one cow. It is the farmer who has only one cow that will contribute to the packers of the United States for this duty that is proposed upon hides.

That is his relationship to it; and let us assume, Mr. President, that there is a farmer, and that he has more than one cow, and that he himself slaughters one "critter" a year. The Senator from North Dakota said that he expected that the benefit upon an average hide would be $1.20. Let us assume that. Let us assume that a farmer with a wife and five children does slaughter a cow, sells the hide, gets $1.20 more for it, and for that family of six he has to buy two pairs of heavy shoes a year, or 12 pairs of shoes, that cost him 20 cents a pair more. For a benefit of $1.20, the amount by which you increase the price of his hide, he has paid $2.40 in the increased price of his shoes; and that is a farmer, Mr. President, who, we assume, does have a hide to sell. What will you say of the millions who do not have a hide to sell?

Mr. BURSUM. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LENROOT. I do.

Mr. BURSUM. How does the Senator make out that the average increase will be 20 cents a pair?

Mr. LENROOT. Was the Senator in the Senate Chamber when I was stating how I arrived at that figure?

Mr. BURSUM. Yes.

Mr. LENROOT. If I did not make the Senator understand that, it would be hopeless for me to try to make him understand it.

Mr. BURSUM. Certainly that would not hold good with children's shoes. The Senator knows very well that children's shoes and ladies' shoes are not, as a rule, made out of cowhide. There is very little of that class of material in that kind of shoes; and in the case of the farmer who had a half dozen children, they would not likely be all grown-up men. If they were, they would probably be out at work for themselves.

Mr. LENROOT. Is the Senator familiar with the committee amendment?

Mr. BURSUM. Reasonably so, I think.

Mr. LENROOT. Does the Senator know that the committee amendment reports a compensatory duty of 12 cents a pair upon all shoes—men's, women's, and children's—made of leather from hides?

Mr. BURSUM. I understand that thoroughly.

Mr. LENROOT. Does the Senator think the committee was wrong in reporting that duty?

Mr. BURSUM. We have not gotten to that yet. It may be wrong, and it may not be wrong. Anyway, it does not necessarily imply that it would mean a raise of 12 cents. It does not necessarily imply that it would mean a raise of 20 cents. If we have competition in this country in the manufacture of these shoes the law of competition should apply, and if the shoes do not contain any of the leather contained in cowhides, why should they be entitled to a compensatory duty?

Mr. LENROOT. Does the Senator contend that the heavy working shoe, used by the mass of the people of this country, which the farmer uses in his daily work around the farm, is not made of this kind of leather?

Mr. BURSUM. Some of them are; yes.

Mr. LENROOT. Does the Senator say that the farmers of this country in their work upon the farm use shoes like the Senator wears?

Mr. BURSUM. Well, we have different kinds of farmers.

Mr. LENROOT. Yes; that is just the point, Mr. President. We have the kind of farmer that may have a thousand head of cattle that wears shoes like the Senator from New Mexico and I wear all the time and buys only one or two pairs a year. Then we have the real farmer, who does the work himself upon the farm, with his wife and five children, who may have one hide to sell during the year, but who has to buy a dozen pairs of shoes during the year, most of them heavy shoes. Those are the two kinds of farmers we have. I am rather

looking out for the real farmer and not for the farmer that wears only the kind of shoes that the Senator from New Mexico speaks of.

Mr. GOODING. Mr. President, will the Senator yield?

Mr. LENROOT. Yes; I yield.

Mr. GOODING. I do not understand that the committee amendment provides a duty of 12 cents a pair on all kinds of shoes. Does the Senator understand it that way? That is not the intention of the committee, I am quite sure.

Mr. LENROOT. Twelve cents a pair on all shoes made of this kind of leather.

Mr. GOODING. Yes; of cowhide.

Mr. LENROOT. I said that.

Mr. GOODING. I did not understand the Senator to put it quite that clearly.

Mr. LENROOT. If I did not, I beg the Senator's pardon.

Mr. GOODING. Then the Senator figured it out on the basis of six in a family; and, as has been well stated by the Senator from New Mexico [Mr. BURSUM], the wife, at least, on the farm will not wear cowhide shoes, nor the babies, nor the children.

Mr. LENROOT. No part of the children's shoes is cowhide?

Mr. GOODING. Possibly the heel.

Mr. LENROOT. Well, there is no use in discussing it with my friend from Idaho.

Mr. STANFIELD. Mr. President——

Mr. LENROOT. I yield to the Senator from Oregon.

Mr. STANFIELD. I should like to ask the Senator from Wisconsin if it is his idea that the manufacturer is going to attach the duty of 12 cents a pair on these shoes; and if so, how does he reconcile that with the statement he made a moment ago that our importations of shoes of that kind were negligible?

Mr. LENROOT. Mr. President, I assume that when the Senate Finance Committee give a compensatory duty, as they did upon shoes, the assumption is that will be attached, because in so far as they are imported it must be attached, because it is a part of the cost.

Mr. STANFIELD. But the importation is so small.

Mr. LENROOT. Oh, no; the importation is not small. The importation is from 35 to 40 per cent of our whole consumption.

Mr. STANFIELD. On the hides, yes; but I am speaking of the compensatory duty on shoes. Of course, the manufacturer will pass on the duty on hides.

Mr. LENROOT. That is all the compensatory duty is for.

Mr. STANFIELD. Yes; but the Senator added that to the duty on the hides—12 cents per pair.

Mr. LENROOT. Yes.

Mr. STANFIELD. It does not amount to that much.

Mr. LENROOT. Then the committee is wrong if it does not. I am not. I am taking the judgment of the committee as to what the duty should be.

Mr. STANLEY. Mr. President, we can not hear the Senators.

Mr. LENROOT. The Senator from Oregon says the actual compensatory duty does not amount to 12 cents a pair. I have said that I have tried to be so conservative that I have taken the judgment of the committee.

Mr. STANFIELD. The chairman of the committee made the statement that it was 12 cents a pair on all shoes.

Mr. LENROOT. Made altogether of this kind of leather.

Mr. BURSUM. Made out of cowhide.

Mr. LENROOT. Out of cowhide; yes.

Mr. STANLEY. Mr. President, I do not wish to ask a question, but I want to get this point clear, because I am following the Senator with a great deal of interest. As I understand, this is a duty upon hides of the bovine species. It applies to a calfskin just as much as to a cowhide?

Mr. LENROOT. No; I believe there has been a construction that it does not include calfskins.

Mr. GOODING. Skins weighing less than 25 pounds are classed as calfskins and would not be dutiable under this act.

Mr. LENROOT. Mr. President, a calfskin is not known as a hide, but as a calfskin.

I see that my time has almost expired. I feel very deeply upon this. I believe that this duty, if it is carried into this bill, will injure every farmer in the United States, except possibly the man who has immense herds of cattle. That is the only class of people it can possibly benefit, and the benefits even to that class are doubtful in the extreme. So far as 99 per cent of the farmers of the United States are concerned, if this tariff on hides is carried into the law it will, in my judgment, cost them each year more than twice as much as any possible benefit they may receive from this tariff, and therefore I shall vote against the amendment.

Mr. LODGE. Mr. President, as a protectionist I am in favor of protection without any regard to locality whatever, and I certainly should not attribute to any of my fellow Senators any desire to sacrifice one part of the country to another, because I have no desire myself for anything of that kind. But this question that is before us to-day is one affecting a great national industry. Cattle are not raised alone on the great ranges of the West; they are raised also by farmers who are scattered from the Atlantic to the Pacific. Boots and shoes are worn by everybody. Therefore the question involved here is as extensive as the boundaries of the Nation.

Everyone who has ever given any attention to a tariff, whether it is a tariff for revenue only with incidental protection, or a protective tariff with incidental revenue, knows that there is a frequent interlocking and crossing of different products; that is, that the finished product of one producer may well be the basic material of another producer. I think I may say that it is obvious, and must be accepted by everybody, that if you leave the most highly finished article in any industry free of duty, and impose a duty on the basic material used in that industry, the days of that industry are numbered. It will be taxed out of existence, and I do not know that anybody ever proposes that.

There are other cases which are more difficult, cases in which the finished product, the highest product, has a protection by duties, and must have protection if it is to compete, under the American scale of wages, with the foreign manufacturer, and not infrequently those industries feel that the basic materials which they are obliged to buy ought to come in without duty. That has always seemed to me an illogical and unfair proposition, though I think it has come before all of us many times in our experiences.

Then there is the third situation, where the maker of the most highly finished product in the industry is entirely content that his product should receive no protection at all, provided he can have his basic material free of duty. I think that is both a logical and a reasonable proposition.

The Senator from Montana [Mr. WALSH] stated that the other day very tersely in speaking of newsprint paper, that as the manufacturer of newsprint had no protective duty he came within the general class of industries making highly finished products, which asked for no protection themselves, and therefore were entitled to be relieved of duties on the basic materials of their industry.

The basic material of an industry—for, strictly speaking, there is no such thing as a raw material—is one man's finished product which is used by another man in a much more highly manufactured product; but where the makers of the highest product of the industry, as I have said, are willing and content to have their production unprotected by duties, I think they are entitled to have their basic materials free.

A manufacturer has no right to ask that everything that goes out of his factory shall be protected and that nothing that comes into it should bear a duty, but the man who is willing, as the maker of the highest product, to say, "All that goes out of my factory may go out unprotected by tariff duties, and I ask that everything that comes into it may also be unprotected by tariff duties," makes a fair proposition, and that is the case we are now discussing in regard to hides.

If I thought that a duty on hides would be of any material benefit to the farmer I should be very slow and very reluctant to refuse to impose a duty; but hides are a by-product. Cattle are not raised for their hides, and it is difficult for me to see how the farmer can get any benefit from a duty on hides. The statement of the Farm Bureau Federation which has been read here concludes by giving the reasons, and then says, "Therefore we believe that hides, leather, and leather products should remain on the free list," is pretty good testimony as to the feeling of the farmers. The farmers in my State, of course, are all small farmers. We have dairy farms and what are called truck farms. I have yet to hear a suggestion from one of them that they desire a duty on hides or that they think there is any benefit to them in it.

Cattle are sold by weight. The hide, I believe, is about 6½ per cent of the total weight of the animal. The average farmer would get nothing, and the small farmers, perhaps with only two or three cows each, would in the aggregate probably have more cattle than all the great cattle raisers in the country.

Who would get the benefit of the duty, if there is a benefit in it? Obviously it would come to those persons who possess the hides after they have been taken from the dead animals. So far as I can learn, the large majority of those hides pass into the hands of the packers. Those engaged in the next stage of the industry are the heavy leather tanners, and I

judge of what their feeling is about it by the statement they have made in their brief here signed by 40 great firms, which is as follows:

> The American tanner believes that the reciprocal duty should be placed on leather to protect against the dumping of foreign leather in this country, but so absolutely essential does the independent tanner regard free hides as necessary to his continued existence, that to continue to have free hides he will accept free leather.

He would rather have the danger and risk which come from having free hides than to take the certainty of loss which he sees in the other direction, and he feels also that he would be deprived not only of the control of the domestic hides, which has already passed to the packers, but he would likewise be deprived of any relief such as he can get from the imported hides.

The hide passes from the tanner into very many articles which are made from leather, but chiefly into boots and shoes. The manufacture of boots and shoes happens to be a very large industry in my State and in some of the other New England States. It is also a very large industry in New York. It is not confined to the East at all. I think the third State in the manufacture of boots and shoes is Missouri, which produces about 109,000,000 pairs annually. It is an industry which has spread halfway across the continent.

I am not going to waste time going over the number of people employed, but, as a rule, a shoe factory is a small factory. They are not great concerns. Most of them have very moderate capital, and there are no combinations among them. The number of operatives employed is very large.

I will also say, in passing, as I am speaking of the character of these factories, that in a somewhat varied experience of tariff making this is the only industry from which I have received strong resolutions in regard to the effect of the tariff from the men who work at the bench, and those so engaged in this industry have appealed to me in regard to this matter of a duty on hides even more than the manufacturers have. They feel keenly the importance of this duty and the injury it would be to them if imposed.

Now, let me say further that we import, I think, about one-third of the hides used in the country, a very large amount. It was stated to-day by the Senator from North Dakota [Mr. McCUMBER]—I do not think this is at all an essential part, because I think the subject is too serious to be decided by the amount of revenue—that the amount of revenue to be derived from the importation of hides would be about $15,000,000. I find that in 1920 the number of dried hides imported, which would bear a 4 per cent duty, were 59,000,000 pounds, in round numbers, and the green hides, which would bear a 2 per cent duty, were 216,000,000 pounds, in round numbers. Upon that basis the total revenue would be $6,680,000. That would be the revenue if we had next year the imports that we had in 1920.

Taking the actual figures for the first nine months of 1921 and estimating the remaining three months on the average, there were 12,000,000 pounds of dried hides imported, which, with a 4 per cent duty, would yield $497,000. There were 171,000,000 pounds of green hides, which would yield $3,430,000, and the total revenue would thus be $3,927,000. So that the revenue is by no means as serious as the Senator from North Dakota seemed to think.

It is also to be noted that the price of hides fluctuates enormously because, owing to the imports of 30 per cent, the domestic prices are affected by the world's price. I have here a table which I have had prepared, very simple in its nature, showing the prices of hides running from April, 1921, to July, 1922. I wish I might have it printed, because, like all graphic presentations, it is illuminating. The cattle and beef prices are shown to run almost together, the fluctuations being very similar and quite moderate in range. When we come to hides there are enormous variations, showing a very great fluctuation in the prices of hides and that they are not governed by the price alone in this country.

Mr. WADSWORTH. The price of hides is not governed by the price of cattle, I may suggest to the Senator.

Mr. LODGE. That is very true. It is shown that the price of hides is not governed by the price of cattle or by the price of beef. They have another and different range of prices which is all their own.

Now I have gone as far as the maker of the boots and shoes, which are the principal leather product. I have shown what can be said in one word, that they are all content that there should be no protective duty on their products at all, but they ask in return that the principal basic material of their industry shall come to them free. We are unable to supply them from our own resources. We must buy hides in order to maintain the industry which produces $501,000,000 worth of boots and shoes in a year.

Now I go a step further, to the consumer of boots and shoes. The consumer of boots and shoes, of course, lives all over the country and in every part of it. I think we may say as Americans that the habit of wearing boots and shoes is almost universal in this country. I was anxious to see what part of the leather which is used for boots and shoes or for footwear would come from hides affected by this duty or from other hides. I have here certain figures in that regard, the best I could get, made up by the tanners' council in June, 1922. Of course they can show, with more accuracy than anybody else, what their own production is. Of the heavy cowhide upper leather there were 163,000,000 feet; cowhide patent sides, 38,000,000 feet; calfskins, 59,000,000 feet; kip and veal, 23,000,000 feet; kid and goat, 112,000,000 feet. I have given only the round figures. Then they give the exports, which I shall not repeat. One hundred and fifty-seven million feet of heavy cowhide upper leather is used in the United States and will produce in round numbers 63,000,000 pairs of shoes. Of the cowhide patent sides, 36,000,000 feet used in the United States will produce 13,000,000 pairs of shoes. In all, this would mean 76,319,000 pairs of shoes. The calfskin, kip and veal, kid and goat produced altogether only 58,000,000 pairs of shoes.

The figures in detail are as follows:

Statement showing production, exports, and consumption of leather and hides.

[From the Tanners' Council, June, 1923.]

Leather and hides.	Quantity.	Feet.	Feet exported.	Used in United States.	Pairs of shoes.
Heavy cowhide, upper leather	8,185,581 sides, average 20 feet	163,711,620	5,854,445	157,857,175 feet will produce	63,142,870
Cowhide, patent sides	2,380,691 sides, average 16 feet	38,091,056	11,738,674	36,352,382 feet will produce	13,176,191
Total					76,319,061
Calfskins	5,993,630 skins, average 10 feet	59,936,300	10,915,702	72,620,488 feet will produce	16,343,535
Kip and veal	1,311,105 skins, average 18 feet	23,599,890			6,047,347
Kid and goat	24,948,469 skins, average 4½ feet	112,268,110.5	21,573,549	90,694,561.5 feet will produce	36,277,824
Total					58,668,706
Grand total					134,987,767

Mr. McCUMBER. Mr. President, will the Senator inform me whether the figures he has quoted of the importations of the cowhides mean that all of those went into the manufacture of shoes?

Mr. LODGE. These are not importations.

Mr. McCUMBER. They are figures of production?

Mr. LODGE. The production of the tanners in the United States.

Mr. McCUMBER. What proportion of those went into the manufacture of shoes, I mean? Of course, we have covers for automobiles and many other things in which we use the split leather.

Mr. LODGE. Certainly. They are giving only the amounts of shoe leather of the different grades. If the Senator wants more details, I shall give the exact figures from one of the biggest factories in the country.

Mr. McCUMBER. The details, if the Senator will allow me, do not explain it very well to us.

Mr. LODGE. They give the proportion of leather used for shoes. Now, I may show from a practical case just what proportion they do use in the shoes. I intend to give that with reference only to one great manufacturing company.

Mr. McCUMBER. When the Senator gives that, I should like to ask him an explanatory question.

Mr. LODGE. I quote now from a letter which was given to me, signed by Mr. F. C. Rand, of the International Shoe Co., of St. Louis, in reply to a letter from a friend of mine, as follows:

As you know, our company manufactures a general line of shoes, both dress and work shoes for men, boys, women, girls, and children. Our production is probably the most representative in America to meet the universal demand and consumption of shoes.

We are operating a large number of factories and seven tanneries, three of which are upper leather, four sole leather. These tanneries are operated exclusively on cowhides.

Based on our actual upper-leather requirements for last week, which was a normal week with all of our factories in operation, our consumption of upper leather was as follows: Cowhides (sides), 53 per cent; all other upper leathers, 47 per cent.

Estimating that outsoles, insoles, counters, heels, etc., would require footage equal to that consumed in uppers, the percentage of shoes made from cow and steer hides, or cattle hides weighing more than 25 pounds, would be approximately: Cowhides, 77 per cent; all other leathers, 23 per cent.

That is the proportion in the use of cowhides and the other skins and hides in the boot and shoe industry.

Mr. McCUMBER. That would carry the idea, if the Senator will allow me, that of a given number of feet of cowhides only a certain number go into the manufacture of shoes. Now, the Senator knows, as I do, that the cowhide is split into one or two parts, and in the uppers, instead of there being a duty of so much per pound, if it is cut in three parts or split into three parts, the duty in fact would be only equivalent to one-third upon the split leather that goes into the uppers. I am informed by the experts that not to exceed 10 per cent of the uppers are of the full thickness of the cowhide.

Mr. LODGE. Of course, the principal use of the heavy hides is in the soles and heels, but a major proportion of the uppers are made also from cowhide. I did not say the full duty on the cowhide must be assessed on the split portions. I know very well that the duty is assessed on the entire hide.

As to the figures which I have given from the tanners' council they simply classify as to the number of pairs of shoes that their tannery output would produce and give substantially the same proportion that is given here. The author of the letter, Mr. Rand, from whom I have quoted, is an actual and very large manufacturer. He uses in the manufacture of the most varied products of shoes of all kinds 77 per cent of cowhide to 23 per cent of all other leathers. Therefore, the principal leather used in the manufacture of boots and shoes was what the bill terms "bovine hides."

Of course, if the duty goes on the hide there must be a compensatory duty, and the Committee on Finance have admitted that. They have made a very elaborate and, I have no doubt, very carefully prepared schedule of duties on the manufactured article. If the hide duty goes on it is only the fairest and simplest justice, unless we wish to destroy this great industry, that those who make the shoes and boots and the other articles of leather should have a compensatory duty. Of course, the Committee on Finance have recognized that principle. As tariff experts they know a great deal about it, and they see that must be done. They have given on shoes, as the Senator from Wisconsin pointed out, 12 cents a pair, which is a compensatory duty, and 5 per cent, which is a very moderate protective duty under the circumstances.

I do not need to go into the other question. If we are going to put a duty on hides, it would not be of any benefit to those who seek it if we by so doing did not raise the price of the hides. If we thus raise the price of hides, we must expect to add the compensatory duty upon the boots and shoes and all other manufactures of leather.

Mr. President, to come back to where I started. When the workers in an industry, which includes not only the boot and shoe makers and other workers in leather but also the tanners, who fill the intervening stage, when all these people so deeply interested think it more important to their industry than any protection they can receive to have their basic material free, I think they are entitled to have it free.

We are the master makers of boots and shoes in the world. We have a great export trade, the amount of which I have roughly figured here, amounting to $30,000,000 a year in boots and shoes. The importation is trivial. I think it is only some $400,000. Of course, if the basic material of the shoemakers is increased in value their product will also be increased in value, and they will suffer both in the market of the world, where the competition is keen, but we shall also endanger the great export trade. They will suffer, too, from the fact that the duty will tend to drive the foreign hides away from this country and give better opportunity for competition to the makers of boots and shoes and other leather products elsewhere.

Mr. President, the key of this whole situation, to my mind, speaking as a protectionist, is that this great industry asks no protection; it asks no duties; it asks no favors; but asks only to be allowed to buy its basic material in the open markets of the world. Those who tan the leather and perform that essential part in the production of leather work of all kinds also ask to have this market in order that they may not be driven out of business and completely absorbed by the packers, who necessarily have the greatest supply of hides and who inevitably will benefit by the proposed duty more than will anybody else.

Mr. POMERENE. Mr. President, I have understood that the slogan of the shoe manufacturers of the country is "Free hides, free leather, and free shoes." I believe they are right; I believe in their slogan. I am going to vote for free hides and free leather and free shoes.

The senior Senator from Massachusetts [Mr. LODGE] has pointed out the extent of this industry in Massachusetts. In the manufacture of shoes Massachusetts leads the country. There are several other States whose shoe industry exceeds that of Ohio, but it is a very substantial industry also in Ohio, and it means a vast deal to the 6,000,000 people who live in that State. The people of Ohio are very greatly exercised about this matter. I have here, though I am not going to take time to refer to them, probably 150 letters, most of them from retail shoe dealers, and, with all due respect to the fine mathematical analysis which has been made by members of the Finance Committee touching the effect of this tariff on hides on the manufactured product, I am prone to believe that the retailers of Ohio also know something about that subject.

There has been this peculiar condition affecting the shoe trade in Ohio and elsewhere. Everyone recognizes that, due to the war, hides were bought in vast quantities by the manufacturers and the tanners, and, I think, by the Government as well. In any event, great purchases were made due to war conditions. These purchases abnormally increased the price of the hides and the price of shoes. When the reduction in the price of hides came, of course that could not be transferred immediately to the leather which had already been manufactured or to the shoes which had already been manufactured. The retail establishments were filled with high-priced shoes at the time when these reductions in the price of hides took place. Prices of shoes kept up. It may be that they were kept up unduly, but I personally know, from conversations with many of the retail dealers, that they deplored the high prices of shoes. Bankruptcy confronted them if prices were reduced to normalcy at once.

I know, too, that for months past, if not for a year past, efforts have been made to reduce these prices. Now comes an effort to increase the duty on hides, to increase the duty on manufactured leather and on shoes. What effect is it going to have on the price of shoes generally throughout the country? I have no doubt that the increase in price of shoes, due to these tariff duties, is going to be very substantial; and where is it going if the duty of 2 cents is imposed on rawhides or 4 cents on dried hides? The Summary of Tariff Information, which we have before us, indicates the yearly production of hides in this country to be about 12,000,000 hides annually.

Mr. BURSUM. Twelve million hides?

Mr. POMERENE. Yes.

Mr. BURSUM. The hides produced annually amount to nearly 800,000,000 pounds.

Mr. POMERENE. I am speaking of the hides; I will get to what the Senator suggests in a moment. These hides average about 50 pounds per hide, which means about 600,000,000 pounds of hides produced in this country each year. At 2 cents a pound, that means $12,000,000 increase on hides alone. The same authority tells us that about 60 per cent of the hides produced in this country are produced by the packers; so that $7,200,000 of this duty which we are placing upon hides is going directly to the packers as the principal beneficiaries of it.

Mr. STANFIELD. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Oregon?

Mr. STANFIELD. I should like to ask the Senator if the farmer, and not the packer, is not the real producer of the hides? The packer is simply interested in their conversion as a by-product.

Mr. POMERENE. Oh, Mr. President, who is producing the hides for the sake of the hides? What farmer is? Who is benefited by it? Who when he raises his steer and slaughters it is thinking of the price that he is going to get for the hide? Who is thinking of the tariff on the hair that is on the hide? The packers are very greatly interested. The farmer who may have one or two hides a year is only incidentally interested, if he is not wholly indifferent to the subject.

Mr. STANFIELD. Surely the Senator understands that every day the live-stock market is made up from the reports of the hide market and the dressed-meat market and other by-

products markets of the beef animal and the probable effect of the available supply of animals offered for slaughter.

Mr. POMERENE. Mr. President, I understand the position of the Senator, and, with all due respect, I do not think the Senator is interested in the average farmer.

Mr. STANFIELD. I must take exception to that statement, because I most assuredly am. Even from the standpoint of my own welfare I am interested in the farmer, because that is my principal business.

Mr. POMERENE. I think that is true. However, every time the tariff comes up here there is something said in behalf of the farmer and the little fellow back in the country, but no account is taken of the shoes that his family wear; that is not thought of. The farmer thinks more about the price of shoes than he does about the hide.

The Senator from Wisconsin has shown that one of the great national farm organizations is in favor of free hides. That is also my information. And, Mr. President, one of the members of the Finance Committee has suggested that there could not be possibly an increase of more than 6 or 7 cents per pair of shoes due to this duty. I know that is the method of calculation when we try to show the infinitesimal effect of some tariff duties that can not be otherwise defended; but everyone knows that a tariff on hides is only a part of the initial cost, and that every time the hide changes hands, from the raw material to the finished product, the cost is pyramided the same as any other cost.

Mr. BURSUM. Mr. President——

Mr. POMERENE. I will yield in a moment.

Mr. President, the Senator from Wisconsin has pointed out what this increase means. There is a duty of 12 cents per pair provided in the pending amendment on the finished product, and 5 per cent ad valorem on all shoes made out of the hides of cattle of the bovine species, and on "all other boots and shoes, made wholly or in chief value of leather, not specially provided for, 6 cents per pair."

I am not prepared with the figures to say just how many pairs are produced. I feel perfectly clear that there are consumed by the people of this country at least two pairs of shoes per year, and many who are doing heavy work out in the fields, on the highways, and in the factories are obliged to buy more than two pair of shoes per year. The school children in their play wear out often more than two pairs per year. Assume, for the sake of the argument, that the average increase is only 12 cents a pair; in the State of Ohio we have about 6,000,000 people, and two pairs per man, woman, and child would make 12,000,000 pairs, and 12 cents per pair would mean $1,440,000 increase in the shoe bill of the State of Ohio alone.

I wish I were able to understand what this modern Republican theory of a protective tariff is. I confess that I am not able to understand it. I thought when I came to the Senate that I understood what the fathers of protection claimed for it. The lamented McKinley, whose name is attached to one of the great tariff bills of the country, was the prince of protectionists in his time. Secretary James G. Blaine was a Republican and a protectionist; and yet, when the McKinley bill was before the Congress and William McKinley was chairman of the Ways and Means Committee and James G. Blaine was Secretary of State, under date of April 10, 1890, he wrote this letter:

> DEAR MR. MCKINLEY: It is a great mistake to take hides from the free list, where they have been for so many years. It is a slap in the face to the South Americans, with whom we are trying to enlarge our trade. It will benefit the farmer by adding 5 to 8 per cent to the price of his children's shoes. It will yield a profit to the butcher only, the last man that needs it. The movement is injudicious from beginning to end, in every form and phase. Pray stop it before it sees light. Such movements as this for protection will protect the Republican Party into a speedy retirement.
>
> Yours hastily, JAMES G. BLAINE.

Mr. President, other bills have been passed by Republicans and by Democrats alike, when in control, placing hides and the finished leather products. such as shoes, on the free list. Now, it comes to the point where, no matter what the effect may be upon world trade or upon our manufacturers here in this country or upon the consumers in this country, we are going to have these extraordinarily high protective rates placed upon the statute books. In the language of at least one Senator, and I think—I hope, at least—he stands alone upon this subject, he would place the tariff wall so high that no goods of any kind could get into this country.

With a billion and a half to two billions of surplus farm products seeking a world market each year, with two and a half to three and four billions of surplus manufactured products seeking the foreign markets of the world, think what the effect will be if we are to adopt a tariff so high that no one can trade with us. What is the effect going to be? We speak of low prices of farm products. If this kind of a theory is to be carried out we will drive the price of farm products lower than they ever were before because we will not be able to find a market for our surplus.

Mr. President, if the farmer were producing hides as a principal business I could understand how some defense could be made of this tariff duty on hides; but that is not the situation. The farmer, when he kills a steer on his farm, does it for the meat that it produces, not for the hide. I am not suggesting that he is not entitled to a reasonable price for the hide. He is, and I want him to have it; but when it comes to a point where for the benefit principally of the packers of the country we levy a duty which gives them $7,200,000 out of $12,000,000 increase in price, I think it is time that we pause.

Mr. STANFIELD. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Oregon?

Mr. POMERENE. I yield.

Mr. STANFIELD. In the opinion of the Senator, will the duty on hides be a benefit or a disadvantage to the South American holder of hides?

Mr. POMERENE. If the South American hides can be brought into this country he gets the benefit of the market; the tanner gets the benefit of it; the shoe manufacturer gets the benefit of it; the consumer gets the benefit of it. Only about 60 per cent of the hides which we consume in this country are produced in this country.

Mr. STANFIELD. I am referring to the South American hides.

Mr. POMERENE. Oh, yes; there will be some incidental benefit, and there will be a benefit to us when we can sell our shoes in the South American trade.

Mr. STANFIELD. My question was, Will the tariff be a benefit to the owner of the South American hides before they enter this country?

Mr. POMERENE. The Senator means the tariff that is placed on hides here?

Mr. STANFIELD. If it shall be placed, yes; will it be beneficial or detrimental?

Mr. POMERENE. Why, of course, it is not going to benefit him.

Mr. STANFIELD. It is going to be detrimental to him, then?

Mr. POMERENE. To some extent, possibly. In other words, to the extent that a tariff duty is placed upon the importation of hides it is going to contract his market.

Mr. STANFIELD. Mr. President, undoubtedly the Senator from Ohio is aware that the output of South American hides is controlled by the great American packers that he maintains are instrumental in having this duty placed upon hides.

Mr. POMERENE. Oh, now, the Senator is in love with the packer, and he is passing a law here which is for his benefit directly and for the benefit of the other man only indirectly.

Mr. STANFIELD. I am attempting to show that the Senator from Ohio is not consistent in his arguments here.

Mr. POMERENE. It is the Senator from Oregon who is not consistent.

Mr. STANFIELD. On the one hand, the Senator from Ohio says the duty is detrimental to him. I say that he controls the South American hides, and I want to say to the Senator and to the other Members of the Senate that if there is any man in America who wants free hides it is the packer who wants free hides. There is a reason why he should want them, and that is the reason, and I say that the arguments of the Senator from Ohio are inconsistent.

Mr. POMERENE. And the Senator from Oregon wants to place a duty of 2 cents per green pound of hides on the 60 per cent of the 12,000,000 hides that are produced by the packer in this country; but he keeps that argument in the background, because it would not be consistent with his position that he loves the dear farmer, and wants this duty for the benefit of the dear farmer.

Mr. STANFIELD. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Ohio further yield to the Senator ffrom Oregon?

Mr. POMERENE. Yes; I yield.

Mr. STANFIELD. The Senator from Oregon maintains that the beef market or the live-stock market changes as the hide market and as the skin market in the United States change. I maintain that the difference in the price of hides is passed on to the grower of the live stock. I do not agree with the Senator from Ohio that the hide is the product of the packer. It is the product of the live-stock producer. The packer, the very man that the Senator says wants it, I know does not want it. I know that he wants free hides, because he controls the world's output of hides. That is why he wants free hides.

Mr. WALSH of Massachusetts and Mr. STANLEY addressed the Chair.

The PRESIDENT pro tempore. Does the Senator from Ohio yield; and if so, to whom?

Mr. POMERENE. I yield first to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. Mr. President, when I was addressing the Senate a short time ago the Senator from Idaho [Mr. GOODING] interrupted me and challenged the assertion I made that the packers were importing hides from South America. I said they were importing them in substantial quantities. He said that was not so; that they are importing very, very few hides. His correction was a proper one, because the importation of hides from South America by the packers is very insignificant. The tanners of America to-day are buying their hides not from packers but from all over the world and from independent concerns other than the South American packers; so that the packers of South America are importing very few hides. My authority is the Senator from Idaho [Mr. GOODING], also the experts of the Tariff Commission, whom I only yesterday asked to look up this matter, and also manufacturers who have made a survey of the question. So that the Senator from Oregon finds himself alone in that proposition.

Mr. STANFIELD. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Oregon?

Mr. POMERENE. First, I ought to yield to the Senator from Kentucky. I will yield to the Senator from Oregon in a moment.

Mr. STANLEY. Mr. President, in the light of the investigation which was made by the Federal Trade Commission, their sweeping finding, and the statement universally made on the floor of the Senate when the packers' bill was up—a bill which I did not support—an assertion now that the packers would not get the benefit of any accretion in the value of hides is utterly untenable. It would be just as sensible to attempt to benefit the pork raiser by putting a tax on bristles as to attempt to pass this benefit through the packers to the raiser of beef.

Mr. BORAH. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. POMERENE. I first yield to the Senator from Oregon; then I will yield to the Senator from Idaho.

Mr. STANFIELD. Mr. President, for the enlightenment of the Senator from Massachusetts, as well as the Senator from Ohio, I want to say that it is a well-known fact that the American packers control the slaughtering business of South America, and largely control that of Australia. It is a matter of common knowledge.

Mr. WALSH of Massachusetts. They do not import hides in large quantities. I think the Senator from Idaho [Mr. GOODING] will agree with me in that statement. I ask him now if he did not say to me to-day on the floor that the importation of hides by the packers was insignificant?

Mr. GOODING. I understand that the packers do not import any hides. That is my information. At least, I have that information from manufacturers and other sources.

Mr. STANFIELD. I think the Senator from Idaho will admit that they control the hides of South America, because they do the slaughtering in South America. That is generally well known.

Mr. POMERENE. We will allow the two great protectionists of the Senate to settle their differences upon that subject. I yield now to the senior Senator from Idaho.

Mr. BORAH. Mr. President, yesterday I received a letter from a very large farmer in my State, part of which I had intended to read in some remarks that I intended to make myself; but will the Senator permit me, in connection with this question, to read a paragraph from that letter?

Mr. POMERENE. I shall be very glad to yield to the Senator for that purpose.

Mr. BORAH. He says:

> It seems to us farmers who really farm that we are paying too much for the protection we are getting in the tariff bill you fellows are passing. I can explain by the tariff on hides. We did not think you folks would be ignorant of how that tariff would work. The real farmer will never get any benefit from that duty. The fellows at Chicago and Omaha either skin the steer or skin the fellow who does skin him. They are the ones who take off the hides, and they control the price of all other hides.
>
> I have been raising a few cattle for 30 years. I am not an expert, because I know the facts; but when it comes to the leather and shoes, then we will feel the effect of the duty. They will charge us more for shoes and tell us, whether it is true or not, that "it is because you farmers would have a duty on hides"—a duty which does not help us. We would rather not give the shoe people an excuse for charging us more for our shoes, and leave off the duty on hides. It is all bunk. It does not help the farmer.

Mr. POMERENE. Mr. President, I assume from what the Senator's correspondent says that the letter was written by a farmer who farms a farm, and not by a farmer who farms farmers.

Mr. BORAH. This man has been a farmer, to my knowledge, for a good many years, and farms a farm.

Mr. POMERENE. He has evidently learned in the school of experience.

Mr. STANFIELD. He may be a free trader.

Mr. POMERENE. He may not be a protectionist. He may be midway between the two; but I do not understand that the saints are all limited to those who believe in sky-high rates of duty. Neither do I think the sinners are all in that crowd who believe in a moderate tariff. I do not think that either side has a monopoly of wisdom or a monopoly of patriotism.

Mr. President, I was informed just a few minutes ago that it appeared in these investigations that the packers in the country had in stock a very large quantity of hides. Of course, if we place this duty upon the importation of hides the packers are going to be the beneficiaries, not only on account of the increased price of the hides they will produce hereafter but on this great stock of hides they now have in their possession. But I guess I should not even refer to that, because this duty is for the interest of the farmers!

For the reasons thus stated, I am unalterably opposed to this duty upon hides.

Mr. STANLEY. Mr. President, I fear the Senator from Wisconsin [Mr. LENROOT] did the Senator from Idaho [Mr. GOODING] a grievous injustice. He said the Senator from Idaho never got a duty high enough. I was surprised to see, in as dependable a paper as the New York Times of August 9, that the Senator from Idaho had voted for free white arsenic. I could hardly believe my eyes.

Mr. GOODING. The Senator need not believe his eyes, if he thinks it was the junior Senator from Idaho who voted for free arsenic. I did not.

Mr. STANLEY. I could not believe it when I read it in the paper, but it is here.

Mr. GOODING. The Senator can be assured that I did not vote for free arsenic.

Mr. WALSH of Massachusetts. The Senator from Kentucky owes an apology to the Senator from Idaho.

Mr. GOODING. Yes; and I demand it at once.

Mr. WALSH of Massachusetts. The Senator from Idaho has not voted that anything should be on the free list.

Mr. STANLEY. It is a mistake of the New York Times in referring to Senator GOODING.

Mr. BURSUM. Mr. President, the information given by the experts who have spoken to-day as to what is healthy and beneficial for the farmers is very interesting. The attitude taken by Senators on this floor with reference to a duty on hides, taking into account the States which they represent, would suggest that the idea of Hancock was not so far off after all, when he said that the tariff was a local issue. It seems to make a good deal of difference as to whose ox is gored.

I believe in the policy of protection. I believe that protection is right; that it is right for every section of the country and for every industry of the country whenever that industry requires protection in order to maintain the standard of American living in this country and to make ends meet. If it is proper to impose protective tariff duties on the manufacturer's goods, certainly it ought to be proper to impose protective duties on the basic products upon which the manufacturing industries depend, if those products are in need of protection, if the cost of production here as compared with the cost of production in foreign countries makes protection necessary in order to permit those industries to live.

I can not agree with some of the statements made here with reference to the reflection of the duty in the prices of the products so protected; that is to say, that if we impose a duty of 2 cents on green hides, it will not benefit the farmer or the producer of those hides. Certainly we expect that the duty will be reflected to a very large extent. Otherwise there would be no benefit derived by anyone.

I can not agree with the proposition that the packer takes for himself and puts into his own pocket whatever increase might be brought about in the value of hides by reason of this duty. There is no industrial institution in this country I know of which is more scientific in the handling of cattle, sheep, hogs,

and live stock of all kinds and by-products than the packing institutions of this country; and the prices and value of the by-products, as far as I have been able to observe, have invariably had a bearing on the value of the live stock sold on the market.

I know that in the case of lambs the value of the wool would have a great deal to do with the market value of the lambs. Whether or not a lamb was shorn would have a great deal to do with the value of the lamb upon the market.

The same rule must apply with reference to cattle. During the war there were times when hides were worth as much as 50 cents a pound, so a 60-pound hide would cost $30. I can not conceive how anyone could pretend that such a hide was not a very substantial factor in arriving at the market value of the animal from which it was taken. Of course it is. There can be no question about it.

The Senator from Wisconsin [Mr. LENROOT] laid great stress on the compensatory duties which would be levied, stating that the imposition of a 2-cent tariff duty would mean an additional cost of 12 cents, being the compensatory duty allowed for each pair of shoes imported, and he pyramided the profits of the manufacturers, the jobbers, and the retailers, and brought the total increase in the cost up to 20 cents a pair. I submit that it is very unfair to undertake to say that because of this compensatory duty there would be an increase on each pair of shoes sold in this country amounting to 20 cents a pair.

A compensatory duty is not allowed except upon imports. Our imports of shoes will not amount to exceed 5 per cent of the total consumption of shoes in this country. Our production, I understand, is something over a billion dollars. The imports are about $500,000,000. Therefore, even if all those shoes were made chiefly from the hides of cattle, the compensatory duty could not possibly amount to more than 5 per cent of the total consumption, and it is not at all likely that any large percentage of the imports would be confined to shoes manufactured from the hides of cattle. It is very likely that a large percentage of those shoes might be ladies' shoes, made out of kid, morocco, or some other kind of leather, which would be entitled to no compensatory duty.

Then, again, the tariff duty which is paid is not wasted. The duty which would be imposed upon the imports of hides, taking as a basis the importations for 1921, which I am advised are about 255,000,000 pounds, would amount to $5,100,000, approximately. That money would go into the Treasury to defray the expenses of the Government. The duty is carried on to the consumer, and the consumer pays his pro rata of the expenses of the Government. Certainly the Government must derive the revenues to pay its expenses from some source, and what fairer method is there than to prorate the duty to the whole country, and what fairer method is there than to extend that expense of the Government to the consumer, who certainly enjoys the benefits? A great deal may be said about methods and means of levying taxes without reaching the consumer. No such method has ever been devised, and no such method will ever be devised, it matters not in what form you apply the tax.

A great deal has been said about the consumer being taxed and taxed and taxed. I submit that a producer is a consumer; that nearly all producers are consumers, and any producer who is not a consumer must be a middleman, who lives off his wits, who lives by dealing in the products of the real producer, and he is not an element of production nor does he contribute to the country's wealth. He might be described in many instances as a drone. There are all kinds of producers—producers of cattle, producers of sheep, producers of coal, producers of shoes, producers of steel, and producers of all sorts of farm products. All of these producers are consumers. If we are to have a well-balanced condition in this country we must permit every class of industry to enjoy the benefits of a relative purchasing power of his production to enable him to get along and make ends meet and live. Mr. President, I submit that the duty imposed is a very moderate one. It is not a high duty. It is lower than other duties which we have heretofore had.

There is another phase of the proposition to which I wish to direct attention. It is not only a question of whether or not we are going to afford protection to the raiser of cattle to enable him to get along, but the Nation has an interest in this great industry. There are certain essential industries which no government can afford to do without or permit to perish, because to do so would be dangerous to the peace of the country. No country can get along without meat, wool, cotton, or sugar. Those articles are just as necessary and essential for national defense as the most modern weapon that human ingenuity has been able up to the present time to devise. If we were to be dependent entirely upon foreign countries for the production of hides, if we had no home supply, another story might and would be told as to the prices which the consumer would be obliged to pay. The only safe course for the country and for the consumers of the country is to preserve the home industries so as to guarantee to the people a reasonable competition and thereby keep in check and within the bounds of reason prices to be charged the consumers.

This is not a large duty. It will probably add from 6 to 10 cents a pair on certain kinds of shoes. Other classes of shoes will not be affected by the duty. I do not believe that the duty would be reflected in the price of shoes. My observation during these years while we have had cheap hides, subjected to a demoralized market, has been that shoes have been higher. They are higher to-day than at any time in the history of the country except the period during the war. With all the modern machinery and with the ability, as has been stated upon this floor, of the shoe manufacturers of the country to supply the markets of the world, why is it that shoes are higher to-day than at any time in our history except during the war? Why, Mr. President, a good pair of men's shoes to-day will cost in the neighborhood of $12 at almost any retail store. A pair of lady's shoes will cost almost as much, if not more. It can not be said that the tariff has any effect on that price, because there is no tariff. Why is it?

It has been said on the floor of the Senate by the distinguished junior Senator from Massachusetts [Mr. WALSH] that there is no monopoly in the shoe-manufacturing business. That may be true. There may be no monopoly so far as ownership is concerned, but I say that there never was a better organized institution in the country than the manufacturers of shoes and the retail dealers in shoes. They are all organized—organized with an understanding as to prices, as to credits, as to methods. Annual conventions and semiannual conventions are held, and there is the closest cooperation among all the agencies which come within the lines of the shoe industry whose members are members of the organization and working with an understanding, if not an agreement. That, to my mind, accounts to some extent for high prices.

The duty is small. It is 2 cents a pound on green hides and 4 cents on dried flint hides. Four cents on dried flint hides is the equivalent practically of 1¼ cents on the green. The flint hides are produced mostly by small farmers and by ranchmen and by country butchers. The duty can not possibly, under any arrangement, exceed the compensatory duties which were allowed by the Finance Committee, and would not in any event affect more than 5 per cent of the total consumption of the country. It could not amount to more than 12 cents per pair of shoes. Yet a propaganda has been carried on, from the manufacturers to the jobbers and to the retailers all over the land, misrepresenting the effect of the duty, and plainly stating that in the event of the adoption of the duty it would increase the cost of shoes $2.50 a pair, or twelve times the amount which is claimed by opponents of the bill upon this floor. That shows the kind of organization that has been behind the opposition to this schedule. The Senator from Utah [Mr. SMOOT] corrects me and states that I should have said fifty times the amount.

Mr. SMOOT. Two dollars and fifty cents a pair would be fifty times 5 cents.

Mr. BURSUM. Yes. The statement which I made was that it was twenty-five times the amount, which it was claimed by the opponents of the measure upon the floor of the Senate is the amount by which the price would be affected. The propaganda has been unfair in the extreme, with no rule of reason and no basis in truth or fact. Advantage has been taken by the manufacturers and through their organizations to line up the retail dealers all over the land to send form letters of protest to Senators. That is the kind of opposition the duty on hides has had to contend with. When we had a duty on hides under the Dingley law shoes were much cheaper than they are now. If the duty causes the high prices why did it not affect prices at that time?

Mr. President, while there is probably no monopoly in the form of a single ownership, yet, in my opinion, there is a monopoly on the machines which are used in the manufacture of shoes, and that monopoly is so manipulated as virtually to constitute a monopoly in the manufacture of shoes all over the country. We bought shoes cheaper when they were made by hand than we can buy them now with all the modern machinery.

Now, there is another angle to this matter which ought to be of great concern to the Nation as a whole, and that is that we should be in such position as to rely upon having an adequate supply of beef and meat in the country. I read from page 4466 of the tariff hearings a statement by Mr. Zimmerman, of Somerset, Pa. Among other things, Mr. Zimmerman said:

Another comparison may be effective: Twenty years ago we had 50,585,777 beef cattle with a population of about 76,000,000; at present we have 35,424,458 with a population of about 105,000,000, which is increasing in the same ratio as beef production is diminishing. While population has increased 40 per cent beef production has decreased 30 per cent. Had the beef-cattle supply of the country kept pace with population increase we would now have 70,000,000 instead of 35,000,000 head.

In other words, in order to have a normal supply of cattle at this time we ought to have double the number which we now have in the country. Unless encouragement is given which will permit the grower to continue the industry, to continue to raise cattle, the supply is bound to diminish.

Mr. President, we adopted a duty of 2 cents per pound on live cattle. What an inconsistency it is to say that if we bring in a hide upon the cow or steer we pay 2 cents, but if we bring the hide in separately it comes in free. This policy seems to me to be inconsistent. Hides are the finished product of the farmer just as much as is any other manufactured product the finished product of the manufacturer.

To my mind the proposed duty is reasonable; it is just, it is modest, and it is desired by the farmer. I do not agree with the statement made by the Senator from Wisconsin [Mr. LENROOT] that all the farmers of the country are in favor of free hides. My observation would not justify such a conclusion; and I know that is not the case in my State. In my opinion the duty is necessary; it is an element of protection to the benefit of which the farmer is entitled. The hide is just as much a part of the actual value of a live steer as is the beef; and it is just as much entitled to a duty as is any article of leather which is produced by the manufacturer of saddlery, of harness, or of suit cases, or of gloves. If the producer of the so-called raw material is not entitled to the benefits of a protective duty in proportion to the difference between his cost of production and the cost of the production of the imported article, then certainly the manufacturer can not be entitled to any greater privilege. If it is fair and just to give a protective duty to the manufacturer, it is fair to give that same duty, in proportion to his requirements, based upon the same principle, to the farmer.

I say, Mr. President, if we are going to impose a tariff duty for the benefit of the manufacturer of leather goods, of whatever kind or character they may be, we should give a proportionate duty to the producer of the basic material from which those manufactures are derived. If we are not going to protect the producer, then we ought to be consistent in principle. If we are going to have free hides, let us have free valises; let us have free harness; and let us have free leather goods of every kind and character.

Mr. STANFIELD. Mr. President, I do not wish to take up the time of the Senate in making a speech on the pending subject. The Senator from New Mexico has covered it in a very comprehensive way from my viewpoint; but I desire to say that I can not understand how any Senator here who is a consistent protectionist can justify himself in voting for protection for one industry and refuse to give it to another industry. I maintain that this duty if not for the benefit of the American farmer is at least a protection for the cattle producers; and I wish to say to Senators here that the tariff difference on the value of the hide will at times represent the difference between a profit and a loss in the cattle industry. For the last two or three years the live-stock producer has been losing money; cattle production on the ranges has been at a loss.

The Senator from Ohio [Mr. POMERENE] stated that this tariff would be for the benefit of the packer and would not be passed on to the cattle producer. It is just as fair to presume that a difference in the value of the carcass of the meat is not reflected to the cattle producer; and we know that that is not the case. In order to show the inconsistency of his statement, he maintains that this duty would be detrimental to the owners of hides in South America or in some other foreign countries. As I stated at the time, it is well known that the American packers—the small group of packers, the minority group of packers—are in control of the slaughtering of live stock in South America. Therefore, if it would be detrimental to their interests in South America how is it going to be of concern to them that there shall be a duty on hides in order that they might make a profit on perhaps 40 per cent of the hides which they control in America? It is not reasonable.

I do not believe that any Senator who believes in protection, if he should vote against this proposed duty, could square his act with the policy that he represents. I am not surprised at the attitude of certain Senators here who are opposed to this duty, because they have shown a number of times—I refer to Republican Senators—that they are not consistent protectionists; that they are apparently in favor of protection for products that directly concern the locality in which they are interested or in which their constituencies are directly interested.

The propaganda and the contention to the effect that the imposition of the duty will affect the consumer of shoes is not reasonable. We all know that, so far as the retailer of shoes is concerned, the difference of 12, 14, or 15 cents on a pair of shoes is not material to him; nor does it affect the consumer. The retailer can increase or decrease to this extent the price without any material effect to his business. We know that is true. Of course, in the aggregate Senators may show that the figures are large, but that same method of illustration may be applied to protection on every article on which we have placed a protective duty.

To Senators on the other side of the Chamber who believe in a tariff for revenue only I wish to say that this is a duty for which they may consistently vote, for it is a revenue tariff. It will yield a revenue. Hides will be imported here, for the proposed duty is not prohibitive. It may be placed on a basis where it is purely a revenue proposition.

I therefore sincerely trust that every Senator here who believes in a protective tariff, who believes that an industry which needs protection is entitled to protection, may see his way clear to vote for this small duty of 2 cents a pound on green hides.

Mr. GOODING. Mr. President, I am quite sure that at this time it is proper for me to make my position on the tariff question a little clearer, possibly, than I have made it in the past. I have always believed in the great principle of protection, but I never occupied the position that I do to-day, where in discussing the bill which is before the Senate I have taken the position that the duties could not be too high, and that many of the schedules are entirely too low. I have, however, been discussing a bill which provides for the levying of duties on the basis of foreign valuation. If this bill had provided for the American valuation, some of the duties might have been too high to suit me, for I have never yet found myself in an unreasonable position in life. After studying the conditions prevailing in the world as a result of the great World War and realizing that, through the depreciation of foreign currency, labor in some countries is working for almost nothing at all as compared with the wage paid to labor in this country as measured by the gold standard, I do not know how we can properly protect labor in America when we permit imports to come into this country based on the depreciated currency of many of the countries of the Old World.

The senior Senator from Utah [Mr. SMOOT] placed in the RECORD a few days ago a most remarkable document, setting forth a signed contract between the proprietors of textile mills in Germany and their employees, according to which, using the price paid in American mills as a basis and figuring that price at 100 per cent, labor in the textile districts of Germany would receive 1,000 per cent below what we pay here in America. I have placed in the RECORD on different occasions the prices paid for labor in Germany in the principal trades and industries, and all the way through the average is from ten to fifteen times less than we pay labor in this country.

Germany in order to protect her own industry against her own depreciated currency has found it necessary to increase her protective tariff rate 65 times over pre-war duties; Austria in order to protect herself and her industries against the depreciated value of the krone has been forced to increase her protective duties 200 times; and France has protected her industries by a system of coefficients or multipliers, so that in some cases the duty in France has been increased 10 times as against the depreciated currencies of other countries. We, however, refuse to take that situation into consideration at all.

Tell me, if you please, Mr. President, with an average duty on manufactures in this bill of only 35 per cent and with labor in some foreign countries receiving a thousand per cent less than the wages paid similar labor in America, what protection does this bill provide to the manufacturers of this country, when we consider the difference in the cost of production in Germany or any other country with depreciated currency and cost of production here?

I hope that I am needlessly alarmed over the industrial conditions which exist in America; I hope that those who have given service here in the Senate for so many years are right and that I am entirely wrong, but I do not see how it is going to be possible to start any industry in America at the present time, with a protective duty based on foreign currencies that are not worth in some cases the paper on which they are printed. It seems to me, Mr. President, if I can see the situation clearly, that we are facing a new world, with entirely new conditions.

The greatest question that confronts any country at any time, whether it is a new country or an old country, is that of finding employment for its own people. One-half of all the German people before the war were employed in preparing for the greatest struggle that humanity has ever known. England was build-

ing a great navy. France was building a navy and developing an army. Our own country was building a great Navy. Japan also was in a mad race, trying to keep pace with this country and the rest of the world in building her navy and extending her army. Now the world is on a peace basis. England is scrapping some of her great weapons of destruction. We are scrapping our Navy and Japan likewise is reducing her navy, and we have reduced our Army in this country in the last year something like 75,000. As I see it, the great question before the American people is to find employment for our own people.

That condition confronts every country on earth to-day. Besides the world being on a peace basis, new inventions are being discovered that are making inroads on labor. Every industry in America is overdeveloped. There is not an exception to that rule in the great industries, at least. I placed in the RECORD only a few days ago a report from the Department of Labor which showed that in the coal mines alone from 250,000 to 300,000 men were employed that were not needed at all; that the steel industry, the boot and shoe industry, and, in fact, every other industry is overdeveloped, and that not over half the men employed in those industries are needed, if they are to be given full-time employment. Study as I pleased, I could not find a single great industry in America but that is overdeveloped, and in some cases can supply the needs of the world. I do not believe it is possible to find employment for our own people except through a high protective duty, following along the lines other countries have followed.

If all the ports of the Old World were still wide open to the American manufacturer and the American people, I would not take the position that I do to-day. I want to say to the Senator from Ohio that some of the South American countries have an embargo against shoes—Chile especially. In others the duties are so high that they practically act as an embargo. Germany has a license system, an embargo on all articles that her people can manufacture for their own use. That country is closed to the industries of this country, or at least to our manufactures. France has the coefficient system of multipliers, so that she has practically an embargo on many of the manufactured articles. Sweden has increased her duties five times over pre-war levels. Spain has materially increased her duties, practically placing an embargo, the same as other countries, on those articles that her people can manufacture for themselves.

Poland has a complete embargo on articles that can be manufactured at home. Ecuador has an embargo on shoes. Belgium has increased her duties from 100 to 300 per cent. Italy has an embargo against many of the articles manufactured in the United States or any other country on earth. Austria has increased her duties two hundred times. Switzerland has an embargo against all articles that can be manufactured at home. Canada has protected herself against the depreciated currency of foreign countries. We are practically the only country left on earth that has not taken some action toward protecting her manufacturing industries. England has a protection as against Germany of 59 per cent. Twenty-six per cent of this is arranged for in the reparation act on all imports from Germany into Great Britain, and with 33⅓ per cent for what England calls her key industries she has a protection of 59 per cent, which is nearly twice the average duty that we give manufacturers here in America.

There is one thought that controls me on the tariff question. It is not a question of protection to the farmer. It is not a question of protection to the manufacturer or to any other industry. It is the one thought of the greatest possible development of all of our industries here in America. With 3,500,000 men out of employment tell me how it is possible, unless through a protective tariff, for us to start the wheels of industry in America?

It has been shown, through exhibits that were shown here in the Senate, that from 2,000 to 3,000 per cent is charged by our great department stores as a profit on imported articles over the price that is paid in foreign countries. Will a 35 or a 50 or a 60 per cent duty on foreign valuation protect the American manufacturer? When Senators here discuss a question and say that there are no imports of a certain manufactured article I want to tell you that the industry that is manufacturing that particular article here is running at full speed. I know that American labor is employed in that particular industry manufacturing for the needs of America. That is why I stand in the position that I do to-day.

In my judgment, as I have said before, as far as protection is concerned to many of our great industries this bill, with its foreign valuation, will not be worth the paper that it is written on. I hope I am all wrong; God knows that I am sincere in the position I take; but I believe that unless something is done in some way or other to start the wheels of industry in this country and give the labor of this country an opportunity to work we are going into the winter with 6,000,000 or 8,000,000 men unemployed.

Mr. Hearst said, in an editorial:

> Better have a tariff with graft and everything that goes with it than to have millions of unemployed in the country. Better pay $25 or $100 for protection to give the laboring man employment than to throw our ports open to foreign countries, and give foreigners employment and an opportunity to work for the American people.

Mr. President, again I want to say that with the world on a peace basis there is not work in the world to-day for all the peoples to do. It is just going to be a question of what country is going to find employment for its own people. These Old World countries that have had serious labor conditions to meet for many, many years are protecting their laborers by practically putting an embargo on those things that they can manufacture for themselves.

Again, Mr. President, let me say that we are no longer a new country. Nowhere in the great West is there a single homestead left for the homesteader where it is safe for him to take his family and try to make a living, and there is no opportunity to relieve the congested conditions of the great cities by people going out upon the farms. This talk about "back to the farm" is filled with irony and sarcasm. The farmers of this country for the last two years have lost billions of dollars in the prices they have been forced to accept for their farm products. There is no chance for a movement of back to the farm. In fact, in 1920 there were a million men, women, and children who left the farms because they could not make a living. So unless we do something to create employment in America, tell me what the winter is going to bring forth! I am not able to tell you. It looks dark to me, and I hope that I am entirely wrong.

I send to the desk a letter that I am going to ask to have read. Mr. Thomas G. Clarke, the president of the National Print Cutters' Association of America, brought into my office some time ago a print roller for printing wall paper. He told me one of the saddest stories that I have listened to in many a long day. I asked him to write me a letter, telling me the story of his industry.

The PRESIDENT pro tempore. If there be no objection, the Secretary will read the letter.

The Assistant Secretary read as follows:

EXECUTIVE COUNCIL
NATIONAL PRINT CUTTERS' ASSOCIATION OF AMERICA,
Philadelphia, May 17, 1922.

HON. FRANK R. GOODING,
United States Senate, Washington, D. C.

DEAR SIR: In accordance with my promise to you, I am herewith sending you a statement of facts as they relate to print cutting and proposed new tariff.

Print cutting for wall paper is rated as one of the highest skilled trades in the United States, being tedious, exacting, and all hand-work, but as this work can be imported, it has never been paid in proportion to the skill required.

Five years of apprenticeship must be served, and few men are finished workmen in that time.

We had for a number of years an agreement with the wall-paper printers whereby they would use only union-made prints, but being hard pressed by the manufacturers of wall paper to get a satisfactory contract on September last, they agreed to eliminate the union-made print clause in their contract, which placed us at the mercy of foreign labor.

The wall-paper manufacturers' committee before the Ways and Means Committee pleaded for an adequate tariff on wall paper, as without it they could not continue in business and compete with the foreign wall paper, and feelingly referred to the American workman the trade employed who had to have wages in proportion to American standard of living. Notwithstanding this plea, hundreds of print rollers have been contracted for and imported to this country for the new-season line.

American cutters receive 80 cents per hour, or $38.40 per week, and in Germany, at the present rate of exchange, the weekly wage is less than $2.50. You can readily see that the proposed tariff of 45 per cent ad valorem, on page 37, paragraph 392, is insufficient and will not help us at all. We should have at least 75 to 100 per cent ad valorem, American valuation, to save us from annihilation, as 45 per cent of our members are over 50 years of age and can hardly at this late day earn enough at some other business even for a bare living.

The wages of print cutters, averaging on the output of wall paper of the entire trade, amounts to approximately one-tenth of a cent on a roll of wall paper, so you can see that the consumer will get no benefit from cheap German print cutting, but the manufacturers will have greater profits to divide.

The improved patterns are having the words "made in the U. S. A." placed on it so that it will print on the margin of the paper. We have refused to fashion the letters in brass, as we consider this a misrepresentation, but the manufacturers are having castings made for this purpose.

When war was declared with Germany all print cutters who were eligible went into the service. Those who were too old gave their sons. After our contract expired with the manufacturers the entire trade, with exception of those too old and feeble, whole-heartedly used their skill in Government work, where men who really could use tools were needed as much as the young men on the battle field. Every dollar we could spare we invested in Liberty bonds.

I do not mention these facts with a desire to boast of the virtues of the print cutters. On the contrary, it was our great privilege to do everything in our power for the honor of our country, and should the

occasion again arise we would just as gladly do the same for this "our country."

The war is over and imperialism has been defeated, but as far as we are concerned, unless we have an adequate tariff, Germany will have won the war, for we will be enslaved and pauperized.

Our case is absolutely a plea for protection to American workmen. We have the manufacturers with one hand reaching out for the protection they must have and with the other trying to strangle the print cutters by sending their work to Germany.

The only people who will profit will be the German print cutter and his ally, the American manufacturer. We only ask that we be given the right to earn a decent living for those depending on us. I am,

Sincerely yours,

THOMAS G. CLARK,
National President.

Mr. GOODING. That is just the story of what is going to happen to a great many of our industries. This is not a large industry. It employs only about 500 men, as I understand it, but it is highly skilled work, and unless it is properly protected it is going to pass out of existence and be lost entirely to this country. What is true of this trade must of necessity be true of others. American labor can not live on the wages they pay in Germany. So it is this case and many others, as I have been studying the great tariff question at this time, which have led me to believe that the pending bill, with its foreign valuation, as far as protection to American labor is concerned, is absolutely worthless.

I am not going to take up a great deal of time, because nothing I am going to be able to say is going to change a single vote. The die is cast, as far as the duty on hides is concerned, and I know it is late, and before we can possibly get through with this schedule it is going to be well into the night. We must finish before we can recess, because there are other important rates to be considered in this schedule besides the duty on hides.

I know of no industry in America which during my lifetime has had the struggle the cattle growers of this country have had. I especially speak for the small man, the cattle grower with 20, 50, 100, or 200 head. The cattle growers of the West in a large measure are made up of small herds. In the early history of the range we had a few great cattle growers, and we have some to-day, of course, down in Texas; but in the West generally the cattle growers are small cattlemen.

No class of citizens in America have given so much and received so little for their labor as the small cattle growers. I know a great many of them in my State who have been struggling along for more than a third of a century. It has been a fight all the time to keep the wolf from the door. Market prices would increase so that the business looked prosperous, then reverses came, and there were low prices again, and the little bands of cattle remained about the same as they were 30 years or more ago, and they had to struggle all the time for existence.

The cattlemen received fairly good prices during the war, and then came the winter of 1919, and in a great many cases in Montana and in my own State if the cattlemen had given the cattle away at the beginning of the winter they would have been in better condition financially when spring came, after they had paid the winter feed bills, where in some cases they were forced to pay as high as $50 a ton to save their live stock. One of the hardest winters we have ever known swept over the West that year.

For the cattle grower of this country there is never a holiday; Sunday is never a rest day. Eternal vigilance must be the watchword all the time, regardless of the weather and regardless of how fierce the blizzard is. In bad weather the herds must have the closest attention.

It seemed to me when the cattlemen were satisfied with the little protection of 2 cents a pound on the green hide and 4 cents on the dried hide, equivalent to a 15 per cent ad valorem duty, and the manufacturer was given protection, that the country would accept it without question.

There has been a good deal said about the farmer not being in favor of a duty on hides. I have not found that farmer. There may be some farmers who are not. I do know of free-trade farmers. I have known men in the sheep business who voted for the Democratic Party when they knew that free trade meant absolute destruction of their industries. I presume there are farmers who would not change their politics to save a great industry. But that principle exists only among farmers. I have not found a manufacturer in America anywhere who ever took such a position as that. They all want protection; and they want high protection and, besides, they want free raw material. They want the farmer to slave for them; but if there is a manufacturer in America who is not asking and demanding protection I have not found him. It is simply because he has studied the question a little better than the farmer has, in my judgment.

Last winter the President, after discussing the needs of agriculture, believing something might be done for it, advised the Secretary of Agriculture to call a national meeting, and the national agricultural conference was held here February 23–27, 1922, and beyond a doubt those who were invited were representatives of agriculture, as far as the Secretary of Agriculture could accomplish that result, for no one will deny that the Secretary of Agriculture is a friend to agriculture, doing all he can to assist it. This is a part of a resolution adopted in their proceedings:

On meat and meat products, 20 per cent ad valorem, with a minimum of 4 cents per pound; live cattle, 30 per cent ad valorem; hides, dry, 6 cents per pound; green, 3 cents per pound, with an ad valorem minimum of 20 per cent; wool used for clothing or wearing apparel purposes in whatever form, imported, 33 cents per pound of clean content; mutton, 3 cents per pound; lamb, 5 cents per pound; live sheep, $2 per head.

If we have had a representative gathering of farmers within the last year, who had a right to speak for the great agricultural interests, it seems to me this conference, called at the suggestion of the President, was that body; and that is the last word.

I have a copy of a report from an employee of the Tariff Commission, which is in the hands of the printer at the present time. It may not be strange that this report is in the hands of the printer at this time, but I have a very good reason to believe that no friend of the farmer can remain long in the employment of the Tariff Commission if the present members of that branch of the Government know it. That is a pretty strong statement to make, but I make it advisedly.

This report relates to the production of cattle hides in America and their effect upon the shoe industry.

In the year 1914 we produced 695,748,000 pounds of cattle hides.

Calfskins, of an average of 10 pounds each, were produced to the number of 46,614,000 pounds.

Of sheepskins, averaging 4 pounds each, there were produced 80,842,000 pounds.

Of horse and colt skins, of an average weight of 30 pounds to the skin, there were produced 30,000,000 pounds.

We imported in the same year 351,232,000 pounds of cattle hides, 110,134,000 pounds of calfskins, 101,065,000 pounds of sheepskins, 20,058,000 pounds of horsehides, 29,000,000 pounds of buffalo hides, 147,000,000 pounds of goatskins, and 1,000,000 pounds of kangaroo skins. I will just read the millions and put the table in the RECORD. Of all other hides and skins, exclusive of furs, there were imported 6,000,000 pounds.

In 1920 we produced in this country 781,000,000 pounds of cattle hides, 96,000,000 pounds of calfskins, 63,000,000 pounds of sheepskins, 30,000,000 pounds of horsehides. We imported for that year 334,000,000 pounds of cattle hides, 52,000,000 pounds of calfskins, 112,000,000 pounds of sheepskins, 21,000,000 pounds of horsehides, 20,000,000 pounds of buffalo hides, 150,000,000 pounds of goatskins, 1,000,000 pounds of kangaroo skins, and 7,000,000 pounds of other hides and skins.

So the total production of those hides and skins in this country was 972,321,000 pounds, and we imported 520,923,000 pounds. So it will be seen that our production in this country is almost double our imports.

Mr. President, much has been said about what the effect of this duty of 2 cents a pound on green hides and 4 cents a pound on dry hides is going to be. Of course, it is all speculation. I know of no better way, however, of judging the future than by the past, going back to see what the effect of the duty on hides was under the Dingley law. This is the report of a representative of the Tariff Commission who said:

Prior to 1897 cattle hides were free and leather and shoes were dutiable. By the act of 1897 cattle hides were made dutiable at 15 per cent ad valorem.

Using average yearly wholesale prices gathered by the Bureau of Labor Statistics, it appears that the price of sole leather and work shoes did not increase relatively as much as the price of cattle hides. The average yearly wholesale price for cattle hides in 1896 was $0.0811 per pound. In 1899, two years after the enactment of the duty, the price was $0.1235, an increase of $0.0424. In 1896 the price of oak sole leather was $0.2925 per pound; in 1899 it was $0.3358, an increase of $0.0433. In 1896 the price of men's brogan split leather work shoes was $0.9938 per pair; in 1899 it was $0.9375, a decrease of $0.0563. During the entire period that the Dingley Act was in effect green hides increased $0.0525 per pound, sole leather increased $0.0875 per pound, and work shoes $0.1416 per pair.

That was the effect of the Dingley bill. There is a lot of very valuable information, and it is regrettable that it has not been in the hands of every Senator. I am not going to say there was a conspiracy to keep it out of the hands of Senators, but I shall have something more to say about the Tariff Commission before we close the debate here on the tariff bill.

I ask unanimous consent that the report to which I have referred and from which I have briefly quoted may be printed in the RECORD, and with this request I shall conclude my remarks.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

THE PROPOSED DUTY ON CATTLE HIDES.

1. Domestic production and imports.
2. The relation of the price of hides to prices paid for live cattle.
3. The effect of the duty on hides under the Dingley Act on prices of sole leather and shoes.
4. Prices of hides, leather, and shoes from 1910 to 1922.
5. The United States export trade in leather and leather products, 1890–1922.
6. The estimated financial results of a duty on hides.
7. Duties on hides, leather, and shoes since 1894.

Domestic production and imports of hides and skins.

(Converted to a green basis, 1 pound of dried equals 2 pounds of green.)

1914	Domestic production (estimate).	Imports.
	Pounds.	*Pounds.*
Cattle hides (55-pound)	695,748,000	351,232,000
Calfskins (10-pound)	46,614,000	[1] 110,134,000
Sheepskins (4-pound)	80,842,000	101,065,000
Horse, colt, ass (30-pound)	30,000,000	20,058,000
Total	853,204,000	582,489,000

[1] Includes kipskins.

	Pounds.
Buffalo hides	29,162,000
Goatskins	147,925,000
Kangaroo and wallaby skins	1,332,000
All other hides and skins (exclusive of furs)	6,180,000
Total	767,088,000

1920	Domestic production (estimated).	Imports.
	Pounds.	*Pounds.*
Cattle hides (55-pound)	781,702,000	334,475,000
Calfskins (10-pound)	96,628,000	52,035,000
Sheepskins (4-pound)	63,991,000	112,523,000
Horse, colt, ass (30-pound)	30,000,000	21,890,000
Total	972,321,000	520,923,000

	Pounds.
Buffalo hides	20,727,000
Goatskins	150,074,000
Kangaroo and wallaby skins	1,389,000
All other hides and skins (exclusive of furs)	7,000,000
Total	700,113,000

THE RELATION OF THE PRICE OF HIDES AND DRESSED BEEF TO LIVE CATTLE.

The relative values of dressed meat, hides, and other by-products may vary considerably from time to time, according to the changing supply of and demand for the respective products. However, in order to give a rough indication of a normal situation it may be said that the meat packer obtains about 79 per cent of his total returns of the beef-packing end of his business from the dressed-meat carcass, 11 per cent from the hide, and about 10 per cent from a large number of minor products, such as tallow, oleo oil, stearin, casings, and the like.

A study made by the Tariff Commission of average yearly wholesale prices for a period of five years (1912–1916) covering green, salted, packers' heavy, native steer hides, good to choice steers, and good native steer carcass beef, all in the Chicago market, brought out the fact that while the price of dressed carcass beef in the Chicago market increased but 8.8 per cent the price paid for live cattle increased 14.3 per cent. (Table 1.) This was made possible only through the rise in price of hides, which was 48.9 per cent, and the increase in price of tallow, oleo oil, stearin, and other by-products.

A similar study for a period of nine years (1908–1916) brought out the same relationship. In this instance the price of dressed beef increased 81.4 per cent, the price of live cattle 60 per cent, and the price of hides 95 per cent. For the 14-year period (1906–1919) the price of dressed beef increased 122 per cent, the price of live cattle 192 per cent, and the price of hides 193 per cent.

In the long run, therefore, higher hide prices, like higher beef prices—only to a lesser extent—means that higher prices can be paid for live cattle. Though temporary or short-time variations, due to local or other factors, may cause the price of hides to move one way and the price of live cattle in the opposite direction, nevertheless over a long period the two price curves show a fairly close relation. (A depression in the hide market such as has occurred during the past year is reflected in a reduction in the price of live cattle or in increase in the selling price of the dressed meat, or sometimes both. Conversely, an increase in the price of hides means a lowering of the selling price of dressed beef or an increase in the price paid the producer for the live animal, or both.) On the basis of yield a 1,000-pound steer of fair average quality will yield about 550 pounds of dressed carcass and 60 pounds of green hide. An increase of 1 cent per pound in the price of hides is equal to a credit of about 12 cents per 100 pounds on the dressed beef or 6 cents per 100 pounds on the live weight. (C. V. Whalin, United States Bureau of Markets.)

Briefly, there appears reason to believe that on the whole competitive buying in the live-stock markets has forced the packers to pay the true market value for live cattle purchased and for the hides they carry. Competition among live-cattle buyers and hide sellers thus quickly tends to correct any apparent discrepancies which may occasionally exist between the values of hides and live cattle. It therefore seems probable that in the long run packers would be compelled by competition to add a duty to the price paid for live animals, getting this addition back when hides or leather are sold. It thus would appear that both packer tanners and independent tanners would be affected by a duty and that virtually the only effect on independent tanners would be the larger credits needed to carry stocks of higher-priced hides.

TABLE 1.—*Average yearly prices of hides, live cattle, carcass beef, 1908–1921.*

[Chicago market.]

Year.	Hides—Green, salted, packers' heavy, native steers.		Live cattle—Steers, good to choice.		Carcass beef—Good native steers.	
	Per pound.	Relative to 1913.	Per pound.	Relative to 1913.	Per pound.	Relative to 1913.
1908	$0.134	72.6	$0.060	70.5	$0.105	81.3
1909	.165	89.6	.065	75.9	.110	64.6
1910	.155	84.1	.070	82.5	.115	89.1

1921	.139	75.5	.087	102.3	.163	125.4

THE EFFECT ON THE PRICES OF LEATHER AND SHOES AS A RESULT OF A DUTY OF 15 PER CENT ON CATTLE HIDES UNDER THE ACT OF 1897.

Prior to 1897 cattle hides were free and leather and shoes were dutiable. By the act of 1897 cattle hides were made dutiable at 15 per cent ad valorem. (See Table 6 for complete statement of duties.)

Using average yearly wholesale prices gathered by the Bureau of Labor Statistics and given in Table 2, it appears that the price of sole leather and work shoes did not increase relatively as much as the price of cattle hides. The average yearly wholesale price for cattle hides in 1896 was $0.0811 per pound. In 1899, two years after the enactment of the duty, the price was $0.1235, an increase of $0.0424. In 1896 the price of oak sole leather was $0.2925 per pound; in 1899 it was $0.3358, an increase of $0.0433. In 1896 the price of men's brogan split-leather work shoes was $0.9938 per pair; in 1899 it was $0.9375, a decrease of $0.0563.

During the entire period that the Dingley Act was in effect green hides increased $0.0525 per pound, sole leather increased $0.0875 per pound, and work shoes $0.1416 per pair.

It requires approximately 1½ pounds of green hides to make 1 pound of oak sole leather. Then, multiplying the increase in hide price of $0.0525 per pound by 1½, the result is $0.07875. The actual increase in sole-leather price was $0.0875 per pound, or $0.00875 more than accounted for by the increase in price of hides. But there was also a duty of 20 per cent ad valorem on sole leather. If the average value of $0.30 per pound were multiplied by 20 per cent, the increased price due to the duty would be $0.06 per pound if the duty were wholly effective. It is unlikely that it was fully effective.

Computations.

Price of cattle hides, 1908	$0.1336
Price of cattle hides, 1896	.0811
Increase in hides	.0525
Price of sole leather, 1908	.3800
Price of sole leather, 1896	.2925
Increase in sole leather	.0875

One and one-half pounds of hides equals 1 pound of sole leather.
Then, 1½ pounds multiplied by $0.0525 equals $0.07875.
Difference between $0.0875 and $0.07875 equals $0.00875.
Duty on sole leather, average value of $0.30, at 20 per cent equals $0.06, or the possible justifiable difference between the increased price of leather and the increased price of hides, yet this difference was only $0.00875.

Then, again, with men's work shoes, it requires 6 pounds of green hides to make a pair, about 3 pounds of which are for sole leather and the balance for upper leather. Upper leather increased in price as well as sole leather, but as statistics are not available for upper leather only sole leather will be included. This, of course, presents only part of the case, but is sufficient to show the trend.

Multiplying the increase in hide prices of $0.0525 by 3 pounds of sole leather the increase in shoes would have been $0.1575. Yet the increase was $0.1416, or $0.0159 less.

Computation.

Price of cattle hides, 1908	$0.1336
Price of cattle hides, 1896	.0811
Increase in hides	.0525
Price of shoes, 1908	1.1334
Price of shoes, 1896	.9938
Increase in shoes	.1416

Three pounds of sole leather multiplied by $0.0525 equals $0.1575.
Difference between $0.1575 and $0.1416 equals $0.0159.
If the 25 per cent duty on shoes were effective, a difference of about $0.29 more than is shown here would have been justifiable, yet the shoes did not even increase the full amount of the hide increase by $0.0159.

During this 13-year period it would appear that (1) there was little if any pyramiding of the prices of leather and shoes as a result of the duty on cattle hides, and (2) other factors are instrumental in determining the price of leather and shoes than the hide cost.

Using average prices for the period 1890–1899 as equaling 100, the relative changes in prices of the three products are as follows:

	1896	1908
	Per cent.	*Per cent.*
Cattle hides	86.6	142
Leather	87	113
Shoes	100.4	114.8

TABLE 2.—*Average yearly wholesale prices of hides, sole leather, and shoes, 1890–1910.*

[1] Brogans of split leather.

PRICES OF HIDES, LEATHER, AND SHOES FROM 1910 TO 1922.

Prices given in Table 3 are in a period of free hides. They are largely the story of prices during the pre-war and war period. In the main hide prices increased faster at the beginning of the war and declined greater and quicker in 1921. While hides are now beginning to rise slightly, leather and shoes are still slightly declining.

TABLE 3.—*Average yearly wholesale prices of hides, sole leather, and shoes, 1910–1922.*

	Green salted packers' (Chicago).		Oak sole leather, (Boston).		Men's work shoes (Boston).[1]

UNITED STATES EXPORT TRADE IN LEATHER AND LEATHER PRODUCTS, 1890–1922.

Since 1890 the value of our export trade in leather and leather products has steadily increased. In the period of the duty on hides (1897–1907) there is no indication that our export trade was affected. Average annual exports for the five-year period 1895–1899 were valued at $19,920,000. About one-half of this period hides were free. In the next five-year period (1900–1904) average value of exports increased to $30,122,000. In the five-year period 1905–1909 average annual exports were $41,555,000. In these two last periods hides were dutiable. It appears that if the leather industries were handicapped they were successful in overcoming the difficulties. (See Table 4.)

The table below summarizes the export trade of all leather and leather products by five-year periods and gives the percentage increase over each previous period.

5-year periods.	5-year average value of annual exports.	Per cent increase over preceding.
1890–1894	$12,800,000	
1895–1899	19,920,000	55.6
1900–1904	30,122,000	51.2
1905–1909	41,555,000	37.9
1910–1914	57,707,000	36.5
1915–1919	140,997,000	144.4
1920–21 [1]	195,004,000	38.6

[1] 2-year period.

TABLE 4.—*Value of leather and leather products exported from the United States, 1890–1922 (all fiscal years).*

1890	$12,439,000
1891	13,279,000
1892	12,085,000
1893	11,912,000
1894	14,283,000
Five-year average, $12,800,000.	
1895	15,614,000
1896	20,243,000
1897	19,161,000
1898	21,115,000
1899	23,468,000
Five-year average, $19,920,000.	
1900	27,293,000
1901	27,924,000
1902	29,799,000
1903	31,616,000
1904	33,980,000
Five-year average, $30,122,000.	
1905	37,937,000
1906	40,645,000
1907	45,477,000
1908	40,739,000
1909	42,976,000
Five-year average, $41,555,000.	
1910	52,647,000
1911	53,673,000
1912	60,757,000
1913	63,893,000
1914	57,566,000
Five-year average, $57,707,000.	
1915	120,727,000
1916	146,704,000
1917	153,710,000
1918	100,881,000
1919	182,964,000
Five-year average, $140,997,000.	
1920	291,801,000
1921	98,208,000
Two-year average, $195,004,000.	
July, 1921, to April, 1922 (10 months), $47,340,000.	

TABLE 5.—*Estimated financial results of a duty on hides.*

	Pounds.
Domestic production of cattle hides	700,000,000
Cattle hides imported for consumption	300,000,000
Total (about 9½ pounds per capita)	1,000,000,000

On the basis of duty of 2 cents per pound for green hides and 4 cents per pound for dried—

(a) The returns to the producers would be, assuming the increase of the full amount of the duty was reflected in increased prices paid for live cattle and hides, $14,000,000.

(b) The cost to the farmer and his family (30,000,000 people), at 12 pounds per capita (30 per cent higher than average), $7,200,000. While the price might be increased the full amount of the duty, the price of any commodity depends upon the demand and supply of that commodity. It is conceivable that a slackened demand might decrease the above figure, or in times of great industrial prosperity increase it.

(c) The cost to all consumers of the country, at 9½ pounds per capita, $19,000,000.

(d) The revenue to be derived by the Government would be on 300,000,000 pounds, $6,000,000. No allowance is made for disbursements due to the drawback provision.

TABLE 6.—*Duties on hides, leather, and shoes since 1894.*

Act of—	Cattle hides.	Leather.		Shoes.
		Sole.	Upper (dressed).	
1894	Free	10 per cent	20 per cent	20 per cent.
1897	15 per cent	20 per cent	20 per cent	25 per cent.
1909	Free	5 per cent	20 per cent	15 per cent.
1913	Free	Free	Free	Free.
1922 (proposed)	Green, 2 cents pound; dried, 4 cents pound.	3 cents pound, 15 per cent.	2½ cents square foot, 15 per cent.	(1)

[1] Of cattle hides only, 12 cents pair plus 5 per cent. All other, 6 cents pair.

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the committee.

Mr. CURTIS. Let it be reported.

The ASSISTANT SECRETARY. On page 192, after line 2, the committee proposes to insert a new paragraph, as follows:

PAR. 1427a. Hides of cattle of the bovine species, raw or uncured, or green or pickled, 2 cents per pound; dried, 4 cents per pound.

Mr. WALSH of Massachusetts. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. LODGE (when Mr. FERNALD'S name was called). The Senator from Maine [Mr. FERNALD] is absent on account of illness. If present, he would vote "nay." He has a general pair with the Senator from New Mexico [Mr. JONES].

Mr. HALE (when his name was called). I have a general pair with the senior Senator from Tennessee [Mr. SHIELDS]. I am informed that if present that Senator would vote as I shall vote. Therefore I am at liberty to vote. I vote "nay."

Mr. UNDERWOOD (when Mr. HARRISON'S name was called). The junior Senator from Mississippi [Mr. HARRISON] is necessarily absent. He is paired with the junior Senator from West Virginia [Mr. ELKINS]. If present and permitted to vote, the Senator from Mississippi would vote "nay."

Mr. JONES of New Mexico (when his name was called). I have a general pair with the Senator from Maine [Mr. FERNALD]. I am advised that on this question he would vote "nay." I transfer my pair with that Senator to the Senator from Nevada [Mr. PITTMAN]. If the Senator from Nevada were present, he would vote "yea." I vote "yea."

Mr. NEW (when his name was called). I have a general pair with the junior Senator from Tennessee [Mr. MCKELLAR]. On this question I have been assured that he would vote as I shall vote. I therefore feel at liberty to vote. I vote "nay."

Mr. SIMMONS (when his name was called). I transfer my general pair with the junior Senator from Minnesota [Mr. KELLOGG] to the senior Senator from Texas [Mr. CULBERSON] and vote "nay."

Mr. SUTHERLAND (when his name was called). I have a general pair with the senior Senator from Arkansas [Mr. ROBINSON], who is absent. I understand if he were present he would vote as I expect to vote on this question, and I therefore feel at liberty to vote. I vote "nay."

Mr. WATSON of Indiana (when his name was called). I have a general pair with the senior Senator from Mississippi [Mr. WILLIAMS]. I am unable to secure a transfer and therefore withhold my vote. If I were permitted to vote, I should vote "yea."

The roll call was concluded.

Mr. MCCUMBER. I have a general pair with the junior Senator from Utah [Mr. KING]. I am unable to secure a transfer of that pair and therefore withhold my vote. Were I permitted to vote, I should vote "yea."

Mr. EDGE. I have a general pair with the senior Senator from Oklahoma [Mr. OWEN]. I am informed that if he were present he would vote as I propose to vote, and I am therefore at liberty to vote. I vote "nay."

Mr. JONES of Washington (after having voted in the affirmative). The senior Senator from Virginia [Mr. SWANSON] is necessarily absent. I am paired with that Senator for the afternoon. Being unable to secure a transfer, I withdraw my vote.

Mr. MCKINLEY (after having voted in the affirmative). I have a general pair with the junior Senator from Arkansas [Mr. CARAWAY], who is absent. I am unable to obtain a transfer of that pair, and therefore withdraw my vote.

Mr. JONES of New Mexico. I wish to announce that the Senator from Nevada [Mr. PITTMAN], to whom I transferred my pair, is absent on account of illness in his family.

Mr. MYERS (after having voted in the negative). I transfer my pair with the Senator from Connecticut [Mr. MCLEAN] to the junior Senator from Tennessee [Mr. MCKELLAR] and allow my vote to stand.

Mr. CURTIS. I wish to announce that the senior Senator from Minnesota [Mr. NELSON] is absent on account of a death in his family.

I also wish to announce the following general pairs:

The junior Senator from West Virginia [Mr. ELKINS] with the junior Senator from Mississippi [Mr. HARRISON]; and

The senior Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON].

Mr. LODGE. I wish to announce that the senior Senator from Minnesota [Mr. NELSON], whom I am informed would vote "yea," is paired with the junior Senator from Maryland [Mr. WELLER], who would vote "nay"; and that the Senator from Washington [Mr. POINDEXTER], who would vote "yea," is paired with the Senator from Vermont [Mr. PAGE], who would vote "nay."

The result was announced—yeas 26, nays 39, as follows:

YEAS—26.

Ashurst	Fletcher	McNary	Shortridge
Broussard	Gooding	Nicholson	Smoot
Bursum	Harreld	Norbeck	Stanfield
Cameron	Jones, N. Mex.	Oddie	Sterling
Capper	Kendrick	Phipps	Warren
Curtis	Ladd	Ransdell	
Ernst	McCormick	Sheppard	

NAYS—39.

Ball	Gerry	New	Stanley
Borah	Glass	Newberry	Sutherland
Brandegee	Hale	Overman	Townsend
Calder	Harris	Pepper	Trammell
Colt	Heflin	Pomerene	Underwood
Cummins	Keyes	Rawson	Wadsworth
Dial	Lenroot	Reed	Walsh, Mass.
Dillingham	Lodge	Simmons	Walsh, Mont.
Edge	Moses	Smith	Willis
Frelinghuysen	Myers	Spencer	

NOT VOTING—30.

Caraway	Johnson	McLean	Shields
Culberson	Jones, Wash.	Nelson	Swanson
du Pont	Kellogg	Norris	Watson, Ga.
Elkins	King	Owen	Watson, Ind.
Fernald	La Follette	Page	Weller
France	McCumber	Pittman	Williams
Harrison	McKellar	Poindexter	
Hitchcock	McKinley	Robinson	

So the amendment of the committee was rejected.

Mr. LODGE. Mr. President, I suppose it would be now in order to move to place on the free list the articles covered by paragraph 1427a, which reads:

Hides of cattle of the bovine species, raw or uncured, or green or pickled, 2 cents per pound; dried, 4 cents per pound.

Mr. SMOOT. Not only that one amendment but about four other changes will have to be made, three of them relating to articles which go on the free list. Then, of course, we shall take up the others when the paragraphs are reached.

Mr. LODGE. The articles embraced in this clause should be placed on the free list.

Mr. SMOOT. If the Senator will allow me, I will move the amendments in their order.

Mr. LODGE. Very well; but hides will be placed on the free list?

Mr. SMOOT. They will be placed on the free list, I will say to the Senator.

The PRESIDENT pro tempore. Under the unanimous-consent agreement the Senate now proceeds to the consideration of paragraph 1431, on page 195.

Mr. SMOOT. Mr. President——

The PRESIDENT pro tempore. The Chair desires to remind the Senator from North Dakota that under the unanimous-consent agreement whatever amendment is desired to be offered to that paragraph must now be offered.

Mr. MCCUMBER. I think the idea is to disagree to the committee amendment there.

The PRESIDENT pro tempore. The committee amendment will be stated.

The ASSISTANT SECRETARY. The committee proposes to strike out paragraph 1431, as printed in the House bill, as follows:

PAR. 1431. Chamois skins, pianoforte, pianoforte action, player-piano action leather, enameled upholstery leather, and glove leather, finished, in the white or in the crust, 20 per cent ad valorem.

And in lieu thereof to insert:

PAR. 1431. Band, bend, rough, and sole leather, 3 cents per pound and 5 per cent ad valorem; belting and harness leather, 4 cents per pound and 5 per cent ad valorem; calf and veal skins, tanned or tanned and dressed, 15 per cent ad valorem; patent, japanned, varnished or enameled leather, made of hides of cattle of the bovine species, 7½ cents per square foot and 15 per cent ad valorem; patent, japanned, varnished or enameled, not made of hides of cattle of the bovine species, 5 cents per square foot and 15 per cent ad valorem; chamois skins and glove leather, finished or unfinished, or in the white or in the crust, 20 per cent ad valorem; pianoforte, pianoforte-action, and player-piano-action leather, 20 per cent ad valorem; skins for morocco, tanned but unfinished, 5 per cent ad valorem; upper leather, finished, not specially provided for, made of hides of cattle of the bovine species, 2½ cents per square foot and 15 per cent ad valorem; all other upper leather, finished, not specially provided for, 15 per cent ad valorem; leather cut into shoe uppers, vamps, soles, or other forms suitable for conversion into manufactured articles, shall pay a duty of 5 per cent ad valorem in addition to the duty imposed by this paragraph on leather of the same character as that from which they are cut; case, bag, strap, upholstery, fancy, bookbinders', and all other leather, not specially provided for, made of hides of cattle of the bovine species, 25 per cent ad valorem; not made of hides of cattle of the bovine species, 15 per cent ad valorem; leather shoe laces, finished or unfinished, 50 cents per gross pairs and 10 per cent ad valorem; boots and shoes, made wholly or in chief value of leather made of hides of cattle of the bovine species, 12 cents per pair and 5 per cent ad valorem; all other boots and shoes, made wholly or in chief value of leather, not specially provided for, 6 cents per pair.

Mr. SMOOT. I now desire to ask unanimous consent to turn to the free list and to perfect the bill as to items on the free list. Then we shall know just exactly what action has been taken by the Senate in reference to the free list proper.

Mr. UNDERWOOD. As I understand, the purpose is that hides are to be put on the free list, as are boots and shoes?

Mr. SMOOT. Boots and shoes and two or three other items.

Mr. WALSH of Massachusetts. Does the Senator from Utah intend that all of the items in paragraph 1431 shall go on the free list?

Mr. SMOOT. No; I will say to the Senator.

Mr. LODGE. We ought to act on these various items and select those which are to be placed on the free list.

Mr. SMOOT. I do not think there will be any objection in having the articles to which I refer placed on the free list, but it makes no difference. It may be done either one way or the other.

The PRESIDENT pro tempore. Under the unanimous-consent agreement nothing can be considered at this time save paragraph 1431.

Mr. SMOOT. That is true; nothing save that paragraph may be considered except by unanimous consent. Now, Mr. President, in paragraph 1431 I ask that the committee amendment may be disagreed to. If that is done it will leave the House paragraph just as it originally was, reading as follows:

PAR. 1431. Chamois skins, pianoforte, pianoforte-action, player-piano-action leather, enameled upholstery leather, and glove leathers, finished, in the white or in the crust, 20 per cent ad valorem.

Mr. WALSH of Massachusetts. I have no objection to that.

The PRESIDENT pro tempore. The Chair will assume that the amendment printed in the bill has been offered, although the RECORD does not show that that has been done up to this time.

Mr. LODGE. It is a committee amendment?

Mr. SMOOT. It is a committee amendment, and I ask that it be disagreed to.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

Mr. WALSH of Massachusetts. If we disagree to the committee amendment the House clause will then remain?

Mr. LODGE. Yes.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment printed in the bill proposing to substitute a new paragraph for paragraph 1431.

The amendment was rejected.

Mr. SMOOT. On page 197, paragraph 1432, line 4, before the words "per centum," I ask to substitute the numeral "50" for the numeral "60." That is the paragraph covering bags, baskets, belts, satchels, cardcases, pocketbooks, and so forth.

The PRESIDENT pro tempore. The modification of the committee amendment proposed by the Senator from Utah will be stated.

The ASSISTANT SECRETARY. On page 197, line 4, before the words "per centum," it is proposed to strike out the numeral "60" and in lieu thereof to insert the numeral "50."

Mr. WALSH of Massachusetts. I should like to ask the Senator from Utah if he offers the amendment which he has proposed as a substitute for the committee amendment?

Mr. SMOOT. I desire to modify the committee amendment by the substitute which I have stated, proposing, on page 197, line 4, before the words "per centum," to strike out the numeral "60" and to insert in lieu thereof the numeral "50."

Mr. WALSH of Massachusetts. Then, I move, on page 197, line 1, to amend the committee amendment by striking out the numeral "40" and inserting in lieu thereof the numeral "35."

The PRESIDENT pro tempore. The amendment proposed by the Senator from Massachusetts is not now in order. The Chair desires to remind the Senator from Utah that there is no provision for 60 per cent in the paragraph to which he refers. The provision of the House bill is for 30 per cent, and that is the provision upon which the Senate is now acting.

Mr. SMOOT. Mr. President, of course——

Mr. WALSH of Massachusetts. I rise to a point of order.

The PRESIDENT pro tempore. The Senator from Massachusetts will state his point of order.

Mr. WALSH of Massachusetts. I understood the Senator from Utah to offer a substitute for the amendment of the committee in line 4, on page 197.

Mr. SMOOT. That is true.

Mr. WALSH of Massachusetts. So that the committee amendment——

The PRESIDENT pro tempore. The committee amendment is not before the Senate; it has never been offered, and has not as yet been acted upon by the Senate.

Mr. WALSH of Massachusetts. We have been proceeding in this manner heretofore.

The PRESIDENT pro tempore. The Chair overrules the point of order.

Mr. WALSH of Massachusetts. The committee have been substituting amendments for the committee amendments as originally reported.

Mr. SMOOT. There are two other amendments in that paragraph.

The first amendment in paragraph 1432 is on page 196, line 23, to insert the words "not jewelry." Is there any objection to that?

Mr. WALSH of Massachusetts. None at all.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. SMOOT. Then, on page 196, at the beginning of line 24, the next committee amendment is to strike out the words "not jewelry."

The PRESIDENT pro tempore. The next committee amendment will be stated.

The next amendment of the Committee on Finance was, on page 196, at the beginning of line 24, to strike out the words "not jewelry."

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDENT pro tempore. The next committee amendment will be stated.

The ASSISTANT SECRETARY. On page 197, line 1, before the words "per cent," the Committee on Finance propose to strike out the numeral "25" and to insert the numeral "40."

Mr. WALSH of Massachusetts. Now I move to amend the committee amendment by inserting the numeral "30" instead of "40" on line 1, page 197.

Mr. SMOOT. On that I ask for the yeas and nays.

Mr. WALSH of Massachusetts. I should like to address the Senate very briefly on my amendment to the committee amendment.

Mr. McCUMBER. Of course, the question is open to discussion before a vote is taken. The committee has had no opportunity to go into the question of just what the rate should be, in view of the fact that hides have been placed on the free list. Of course, that will necessarily carry with it the leather which would properly, for the most part, go upon the free list, and, inasmuch as the 40 per cent rate was based upon the assumption that the leather would be dutiable, and the Senator from Massachusetts has moved to reduce it, as I understand, to 30 per cent——

Mr. WALSH of Massachusetts. That is my motion.

Mr. McCUMBER. I think that should be done, and, without speaking for the committee, I should vote for that reduction.

Mr. WALSH of Massachusetts. Then probably we can dispose of the amendment immediately by a viva voce vote.

Mr. McCUMBER. Certainly.

Mr. JONES of Washington. Mr. President, I understand the House bill was framed on the theory that hides would be on the free list. As I understand, the committee has not considered what the effect would be upon these rates under the amendment which we have just adopted putting hides on the free list. Why should we not go back to the House rates in view of the circumstances?

Mr. McCUMBER. Mr. President, the House rates are based upon the American valuation at the time they were imposed. In this instance the House rate would be higher than the 40 per cent rate proposed on the foreign valuation.

Mr. SMOOT. It would be 40 per cent.

Mr. McCUMBER. It would be equivalent at least to 40 per cent, and I think a little more on some articles. I think the 40 per cent should be reduced to 30 per cent.

Mr. SMOOT. I agree with the Senator from North Dakota.

Mr. WALSH of Massachusetts. Then we can dispose of the matter by a viva voce vote.

The PRESIDENT pro tempore. The question is on the amendment proposed by the Senator from Massachusetts to the amendment reported by the committee.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. SMOOT. Mr. President, I desire to substitute the numerals "45" for the numerals "60," in line 4, page 197.

Mr. WALSH of Massachusetts. I think the committee ought to make the rate "40"; I was going to move to make it "35."

Mr. SMOOT. I will remind the Senator that the duty proposed is on fancy articles, such as bags fitted with traveling,

bottle, drinking, dining or luncheon, sewing, manicure, or similar sets.

Mr. WALSH of Massachusetts. They are largely luxuries.

Mr. SMOOT. Absolutely; and they ought to pay 45 per cent.

Mr. WALSH of Massachusetts. I will not contest the question.

SEVERAL SENATORS. Vote!

Mr. SMOOT. Mr. President, there is one amendment in the paragraph before the amendment in line 4. I refer to the amendment striking out the word "and" in line 3.

Mr. FLETCHER. And substituting the word "or."

The PRESIDENT pro tempore. The amendment will be stated.

The ASSISTANT SECRETARY. On page 197, line 3, after the word "manicure," it is proposed to strike out the word "and" and to insert the word "or."

The PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. SMOOT. Now, Mr. President, I move to modify the committee amendment in line 4 by striking out "60" and inserting "45."

The PRESIDENT pro tempore. The amendment as proposed to modify will be stated.

The ASSISTANT SECRETARY. On page 197, line 4, before the words "per centum," it is proposed to strike out "30" and insert "45," so as to read:

any of the foregoing permanently fitted and furnished with traveling, bottle, drinking, dining or luncheon, sewing, manicure or similar sets, 45 per cent ad valorem.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment as modified at the request of the Senator from Utah.

The amendment as modified was agreed to.

The PRESIDENT pro tempore. The next amendment will be stated.

The ASSISTANT SECRETARY. The next amendment is in paragraph 1433, relating to gloves made wholly or in chief value of leather——

Mr. WILLIS. Mr. President, I recognize the requirements of the unanimous-consent agreement, but I call attention to the fact that the Senator from North Dakota [Mr. LADD], who has an amendment to offer to this paragraph, has just been called from the Chamber. He will return as soon as he can within the next few minutes.

Mr. SMOOT. I think there will be discussion on this paragraph, so that he will have ample time to return.

Mr. WILLIS. I merely make the suggestion in order that the rights of the Senator from North Dakota may not be foreclosed.

Mr. FLETCHER. Mr. President, on this subject, pending the offering of the amendment by the Senator from North Dakota, I have a communication—and I presume nearly every Senator has received a copy of it, or a similar communication—which I wish to submit. Of course, we have very largely to depend upon others for our facts in connection with this bill. I am not personally acquainted with the facts, and I do not know how accurate the statement is, but it is a statement made by those engaged in the business. The communication is dated August 2, 1922, and the writer says:

THE ASSOCIATION OF GLOVE IMPORTERS,
New York, August 2, 1922.

Hon. DUNCAN U. FLETCHER,
United States Senate, Washington, D. C.

DEAR SIR: I would ask your attention to the inclosed reprint of recent article and of an editorial published in the Journal of Commerce and Commercial Bulletin, of New York, both relating to the proposed rates on women's leather gloves as provided for in paragraph 1433 of the pending tariff bill. The article was prepared by the president of this association, Mr. Thomas R. Lewis.

This article shows clearly, and with respect to evidence submitted to the Committee on Finance of the Senate (referred to on page 4 of the inclosed reprint), that the proposed duties would be prohibitive as to the importation of women's lightweight leather gloves made of leather which has been dyed by the process of brushing, and that such gloves can not be manufactured successfully in the United States.

The result of the adoption of the committee rates would be that the women of the United States would be unable to obtain the lightweight leather gloves which to them are articles of apparel positively necessary for certain seasons and occasions. They would be compelled to use the heavier gloves made of leather which has been dyed by the process of dipping, instead of the lighter gloves made of brushed leather to which they have become accustomed and which are the only gloves suited to their needs at the seasons and occasions referred to.

It is certain that to adopt the committee rates and compel the American women to buy an article they do not want and at the same time pay much higher prices for it would bring intense resentment and strong persistent protest from the women who buy gloves. It has never been considered that the principle of protection to American industry calls for prohibition of the importation of articles that can not be produced in the United States and wherein consequently there is no American industry to protect. The object of such prohibitive duties could only be to drive the American people into the use of some other and less desirable substitute. I would respectfully submit that such a proceeding would be an abuse and distortion of the principle of protection, and that the infliction of such an injury upon the American women at this time, when they are demanding lower prices, would go far toward discrediting and breaking down the doctrine of protection.

Yours very truly,

A. J. F. GOESSLING, *Secretary.*

I submit a brief upon this subject, which is not very lengthy, and ask that it be also printed in the RECORD.

I shall not take the time now to discuss the matter further, except to call attention to the imports and exports as showing the state of the industry.

In the Summary of Tariff Information it is stated that—

Leather gloves may be dress gloves, work gloves, or automobile gloves—now almost an independent branch of the industry. Work gloves are "block-cut" with dies of approximate measurements; dress gloves are "table-cut"—that is, the skin is manipulated to the sizes that will stretch to desired widths when drawn on the hand. The dress gloves made here are "broad-cut"; the imports, principally in the lighter weight, fit more exactly. Most dress gloves were formerly made of imported sheep and lamb skins but are now made principally from domestic raw materials. Mocha skins, extensively used, are practically all dressed and finished here. Work gloves are from domestic materials—cowhide, horsehide, and sheepskin, or of canvas or canton flannel reinforced with leather.

Schmaschen gloves are cheap dress gloves made of the skins of stillborn—or sometimes of very young—lambs.

The production in this country of leather gloves and mittens in 1914 is given as 3,082,376 dozen pairs, valued at $20,296,558. Without giving all the figures, in 1919 the total number of dress gloves, street gloves, mittens, and gauntlets was 1,227,284 dozen pairs, valued at $24,563,017; of working gloves, 2,888,419 dozen pairs, valued at $20,268,760. The number of all leather gloves produced was 3,615,703 dozen pairs, worth $44,831,777.

As to imports—

In 1914 about $8,000,000 of a total of $9,000,000 value came from Germany and France. Of the men's gloves imported in the years 1919 and 1920, England sent amounts valued at $104,754 and $485,122, respectively. During the war period imports of women's and children's schmaschen gloves decreased. In 1918 none was received from Germany and Belgium and but small quantities from France and Italy. In 1920, however, Germany sent gloves to the value of $170,890, which was a large proportion of the total. Imports of women's and children's gloves, not schmaschen, less than 14 inches in length, came largely from France. In 1920 the United States imported a value of $8,796,004 from that country, $1,615,900 from Germany, $1,061,374 from Italy, over $750,000 from Belgium, and almost the same amount from England.

The imports are given here, showing that they are not very important as compared with our domestic production.

In my judgment, those duties are entirely too high, if any duties at all should be imposed. I am inclined to think that these gloves ought to go on the free list.

I shall not take up time in discussing the matter any further. Have I permission to have this brief inserted, Mr. President?

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

[Reprinted from the Journal of Commerce and Commercial Bulletin of New York, May 8, 1922.]

PROHIBITIVE TARIFF ON MANY CLASSES OF GLOVES—WOMEN'S AND CHILDREN'S LEATHER GLOVES CAN NOT BE MANUFACTURED IN THE UNITED STATES.

(By Thomas R. Lewis, president of the Association of Glove Importers of the United States.)

The tariff bill (H. R. 7456), as reported to the United States Senate by the Committee on Finance, provides for rates of duty on leather gloves which are as follows:

Men's gloves, not over 12 inches in length, $5 per dozen pairs.

Women's and children's gloves, not over 12 inches in length, $4 per dozen pairs.

For each inch in length in excess thereof, 50 cents per dozen pairs.

In addition thereto, on all the foregoing the following cumulative duties:

When lined with cotton, wool, or silk, $2.40 per dozen pairs.

When lined with leather or fur, $4 per dozen pairs.

When embroidered or embellished, 40 cents per dozen pairs.

Provided, that all the foregoing shall pay a duty of not less than 60 nor more than 70 per cent ad valorem.

Thomas R. Lewis, president of the Association of Glove Importers of the United States, says:

"The domestic manufacturers of leather gloves are chiefly located in Gloversville and neighboring towns in Fulton County, N. Y. They supply practically all of the heavy working gloves and from 85 to 90 per cent of the men's leather gloves sold in the United States, and also command the market in about the same proportion in women's and children's leather gloves made of leather which has been dyed by the process of dipping or plunging. These are known as Cape and Mocha gloves and are well distinguished in the trade from the women's gloves made from the lighter and more delicate skins, which can be dyed only by the process of brushing.

"Women's and children's light-weight leather or kid gloves can not be successfully manufactured in this country, and the greatest fault of the above provisions in the pending tariff bill as reported to the Senate is that they will establish practically an absolute embargo upon the importation of gloves that women in moderate circumstances all over the country find it necessary to have and which can not be produced here. Unless these provisions are amended the result will be that women and children will be compelled to use heavier and less suitable leather gloves, at much higher prices, in place of the imported

light-weight kid gloves which they have been accustomed to wear for certain seasons and circumstances, because of the greater delicacy of texture, style, and finish of these light-weight gloves.

"The lightweight kid gloves are necessities for women and children, and this was recognized at the time of the enactment of the war revenue act of 1918, when, notwithstanding the extraordinary need for revenue, which led to taxes on sales of luxuries wherever possible, no such luxury tax was put on women's kid gloves. The present need for revenue from tariff duties has been sacrificed in the matter of gloves for the purpose of forcing the women of the United States to go without the lightweight kid gloves heretofore imported from France and other countries and to pay tribute to a few manufacturers in one county of one State.

IMPOSSIBILITY OF MANUFACTURING HERE THE LIGHTWEIGHT KID GLOVES FOR WOMEN.

"These few manufacturers have had the benefit of high protective duties continually for many years, and during the war were favored by conditions which curtailed the importation of women's kid gloves, but they have completely failed to manufacture the lightweight leather gloves of the style and finish that American women insist upon wearing, and it is thoroughly well known in the glove trade that such gloves can not be made in this country, and that this fact has been conclusively established by the unsuccessful outcome of a number of attempts.

"V. Perrin & Co., the largest manufacturers of leather gloves in the world, with factories in France, Canada, and the United States, and with a large production in the United States of women's gloves made of leather dyed by dipping, have not been able to produce here any appreciable quantity of women's gloves made of the lighter leather dyed by brushing, even when importations from France were impossible because of war conditions. The well-known wholesale dry goods company, Mills & Gibb, established a factory in Fulton County, N. Y., during the war for the purpose of making women's lightweight kid gloves, and after a large expenditure of money were obliged to discontinue the attempt because the product could not be made satisfactorily. Testimony of these facts was submitted to the members of the Senate Finance Committee at Washington.

WHY THEY ARE MADE SUCCESSFULLY ABROAD.

"Such gloves are made successfully in certain foreign countries, France especially, because the lightweight skins have been obtainable there for many generations and greater skill and care have been developed in the labor of dyeing and handling the skins and making the gloves. In France all the work incident to the making of women's kid gloves is the result of the experience of a great many years. The industry is for the most part a village industry, carried on largely by the same families generation after generation, a great deal of the work being done in the homes of the people.

"Years of such training are required before the most careful labor can acquire the skill necessary for making lightweight gloves. Our labor in the United States has never developed the patience and skill necessary to make such gloves. In fact, skilled artisans have been brought into this country from France at various times to make from imported skins the same sort of gloves they made in their native country, but the result has been that, away from the habits and customs of their native villages, they could not maintain their former skill and and care and could not make gloves of the desired quality here because of lack of collaboration by different allied operators, such as exist only in centers where the industry originated and where it constitutes the livelihood of a large percentage of the inhabitants.

FRANCE IN NEED OF AMERICAN PRODUCTS.

"In a great many States in our country factories and workers are in complete or partial idleness because there is not a sufficient demand for the machinery or other articles which they produce. France needs and would buy a great deal more of such articles if she could only pay for them, but France can only pay for goods produced here by sending to us certain goods produced there. If our tariff law prohibits the importation from France of gloves for women such as can not be produced here, it is not protection to a competing American industry, which does not exist, nor to American labor, which is not now employed in such industry.

"Prohibiting the importation of women's lightweight leather gloves is beyond anything like protection. It is simply giving a license to Mr. Littauer and his favored friends to make the women in all parts of the United States pay enormously higher prices for gloves of heavier texture. It will make these favorites of the legal embargo very much richer, and all this will be paid for by the millions of women who now find it very difficult to provide themselves and their children with necessities, and by the hard-pressed workers in the many factories which ought to sell more of their products to France, and would do so if they could get fair play.

THE HIGHER PRICES THAT AMERICAN WOMEN MUST PAY.

"If the Littauer glove rates are enacted, the women's kid glove known as P. K. 2-clasp, now retailing at $3.50 per pair, must be advanced in price not less than $1.25 per pair. The existing rate of duty is $2.25 per dozen. The Littauer duty would be $10.27 per dozen, or almost five times the present duty, and the increase in the duty over the present rate would be 356 per cent.

"Similarly, the women's 16-button mousquetaire glove, now retailing at $6 per pair, must be advanced in price by $2.50 per pair, and hence be sold at retail for $8.50 per pair. The existing rate of duty is $4.50 per dozen. The Littauer duty would be $19.53 per dozen, an increase over the present rate of 334 per cent.

"It is well known that women will not and can not pay such high prices for gloves, and the sale of the imported gloves will be practically prohibited. This is Mr. Littauer's purpose. He and the other manufacturers will then advance the prices of their gloves to the limit. The effect of this upon the public mind when it happens can be well understood in advance. This outrageous imposition for Mr. Littauer's advantage is to be perpetrated upon the millions of women buyers at a time when they need and are urgently asking for lower prices for gloves, and when all the women have votes in addition to the votes of the men folks of their households, who are also demanding that the cost of living be brought down.

AD VALOREM DUTIES ON GLOVES ARE IMPRACTICABLE.

"The Littaner duties as written into the pending bill, quoted above, contain a provision that the gloves as designated shall pay a duty of not less than 60 nor more than 70 per cent ad valorem. This provision is the joker, and in addition to the lack of a reasonable classification permitting the importation of the brushed leather (light weight) kid gloves will make the Littauer schedule most completely prohibitive and establish the domestic monopoly sought. Moreover, it will place the glove schedule again on an ad valorem basis rather than a specific basis. This will bring serious administrative difficulties. The Government, in addition to the loss of revenue through the prohibition of importations, will have to contend with expensive disputes about values.

"Ad valorem duties on leather gloves were tried out thoroughly a number of years ago and found to be entirely impracticable. Since the leather in the gloves is a natural product that is constantly varying and fluctuating in quality and value, it is not possible to closely and fairly determine the actual value of the gloves. The efforts to collect ad valorem duties resulted in so much confusion and difficulty, with expensive and vexatious litigation, that the appraisers and collectors of customs about 25 years ago demanded that the duties be changed from ad valorem to specific rates. This was done, and specific rates have prevailed ever since under the Dingley and Payne-Aldrich tariffs, as well as under the existing tariff law, and have been entirely successful.

"I believe I can say without fear of contradiction that when the leather-glove duties were under consideration by the Senate Finance Committee it developed that practically all the members of that committee, as well as the Treasury experts and customs appraisers who were assisting the committee, were convinced that it would be entirely impracticable to apply ad valorem duties to leather gloves.

"In this matter of leather gloves, of which I am speaking, there is no opposition on our part to duties which shall be fully protective to the established American industry. What we are contending against is an indefensible abuse that is sought to be committed in the name of a protective tariff, and which, if it should be consummated, would discredit and injure the protective system and the great political party that champions it.

"In this paragraph on leather gloves, ad valorem duties should be stricken out and specific rates imposed. An amendment has been proposed providing for rates on men's gloves, and women's and children's gloves made of leather dyed by the process of dipping or plunging, protecting the American manufacturer in a far greater measure than in the Payne-Aldrich tariff, known to be the highest in the history of our country. A separate rate has been proposed for women's and children's gloves that can not be produced here, so that it will be possible for the lightweight kid gloves to come into this country, thereby yielding revenue for the United States Treasury. The public welfare calls for such an amendment, which has been introduced in the Senate by Senator LADD, of North Dakota, a prominent and very able Republican, who is a leading advocate of a protective tariff that will be just and well balanced."

—

[Editorial reprinted from the Journal of Commerce and Commercial Bulletin of New York, May 12, 1922.]

TARIFF JOKERS—No. 5.

The tariff bill (H. R. 7456), as reported to the United States Senate by the Committee on Finance, provides for rates of duty on leather gloves which are as follows:

Men's gloves, not over 12 inches in length, $5 per dozen pairs.

Women's and children's gloves, not over 12 inches in length, $4 per dozen pairs.

For each inch in length in excess thereof, 50 cents per dozen pairs.

In addition thereto, on all the foregoing, the following cumulative duties:

When lined with cotton, wool, or silk, $2.40 per dozen pairs.

When lined with leather or fur, $4 per dozen pairs.

When embroidered or embellished, 40 cents per dozen pairs.

Provided that all the foregoing shall pay a duty of not less than 60 nor more than 70 per cent ad valorem.

In this paragraph, which has formed a bone of contention for years past, there now reappears an old, familiar friend. This is found in the final clause respecting an ad valorem rate to be charged upon "all the foregoing." The joker quality of it lies in the fact that inasmuch as it applies to all gloves, including those that are competitive and those that can not be produced at all in this country and are not classified in such a way as to permit proper grouping, it provides a prohibitive tariff rate. The increase in rate, if made effective, is reckoned by experts as about 334 per cent over existing levels.

It was the glove schedule which turned the stomach of President Taft just at the last moment when the conference committee was in final session over the Payne-Aldrich tariff in 1909. He sent back—so it was then asserted—the projected duties which contained a joker of this same sort for revision, with a stern message which portended a veto if the offending provision were not modified. Will President Harding do likewise if this joker holds its own up to the last?

Mr. CALDER. Mr. President, do I understand that we are now considering paragraph 1433?

The PRESIDENT pro tempore. The Senate is now considering paragraph 1433.

Mr. CALDER. I submit an amendment which I send to the desk and ask to have stated.

The PRESIDENT pro tempore. The Secretary will state the amendment offered by the Senator from New York.

The ASSISTANT SECRETARY. At the end of the paragraph it is proposed to insert——

Mr. CALDER. Mr. President, I send that amendment to the desk to be read. I will offer it after the other amendments are acted on.

The ASSISTANT SECRETARY. At the end of paragraph 1433 it is proposed to insert the following:

Gloves made wholly or in chief value of leather made from horsehides, pigskins, and cattle hides of cattle of the bovine species, excepting calfskins, whether partly or wholly manufactured, 25 per cent ad valorem.

Mr. McCUMBER. Mr. President, the Senator has suggested waiting until we pass upon the other amendments; but inasmuch as the rule which provides that by unanimous consent the committee amendments shall be first considered has been suspended by this unanimous-consent agreement, I can see no rea-

son why the Senator can not immediately offer that amendment and have it considered and voted on now.

Mr. CALDER. Very well, Mr. President. I offer the amendment which has just been read.

The PRESIDENT pro tempore. The question is on the amendment offered by the Senator from New York.

Mr. WADSWORTH. Let it be stated.

Mr. CALDER. Mr. President, may I make an explanation of its provisions, after which it can be stated again?

Mr. WALSH of Massachusetts. I think the Senator ought to give some explanation of the amendment.

Mr. CALDER. Mr. President, the House bill would carry a rate of 38½ per cent on these working gloves. The Senate Finance Committee determined that that rate would be too high, and for that reason I have offered this amendment.

These gloves are work gloves. We manufacture practically all of them here. Not very many are imported. The record, however, shows that in 1918 $1,500,000 worth were imported. Since then the imports have been negligible.

Mr. McCUMBER. Mr. President, I notice that the glove which the Senator has in his hand is the ordinary workmen's glove, used upon the farm and used generally by laborers.

Mr. CALDER. Yes.

Mr. McCUMBER. I will ask the Senator whether that is not practically the only workmen's glove that is made in the United States for workmen? In other words, they are not made out of cowhide?

Mr. CALDER. No.

Mr. McCUMBER. And they are not made out of any hide other than that which is specified in the Senator's amendment?

Mr. CALDER. That is correct. I may say that workmen's gloves made of leather of this character are worn generally in the United States and Canada and in no other country. There is a Canadian duty of 45 per cent against them. They are made in Canada as well as here, and the committee believes that 25 per cent would be ample protection for them.

Mr. REED. Mr. President, if these gloves are used by workmen, and if there are very few imported, and if we are furnishing free skins and free hides, why should they not be put on the free list, instead of bearing a 25 per cent duty?

Mr. McCUMBER. Mr. President, they are not made out of hides of cattle. They are not made out of hides which are placed upon the free list.

Mr. REED. What is the duty on the hides that they are made out of? I can not tell; I can not see the gloves from here.

Mr. SMOOT. Mr. President, glove leather is dutiable at 20 per cent ad valorem. I do not know whether it is this leather or not, though.

Mr. WADSWORTH. Glove leather bears a duty of 20 per cent ad valorem.

Mr. CALDER. These gloves are made from horsehides, pigskins, and cattle hides of cattle of the bovine species.

Mr. REED. Are we not putting those hides on the free list? Do we not propose to put them on the free list?

Mr. CALDER. Yes.

Mr. REED. Very well. Then the Senator from North Dakota was mistaken.

Mr. CALDER. I am under the impression that these skins are on the free list.

Mr. President, as I said a moment ago, these gloves are worn in this country and in Canada. They are not used to any great extent outside of North America. People in Europe do not use gloves at their work. The manufacture of these gloves here is very large. Canada has a duty of 45 per cent against our gloves coming into their country; and it seemed to the committee that at least, with that condition prevailing, we should have a duty here of 25 per cent.

It is true that not very many of these gloves have come in from Europe, hardly worth keeping a record of; but they can come in.

Mr. REED. If I understand the Senator correctly, Canada has a 45 per cent duty on these gloves.

Mr. CALDER. Yes.

Mr. REED. Because Canada has a 45 per cent duty against our gloves being shipped there, what reason is that for our putting a duty of 25 per cent on gloves of the same character being shipped in here? I can not get the logic of that. If we are able to make these gloves and ship them to Canada in competition with the world, in competition with the Canadian manufacturers, so that they feel it necessary to put a 45 per cent duty on them to protect the Canadian industry against our manufacturers, that is pretty nearly conclusive evidence that our manufacturers need no duty at all.

Mr. CALDER. I will say to the Senator that there is no record that we ship any into Canada.

Mr. REED. They may not be shipped into Canada.

Mr. CALDER. It is a fact, too, I will say to the Senator, that these gloves are not generally worn except in Canada and in our own country.

Mr. REED. Very well. I do not care where they are worn. The point I am making is this:

The Canadian statesmen have thought that we could make these gloves and ship them into Canada, where they are worn; and in order to protect their own manufacturers against American competition, against competition with the outside world, they put on a 45 per cent duty. If that argues anything, it is that we can make these gloves, and we can send them to Canada, and we can compete with the Canadian manufacturers, unless they put on a heavy duty to keep us out. That is a very sound argument against the necessity of any duty at all in this country.

The Senator says that these gloves are worn by workmen, and he corrects the statement of the Senator from North Dakota that none of the hides out of which they are made are on the free list, because a large part of them are made from the hides of cattle; so we put the hides on the free list for these gentlemen. They are already able to compete in Canada with the Canadian manufacturers. Why should we now impose a 25 per cent duty when every penny of it would have to be paid by the American laborer who wears these workmen's gloves? I protest against it. I say they should go on the free list, just the same as it is understood we are going to put shoes on the free list. Let us have something that somebody who works with his hands can get without paying a tax to benefit some manufacturer who is already able to compete in Canada to such an extent that they require a 45 per cent duty up there to protect them against that competition.

Mr. CALDER. The record does not show that any of these gloves are sent to Canada. The committee thought that the imposition of a duty of 45 per cent against us by Canada prevented their exportation into Canada.

Mr. REED. Does not the Senator understand that if that duty were taken off we would be able to send those gloves to Canada and compete?

Mr. CALDER. Undoubtedly.

Mr. REED. Then there is no use quibbling about whether they have been sent in or not. If we are able to ship them to Canada and sell them there without any protection, why should we not sell them in the United States without any protection?

Mr. CALDER. Mr. President, the Senator knows that with the cheap labor of Europe and the fact that large quantities of gloves come over from Europe it would be perfectly simple for the European glove manufacturer to begin the manufacture of these gloves in Europe and dump them all here. It seemed to the committee and seemed to me that 25 per cent was a moderate rate, and one to which the manufacturing interests of our country are entitled.

Mr. REED. The Senator has just said they do not make them in Europe. Now he says they may make them in Europe.

Mr. CALDER. I did not say that; I said they did not wear them in Europe.

Mr. REED. They do not make them in Europe, and the imports are negligible. Now the Senator wants a 25 per cent duty to protect an American manufacturer so that he can mulct the American laborer on these gloves to the extent of 25 per cent. At the same time, he tells us that the American manufacturer could sell them in Canada, in competition, of course, with the Canadian manufacturer and with the outside manufacturer, if it were not for a 45 per cent duty. In other words, we are asked to tax the American laboring man on his gloves; for the benefit of whom? Plainly, for the benefit of the glove manufacturer and nobody else. It seems to me that it is about time we took some of the burdens off of the people who toil. It is understood we are going to take the duty off shoes. Why put a duty on a thing a man wears on his hands made out of leather, and put the thing he wears on his feet, which is made out of leather, on the free list? Let us give our American workingmen, who have to have these gloves to protect their hands in the winter season, a glove that is untaxed. Why put on a duty of 25 per cent for the benefit of the manufacturer, which, when it gets around to the workingman, will increase the cost of his glove at least 40 or 50 per cent?

Mr. NICHOLSON. Mr. President, in regard to the character of gloves the Senator from New York has been discussing, I want to inquire whether they are made from leather

produced from the hides which have been placed upon the free list?

Mr. REED. Partly.

Mr. NICHOLSON. And the Senator from New York voted to put hides on the free list, did he not?

Mr. CALDER. I did.

Mr. NICHOLSON. How can he justify asking for a tax on gloves made from hides which he voted to place on the free list?

Mr. GOODING. Mr. President, I believe it is definitely understood that shoes are going to be put on the free list, as are harness, which the farmer uses, of course. I understand that is going to be done, and I think it should be done. But I believe it would be a very serious mistake to put gloves on the free list.

The shoe and glove industries in this country occupy entirely different positions. I think it can be said that the shoe industry has been developed up to a higher standard than it has been in any other country. I venture the assertion that within two years the shoe manufacturers of this country will come to Congress on their knees begging for protection. The glove industry, to my mind, is, as I said before, in an entirely different position, and if we put gloves on the free list it would destroy the industry. I do not believe it could exist. I do not care whether gloves are made out of cowhide or what they are made out of, I think we must save that industry, or we will only increase the unemployment in America. I hope Senators on this side who believe in protection will stand by this industry, which needs protection.

Mr. McCUMBER. Mr. President, I want to ask the Senator from New York [Mr. CALDER] a question. The question I asked him a short time ago, observing that he had in his hands several different makes of gloves, none of which were cowhide and all of which were workingmen's or workingwomen's gloves, was whether or not cowhide was used in the manufacture of any of those workingmen's gloves. The Senator spoke, possibly without due consideration, and said "no," as I understood him. A little further investigation into the matter, however, discloses the fact that there are more gloves made in the United States out of cattle hide than out of any of the other hides. Inasmuch as the hides of the kind which the Senator has presented to us are on the dutiable list, bearing 20 per cent ad valorem, I would dislike to say that we will levy a duty of 20 per cent ad valorem upon the raw material without giving any compensatory duty upon the manufactured glove itself.

But inasmuch as the Senator himself has taken the position that there ought to be no duty, either upon the hides or upon leather, I assumed, naturally, that he would take the position that there should be no duty upon the gloves manufactured from that leather, and I suggest to him that he divide his amendment in two parts, at least, so that he may ask the compensatory duty of 25 per cent on those gloves made of pigskin, horse skin, and buckskin, of the working-glove variety, and cut out cattle-hide gloves. I think we can all vote for the amendment then, and we can allow these people who want to make shoes and who want to make gloves out of cowhide, and want everything free, to have it just as they want it, both for the shoes and for the gloves.

Mr. CALDER. Mr. President, I will withdraw this amendment temporarily until I can find out just what is the proportion of these gloves made of cattle hide.

Mr. McCUMBER. I call the Senator's attention to page 1173 of the Summary of Tariff Information, which will give him that information.

Mr. WALSH of Massachusetts. Mr. President, there is just one way to make progress, if we want to dispose of this schedule to-night, and that is to take up the committee amendments to this paragraph in their order and then consider amendments from the floor. I intend now to discuss the whole paragraph and to do so as briefly as possible.

Mr. President, paragraph 1433 provides the rates on leather gloves. Let us consider the rates and their probable effect. An examination of this part of the bill shows that the rates have been increased to a point never before reached in the history of American tariff laws, and when we make such a statement it is worthy of attention, because this is a class of articles which has certainly not been slighted in the distribution of tariff favors.

Generous ad valorem rates on leather gloves were provided by tariff laws previous to 1890, but the McKinley bill passed in that year marks the beginning of even higher protection to the leather glove industry. Even previous to 1890 the glove manufacturers could not claim that theirs was a neglected industry, so far as the tariff was concerned, because we find that as far back as 1842 the tariff law divided leather gloves into five different classes and levied specific rates of duty ranging from 50 cents to $1.25 per dozen pairs. By the McKinley law a combination of specific and ad valorem rates were levied. The duty on men's gloves was $1 per dozen pairs plus 50 per cent ad valorem and the duties on women's and children's gloves were $1.75 to $3.25 per dozen pairs plus 50 per cent ad valorem. Additional specific duties were placed on lined gloves, on embroidered gloves, and on gloves sewed with various fancy seams.

It is not my purpose to enter upon an exhaustive discussion of the tariff history of leather gloves. I may summarize that history by saying that the tendency of these rates has been continually upward, with the exception of the Underwood tariff.

Under the Dingley Act of 1897 the basic rate on women's sheep and lamb skin gloves was $2.50 per dozen pairs and on women's kid gloves $3 per dozen pairs. The basic rate on men's gloves was $4 per dozen pairs. These rates were increased by extra duties on lined gloves, on embroidered gloves, and on gloves sewed with various fancy seams.

The rates imposed by the Payne-Aldrich Act were practically the same as those under the Dingley Act. The Underwood rates were substantially lower than these. Under that law the basic rate on women's gloves was $2 and on men's gloves $2.50. The extra duties also were less than those of the Payne-Aldrich law. Now the present bill proposes to carry the protection to a higher point than ever before enjoyed by the industry.

Upon what theory, Mr. President, can the advocates of such a measure justify the continual advance of rates? Here we have an industry which was established in this country at a very early date and which has been continually growing and taking advantage of one of the best markets for gloves, if not the best, in the world, and yet they ask for protection which only the most ardent Hamiltonian could justify for the weakest of struggling infant industries.

The proviso in this paragraph practically makes the rate not less than 60 per cent and not more than 70 per cent ad valorem. Turning to the statistics in regard to pre-war importations, we find that the average rate collected on imports of leather gloves was about 45 per cent (equivalent ad valorem rate). It is true that during the war the price of gloves increased to such an extent that the ad valorem rate collected on gloves fell to 11 per cent in 1918. Since that time the price of gloves has gone down so that the equivalent ad valorem rate has increased slightly.

Mr. President, instead of returning to the pre-war rates, however, the framers of this bill propose to carry the rates upward from the rate of 12.41 per cent, which the Tariff Commission's report shows was collected in the calendar year 1921, to a minimum of 60 per cent.

If any such increase can possibly be justified, extraordinary conditions must be shown to exist. Do we find any such state of affairs? The average value of imports for consumption prior to 1914 was between $7,000,000 and $8,000,000, the number of dozen pairs averaging about 1,200,000. In no year since the close of the war has the quantity of imports been as great as the pre-war average. In 1921, 911,238 dozen pairs were imported. This is the largest quantity imported in any year since the war. If we should use only the figures for value of imports, the situation might seem to be alarming for the domestic producer, as the value in 1920 was approximately $14,000,000 and in 1921 it was $15,000,000, but when we put these figures beside the quantity of imports we see that the situation can not be serious.

We have heard a great deal about the ruin which threatens the glove industry of this country because of the importation of the French and German gloves at the low rates of exchange. This fails to materialize when we consider the figures that have just been quoted. The value per dozen pairs of leather gloves imported in 1920 was $15.82 and in 1922, $14.36, whereas the average value per dozen pairs before the war was about $6.50. Does this look like ruinous competition for the American manufacturers? Less gloves imported than before the war and the value more than twice as great!

The ratio of imports to production in 1914 was 46 per cent based on value and 47 per cent based on quantity. In 1919 it was only 10 per cent based on value and 11 per cent based on quantity. The value of the domestic output increased from $20,296,558 in 1914 to $44,831,177 in 1919 and the number of dozen pairs from 3,082,316 to 3,615,703 in the same period. The rate of increase in the production of dress gloves and that of working gloves was about the same.

Mr. President, we have heard a great deal of complaint about the paralyzed condition of the leather glove industry in Fulton County, N. Y., but we have likewise heard reports of stagnation of industry in many lines and many places through-

out the country, and we have no proof whatever that conditions have been worse in that locality or that industry than they have been elsewhere.

We have reports to the effect that the domestic glove manufacturers have more business in sight than at any time for many months past, and we may safely conclude that this industry has not been any more seriously affected by the industrial depression than any other industry, and that, in common with others, it is now improving.

What the proposed rates of duty would do to the wholesale and retail trade in gloves is very graphically described in a circular which has been distributed throughout the country by the Association of Glove Importers of the United States. This circular is entitled "Glove Prohibition."

The glove industry of this country is more highly localized than almost any other American industry. In 1919 the State of New York produced about $26,000,000 worth of the leather gloves out of a total production of about $45,000,000. Fulton County, N. Y., is the center of the industry, and the cities of Gloversville and Johnstown are of particular importance.

The figures for local production in 1919 are not available, but in 1909 Fulton County, N. Y., produced about 55 per cent of the valuation of the total output of the United States.

Protective tariff rates on a commodity made within such narrow geographical limits affords a wonderfully instructive example of protection of the few at the expense of the public at large.

Importations of gloves are almost altogether of women's and children's dress gloves. The producers of men's gloves, both the working and dress varieties, have the domestic market almost entirely to themselves. In 1914 the domestic manufacturers produced 81 per cent, on the basis of value, of the women's and children's dress gloves used in this country. In 1919 much more than one-half, on the basis of value, of the women's and children's gloves worn in this country were produced here. This in spite of the claims of the manufacturers that the importation of cheap foreign gloves has increased since the war.

The actual figures are:

Valuation of women's and children's dress gloves.

	1914	1919
Manufactured in the United States	$3,963,170	$10,333,121
Total importations of all gloves	9,366,899	6,162,848

We must bear these figures in mind when the claim is made that the post-war condition of the women's dress-glove industry is worse than the pre-war condition. On the contrary, our domestic manufacturers appear to be better situated than they were before the war.

This is the crux of the whole debate over the tariff on leather gloves. Advocates of high protection admit that the men's working glove industry does not need protection, and also that the men's dress-glove industry controls the American market and fears little from foreign competition. They do, however, assert that higher rates of protection are needed to build up the women's dress-glove industry, and allege that this branch of the glove industry has been neglected because in the past it has not received as high rates of duty as the men's glove branch of the business.

The imported gloves are of a different character from those made in this country. The foreign gloves, especially those made in France, are of lighter weight and are manufactured more largely by hand processes and from leather which has the dye brushed on the surface, as distinguished from those made in America which are of leather dipped in the dye.

Glove operatives have been brought from France to this country for the purpose of employing them in the manufacture of dress gloves of the same character as those made in France, but it has been found that under American conditions, and removed from the environment and traditions of their native land, they do not produce the same kind of work. Practically all of the glove dealers of this country are of the opinion that American manufacturers can not produce, even if they were granted prohibitive duties, the same kind of gloves that we import.

If these rates are put into effect, therefore, the American woman will be deprived of the privilege of wearing the fine, high-grade gloves which she now uses for formal occasions.

If the claim is made that importers have been taking enormous profits on the gloves which they have lately brought in, I would ask in turn how it happens that they have not imported larger quantities of gloves? I have already shown that the importations have been smaller in quantity since the war than they were before the war. The answer which I gave to this question is that the demand for gloves in the American market has been so great that quantities brought in have been rapidly absorbed at prices fixed more by the demand than by the cost abroad.

Mr. President, if the advocates of this bill believe that the prices of gloves are too high they should take steps to prevent profiteering; the passage of this bill will merely put the stamp of Government approval on the high prices now being paid and will give the manufacturers a chance to profit instead of the importers. What we desire is a reasonable price to the consumer without profiteering by either importer or manufacturer.

Mr. WADSWORTH. Mr. President, does the Senator notice that the House provided, however, that all the foregoing gloves named in this paragraph shall pay a duty of not less than 37½ per cent ad valorem, which was based on the American valuation, which if translated into foreign valuation would read 100 per cent?

Mr. WALSH of Massachusetts. Yes; and I have shown and will again prove before I get through that this rate is based upon the value of gloves which are now coming to this country; that the rate is 10 or 11 per cent ad valorem, and it is proposed to make the minimum here 60 per cent. It is purposed to increase the duty upon gloves by 500 or 600 per cent.

Mr. WADSWORTH. Does the Senator still say that the rate in the Senate committee amendment is higher than the rate in the bill as it passed the House?

Mr. WALSH of Massachusetts. I say that the rates upon gloves by the pair are higher, and that the proviso which attempts to make a minimum and maximum ad valorem rate makes the Senate committee rate higher than the House rate. I consider 37½ per cent, based upon the foreign valuation——

Mr. WADSWORTH. It is not; it is based upon the American valuation.

Mr. WALSH of Massachusetts. I beg the Senator's pardon. The House rate is based upon the American valuation, and 37½ per cent based on the American valuation is not more than 60 or 70 per cent based upon the foreign valuation.

Mr. WADSWORTH. I think the Senator can be shown that it equals 100 per cent based on the foreign valuation.

Mr. WALSH of Massachusetts. It depends on the kind of glove. The gloves coming into this country this duty will affect are fancy gloves, women's gloves, kid gloves. There are practically no importations of men's gloves. There is no competition with the glove industry of this country from abroad, except in one class of gloves, the fancy kid glove, and it competes with the American industry in this particular: The dye on the foreign glove is put on the leather with a brush. In the case of the American glove the leather is dipped in the dye, and for that reason the foreign glove is preferred, brings a higher price, is more in demand, and is not competing with the domestic glove, but supplemental to the domestic production.

But it is only the expensive, high-class glove. The American manufacturers control the market of the cheaper kid glove, and the only reason they are asking for a protective-tariff duty is that they can, with the proper rates, be able to make gloves similar to those made abroad, and they can keep out of this country a large number of fancy kid gloves which are imported, if they are given a higher duty.

That is the only tariff issue here. There is not a tariff issue in so far as men's gloves are concerned, because there is no competition. There is not a tariff issue in so far as women's cheap gloves are concerned, because there is no competition. The only tariff issue is this: Can we, by levying a very high duty upon kid gloves, make it possible for the domestic manufacturer to compel the American women to buy domestic gloves? The importations are heavy. Can the domestic manufacturer corral that business by putting upon the market a glove which will outsell the imported glove? They can not do it. It has been tried. The most skilled glove makers of Europe have been imported into these factories and have been put to work. They have tried in various ways to make a glove as fine and as high class as the European glove. I notice the Senator from New York smiles.

Mr. WADSWORTH. I most certainly do. I anticipate the same old story, that the glove can not be made in this country; but I happen to have some in my desk made in this country as fine as were ever made.

Mr. WALSH of Massachusetts. Then I will ask the Senator why there are so many importations into this country?

Mr. WADSWORTH. They can not be made here in competition with German gloves of the same type, which are made and turned out at the German factory for 18 cents a pair, and for

which $2.25 a pair is charged in the department stores of this country, because they have a monopoly.

Mr. WALSH of Massachusetts. Now let us follow up that statement. In 1914 the importations of women's gloves into this country were $9,000,000 worth. In 1919 the importations were $6,000,000 worth. There are not as many gloves imported at 8 cents a pair or 10 cents a pair from Germany to-day as there were in 1914. The Senator can not produce the statistics to show it. If the gloves were being sold at that ridiculously low price, nothing could stop the American market from being flooded. There are less gloves imported to-day than at any time during the war or the period previous to the war.

But let us see just what the importations are. The framers of the bill propose to increase the rate from 12.41 per cent, which the Tariff Commission report shows was collected in the calendar year 1921, to a minimum of 60 per cent. In other words, the value of the imports and the amount collected by the Government show that the duty averaged 12.41 per cent ad valorem. Yet the pending bill proposes to place a minimum of 60 per cent on the very same gloves. I say there is no evidence of a distressed condition of the business in this country to justify such a substantial increase and such a substantial change.

Mr. President, the value per dozen pairs of leather gloves imported in 1920 was $15.82 and in 1922 it was $14.36, whereas the average value per dozen pairs before the war was about $6.50. I call the attention of the Senator from New York to these figures. The average value of a dozen pairs of gloves imported into this country in 1922 was $14.36, while the average value in 1921 was $15.82. The average value before the war was $6.50. Now, where is the proof of all his talk about kid gloves being bought in Germany for 8, 10, 15, or 20 cents a pair? Of course it can not be substantiated. All the statistics available show that there are less imports now than before the war and show that the price of the foreign glove is higher than before the war.

Now, I am not going to spend any more time arguing the question.

I want to call attention to a circular which has been sent broadcast and which is issued by the association of glove importers, dated New York, April 21, 1922. It states that women's piqué two-clasp gloves, now retailing at $3.50 per pair, bear a duty at the present time of $2.25 per dozen, but under the pending bill would bear a duty of $10.27 per dozen, an increase over the present rate of 356 per cent; that women's 16-button gloves, retailing at $6 per pair, bear a present rate of duty of $4.50 per dozen, while the rate named in the bill is $19.53 per dozen, an increase over the present rate of 334 per cent.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator a question?

Mr. WALSH of Massachusetts. Certainly.

Mr. SHORTRIDGE. Does the Senator vouch for the accuracy or truthfulness of that statement?

Mr. WALSH of Massachusetts. I will be very frank with the Senator. I submitted them to an expert of the Tariff Commission.

Mr. SHORTRIDGE. Does he know everything?

Mr. WALSH of Massachusetts. I have found those men honest. I have found them honorable. I have found them fair. I have found them just. I have found them unwilling to do more than answer one's questions directly yes or no and to give no opinion, but I have found them, when they were asked a frank question, to make a frank, honest answer, and I believe the man who gave me that information knew what he was talking about. I believe the figures I have given here confirm it. The present ad valorem rate is about 11 per cent. The bill, if the Senator can read English, provides that the minimum shall be 60 per cent. How much of an increase is that? It is between five and six hundred per cent.

Mr. SHORTRIDGE. I am not much of a mathematician, but——

Mr. WALSH of Massachusetts. That confirms the amount stated in the circular.

Mr. SHORTRIDGE. What did the expert say?

Mr. WALSH of Massachusetts. He said he could not dispute these figures.

Mr. SHORTRIDGE. But he did not confirm them.

Mr. WALSH of Massachusetts. Is not that confirming them?

Mr. SHORTRIDGE. No.

Mr. WALSH of Massachusetts. All right, then. But I say that the present ad valorem rate upon the gloves is 11 per cent, and the language in the bill calls for a minimum of 60 per cent. I ask the Senator, who surely has some knowledge of mathematics, what increase in rate that is?

Mr. SHORTRIDGE. I shall figure that out presently. Has the Senator any information with regard to the glove industry as it is carried on in California? I note that he mentioned New York. I rose immediately for that purpose.

Mr. WALSH of Massachusetts. No; but I know if there is in California any glove industry its interests will be fully and ably protected by the Senator from California. I have not any doubt we will hear from it before the debate ends.

May I ask the Senator whether he disputes the correctness of the figures given in the circular to which I have referred?

Mr. SHORTRIDGE. I have proof to dispute them.

Mr. WALSH of Massachusetts. What figures will the Senator give?

Mr. SHORTRIDGE. I shall take that up presently.

Mr. WALSH of Massachusetts. How can a Senator get up on the floor of the Senate and say that a statement is false without being able to say why it is false and give some explanation for his assertion?

Mr. SHORTRIDGE. If the Senator puts the question so directly, I answer that I have the courage to stand up and dispute the accuracy of the figures and the deductions therefrom.

Mr. WALSH of Massachusetts. I do not think any Senator can substantiate a position by simply denying an assertion made by somebody else, without some proof as to his knowledge of the facts upon which the statement is based.

Mr. SHORTRIDGE. Nor can any Senator justify himself in affirming and reaffirming the accuracy of figures when he himself is unable to demonstrate their correctness.

Mr. WALSH of Massachusetts. Does the Senator mean to say I have not demonstrated the correctness of them?

Mr. SHORTRIDGE. I have heard no demonstration.

Mr. WALSH of Massachusetts. I have read to the Senate the imports into this country. I have stated the amount of duty collected, and that it represented an ad valorem of 11 to 14 per cent upon gloves that came in. I have said that the bill provides a minimum ad valorem rate of 60 per cent.

Mr. WADSWORTH. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Massachusetts yield to the Senator from New York?

Mr. WALSH of Massachusetts. I yield.

Mr. WADSWORTH. Why does not the Senator tell the Senate that, with the exception of the Underwood law, the four preceding tariff laws carried in excess of 50 per cent ad valorem, including the Wilson Democratic tariff law?

Mr. WALSH of Massachusetts. My information is that the maximum heretofore was 45 per cent. Perhaps the Senator is right.

Mr. WADSWORTH. The Senator is mistaken. It was 50 per cent ad valorem.

Mr. WALSH of Massachusetts. I am now criticizing the present amendment. I am not now comparing the proposed rate with previous laws.

Mr. REED. Mr. President, may I have the indulgence of the Senator from Massachusetts to inquire of the Senator from New York what difference it makes as to the justice of the pending tariff bill what amount was named in some other law some years ago? What does that prove?

Mr. WADSWORTH. If the Senator from Massachusetts will permit me, I can answer that.

Mr. WALSH of Massachusetts. I am glad to permit the Senator to answer it.

Mr. WADSWORTH. Under the other laws, even including the laws prior to the McKinley law—the McKinley law, the Wilson law, the Dingley law, and the Payne-Aldrich law—the average rate on men's gloves has been 61 per cent ad valorem and on women's gloves a minimum of 48 to 50 per cent ad valorem. That built up a tremendous industry in men's gloves and reduced the price of gloves to the consumer in that period. We have never been able to build up or hold the industry in women's gloves. The Underwood law meant ruin for both.

Mr. REED. Were they ruined under the Underwood law?

Mr. WADSWORTH. In my own time I shall describe conditions which exist at the factories and in the homes where the gloves are made.

Mr. REED. I understood the Senator to say the gloves could be made in Germany for 18 cents a pair.

Mr. WADSWORTH. Eighteen cents a pair. I have the gloves and I have the record of the whole transaction from the door of the German factory to the retail store in the United States.

Mr. REED. The Senator said they are sold in this country at $2.25.

Mr. WADSWORTH. Yes; per pair.

Mr. REED. Does it not occur to the Senator that that is about the best argument in the world for opening the door and letting the people get the gloves at a decent price?

Mr. WADSWORTH. And give the importers 300 per cent profit and a monopoly of the business? That would close the doors of the American factories and put the American employees on the streets.

Mr. REED. If the American factories have been open with this protection——

Mr. WADSWORTH. They have had no protection on gloves.

Mr. REED. They had it under the previous law.

Mr. WADSWORTH. I am speaking now with reference to the Underwood law.

Mr. REED. In their previous condition, if the American factories had this protection, so that the American woman was not compelled to pay $2.25 for a 15-cent pair of gloves——

Mr. WADSWORTH. Eighteen cents.

Mr. REED. Or an 18-cent pair of gloves, then it is perfectly patent that they have not been cutting down the price. It is perfectly obvious that the whole thing is a farce; and the lower——

Mr. WADSWORTH. I agree with the Senator that it is a farce. It is a farce resulting from giving other people an absolute monopoly of our market. It will happen every time that is done.

Mr. REED. Now the Senator speaks of an absolute monopoly. Does he know of any combination among the importers of gloves?

Mr. WADSWORTH. I know there are no women's gloves to amount to anything sold in this country except those coming from abroad, and that is an importers' monopoly.

Mr. REED. Is that a monopoly among the importers or a monopoly among the retail or wholesale dealers of the United States?

Mr. WADSWORTH. The retail dealers can not get their gloves in any quantities except from the importers, and they charge high prices, of course. The importer adds 200 per cent to the landed cost; and he charges that to the retailer.

Mr. REED. The importer adds 200 per cent and keeps the market at this enormously high level and yet the American can not manufacture and sell in competition after the goods have been advanced 200 per cent by the foreign importers—or 2,000 per cent, which was it?

Mr. WADSWORTH. I said 200 per cent.

Mr. REED. An advance from 18 cents to $2.25 is about 2,000 per cent, is it not?

Mr. WADSWORTH. The 18 cents is the original factory cost. The Senator must not draw his conclusion from that. Eighteen cents is the wholesale price at the German factory door. There are insurance and transportation and the Underwood duty and the interest and landing charges to be added.

Mr. REED. How much is the present Underwood duty?

Mr. WADSWORTH. Two dollars a dozen pairs on women's gloves, which figures out on the present value 11 per cent ad valorem. The Senator from Massachusetts confirms that.

Mr. REED. If the Senator will pardon me, then we come to this proposition: A glove is manufactured in Germany for 18 cents——

Mr. WADSWORTH. I am speaking of the German gloves which are much higher than the French gloves.

Mr. REED. The gloves come to this country, according to the Senator, and they pay $2 a dozen tariff duty, which is equivalent to about 100 per cent on their manufactured cost. Then, after that has taken place, somebody here who controls the foreign market adds 200 per cent more. With all that added, he tells us we have got to raise the tariff so that our domestic manufacturer may compete, although his gloves have already now had about 300 per cent added to their original cost. That is a demonstration, absolutely conclusive, that we have not any business to make these gloves in this country at all, for an article that costs us three times as much to make here as it does to make it abroad and is not an infant industry and still can not compete is clearly maintained at an expense that is unwarranted under any theory of protection that was ever advanced even by Dingley.

Mr. WADSWORTH. Has the Senator from Missouri ever studied the history of the tariff on men's gloves?

Mr. REED. I do not need to study that. I am discussing this proposition.

Mr. WADSWORTH. But the same principle applies. Has the Senator ever studied anything about the tariff on gloves? If he has—and I do not mean to ask an impertinent question——

Mr. REED. I have not studied the tariff on gloves, for I am not here to make an argument for any particular or special manufacturer.

Mr. WADSWORTH. Neither am I.

Mr. REED. I do not think the Senator is.

Mr. WADSWORTH. However, the Senator from Missouri is making an argument; but if he had studied the history of the tariff on gloves, he would have found that as soon as the American manufacturer was put in a position to compete with the foreigner in the manufacture of men's fine gloves the price of men's gloves in this country was reduced 75 per cent in one year, and a better glove was given to the consumer.

Mr. REED. Well, I should want to look into that matter very seriously.

Mr. WALSH of Massachusetts. Mr. President, I do not wish to prolong the debate. I simply intended to call attention to what seem to be the excessive rates that are proposed in this amendment and to present such facts as seem to me would indicate that they are not justified. Of course, there is little prospect of getting any action here in favor of reducing them. Whatever concessions that may be made will be merely trifles, for that is about all that has been conceded, even when a strong case has been made out against proposed rates.

The Senator from New York [Mr. WADSWORTH], in his colloquy with the Senator from Missouri [Mr. REED], has called attention to the fact that women's and children's gloves are not produced in large quantities in this country. I now call attention to the fact that in 1914 the domestic manufacturers of gloves produced 31 per cent, on the basis of the value, of women's and children's dress gloves which were worn in this country; in 1919 much more than one-half, on the basis of value, of women's and children's gloves which were worn in this country were produced here. Instead of the claim of the manufacturers that importations of foreign gloves had increased since the war being true, as a matter of fact, there has been a decrease in the importations from foreign countries.

Now let me sum up what I have said. First of all, there is no tariff question here in regard to men's gloves; there is no tariff question in regard to women's and children's gloves except as to the finer and higher class of gloves. So far as they are concerned, the present price of such gloves is three times more than it was before the war. The foreign gloves were then $6 per pair compared with $16; that is, the present price of the foreign gloves is two and a half times more than it was before the war, while the importations are less than before the war.

Everybody concedes that this domestic industry has passed through a period of depression, as has every other industry; but there is no depressed condition and there is no situation here which justifies an increase of 200, 300, and 400 per cent duty upon gloves.

Mr. President, that is all I care to say upon this subject, except that I desire to offer amendments as we reach the various items of this paragraph.

Mr. WADSWORTH obtained the floor.

Mr. REED. If the Senator will pardon me a moment, I desire to say that this is a very important item of the schedule; it is covered by the unanimous-consent agreement; and I was wondering what the disposition of the chairman of the Committee on Finance would be with reference to modifying the unanimous-consent agreement and allowing us to have a part of to-morrow to consider this matter instead of sitting here late to-night?

Mr. McCUMBER. Mr. President, we could not modify this part of the unanimous-consent agreement without modifying all of the clauses of the unanimous-consent agreement relating to other matters. I think if Senators will take their time and discuss the subject and not each one discuss the matter in another's time until one can not tell who is properly speaking and who is not, we shall be able to dispose of this subject entirely and finish it before 9 o'clock to-night.

Mr. REED. I merely make the suggestion to the Senator that all that is necessary is to modify the unanimous-consent agreement by pushing the work over one day.

Mr. McCUMBER. But that might be disagreeable to Senators who consented to the unanimous-consent agreement who are not now here. I think we can get through with the subject to-day.

Mr. LADD. Mr. President——

Mr. WADSWORTH. I yield to the Senator from North Dakota in order that he may offer an amendment to the pending bill.

Mr. LADD. Mr. President, I desire to offer an amendment to the bill, beginning on page 197, line 17, and striking out from line 17 down to line 23, inclusive, and inserting in lieu thereof the matter which I have marked and which I now send to the desk. After the Senator from New York [Mr. WADSWORTH] shall have concluded, I desire to be heard on the subject.

Mr. WALSH of Massachusetts. Let the Secretary state the amendment.

The PRESIDENT pro tempore. The Secretary will state the amendment proposed by the Senator from North Dakota [Mr. LADD].

The ASSISTANT SECRETARY. On page 197, line 17, beginning with the word "Provided," it is proposed to strike out the remainder of the paragraph and to insert in lieu thereof the following words:

Provided further, That glove tranks, with or without the usual accompanying pieces, shall pay 75 per cent of the duty provided for the gloves in the fabrication of which they are suitable: *Provided further*, That women's and children's gloves not specially provided for, made wholly or in chief value of leather, whether wholly or partly manufactured, not over 14 inches in length, the lengths stated in each case being the extreme length when stretched to their full extent, shall pay $2.50 per dozen pairs; for each inch in excess thereof, 25 cents per dozen pairs: *Provided further*, That in addition thereto, on all of the foregoing there shall be paid the following cumulative duties: When lined with cotton, wool, or silk, $2.40 per dozen pairs; when lined with leather or fur, $4 per dozen pairs.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment proposed by the Senator from North Dakota.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Massachusetts?

Mr. WADSWORTH. I yield.

Mr. WALSH of Massachusetts. I desire to ask the Senator from North Dakota a question. Has not the Senator repeated some of the language which is used in the text in paragraph 1433 previous to line 17?

Mr. LADD. I have not. I have used in part the same language as that beginning in line 17.

Mr. WALSH of Massachusetts. As I heard the amendment read, there seems to be a conflict in the rates and in the language and a repetition of what appears above it in the paragraph.

Mr. WADSWORTH. Mr. President, I hope I shall not detain the Senate long; I certainly do not want to do so; but I wish to refer to some matters which I think ought to be of interest.

The glove industry in the United States had its inception in the year 1760, when a group of people were brought from Scotland, at the instance of one of the pioneers in what was then the Colony of New York. They were glove makers, living in Perthshire, in Scotland. At that time gloves were made in the homes of the people engaged in the work, and I may say that a very large percentage of gloves now are made in the same way. The impression seems to prevail that gloves are solely made in factories, but as a matter of fact a large portion of the work is done in the homes of the people who have grown up in the business for generations. The glove makers from Perthshire, in Scotland, settled in what is now Fulton County, N. Y., and named the town Perth. From that little center has grown this industry, spreading to-day over four counties, and, of course, at this time including places far removed from the State of New York, but in that neighborhood alone 40,000 people are dependent upon the prosperity of the glove industry.

Apparently the value of the industry in America generally was early recognized, for many years prior the enactment of the McKinley bill, in 1890, gloves carried an ad valorem duty of 50 per cent. We hear very loud cries about a duty of 60 per cent to-day, with wage costs more than double those of that era; but for many years before the McKinley bill was passed gloves carried a duty of 50 per cent ad valorem.

During those early generations the gloves made were largely the coarse or workman's gloves. No effort was made in those early days to make what is now known as the fine glove either for men or for women, the demand for such a glove not having become so widespread as it has in more recent years.

There was no distinction in the early days made between men's gloves and women's gloves in the matter of the tariff. The first gloves which became known as fine gloves and which began to command good prices were men's gloves made in England very largely, and in some other European countries.

They began exporting prior to 1890 a quantity of men's fine gloves. Senators can certainly recollect that prior to that time a pair of men's fine gloves could not be purchased in the United States except of foreign manufacture, and that prior to 1890, when the first change was made, a decent pair of men's gloves cost $2.50 at our own retail stores, and the foreigner had almost a complete monopoly of that production.

In the McKinley bill for the first time an effort was made to encourage the production of men's fine gloves in this country. The McKinley bill, as I recollect, continued the 50 per cent ad valorem duty on all gloves, but also provided a specific duty of $1 a dozen pairs on men's fine gloves, making an equivalent total ad valorem of something like from 60 to 62 per cent.

What was the result? I know that our Democratic friends have always contended that a procedure such as that would raise the price of gloves affected. It had exactly the opposite effect. Within 18 months the American industry making men's fine gloves got on its feet, and with typical American genius and with the sharpest kind of competition among American producers they put as fine a men's glove upon the market as the foreigner had ever produced, and even better, and instead of the American consumer paying $2.50 a pair for men's fine gloves, within 18 months he was paying only $1.50 a pair for an even better glove. So we built up the men's fine glove business in this country. Step by step we beat the foreigner at his own game and reduced the price of gloves to the people.

The McKinley bill was succeeded by the Wilson tariff bill, passed when Grover Cleveland was President, under Democratic auspices. The Wilson bill continued substantially the same duties on gloves, and the American industry continued to thrive and to grow.

The Wilson bill was succeeded by the Dingley bill, and the Dingley bill continued substantially the same duties upon gloves—about 60 per cent on men's fine gloves, and about 50 per cent, the old, unchanged rate, on women's fine gloves. We were not making women's fine gloves all through that period of years. We could not do it in competition with the foreigner; but with 10 per cent added to the original men's glove schedule, making it 60 per cent instead of 50 per cent—the women's glove schedule—we did succeed in making the men's gloves and reducing the price at the same time that we were building up a great industry.

The Payne-Aldrich bill came along and made no substantial change, averaging about 48 to 50 per cent for women's gloves and about 60 per cent for men's gloves, and still the men's glove industry grew. We had never made to any extent the women's fine gloves. The importers during all those years swore that they could not be made in this country. They had lost their enormous profits on the men's gloves which they had been bringing in; they had seen the American industry develop, and they had seen the price of men's gloves go down. They have all these years clung to their contention that we were not capable of making women's fine gloves in this country, because the women's glove is the one thing left to them where they have an absolute monopoly, which I think I can demonstrate; and, having the monopoly, they have always charged whatever price they pleased. It is true, as the Senator from Missouri has stated, that they have boosted that price away up, having a monopoly; but the instant any American tries to come in they put the price away down again and kill him before he can start. That has been the history time and time again; and as soon as they have killed the American manufacturer up goes the price again. It is the same old story when the foreigner has the monopoly.

Along came the Underwood bill and completely and drastically reversed the tariff policy so far as gloves were concerned, and cut the duties away down. Shortly after the passage and taking effect of the Underwood bill, however, the war came along, and we lived for a considerable period behind what was the equivalent of a tariff barrier, an insurmountable wall. There was the chance for the American manufacturer to try his luck at making the women's fine gloves which it had been said he never could make, and he proceeded to do it.

Mr. BURSUM. Mr. President——

Mr. WADSWORTH. I yield.

Mr. BURSUM. I think the logic of the Senator's argument about gloves should apply to hides also. Does not the Senator think so?

Mr. WADSWORTH. No; I do not.

Mr. BURSUM. Why not?

Mr. WADSWORTH. I am speaking of a manufactured product, not a raw material. There is a very different question involved.

Mr. BURSUM. The hide is the finished product of the farmer.

Mr. WADSWORTH. I do not want to argue hides on the glove schedule. The leather of which these gloves are made does not come from cowhides at all. It comes from kids and lambs and calfskins—mostly kids and lambs.

The American manufacturer found, as he knew all the time, that he could make the women's gloves, and he proceeded to do it. Of course, wages during the war went soaring to untold heights and so did all manufacturing costs, all supplies, overhead, and everything else, and the prices of gloves went soaring upward, no more so, however, than the prices of any other articles in general use by the people. That condition lasted to and including 1919. Then the effects of the war began to wear off, and the German and the Frenchman, who are the largest producers of women's fine gloves, began to resume business.

Since that time the importations of women's fine gloves from Germany and from France have mounted by leaps and bounds, until in 1921 they aggregated 991,000 dozen pairs. Those importations absolutely destroyed the industry in this country.

I want to read something from the center of this industry—a petition gotten up by the ministers in Gloversville, N. Y., after this condition had overtaken our industry. Mind you, these people who are affected have been glove makers, or their ancestors have, for generations back, since 1760. They make a large portion of these gloves in their homes, and the dealers and heads of the industry send wagons about and pick up the gloves from the homes, where they are made largely by the women in the family. Other portions of them, of course, are made in the factories. I read this to show what happened to American working people as the result of a foreign monopoly:

At a meeting of the Ministers' Association of Gloversville, N. Y., and vicinity, held on Monday, June 5, acting entirely on our own initiative and without suggestion of any kind from the outside, a committee was appointed to respectfully call your attention to some pertinent facts relative to the glove situation.

This petition was addressed to some officials in the city.

We do not profess any expert knowledge regarding either the tariff or the American-valuation plan, but we are closely in touch with the economic conditions of Fulton County. For over a year the manufacture of gloves has been at a standstill. The last winter has been one of unusual suffering because of the lack of work. Funds were raised by popular subscription to alleviate the distress, a larger amount being required than ever before in the history of the community. Our churches have been overtaxed in trying to help needy families. The glove shops are now idle, and until something definite is decided about the tariff the suffering will remain acute. In behalf of the 40,000 people who are largely dependent on the glove industry, in behalf of those whose capital is invested in the leather and glove business, we plead for immediate relief and a tariff that will enable us to sustain the industry and furnish employment to the men and women of the county.

Mind you, not only had the women's glove business been utterly destroyed but the men's glove business had been brought to the brink of destruction at the same time under the Underwood rates, which, as has been related upon the floor this afternoon, amount to only 11 per cent ad valorem.

Mr. McCORMICK. Mr. President——

Mr. WADSWORTH. I yield to the Senator.

Mr. McCORMICK. Has the Senator made allusion, or does he purpose to make allusion, to the number of small companies engaged in this industry?

Mr. WADSWORTH. The business is scattered among a large number of small companies. There are over 200 concerns making gloves. The number approaches 300.

Mr. McCORMICK. If I remember rightly, there are over 200 concerns making gloves, among which half a dozen, not more, are capitalized for $1,000,000, according to Dun and Bradstreet.

Mr. WADSWORTH. I think the Senator is substantially correct.

Mr. McCORMICK. They are all small enterprises.

Mr. WADSWORTH. Of course, the Senator knows that whenever a glove schedule is discussed here the name of a certain ex-Congressman is always dragged into it, and it is charged and alleged that he is a lobbyist and that he is working for his own pocket all the time and that of no one else. The truth of this matter is that that certain ex-Congressman is not engaged in this business and has not been for years.

Mr. CALDER. The Senator means the kid-glove business?

Mr. WADSWORTH. Yes; I do. The business is scattered among a large number of small concerns.

Now let us see if this destruction or near destruction of the American industry by the underbidding of the foreigner has been of any benefit to the American consumer.

Here is a lady's glove from Germany. It is a brushed glove. In other words, the dye or coloring matter applied to the leather is applied with a brush on one side of the leather. There is no mystery about it. It can be done by any skilled workman. This is the kind of glove which the importers who are hanging on to this monopoly and these 300 per cent profits insist can not be made in this country. This glove, however, was made in Germany. I have here the complete record from the German factory door to the retailer's counter of the transaction in which this glove was involved, but I can give a transcript of it without reading the record. It would be rather difficult for me to do so, because a good deal of it is expressed in German marks, and expressions and phrases are used with which I am not entirely familiar, but which are European in their origin, and especially German.

There was paid to the German manufacturer for a dozen pair of these gloves 575 marks, which is $2.16 for a dozen pair. That is about 18 cents a pair. That is the figure I gave a little while ago to the Senator from Missouri. Eighteen cents a pair is what the German manufacturer sold this glove for at his factory door. Carry that figure in your heads, Senators. The duty under the Underwood law was $2 a dozen pair. The landing charges were 36 cents a dozen pair, so that the cost delivered, duty paid, to the importer at New York was $4.52 a dozen pair. The importer who imported this glove, or the lot of gloves of which this glove was one, thereupon sold that dozen pair, which had cost him $4.52, for $13.50. His gross profit—not his net profit but his gross profit—on a dozen pair of gloves which cost him $4.52 was $8.98. Here is where the American consumer begins to get it when the foreigner has a monopoly. This same lot of gloves of which this glove was one was thereupon sold over the counter at retail at $2.25 a pair. The glove left the German factory at 18 cents, and Americans are paying these exorbitant prices to what amounts to a foreign monopoly, paying through the nose, because there is no competition in this country against it, and American men and women in the glove industry are being fed by public subscriptions, begged for by the ministers of the churches!

Mr. REED. Mr. President, will the Senator yield for a question?

Mr. WADSWORTH. I yield.

Mr. REED. Does the Senator want us to understand that the foreign market is so controlled that only particular people can buy there?

Mr. WADSWORTH. Anybody can buy these gloves in Germany, and I will say very frankly to the Senator that some of the glove-making concerns in this country, having lost their business and still being burdened with an overhead, although their men are walking the streets, in order to carry the burden of overhead in part, at least, and struggle along, hold their sales organization, and wait for relief, have themselves gone to Germany and bought some of these gloves, brought them here, and sold them in competition with the importers. In other words, we are driving our own manufacturers out of the business of employing American labor here in the United States, compelling them to go to Germany and to France to buy gloves made there and to bring them here and sell them. That is the situation.

What does this bill provide? It provides for a minimum of 60 per cent ad valorem. That was the rate on men's fine gloves for 23 years prior to the enactment of the Underwood law. The amendment now proposed by the committee provides, in effect, that women's fine gloves shall bear approximately the same rate, and if we agree to that we will put that end of the business on its feet and we will read the same history of it a year or two from now as we can read now in connection with the men's glove industry. They will meet the foreigner with competition and they will compel him to slash these outrageous prices. It will inject new life into the American industry, and before long American women will be buying fine gloves at a lower price than they are paying to-day, and they will be American made. That is exactly what happened, I will say to the Senator from Missouri, in the case of men's gloves.

Mr. REED. Are the factories in New York, where the ministers have gotten up this petition, engaged in making women's fine gloves?

Mr. WADSWORTH. No; they can not make a glove.

Mr. REED. What kind of gloves had they been making?

Mr. WADSWORTH. They had been making them during the war. That is the only time they ever had a chance to make them.

Mr. REED. What were these people who are now out of employment doing before the war?

Mr. WADSWORTH. They were making men's gloves.

Mr. REED. Are they still making men's gloves?

Mr. WADSWORTH. At about 30 per cent of their capacity. The Underwood law nearly killed them in that.

Mr. REED. The Underwood law has pretty nearly killed them in the making of men's gloves? I am speaking now of men's fine gloves.

Mr. WADSWORTH. I am not speaking of the working gloves at all.

Mr. REED. Has two-thirds of the consumption in this country been imported any time since the war?

Mr. WADSWORTH. I have not the figures of the importations of men's gloves. I can give the importations of women's gloves. I only know that the industry is flat on its back and that gloves are pouring into this country.

Mr. REED. Other industries are flat on their backs also.

Mr. WADSWORTH. Not to the extent I have noticed in the glove industry.

Mr. REED. The price of these men's fine gloves did not stay at a dollar and a half during the war?

Mr. WADSWORTH. No; during the war everything went up. Wages went up and everything else went up. But prior to

the war you could get a pair of men's fine gloves for $1.50, American made. That glove was protected by an ad valorem equivalent of something like 60 per cent. Before it had that protection you had to pay $2.50 for a glove not quite as good and foreign made.

Mr. REED. And substantially the same drop in prices occurred in the case of every manufactured article during the same period, did it not?

Mr. WADSWORTH. It did not, by any means, occur in the case of all manufactured articles. I bought a good many manufactured articles. I know in that same period the price of clothing went slowly up, and I know that the price of farm machinery went slowly up. It had been going up for years.

Mr. REED. The price of farm machinery was controlled by the Harvester Trust.

Mr. WADSWORTH. Not at all; it was before the Harvester Trust was formed.

Mr. FLETCHER. Mr. President, I want to ask the Senator when the petition which set forth the conditions was drawn up?

Mr. WADSWORTH. A year ago.

Mr. FLETCHER. Up to that time the industry was fairly prosperous, was it not?

Mr. WADSWORTH. It was prosperous during the war.

Mr. FLETCHER. But before the war?

Mr. WADSWORTH. Yes; it was prosperous in the production of men's gloves before the war.

Mr. FLETCHER. So that the Underwood law could not be charged with the responsibility of the destruction of the business.

Mr. WADSWORTH. Absolutely. The Underwood law is now in normal operation, which it was not during the war, and with the Underwood law in normal operation the industry is killed. This amendment from the Finance Committee is, in effect, to restore to men's gloves the duty which they carried for 23 years and to put women's gloves on the same basis; that is all. I have here two pairs of women's gloves. [Exhibiting.] One of them is a brushed glove, made as a sample merely to show that it can be done. They are not being made commercially. This is a very fine kid glove, hand embroidered, with the dye brushed into the leather. Here is a white kid glove, as fine a glove as can be found anywhere, made just as a demonstration. It is in these types of gloves that the foreigner has an absolute monopoly, and is bleeding the American consumer at the rate of 300 per cent and more gross profits.

Mr. LENROOT. Before the Senator takes his seat I would like to ask him a question. I understand the men's glove industry is much more firmly established than the women's glove industry?

Mr. WADSWORTH. Prior to the war the men's glove industry in the United States manufactured from 80 to 85 per cent of the men's gloves consumed in the United States. That great success dated from the passage of the McKinley law in 1890.

Mr. LENROOT. It is true that the imports of women's and children's gloves are very large?

Mr. WADSWORTH. Yes; they are large.

Mr. LENROOT. But the imports of men's gloves, even under the present law, are not very large.

Mr. WADSWORTH. No; not as large in proportion.

Mr. LENROOT. Then why did the committee propose a higher specific duty upon men's gloves than upon women's gloves when the importations of women's gloves are very much larger than those of men's gloves?

Mr. WADSWORTH. The specific duty seems to have been arranged in that way in the tariff laws for years back. I notice the Underwood law carries $2.50 on men's gloves and $2 on women's gloves.

Mr. LENROOT. Is not the duty reversed from what it ought to be? In other words, should not the women's gloves carry the higher duty?

Mr. WADSWORTH. It depends on what the equivalent ad valorem would be. I think you will find that $5 on the men's gloves is no higher, in the equivalent ad valorem, than $4 on the women's gloves. They are balanced in that way. The new element in this amendment is the limitation of 60 per cent ad valorem. It provides that the duty shall not fall below 60 per cent ad valorem, and 60 per cent ad valorem was the average rate of duty paid on men's gloves for twenty-odd years before the Underwood law was enacted.

Mr. WILLIS. Before the Senator from New York takes his seat I want to ask him a question. I dislike to read a letter to him, but I do not know enough about this business to ask the question intelligently, and I do want the benefit of the Senator's information. I want to read a paragraph from a letter which has come to me from a gentleman who says he is a manufacturer of gloves. He says:

> During the war, when importations of the women's lightweight leather gloves were practically impossible in any volume, we established a factory in Johnstown, Fulton County, N. Y., expressly for the purpose of making such gloves—

This is what he says about it. I want the Senator's opinion. He states this as a fact—

> Nevertheless we were obliged to discontinue our attempt to make these lightweight gloves after every possible effort during a considerable period of time and with a large expenditure of money.

Then he goes on and assigns as a reason this situation:

> The reasons for this inability to produce these articles here were found in our experience, as in that of others, to lie in the peculiar difficulties of tanning, dyeing, and handling the lighter and more delicate skins. In France and other European countries where such gloves are made successfully the children in the villages where the gloves are made grow up with an intimate knowledge of the skins and how to handle them. This knowledge is handed down from generation to generation, and the skins are supplied from their neighborhoods; and with this near-by source of supply and early-acquired knowledge and skill these European villagers work continuously all their lives in producing the same line of gloves. This goes on, generation after generation, and in each of the various processes, the tanning, dyeing, sewing, etc., which go to make up the completed article. It is the intensive study and care in all the little details of a delicately constructed article, patiently applied from youth to age and handed on. Our labor in this country will not and can not obtain or apply any such knowledge and skill and does not have the patience or desire to acquire it. It is not a question of wages. In our attempted manufacture of these gloves we paid the highest wages and had the most skillful labor, but the desired result was not obtainable. The fact is that the making of such gloves positively requires the inherited and established conditions of the European villages referred to, and such conditions can not possibly be reproduced here.

He makes the argument that in this country our people, not having grown up to this character of business, do not have the skill, and therefore that these gloves can not be made here. What does the Senator say to that? I am not asking the question argumentatively, but purely for information.

Mr. WADSWORTH. Well, I do not know who the writer is.

Mr. WILLIS. I will hand the letter to the Senator.

Mr. WADSWORTH. I have been assured by many glove manufacturers that they can do it, and they have handed me the gloves they have made, and I hand them to the Senator. I would say that they are very fine gloves.

Mr. WILLIS. They are very fine gloves.

Mr. WADSWORTH. This is very interesting, but the letter is not signed.

Mr. WILLIS. This page is attached to it. I do not know the gentleman. He says he is one of the Senator's constituents. It may be that he is an importer. I do not know him at all.

Mr. WADSWORTH. I recognize the name as that of a prominent importing concern.

Mr. LADD. Mr. President, a short time ago I sent to the desk an amendment to strike out, beginning with line 13 on page 197, down to and including line 23 in paragraph 1433, and substituting therefor the paragraph which I sent to the desk. I am not interfering with the tariff proposed on those gloves which are produced in this country, but what I am objecting to, and what seems to me unfair and unjust, is the heavy tariff tax that is proposed to be put on those gloves which have never been made commercially in this country and have never been successfully introduced, although large amounts of money, I am told, have been expended in trying to develop that industry.

That these gloves are not on sale in this country to any extent would be indicated from an affidavit which I have here, which was secured from the woman at Woodward & Lothrop's, in this city, who for the past 15 years has been the buyer of gloves for that company, and she states that during that entire time there have never been offered to her, or to Woodward & Lothrop, American-produced gloves of the types included in that portion of the paragraph I have asked to have amended. Without reading it, I ask that it be included as a part of my remarks.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

CITY OF WASHINGTON,
District of Columbia, ss:

Stella G. Fischer, being duly sworn, deposes and says as follows:

1. That she is buyer of gloves for Woodward & Lothrop, of Washington, D. C., and has been assistant buyer and buyer of gloves for the said firm for about 15 years.

2. That she is familiar in her experience with the two kinds of women's leather or kid gloves which are known to the trade, and that these are the dipped gloves, which are made of leather which has been dyed on both sides by dipping or plunging the leather into a receptacle holding the dye, and that such gloves are made of the heavier skins; and that the other kind of women's and children's leather gloves known to the trade are made of lightweight skins, considerably lighter than the heavier skins above mentioned, and that these lighter skins are dyed by having the dye applied on one side by a brush.

3. That the gloves made of dipped leather are practically an American product, and that the brushed gloves are a European product; and that in all her experience she has never known of the lightweight brushed gloves being manufactured in the United States, and that she has not at any time been shown samples for purchase or been offered such brushed gloves of American manufacture, and that all the lightweight or brushed leather gloves that she has bought in her experience as a buyer have been of foreign manufacture, and that she has always been informed during her experience as a buyer of gloves, and believes, that such gloves can not be manufactured successfully in the United States, and have never been obtainable in any commercial quantities; and that she has been repeatedly informed and believes that all attempts to manufacture such gloves in the United States have been entire failures.

4. That in her experience the women who buy gloves insist upon having the lightweight brushed gloves for many occasions, and can not be satisfied with the heavier dipped gloves as a substitute; and that higher prices for the brushed gloves would have the effect of forcing the women who buy gloves to use the heavier, dipped gloves against their will.

STELLA G. FISCHER.

Sworn to and subscribed before me this 4th day of August, A. D. 1922.

[SEAL.] RICHARD O. MULLIKIN,
Notary Public.

Mr. LADD. In this particular instance I want to call attention to the gloves as imported. Those which are 12 inches cost abroad at this time $16.87, I am informed. The landing charges are 84 cents, the present rate of duty is $2.25, while the proposed duty of a minimum of 64 per cent would make $10.12, or an increase of 349 per cent.

The long gloves which I show [exhibiting] cost $20.63 per dozen, the landing charges are $1.03, the present rate $4.50, the proposed rate $12.37, making them cost laid down here $34.03. The rate asked is an increase of 174 per cent. These gloves are sold at retail at $4.50 at the present time, and would be sold at nearly double that under the proposed rate.

I was informed that a large firm of importers, also manufacturers, of gloves in New York City, not being able to secure the gloves during the war, expended considerable amounts of money in trying to develop the manufacture of gloves of the same type in this country during the war when they had a complete monopoly of the trade. They state in their letter to me, which I ask to be incorporated in the RECORD as a part of my remarks, that they found it impossible to compete with the European gloves or to produce them in a satisfactory manner in this country, for the reason that the gloves produced here were not of the same quality because of the lack of skill in handling; that they did not stretch in the same way and did not wear as well, and were unsatisfactory to the women; and therefore they were obliged to discontinue the manufacture of them, as they could not compete after the war with the foreign gloves. I ask that the letter be inserted as a part of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 16, 1922.

Hon. E. F. LADD,
United States Senate, Washington, D. C.

DEAR SIR: We wish to add our commendation to the amendment which you have introduced to paragraph 1433 of the tariff bill now pending in the Senate (H. R. 7456). Your amendment relating to leather gloves very well meets the practical requirements of the situation and provides a proper and necessary classification for women's lightweight leather gloves which long experience has proven can not be made successfully in this country. Your amendment provides for very high protective duties (all that anyone could possibly ask for, and much higher than the corresponding rate in the former Payne-Aldrich tariff) on all the kinds of leather gloves which American manufactures are able to produce commercially in the United States, namely, men's gloves and the women's gloves made of leather which has been dyed by the process of dipping or plunging; and at the same time provides for adequate duties, not too high to prohibit importations, of the sort of women's gloves which can not possible be made here successfully, but which the women of the United States demand for certain seasons and occasions, namely, gloves made from the lighter and more delicate skins which can be dyed only by the process of brushing. You are thus protecting completely every American industry engaged in producing leather gloves, and permitting importations (to yield needed revenue to the Government) of the class of gloves not produced or capable of being produced here.

We know thoroughly from our own actual experience that it is not possible to produce here in any appreciable quantity the women's leather gloves made of the lighter leather (kid) which must be dyed by the process of brushing. We have been for many years wholesale dealers in men's and women's gloves of all kinds, domestic and imported. During the war when importations of the women's lightweight leather gloves were practically impossible in any volume, we established a factory in Gloversville, Fulton County, N. Y., expressly for the purpose of making such gloves, from the lighter skins which must be dyed by brushing, such gloves being very well distinguished in the trade from the women's and children's leather gloves made of leather which has been dyed by the process of dipping or plunging. This latter class of gloves are of heavier skins, and are known as Cape and Mocha gloves.

In this manufacturing effort we had the advantage of a great deal of experience in gloves and with the labor required for making them, and we were able to make all necessary expenditures of money, and importations of foreign-made gloves were almost entirely shut out by a practical embargo caused by war conditions, while the demand of American women for the lightweight kid gloves was urgent, and prices of all gloves in this country were very high. Nevertheless we were obliged to discontinue our attempt to make these lightweight gloves, after every possible effort during a considerable period of time and with a large expenditure of money, because the product could not be made satisfactorily. Testimony concerning this effort and to this effect was submitted by us to the Senate Finance Committee, and similar testimony concerning other like and unsuccessful efforts by other well-known manufacturers to produce these articles here was also submitted to the committee. In fact, during a long period of years and under very high protective tariffs there have been within our knowledge a number of attempts by manufacturers to produce these gloves in this country, and all such efforts have been unsuccessful and were soon discontinued.

The reasons for this inability to produce these articles here were found in our experience, as in that of others, to lie in the peculiar difficulties of tanning, dyeing, and handling the lighter and more delicate skins. In France and other European countries where such gloves are made successfully the children in the villages where the gloves are made grow up with an intimate knowledge of the skins and how to handle them. This knowledge is handed down from generation to generation, and the skins are supplied from their neighborhoods and with this near-by source of supply and early acquired knowledge and skill these European villagers work continuously all their lives in producing the same line of gloves. This goes on generation after generation, and in each of the various processes—the tanning, dyeing, sewing, etc.—which go to make up the completed article. It is the intensive study and care in all the little details of a delicately constructed article patiently applied from youth to age and handed on. Our labor in this country will not and can not obtain or apply any such knowledge and skill and does not have the patience or desire to acquire it. It is not a question of wages. In our attempted manufacture of these gloves we paid the highest wages and had the most skillful labor, but the desired result was not obtainable. The fact is that the making of such gloves positively requires the inherited and established conditions of the European villages referred to, and such conditions can not possibly be reproduced here.

We take this opportunity to thank you for taking up this subject and for the able way in which you have handled it. Samples of gloves such as we have referred to will be placed in your hands early next week, after conference with Mr. T. R. Lewis, president of the Association of Glove Importers.

Yours very truly,

MILLS & GIBB CORPORATION,
G. R. FOGARTY, *President.*

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. LADD. Certainly.

Mr. LENROOT. I did not quite understand just the effect of the Senator's amendment. The amendment provides that if the leather has been dyed by the process of dipping or plunging, it shall take the same rate as is proposed by the Senate Finance Committee. Is that correct?

Mr. LADD. That is the American-made glove.

Mr. LENROOT. If the leather has been prepared in some other way, the rate will only be one-half that sum.

Mr. LADD. It would be $2.40; in other words, on the gloves that we do not make and never have made in this country.

Mr. LENROOT. I know, but why should the mere difference of processing the leather make a difference of 50 per cent in the rate?

Mr. LADD. I have not attempted to change the rate of protection where it is deemed necessary for the workingmen of this country who are making the gloves. Therefore, for the gloves we have produced I have not proposed a change in the rate, but I have simply taken the rates for those gloves which are made in small institutions or in the homes abroad and not made in this country, and proposed that that rate shall be reduced.

Mr. LENROOT. May I ask the Senator this question, then? A glove that has not been dyed by the process of dipping or plunging, but is dyed in some other way and is imported, must compete with the glove that is dyed through the process of dipping or plunging, must it not?

Mr. LADD. Yes.

Mr. LENROOT. If it does compete, does it not displace it if the rate is too low?

Mr. LADD. That is very true. But what I am objecting to is forcing the women of this country to pay an unnecessarily high price for the type of glove they desire to wear or be forced to wear the glove that is made in this country. In other words, it simply has the effect of forcing from the American market the foreign glove and substituting a glove that is entirely different.

Mr. LENROOT. Why, then, should not the Senator's amendment be so worded that anybody could understand it? Why should there not be a straight reduction to whatever rate the Senator proposes, if one does compete with the other?

Mr. LADD. One is made in this country and the other is not made in this country.

Mr. LODGE. Where is it made?

Mr. LADD. The glove is made in France and Germany, but the gloves that are dipped are made, I understand, in this country.

Mr. SMOOT. I wish to say that both are made in this country.

Mr. WADSWORTH. I have a pair in my hand that was made in this country.

Mr. SMOOT. I have here samples of gloves made in this country, one of the dipped style and the other of the brushed

style. If the Senator is not a pretty good judge, he could not very well tell the difference between the two, and yet the brushed glove is made here. The statement that they are not made here is hardly correct. I will hand the Senator a sample of the glove. I hand him a glove that is made in the United States.

Mr. LADD. Yes; I have some of the same gloves, as I have already stated.

Mr. SMOOT. That is the brushed glove.

Mr. WADSWORTH. They are not made commercially because they have never been given a chance, but they can be made very easily.

Mr. LADD. I agree with that; but they are not made and sold in this country, and the affidavit of the largest house in this city, Woodward & Lothrop, states that for 15 years they have never had offered to them any gloves made in this country.

Mr. WADSWORTH. For an obvious reason.

Mr. LADD. The Senator has exhibited gloves made for this particular purpose, and I have some of the same gloves.

Mr. WADSWORTH. But the purpose is obvious. The importer does not want to have them made here.

Mr. LADD. Without regard to price?

Mr. WADSWORTH. But see what he is getting for them.

Mr. LADD. I will admit they can be made here, but not in competition at the price, nor will they, I am told, be of the same quality.

Mr. WADSWORTH. Of course, the importers have always said that. They are clinging to the monopoly. They love it. It tastes good. They raise their prices 200 or 300 per cent, and then they tell the women who step up to the counter, "These gloves can not be made in the United States." The affidavit of the saleswoman from Woodward & Lothrop is already famous throughout the industry. The whole glove industry are laughing at it. The whole glove industry know they can make the gloves if once given a chance. The significant thing is that of all the women's fine gloves that are imported in the United States 90 per cent are the brushed gloves, which under the Senator's amendment would have no protection and the foreign monopoly would continue. It is the last desperate effort to cling to that monopoly. They have not told the Senate, and I doubt if they have told the Senator from North Dakota that the amendment which he proposes affects 90 per cent of all the importations.

Mr. LODGE. Mr. President, may I ask the Senator a question? Where are the brush gloves made? I understood the Senator to say that they are made in Germany and France. I thought they were made in Italy.

Mr. WADSWORTH. Some are made in Italy; but Germany and France are the largest producers. They are also made in Czechoslovakia.

Mr. LODGE. They are made everywhere.

Mr. LADD. In the European countries.

Mr. WADSWORTH. It has always been said we could not make them here. It is the old cry of the importers.

Mr. LADD. I desire also to insert in the RECORD the amounts of importations of gloves under the Wilson law from 1894 to 1897, under the Dingley law from 1898 to 1908, under the Payne-Aldrich law from 1909 to 1912, and under the Underwood law from 1913 to 1922, showing the imports of men's, women's, and children's gloves and the total imports of men's gloves; also a table showing the total production for certain years and persons engaged in the industry.

The PRESIDING OFFICER (Mr. ODDIE in the chair). Without objection, it is so ordered.

The tables referred to are as follows:

Statement showing the imports of men's, women's, and children's gloves.

	Year.	Imports of men's, women's, and children's gloves (total dozens).	Imports of men's gloves (total dozens).
Wilson bill, 1894–1897	1895	1,298,006	44,657
	1896	1,262,427	65,120
	1897	1,235,192	61,420
Dingley bill, 1898–1908	1898	1,040,535	36,720
	1899	1,054,986	49,500
	1900	1,206,874	54,826
	1901	1,042,226	50,380
	1902	1,014,711	60,040
	1903	924,033	73,050
	1904	953,956	74,350
	1905	866,259	89,008
	1906	1,058,926	92,600
	1907	1,186,569	108,000
	1908	902,541	93,961

Statement showing the imports of men's, women's, and children's gloves—Con.

	Year.	Imports of men's, women's, and children's gloves (total dozens).	Imports of men's gloves (total dozens).
Payne-Aldrich bill, 1909–1912	1909	1,159,221	86,678
	1910	1,309,107	99,284
	1911	1,196,871	86,610
	1912	1,128,355	65,350
Underwood bill, 1913–1922	1913	1,116,632	66,810
	1914	1,475,689	65,627
	1915	1,107,032	62,459
	1916	700,698	32,187
	1917	735,879	31,408
	1918	665,316	31,212
	1919	380,558	5,185
	1920	831,982	29,155
	1921	912,856	18,262

	Per cent.
Men's	5.67
Women's	17.80
Total	23.47

Statement showing the production of men's, women's, and children's gloves.

(Dozens.)

Year.	Domestic.	Imported.	Combined.
1899	2,895,661	1,054,986	3,950,647
1904	3,370,146	953,956	4,324,102
1909	3,368,635	1,159,221	4,527,856
1914	3,082,376	1,475,689	4,558,065
1919	3,666,045	380,558	4,046,603
Total	16,382,863	5,024,410	21,407,273
Average yearly	3,276,572	1,004,882	4,281,454

Average yearly importations, 23.47 per cent.
Average yearly domestic, corresponding years, 76.53 per cent.

Statement showing persons engaged in the glove industry.

Years.	Population, United States	Persons engaged in the glove industry.	Census.
1890	63,069,756	15,325	1899
1900	77,256,630	11,712	1904
1910	93,402,151	12,950	1909
1920	107,436,441	12,345	1914

Population, increase, 70½ per cent. Persons, decrease, 19.56 per cent.

Mr. LADD. I have no particular interest except that I feel and still maintain that the gloves have not been made in this country, whatever the reason may be; that they are not being made to-day; that they had the protection of an embargo during the war; that the manufacturer who put money into them during that time was unable to compete; that they still have a tariff on them as much as the other gloves have, and yet are not produced in this country; and to place this tariff of 340 per cent is an unnecessary burden.

Mr. REED. Mr. President, the great difficulty in all discussions is to arrive at the basic fact. The Senator from New York [Mr. WADSWORTH], who always speaks with a rare degree of clearness, nevertheless makes the mistake which other mortals make of assuming a premise which may or may not exist, and arguing from that premise. The whole basis of his argument is that there is a European monopoly controlling the prices of gloves in this country. Over and over again he referred to the European monopoly.

I asked him one question and his answer destroyed his entire argument. He admitted, or stated frankly—that is the more polite way to put it—that the European market was absolutely open and that anybody could go to Europe and buy European gloves in a free and open market. If that is the case, and since it is admitted we must assume it to be the case, then there is no European monopoly and the scarecrow of European monopoly which he held up before us vanishes in thin air. If there is any monopolization of the business of handling European-made gloves, it therefore is not a European monopoly, but is a combination of importers, and since every dealer is privileged to buy in Europe and since all of our very large dealers do have their European agents and do buy directly, it follows that if exorbitant prices are charged to the retailer, it is the result of a combination conspiracy or trade

understanding of some kind which has been arrived at by the dealers in the country.

Now, if there be a combination of that character the question at once arises, How will a higher tariff in any way tend to benefit the American purchaser? That is the first question to which I want to give a moment's consideration. If with a tariff of $2 per dozen the American importers, through a combination among themselves, for a glove which costs 18 cents at the factory door, and which with the tariff and the transportation added would not cost more than 35 or 40 cents, charge the American people $2.50 per pair, how will it benefit the American consumer to make the tariff $5 a dozen or any other higher amount? Manifestly if we are in the grip of such a combination as we have spoken of the higher we raise the tariff the more difficult it will be to purchase gloves abroad, the more complete will be their monopoly if the tariff has any effect, and certainly it must be true that the tariff will not tend to reduce the price to the American consumer. Neither will it tend to limit the extortion practiced, as it is alleged, by the importers.

The next question then arises whether we can produce a competition with the foreign importer, who has monopolized the market at home, not abroad, by establishing the business there through a high tariff.

Let us examine that for a moment. If those who handle the retail and distributing glove business of the country are strong enough to go into the open European market, where everybody may go; to go into France where these gloves are manufactured and where everybody may go to purchase; into Germany where these gloves are manufactured and where everybody may purchase and can, through the force of their combination, extort these wicked prices from the women as well as the men of the United States, what reason, I say, is there to believe if we do establish an American industry through the imposition of a tariff the same instrumentalities would not control the prices? To say that they would not is simply to assume something of which there is no evidence, which is not borne out by any kind of logic. Now, for a moment let us turn to the question of the building up of the glove industry in the United States by the enactment of a higher tariff. We have had in the United States a tariff upon gloves for 30 or 40 years, and a very high tariff. The Underwood tariff is somewhat lower than the tariff that preceded it, but under those very high tariffs the manufacture of women's fine gloves in this country never sprang into existence. A few gloves were made during the World War, when prices went to an unheard-of figure. What reason is there to believe that an industry which took some faltering steps during the war may be built up now by any tariff that is within the limits of reason?

Let us see what the proposition is. The Underwood tariff as it stands to-day imposes a duty of $2 a dozen upon gloves which at the factory door cost $1.80 a dozen—a tariff of over 100 per cent—and we are asked to believe that an industry ought to be built up by a higher tariff, which in 40 years' time, with more than 100 per cent tariff, according to the figures that have just been given here—it has not been 100 per cent in figures, I am aware, but it is equivalent to 100 per cent when a duty of $2 a dozen is imposed on gloves that cost $1.80—has not been able to compete with the foreign article.

Mr. CALDER. Will the Senator from Missouri permit me to interrupt him?

Mr. REED. Let me just finish this thought. What reason is there to believe that we may build up such an industry in the future through the medium alone of the tariff?

Mr. CALDER rose.

Mr. REED. I will yield in a moment. But that is not all of the story which we are told here this afternoon. We are told that these gloves which cost $1.80 a dozen at the factory door are sold in this country by this combination or monopoly at $13 a dozen. If, then, a monopoly has fixed a price of $13 a dozen, or more than six times the cost of the foreign production, and yet the industry in our country which has been established is languishing and going to destruction, although the price of the article with which it competes is 600 per cent above the cost of production, the conclusion is inevitable that this business can not be established by any kind of sensible tariff.

Oh, but it is said that if the industry did start, then the importer might drop his price to a destructive figure. But the importer has not dropped his price; he maintains it now—600 per cent, speaking broadly, above the cost of foreign production—and yet it is said that the domestic factory doors are closed; that women and children are starving. Why have they not made these gloves in Gloversville and offered them to the public at, say, $12 a dozen, which is still 600 per cent beyond the cost of foreign production? Why did they shut down? Why did they not go into the market and offer their goods?

The trouble with this matter is that when it is said there is a foreign monopoly which has put the price up 600 or 700 per cent and still there is no domestic competition Senators have argued themselves into a position where they have demonstrated that the domestic manufacturers can not make the goods. That is all there is to it. However, those manufacturers are down here asking that every woman and every child in the United States who wears a glove shall be taxed, although they can not sell in competition when there is a protective tariff and when there is a monopoly profit added of 600 or 700 per cent.

There have been some statements made in reference to the enormous amount of dumping of gloves in this country. What are the facts? In 1914, before the World War, we imported 1,200,000 dozen pairs of these gloves. In 1921 we imported 911,000 dozen pairs. We have not reached the pre-war figure. In 1914, of the total consumption of gloves in this country, we imported 47 per cent, and in 1919 only 11 per cent, and the importations to-day, which Senators on the other side of the Chamber say have closed the doors of the factories in their States, do not equal the importations before the war.

What is the trouble with the glove business here? In the first place, the manufacturers raised the price of gloves to an exorbitant, outrageous, and criminal price during the war. The people were able to pay those prices then because they were making a great deal of money. The glove producers continued to prosper during 1918, when other people were prospering, but when the slump of 1920 came and the people could no longer afford to buy these expensive gloves, that business, which deals in an article which is at once a necessity but also in the nature of a luxury, suffered. Now, when everybody is suffering, when everybody else is compelled to take his losses, it is proposed to tax those who are forced to take their losses in order to sustain a business which admits it can not compete although the market price is 600 per cent above the cost of foreign production.

Who is protecting the American farmer? Senators may put all the protection into this bill that they desire, but the American farmer has to sell his wheat abroad on the foreign market. The price of foreign wheat fixes the price of wheat here. The American farmer has to sell his surplus meats abroad in the foreign market, and the price there, broadly speaking, fixes the price here. I am omitting in all my statements some little cornering which may occur at times. Who is protecting the great body of the American people, who are compelled to lower their cost of living because their income has been decreased? Many of them are walking the streets; many of them are seeking employment; but it is now proposed as to every woman and as to every girl who wears a pair of gloves—and the Senator from New York [Mr. CALDER] even proposed on workingmen's gloves a tariff, although he proposed a lower rate, I give him credit for that, than is in this bill, but a higher rate than is in the Underwood law—to levy a tax on the very necessities of life that everybody has to have, to lay that tax even upon the unemployed, because there is some unemployment in Gloversburg or Gloversdale, or wherever it is, in New York.

It is the usual game of robbery. I have not time now—for I wish to stop within my 15 minutes—to discuss it, but I have seen these leeches and bloodsuckers come before the Committee on Finance demanding what they proposed to have in the way of a tribute from the remainder of the American people. I have seen them demanding a tariff eight or ten times greater in the aggregate to be collected than their entire pay roll; and they did it in the name of American labor.

The truth is that this administration has surrendered itself, body and soul, to the big interests of the country. The Republicans have taken the taxes off the millionaires and left them on the common people; they have taken the taxes off the profiteers and left them on the common people. Now it is proposed to put a tax on the common people for the benefit of the millionaires, of the trusts, and the combinations. Nothing I can say will stop it; but the American people will stop it after the next election. Now, drive on.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from North Dakota [Mr. LADD].

The amendment was rejected.

Mr. WALSH of Massachusetts. Mr. President, on page 197, line 19, I move to strike out the numerals "60" and "70" and to insert in lieu thereof the numerals "30" and "40," and upon that amendment I ask for the yeas and nays.

Mr. CALDER. Mr. President, I ask that the amendment to the committee amendment may be stated.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The READING CLERK. On page 197, in line 19, it is proposed to amend the committee amendment by striking out the numerals "60" and "70" and inserting "30" and "40."

Mr. CURTIS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Hale	Norbeck	Stanfield
Calder	Harreld	Oddie	Stanley
Cameron	Harris	Overman	Sterling
Capper	Heflin	Pepper	Sutherland
Colt	Kendrick	Phipps	Townsend
Cummins	Keyes	Pomerene	Trammell
Curtis	Ladd	Reed	Wadsworth
Dial	Lodge	Sheppard	Walsh, Mass.
Edge	McCumber	Shortridge	Walsh, Mont.
Ernst	McKinley	Simmons	Warren
Fletcher	McNary	Smith	Watson, Ind.
Gerry	Moses	Smoot	Willis
Gooding	Nicholson	Spencer	

The PRESIDING OFFICER. Fifty-one Senators having answered to the roll call, a quorum is present. The question is on the amendment of the Senator from Massachusetts [Mr. WALSH] to the amendment of the committee.

Mr. WALSH of Massachusetts. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. BALL. May we have the amendment stated?

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 197, line 19, the committee proposes to strike out "37½" and insert "60 nor more than 70." The Senator from Massachusetts [Mr. WALSH] proposes to strike out "37½" and insert "30," and in the same line to strike out the numeral "70" and insert "40," so that it will read:

Provided further, That all the foregoing shall pay a duty of not less than 30 nor more than 40 per cent ad valorem.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Massachusetts to the amendment of the committee, on which the yeas and nays have been demanded and ordered. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. KENDRICK (when his name was called). I transfer my pair with the Senator from Illinois [Mr. MCCORMICK] to the Senator from Texas [Mr. CULBERSON] and will vote. I vote "yea."

Mr. LODGE (when his name was called). I have a general pair with the senior Senator from Alabama [Mr. UNDERWOOD]. I transfer that pair to the junior Senator from Vermont [Mr. PAGE] and will vote. I vote "nay."

Mr. MCCUMBER (when his name was called). I transfer my general pair with the junior Senator from Utah [Mr. KING] to the junior Senator from Washington [Mr. POINDEXTER] and will vote. I vote "nay."

Mr. MCKINLEY (when his name was called). Transferring my general pair with the junior Senator from Arkansas [Mr. CARAWAY] to the senior Senator from Minnesota [Mr. NELSON], I vote "nay."

Mr. SIMMONS (when his name was called). I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG]. I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "yea."

Mr. SUTHERLAND (when his name was called). I transfer my general pair with the senior Senator from Arkansas [Mr. ROBINSON] to the senior Senator from Connecticut [Mr. BRANDEGEE] and will vote. I vote "nay."

Mr. WALSH of Montana (when his name was called). I inquire if the Senator from New Jersey [Mr. FRELINGHUYSEN] has voted?

The PRESIDING OFFICER. He has not.

Mr. WALSH of Montana. I am paired with that Senator. I transfer that pair to the Senator from Arizona [Mr. ASHURST] and will vote. I vote "yea."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Maryland [Mr. FRANCE] and will vote. I vote "nay."

The roll call was concluded.

Mr. EDGE. I transfer my general pair with the Senator from Oklahoma [Mr. OWEN] to the Senator from Delaware [Mr. DU PONT] and will vote. I vote "nay."

Mr. HALE. I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER] and will vote. I vote "nay."

Mr. CURTIS. I desire to announce that the Senator from Washington [Mr. JONES] is necessarily absent. He is paired with the Senator from Virginia [Mr. SWANSON].

I also desire to announce the following general pairs:

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR].

Mr. SHEPPARD. I desire to announce that the Senator from Mississippi [Mr. HARRISON], if present and not paired, would vote "yea" on this question.

The result was announced—yeas 22, nays 33, as follows:

YEAS—22.

Bursum	Harris	Overman	Stanley
Capper	Heflin	Pomerene	Trammell
Dial	Jones, N. Mex.	Reed	Walsh, Mass.
Fletcher	Kendrick	Sheppard	Walsh, Mont.
Gerry	Ladd	Simmons	
Glass	Nicholson	Smith	

NAYS—33.

Ball	Ernst	McNary	Sutherland
Broussard	Gooding	Moses	Townsend
Calder	Hale	Oddie	Wadsworth
Cameron	Harreld	Pepper	Warren
Colt	Keyes	Phipps	Watson, Ind.
Cummins	Lenroot	Shortridge	Willis
Curtis	Lodge	Smoot	
Dillingham	McCumber	Stanfield	
Edge	McKinley	Sterling	

NOT VOTING—40.

Ashurst	Harrison	Myers	Ransdell
Borah	Hitchcock	Nelson	Rawson
Brandegee	Johnson	New	Robinson
Caraway	Jones, Wash.	Newberry	Shields
Culberson	Kellogg	Norbeck	Spencer
du Pont	King	Norris	Swanson
Elkins	La Follette	Owen	Underwood
Fernald	McCormick	Page	Watson, Ga.
France	McKellar	Pittman	Weller
Frelinghuysen	McLean	Poindexter	Williams

So the amendment of Mr. WALSH of Massachusetts to the amendment of the committee was rejected.

Mr. STERLING. Mr. President, I move to strike out the number "60" in line 19 and to insert in lieu thereof the number "50," so that it shall read:

Not less than 50 nor more than 70 per cent ad valorem.

On that I ask for the yeas and nays.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The READING CLERK. On page 197, line 19, in the committee amendment, it is proposed to strike out "60" and insert "50," so that it will read, striking out "37½":

Not less than 50 nor more than 70 per cent ad valorem.

Mr. MCCUMBER. Mr. President, before that vote is taken—and possibly, therefore, the Senator need not call for the yeas and nays—I will say that the committee accepts that modification.

Mr. STERLING. Very well.

The PRESIDING OFFICER. The question is on the amendment of the Senator from South Dakota to the amendment of the committee.

Mr. WALSH of Massachusetts. Mr. President, I have no objection to the committee accepting this amendment, but on the final committee amendment I want the yeas and nays.

Mr. SMOOT. On the whole amendment?

Mr. WALSH of Massachusetts. On the whole amendment.

The PRESIDING OFFICER. The question is on the amendment of the Senator from South Dakota to the amendment of the committee.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended.

Mr. WALSH of Massachusetts. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. WADSWORTH. Will the Chair state the question to the Senate?

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended.

Mr. WADSWORTH. Have we passed upon the preceding committee amendments to this paragraph? However, it makes no difference, so far as I can see. We can go back to them.

The PRESIDING OFFICER. The question is on agreeing to the amendment as amended, on which the yeas and nays have been ordered. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as on the previous vote regarding my pair and transfer, I vote "nay."

Mr. LODGE (when his name was called). I have a general pair with the senior Senator from Alabama [Mr. UNDERWOOD], which I transfer to the junior Senator from Vermont [Mr. PAGE] and vote "yea."

Mr. McCUMBER. (when his name was called). Transferring my general pair as on the previous vote, I vote "yea."

Mr. McKINLEY (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. SIMMONS (when his name was called). I transfer my pair with the Senator from Minnesota [Mr. KELLOGG] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. WALSH of Montana (when his name was called). Transferring my pair as heretofore, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. GERRY. I desire to announce that the junior Senator from Mississippi [Mr. HARRISON] is necessarily absent. If present, he would vote "nay."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON];

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. McKELLAR]; and

The Senator from Washington [Mr. JONES] with the Senator from Virginia [Mr. SWANSON].

Mr. SUTHERLAND. Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

The result was announced—yeas 34, nays 21, as follows:

YEAS—34.

Ball	Gooding	McNary	Sterling
Broussard	Hale	Moses	Sutherland
Calder	Harreld	Nicholson	Townsend
Cameron	Keyes	Oddie	Wadsworth
Colt	Lenroot	Pepper	Warren
Curtis	Lodge	Phipps	Watson, Ind.
Dillingham	McCormick	Shortridge	Willis
Edge	McCumber	Smoot	
Ernst	McKinley	Stanfield	

NAYS—21.

So the amendment of the committee as amended was agreed to.

Mr. WALSH of Massachusetts. Before we leave this paragraph I ask permission to have inserted in the RECORD a table showing the imports of gloves from 1910 to the present time and some communications protesting against the duty proposed.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Imports for consumption—revenue.

Fiscal year.	Quantities (dozen pairs).	Values.	Duties collected.	Value per unit of quantity.	Actual and computed ad valorem rate.	Production.	
						Dozen pairs.	Value.
					Per ct.		
1910	1,309,108	$7,755,239	$3,840,493	$5.93	49.52	3,368,655	[1] $22,525,861
1911	1,196,871	7,775,437	3,554,755	6.49	45.72	.....	.....

[1] Calendar year 1909. [2] Calendar year.

FRANCIS T. SIMMONS & Co.,
Chicago, April 26, 1922.

Senator WALSH, of Massachusetts,
United States Senate, Washington, D. C.

DEAR SIR: I was very much interested in reading your recent speech on the tariff, as just reported in the Daily News Record, of New York.

What is being attempted with regard to the women's kid-glove schedule in the proposed bill is a very fair example of what you claim with regard to the make-up of parts of the bill, at least.

Inclosed is a copy of a letter which I sent on April 12 to the chairman of the Senate Finance Committee.

To state the case in a few words, women's fine kid gloves never have been made in this country and never will be made here. Therefore anything but a reasonable tariff for revenue placed upon them would have to be proposed with some ulterior motive.

It is no secret that for years the manufacturers of Fulton County, N. Y., have been trying to get a prohibitive duty placed on women's fine imported kid gloves. The supposition is that while they can not produce these gloves themselves they might, by shutting them out from this country, increase the demand for their own products and in this way have a practical monopoly. Their last serious attempt along this line was in 1909, under President Taft's administration, and their complete failure then is a matter of political history.

The same interests, under about the same leadership, are apparently having another try at the game. Their motto seems to be, "If you don't at first succeed, try, try again." They are no more entitled to success in 1922 than they were in 1909; and if they and other manufacturing blocs do succeed in imposing their will upon Congress, the people will have to pay for it and the bills will be heavy.

Very truly,

WM. N. KNERR,
Secretary of Francis T. Simmons & Co.

—

APRIL 12, 1922.

The Hon. PORTER J. McCUMBER,
Chairman United States Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SIR: We wish to call your attention to the proposed rates on women's imported kid gloves as they appear in paragraph 1433 in the tariff bill just reported by your committee to the Senate.

In the first place these women's fine kid and lamb gloves such as are imported from France have never been made in this country and for a number of reasons known by everyone in the glove business they never can be made in this country. Therefore any duty upon them would be figured from the standpoint of producing revenue for the Government and not for the purpose of protecting an existing or a possible industry.

The specific duty proposed in paragraph 1433 is $4 per dozen, which is just double what the present duty is. It has been proposed by many people familiar with the glove business that an increase of 50 per cent on the old $2 rate would be ample as far as having the glove-importing industry share in providing its part of additional Government revenue. With the present rate of $4 per dozen the old rate has been increased 100 per cent and whether that increase is justifiable and equitable might be open to discussion. What we wish to discuss here is the fact that the specific duty is made subject to a clause providing that it shall not be less than 60 per cent ad valorem.

To show you how this works out, the cheap two-clasp French lamb glove now quoted at 120 francs per dozen would figure in cost in American money $11.08 with the French exchange of $0.0923 quoted this morning. On this $11.08 the specific duty would be $4 but a 60 per cent minimum ad valorem duty would be $6.65.

Taking a higher priced glove, the 16-button French kid mousquetaire, the present quotation is 350 francs per dozen and at to-day's exchange this would amount to $32.30. The specific duty provided in paragraph 1433 would be $10 per dozen but a 60 per cent minimum ad valorem duty would raise this to $19.38. The table in the next paragraph will show these two gloves with a comparison of the present duty, the proposed specific duty, and the proposed ad valorem duty:

	Foreign cost.		Present duty.	Proposed specific duty.	Proposed ad valorem duty.
	Francs.	Dollars.			
Two-clasp French lamb	120	11.08	2.00	4.00	6.65
Sixteen-button French kid	350	32.30	4.50	10.00	19.38

In our opinion it is inconsistent to state that the duty on the 2-clasp French lamb glove shall be $4, excepting that the ad valorem rate will make it $6.65 and that the duty on the 16-button French kid mousquetaire shall be $10 per dozen, excepting that the ad valorem rate shall make it $19.38.

We maintain that the ad valorem rates proposed are absurdly high, particularly in view of the fact that the goods affected are not made in this country.

The 2-clasp lamb glove referred to is worn by almost every woman in the country, and the enormous increase in the duty on this glove, as well as on other fine imported kid gloves, will simply tend to put prices at an artificial level, while the reestablishment of the Nation's business requires that all prices shall be reduced as far and as fast as possible, so that the cost of living can be correspondingly reduced.

The substitution in the tariff bill of the foreign valuation for the American valuation is a long step in the right direction and indicates that your committee is trying to make an equitable and just settlement of the tariff question. Along this line, we claim that women's fine imported kid gloves should be taxed with specific rates only, and in view of the fact that they are not made in this country those rates would be sufficiently high for revenue purposes if increased 50 per cent over the rates now in force. It might even turn out that this reasonable increase in rates would produce more revenue in the end than the high and unreasonable rates now proposed in the 60 per cent ad valorem part of paragraph 1433. This latter schedule might well be found so high that the volume of importations would be reduced to a point where the exorbitant rates of duty would not compensate for the revenue lost in a consequent reduction of the volume of importations.

Very truly,

FRANCIS T. SIMMONS & CO.

BOSTON, MASS., *February 2, 1922.*

Hon. DAVID I. WALSH,
Washington, D. C.

DEAR SIR: As distributers of small wares, knit goods, hosiery, underwear, and gloves we have been in business for a considerable length of time and feel that we have had considerable experience in the distribution of both imported and domestic merchandise.

We wish to call your attention to the new proposed duty on imported kid and lamb gloves.

We are enthusiastically patriotic, but believe that common sense and good business judgment make it very evident that although we are a great big powerful nation we must not expect to be able to produce everything that our citizens use.

There are certain kinds of merchandise that can only be produced in their native land. This may be due to climatic conditions or an inherited adaptability of the natives for its making.

Such articles, we believe, should be permitted to come into our country at a reasonable rate, so that our own citizens may be able to purchase them at a sensible price.

We note that the proposed rate is practically an ad valorem rate. To apply any but a specific rate of duty to imported kid gloves or any other article that is not a manufactured product is decidedly unreasonable, because the material from which the article is made is not fabricated from raw material but one of nature's own products.

No skins are alike and can not be made alike. It is true that perhaps one of the best quality of skins in a lot has a blemish which reduces its value greatly. An ad valorem duty on such an article is simply courting trouble, as there are no two skins ever alike in value.

Dissatisfaction with the tariff is lasting when it embodies schedules known to be unreasonable, and ordinary common sense should show conclusively to a tariff maker that an article, the standard of which can not be controlled by man, should not bear an ad valorem rate, but a specific rate.

Respectfully yours,

WALKER STETSON CO.,
JAS. H. STETSON, *President.*

—

BOSTON, *May 13, 1922.*

Hon. DAVID I. WALSH,
The Senate, Washington, D. C.

DEAR SIR: The Senate has now under consideration the matter of a tariff schedule on foreign-made kid gloves.

We are heartily in sympathy with a tariff which is necessary to protect American manufacturers as against foreign competition, but careful investigation shows that there are certain types of leather gloves which never have been successfully manufactured in this country, and the schedule quoted to us places so high a duty on these particular types of gloves that it would seem as though it might either prohibit their sale or, if not, that the American user of the gloves would have to pay an exorbitant price for them and be, in this way, penalized without any American manufacturer deriving any benefit from the entire situation.

If upon investigation it seems to you that our understanding of the situation is correct, we hope that you will take action along the lines which seem to us best under the circumstances.

Very truly yours,

R. H. WHITE CO.,
G. B. JOHNSON, *President.*

—

A. B. CAMPBELL & CO.,
New York, April 18, 1922.

Hon. D. I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: The tariff rates published in the New York press April 12 states the rates proposed by the Senate Finance Committee re women's and men's leather gloves, viz, $4 on women's gloves and $5 on men's gloves, supplemented by a "catch-all" phrase, "provided the rate of duty is not less than 60 per cent or more than 70 per cent ad valorem."

The decision can be readily understood, in the light of the broad question of principle, that the present rates in force do not protect homemade goods from destruction by foreign competition, so that goods coming from countries with low exchange rates could come into unfair competition with our own.

International exchange rates made the necessity real, urgent, and too important to overlook in any brief submitted to the Senate Finance Committee, consequently the decision was unquestionably founded upon the facts as presented.

It is the application of these new rates under the Senate Finance Committee decision and the Fordney bill, H. R. 7456, which led me to review the rates from the standpoint of what they mean to those engaged in the business and what they mean to the public.

The application of these rates, when translated into trade figures, establishes a result which I believe must be contrary to that which the Finance Committee had in mind when the new rates proposed were decided.

Following is a table showing the application of these rates, based on current quotations in France, applied to women's goat, glacé finish, exchange estimated at 9 cents to the franc:

	Francs.	Dollars.	Present rates.	Senate rates (60 per cent).	Fordney rates (37½ per cent).
WOMEN'S GOAT ORIGIN GLACÉ FINISH.					
Under 14 in. embd., 2-clasp, overseam	100	$9.00	$2.00	$5.40	$4.40
Under 14 in. embd., 2-clasp, P/K sewn	150	13.50	2.00	8.10	5.06
Under 14 in. P/K and embd., str. wr. w. gore and buckle	280	25.20	2.25	15.12	9.45
Under 24 in. embd., 16 bt. msq. O/S	375	33.75	4.50	20.25	12.66
Under 28 in. emb., 20 bt. msq. O/S	500	45.00	5.50	27.00	13.87
MEN'S GOAT ORIGIN GLACÉ FINISH.					
Under 12 in. embd., 1-clasp O/S sewn	165	$14.85	$2.50	$8.91	$5.57
Under 12 in. embd., 1-clasp piqué	200	18.00	2.75	10.80	6.75

The above tables, if applied on a glove costing 75 francs or $6.75, would impose an assessment of $4. Practically no gloves under the above classification are quoted us at 75 francs at the present time.

The rates proposed have no bearing on production costs, and any additional tax imposed in excess of that required to protect our industry against cheaper foreign labor and depreciated exchange rates imposes an unnecessary burdensome tax on the public.

The Table A shows American production equals approximately 76.53 per cent, compared to importations 23.47 per cent, of which women's and children's are about 17.8 per cent and men's 5.67 per cent.

Reviewed by past achievements, have the American manufacturers proven they are justified in receiving by Government edict rates that are not competitive but are prohibitive? Does it not appear to be the better part of wisdom to inquire, before establishing increased duties on women's gloves, imposing a tax of from 45 cents to $2.25 per pair, whether this is justified? The census shows that the number of persons engaged in the leather glove industry was, in the year 1899, 15,325, and in the year 1914, 12,345, a decrease of approximately 19.56 per cent. Comparing only the interval from 1900 to 1910, 10 years, the population of the country increased 20.88 per cent, showing a difference of 40.44 per cent. The population of the country from 1890 to 1920 increased (Tables B and J) 70½ per cent. The reports covering the periods 1889, 1894, and 1919 are not available to make a comparison. However, while the population of the country was increasing the number of persons engaged in the glove industry decreased in a startling proportion.

Therefore the figures must make clear to you that, with an industry going backward while the country is progressing, there is evidently something within the industry that is wrong. The answer is a matter of detail which is purposely excluded from this outline, but which can be satisfactorily explained at length if desired.

Now, let us see what has been accomplished by the domestic manufacturers in the men's field, which they have controlled during the past 26 years by reason of prohibitive rates on men's gloves, 1908 to 1912, $4 to $4.80 per dozen, which were sufficient to check importations, as from 1895 to 1921 only 5.67 per cent of the total importations were men's gloves (Table C).

By referring to the tables of statistics of imports and duties covering the years 1908 to 1914—Tables Nos. 3180 and 3181—on men's leather of sheep origin and exterior surface removed, and Tables Nos. 3192 and 3193, on men's leather of goat origin and exterior surface removed, the totals combined show that the average yearly importations were only 1,239 dozens. The value per unit of quantity in the above-mentioned tables shows the rate of protection of from 55 per cent to 67.91 per cent (Table D).

The classifications above mentioned, translated into trade terms, apply to:

Men's Mocha one-clasp PXM, now retailed at from $3.50 to $5 per pair.

Why $3.50 to $5 for men's Mocha PXM gloves?

The public will want to know this—

For the reason that competitive types of foreign gloves are practically excluded from our market, which has resulted in the creation of the demand for practically one type of men's domestic gloves for street wear. The demand for this particular type far exceeds the supply of skins of the required weight, and this has resulted in unnecessarily high prices for these protected goods.

In other words, because men by these prohibitive rates are denied the choice of the same range of types as granted to women, the demand for the particular type of domestic glove is unrelieved, and high prices result.

Before the people of this country unite and protest against the new proposed rates under either the Senate bill or the Fordney bill, does it not appear that the most reasonable course to pursue is to have a tariff law, as applied to the glove schedule rates established, which will stand a common-sense view of the subject in the last analysis?

Do the figures establish that a glove schedule can be written under specific rates which grants adequate protection to the American industry, somewhere between the high and the low rates under different administrative policies? (Table E.)

New basic rate figures are not difficult for the Senate Finance Committee to establish, by comparing rates in force during the past 30 years under both high and low schedules. (Table E.)

To equalize exchange depreciation use Senator SMOOT'S suggested plan, i. e., add 1 per cent depreciation to the new basic rates for each per cent of depreciated currency of any foreign country.

Then, as foreign countries improve their financial conditions, their rates are lowered. By this method, when we reach normalcy and production costs decline, the American manufacturer will not be left with a rate far in excess of his needs.

Why 60 per cent ad valorem rates now when from the year 1890—McKinley bill—specific rates were adopted for the purpose of preventing undervaluations and proved an unqualified success, enabling the honest importer to enter the field of competition; subsequently, in the Dingley and Aldrich-Payne bills, the penalty clause, $5 per dozen, was omitted.

Your attention is directed to the fluctuations in exchange during the past year—francs advanced from .0585 to .0923, and if the same proportionate improvement continues it will not be a long time before they are valued at 12 cents. (Table F.)

Whereas under the 60 per cent catchall, which is obviously designed for present-day conditions, a return to normalcy in currency rates would practically treble the duty rates as shown and penalize foreign countries for improving their financial conditions. Is this not inviting retaliatory measures?

We must think not only of the public, we must think internationally on the subject. Is it fair to strike a mortal blow on our late allies, viz, France, England, Italy—splendid customers of ours, with whom

the balance of trade in our favor in the year 1921 amounted to $1,524,350,708? (Table G.)

The largest importations of leather gloves, whether we calculate in dollars or from the time dozens were recorded in Government statistics, you will find it is from France the greater number of gloves are imported. (Tables H–I.)

My estimate of costs and tariff rates shows how unreasonably the duties increase, so that under the Senate Finance Committee rates the penalty France must pay in customs duty is to be measured by the present depreciated currency of Germany. (Table F.)

How long do you suppose it will be before the schedules proposed will have the same effect on women's and children's gloves as shown by retail selling prices per pair for men's Mocha 1-clasp PXM?

The erection of the tariff barrier means practically turning over the total quantity of women's and children's gloves to be made here, and in view of the startling figures shown by the census—population increasing; persons engaged in the industry decreasing—how can we possibly make them? Aside from the facts revealed by schedules it can be shown by explanatory details connected with the industry that it can not be accomplished excepting by grant of an absolute monopoly and depriving both men and women their freedom of choice in selecting gloves for their comfort.

It is certainly not your intention to bring this result about unless convinced that it is best for the industry, for the public, international relations, and fair play.

Is it not better to keep a well-balanced proportion, such as we have had in all these years between American and foreign-made gloves, granting both men and women freedom of choice?

This is the broad outline of the subject; the remainder is a matter of detail. Should the opportunity be offered to explain details in connection with the figures presented, pray command.

Yours truly,

A. B. CAMPBELL.

—

THE ASSOCIATION OF GLOVE IMPORTERS,
New York, August 2, 1922.

HON. D. I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: I would ask your attention to the inclosed reprint of recent article and of an editorial published in the Journal of Commerce and Commercial Bulletin, of New York, both relating to the proposed rates on women's leather gloves as provided for in paragraph 1433 of the pending tariff bill. The article was prepared by the president of the association, Mr. Thomas R. Lewis.

This article shows clearly, and with respect to evidence submitted to the Committee on Finance of the Senate—referred to on page 4 of the inclosed reprint—that the proposed duties would be prohibitive as to the importation of women's lightweight leather gloves, made of leather which has been dyed by the process of brushing, and that such gloves can not be manufactured successfully in the United States.

The result of the adoption of the committee rates would be that the women of the United States would be unable to obtain the lightweight leather gloves which to them are articles of apparel positively necessary for certain seasons and occasions. They would be compelled to use the heavier gloves made of leather which has been dyed by the process of dipping instead of the lighter gloves made of brushed leather to which they have become accustomed and which are the only gloves suited to their needs at the seasons and occasions referred to.

It is certain that to adopt the committee rates and compel the American women to buy an article they do not want and at the same time pay much higher prices for it would bring intense resentment and strong, persistent protest from the women who buy gloves. It has never been considered that the principle of protection to American industry calls for prohibition of the importation of articles that can not be produced in the United States and wherein consequently there is no American industry to protect. The object of such prohibitive duties could only be to drive the American people into the use of some other and less desirable substitute. I would respectfully submit that such a proceeding would be an abuse and distortion of the principle of protection, and that the infliction of such an injury upon the American women at this time, when they are demanding lower prices, would go far toward discrediting and breaking down the doctrine of protection.

Yours very truly, A. J. F. GOESSLING, *Secretary.*

—

[Reprinted from the Journal of Commerce and Commercial Bulletin, of New York, May 8, 1922.]

PROHIBITIVE TARIFF ON MANY CLASSES OF GLOVES—WOMEN'S AND CHILDREN'S LEATHER GLOVES CAN NOT BE MANUFACTURED IN THE UNITED STATES.

(By Thomas R. Lewis, president of the Association of Glove Importers of the United States.)

The tariff bill (H. R. 7456), as reported to the United States Senate by the Committee on Finance, provides for rates of duty on leather gloves which are as follows:

Men's gloves, not over 12 inches in length, $5 per dozen pairs.

Women's and children's gloves, not over 12 inches in length, $4 per dozen pairs.

For each inch in length in excess thereof, 50 cents per dozen pairs.

In addition thereto, on all the foregoing the following cumulative duties:

When lined with cotton, wool, or silk, $2.40 per dozen pairs.

When lined with leather or fur, $4 per dozen pairs.

When embroidered or embellished, 40 cents per dozen pairs.

Provided, That all the foregoing shall pay a duty of not less than 60 nor more than 70 per cent ad valorem.

Thomas R. Lewis, president of the Association of Glove Importers of the United States, says:

"The domestic manufacturers of leather gloves are chiefly located in Gloversville and neighboring towns in Fulton County, N. Y. They supply practically all of the heavy working gloves and from 85 to 90 per cent of the men's leather gloves sold in the United States, and also command the market in about the same proportion in women's and children's leather gloves made of leather which has been dyed by the process of dipping or plunging. These are known as Cape and Mocha gloves, and are well distinguished in the trade from the women's gloves made from the lighter and more delicate skins which can be dyed only by the process of brushing.

"Women's and children's lightweight leather or kid gloves can not be successfully manufactured in this country, and the greatest fault of the above provisions in the pending tariff bill as reported to the Senate is that they will establish practically an absolute embargo upon the importation of gloves that women in moderate circumstances all over the country find it necessary to have and which can not be produced here. Unless these provisions are amended, the result will be that women and children will be compelled to use heavier and less suitable leather gloves, at much higher prices, in place of the imported lightweight kid gloves which they have been accustomed to wear for certain seasons and circumstances, because of the greater delicacy of texture, style and finish of these lightweight gloves.

"The lightweight kid gloves are necessities for women and children, and this was recognized at the time of the enactment of the war revenue act of 1918, when, notwithstanding the extraordinary need for revenue which led to taxes on sales of luxuries wherever possible, no such luxury tax was put on women's kid gloves. The present need for revenue from tariff duties has been sacrificed in the matter of gloves for the purpose of forcing the women of the United States to go without the lightweight kid gloves heretofore imported from France and other countries and to pay tribute to a few manufacturers in one county of one State.

IMPOSSIBILITY OF MANUFACTURING HERE THE LIGHTWEIGHT KID GLOVES FOR WOMEN.

"These few manufacturers have had the benefit of high protective duties continually for many years and during the war were favored by conditions which curtailed the importation of women's kid gloves, but they have completely failed to manufacture the lightweight leather gloves of the style and finish that American women insist upon wearing; and it is thoroughly well known in the glove trade that such gloves can not be made in this country, and that this fact has been conclusively established by the unsuccessful outcome of a number of attempts.

"V. Perrin & Co., the largest manufacturers of leather gloves in the world, with factories in France, Canada, and the United States, and with a large production in the United States of women's gloves made of leather dyed by dipping, have not been able to produce here any appreciable quantity of women's gloves made of the lighter leather dyed by brushing, even when importations from France were impossible because of war conditions. The well-known wholesale dry goods company, Mills & Gibb, established a factory in Fulton County, N. Y., during the war for the purpose of making women's lightweight kid gloves, and after a large expenditure of money were obliged to discontinue the attempt because the product could not be made satisfactorily. Testimony of these facts was submitted to the members of the Senate Finance Committee at Washington.

WHY THEY ARE MADE SUCCESSFULLY ABROAD.

"Such gloves are made successfully in certain foreign countries, France especially, because the lightweight skins have been obtainable there for many generations, and greater skill and care have been developed in the labor of dyeing and handling the skins and making the gloves. In France all the work incident to the making of women's kid gloves is the result of the experience of a great many years. The industry is, for the most part, a village industry, carried on largely by the same families generation after generation, a great deal of the work being done in the homes of the people.

"Years of such training are required before the most careful labor can acquire the skill necessary for making lightweight gloves. Our labor in the United States has never developed the patience and skill necessary to make such gloves. In fact, skilled artisans have been brought into this country from France at various times to make from imported skins the same sort of gloves they made in their native country, but the result has been that, away from the habits and customs of their native villages, they could not maintain their former skill and care and could not make gloves of the desired quality here because of lack of collaboration by different allied operators, such as exist only in centers where the industry originated and where it constitutes the livelihood of a large percentage of the inhabitants.

FRANCE IN NEED OF AMERICAN PRODUCTS.

"In a great many States in our country factories and workers are in complete or partial idleness because there is not a sufficient demand for the machinery or other articles which they produce. France needs and would buy a great deal more of such articles if she could only pay for them, but France can only pay for goods produced here by sending to us certain goods produced there. If our tariff law prohibits the importation from France of gloves for women such as can not be produced here, it is not protection to a competing American industry which does not exist, nor to American labor which is not now employed in such industry.

"Prohibiting the importation of women's light-weight leather gloves is beyond anything like protection. It is simply giving a license to Mr. Littauer and his favored friends to make the women in all parts of the United States pay enormously higher prices for gloves of heavier texture. It will make these favorites of the legal embargo very much richer, and all this will be paid for by the millions of women who now find it very difficult to provide themselves and their children with necessities, and by the hard-pressed workers in the many factories which ought to sell more of their products to France and would do so if they could get fair play.

THE HIGHER PRICES THAT AMERICAN WOMEN MUST PAY.

"If the Littauer glove rates are enacted, the women's kid glove known as P. K. 2-clasp, now retailing at $3.50 per pair, must be advanced in price not less than $1.25 per pair. The existing rate of duty is $2.25 per dozen. The Littauer duty would be $10.27 per dozen, or almost five times the present duty, and the increase in the duty over the present rate would be 356 per cent.

"Similarly, the women's 16-button Mousquetaire glove, now retailing at $6 per pair, must be advanced in price by $2.50 per pair, and hence be sold at retail for $8.50 per pair. The existing rate of duty is $4.50 per dozen. The Littauer duty would be $19.53 per dozen, an increase over the present rate of 334 per cent.

"It is well known that women will not and can not pay such high prices for gloves, and the sale of the imported gloves will be practically prohibited. This is Mr. Littauer's purpose. He and the other manufacturers will then advance the prices of their gloves to the limit. The effect of this upon the public mind, when it happens, can be well understood in advance. This outrageous imposition for Mr. Littauer's advantage is to be perpetrated upon the millions of women buyers at a time when they need, and are urgently asking for, lower prices for gloves, and when all the women have votes, in addition to the votes of the men folks of their households, who are also demanding that the cost of living be brought down.

AD VALOREM DUTIES ON GLOVES ARE IMPRACTICABLE.

"The Littauer duties as written into the pending bill, quoted above, contain a provision that the gloves as designated 'shall pay a duty of not less than 60 nor more than 70 per cent ad valorem.' This provision is the joker, and, in addition to the lack of a reasonable classification permitting the importation of the brushed leather (light weight) kid gloves, will make the Littauer schedule most completely prohibitive and establish the domestic monopoly sought. Moreover, it will place the glove schedule again on an ad valorem basis, rather than a specific basis. This will bring serious administrative difficulties. The Government, in addition to the loss of revenue through the prohibition of importations, will have to contend with expensive disputes about values.

"Ad valorem duties on leather gloves were tried out thoroughly a number of years ago and found to be entirely impracticable. Since the leather in the gloves is a natural product that is constantly varying and fluctuating in quality and value, it is not possible to closely and fairly determine the actual value of the gloves. The efforts to collect ad valorem duties resulted in so much confusion and difficulty, with expensive and vexatious litigation, that the appraisers and collectors of customs about 25 years ago demanded that the duties be changed from ad valorem to specific rates. This was done, and specific rates have prevailed ever since, under the Dingley and Payne-Aldrich tariffs, as well as under the existing tariff law, and have been entirely successful.

"I believe I can say without fear of contradition that when the leather-glove duties were under consideration by the Senate Finance Committee it developed that practically all the members of that committee, as well as the Treasury experts and customs appraisers who were assisting the committee, were convinced that it would be entirely impracticable to apply ad valorem duties to leather gloves.

"In this matter of leather gloves, of which I am speaking, there is no opposition on our part to duties which shall be fully protective to the established American industry. What we are contending against is an indefensible abuse that is sought to be committeed in the name of a protective tariff, and which, if it should be consummated, would discredit and injure the protective system and the great political party that champions it.

"In this paragraph on leather gloves ad valorem duties should be stricken out and specific rates imposed. An amendment has been proposed providing for rates on men's gloves and women's and children's gloves made of leather dyed by the process of dipping or plunging, protecting the American manufacturer in a far greater measure than in the Payne-Aldrich tariff, known to be the highest in the history of our country. A separate rate has been proposed for women's and children's gloves that can not be produced here, so that it will be possible for the lightweight kid gloves to come into this country, thereby yielding revenue for the United States Treasury. The public welfare calls for such an amendment, which has been introduced in the Senate by Senator LADD, of North Dakota, a prominent and very able Republican, who is a leading advocate of a protective tariff that will be just and well balanced."

—

[Editorial reprinted from the Journal of Commerce and Commercial Bulletin, of New York, May 12, 1922.]

TARIFF JOKERS—No. 5.

The tariff bill (H. R. 7456), as reported to the United States Senate by the Committee on Finance, provides for rates of duty on leather gloves which are as follows:

Men's gloves not over 12 inches in length, $5 per dozen pairs.

Women's and children's gloves not over 12 inches in length, $4 per dozen pairs.

For each inch in length in excess thereof, 50 cents per dozen pairs.

In addition thereto, on all the foregoing the following cumulative duties:

When lined with cotton, wool, or silk, $2.40 per dozen pairs.

When lined with leather or fur, $4 per dozen pairs.

When embroidered or embellished, 40 cents per dozen pairs.

Provided, that all the foregoing shall pay a duty of not less than 60 nor more than 70 per cent ad valorem.

In this paragraph, which has formed a bone of contention for years past, there now reappears an old, familiar friend. This is found in the final clause respecting an ad valorem rate to be charged upon "all the foregoing." The joker quality of it lies in the fact that, inasmuch as it applies to all gloves, including those that are competitive and those that can not be produced at all in this country, and are not classified in such a way as to permit proper grouping, it provides a prohibitive tariff rate. The increase in rate, if made effective, is reckoned by experts as about 334 per cent over existing levels.

It was the glove schedule which turned the stomach of President Taft just at the last moment when the conference committee was in final session over the Payne-Aldrich tariff in 1909. He sent back—so it was then asserted—the projected duties, which contained a joker of this same sort, for revision, with a stern message which portended a veto if the offending provision were not modified. Will President Harding do likewise if this joker holds its own up to the last?

—

THE ASSOCIATION OF GLOVE IMPORTERS
OF THE UNITED STATES,
New York, April 21, 1922.

PROPOSED DUTY INCREASE 350 PER CENT.

Through the efforts of Mr. Lucius Littauer, aided by political influence, a prohibitive glove tariff on women's kid gloves has been presented to the United States Senate. Littauer's glove schedule will in no way protect an American industry, as women's lightweight kid gloves have never been manufactured successfully in our country.

The glove trade all know that the American manufacturer is organized to produce cape and mocha gloves, and the importers as fair-minded men agree that the domestic manufacturers should have protection on the class of gloves they can manufacture.

A committee was sent to Washington to interview Senator CALDER, who had charge of the glove schedule, and this New York Senator was convinced that the rates of duty on women's kid gloves as proposed to him by Mr. Littauer were necessary for the protection of the American maker until the importers' committee pointed out to him the difference between the American production and the imported article.

The domestic manufacturers had submitted as samples to Senator CALDER about 15 pairs of women's gloves, the type of glove they could manufacture; each and every pair were cape and mocha gloves, which are made of dipped leather, whereas women's imported lightweight kid gloves are made of brushed leather.

When the importers' committee pointed out to Senator CALDER the difference between American gloves made of dipped leather and imported gloves made of brushed leather he, Senator CALDER, admitted the difference was quite apparent and requested the importers' committee to draw up an amendment whereby the domestic industry would be protected on the type of glove they could make and still permit the importation of women's lightweight kid gloves. An amendment was drawn up and submitted to Senator CALDER proposing one rate on gloves made of dipped leather and another rate for lightweight gloves made of brushed leather, and both rates were higher than the Payne-Aldrich schedule, which were the highest ever enacted.

When Littauer heard of the amendment he demanded that it be entirely ignored, and the glove rates were written in the bill without the amendment, exactly as dictated by Mr. Littauer.

The time has now arrived to arouse the public as to what has taken place. Are we merchants, both retail and wholesale, to sit by idly and allow this one man to continually dictate the glove tariff? Mr. Littauer has been before the public a great many years on tariff matters, and it is high time he should be eliminated from dictating the glove rates of duty. The following is an example of what will happen if the Littauer glove rates finally become a law:

Women's P. K. 2-clasp, now retailing at $3.50 per pair:

	Per dozen.
Present rate of duty	$2.25
Littauer rate of duty	10.27

Increase over present rate, 356 per cent.

Women's 16-button mousquetaire, retailing at $6 per pair:

	Per dozen.
Present rate of duty	$4.50
Littauer rate of duty	19.53

Increase over present rate, 334 per cent.

These rates mean an absolute embargo on the importation of kid gloves.

LITTAUER'S OBJECT IS SELF-EVIDENT.

This is of such vital interest to your glove department that we urge you to have the inclosed petitions signed and forwarded direct to the Senators of your State with a letter from you voicing an emphatic protest against these outrageous rates, asking your Senators to vote for the glove duty amendment, which will give ample protection to American manufacturers (on gloves they can make), and at the same time a separate rate on women's lightweight kid gloves, so that their importation will not be prohibited.

Yours very truly,

T. R. LEWIS, *President.*

The next amendment of the Committee on Finance was, in paragraph 1433, on page 197, line 10, to strike out "$4" and insert in lieu thereof "$5," so as to read:

Men's gloves not over 12 inches in length, $5 per dozen pairs.

Mr. WALSH of Massachusetts. I move that "$5" be stricken out and "$3" be inserted in place thereof.

I may say that that is a higher duty than was levied under the Underwood law, and it corresponds more with the duties which have been levied in the past, previous to the proposal of the rates named in this bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Massachusetts to the committee amendment.

The amendment to the amendment was rejected.

The amendment of the committee was agreed to.

The next amendment was, on page 197, line 11, to strike out "$3" and insert in lieu thereof "$4," so as to read:

And women's and children's gloves not over 12 inches in length, $4 per dozen pairs.

Mr. WALSH of Massachusetts. I move to strike out "$4" and insert in lieu thereof "$2."

Mr. WADSWORTH. That is the Underwood rate.

The amendment to the amendment was rejected.

The amendment was agreed to.

Mr. McCUMBER. I think the Senator from Utah desires to offer another amendment to paragraph 1433.

Mr. SMOOT. I move in paragraph 1433 the amendment which I send to the desk, and I will make an explanation of it when it has been stated.

The PRESIDING OFFICER. The Secretary will state the amendment.

The ASSISTANT SECRETARY. The Senator from Utah moves to add at the end of the paragraph, after line 23, the following:

Gloves made wholly or in chief value of leather made from horsehide or pigskin, whether wholly or partly manufactured, 25 per cent ad valorem.

Mr. SMOOT. I simply want to say that if this amendment is agreed to, then I shall offer an amendment to the free list, when we reach that, placing gloves made wholly or in chief value of leather from hides of cattle of the bovine species on the free list.

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from Utah.

The amendment was agreed to.

Mr. McCUMBER. I ask now for the consideration of paragraph 1435a, which is an additional paragraph, and I ask that, inasmuch as we have placed hides upon the free list, the Senate committee amendment be disagreed to.

The PRESIDENT pro tempore. The Secretary will state the amendment.

The ASSISTANT SECRETARY. On page 198, after line 4, the committee proposed to insert the following paragraph:

PAR. 1435a. Harness, saddles, and saddlery, in sets or parts, except metal parts for any of the foregoing, finished or unfinished, 35 per cent ad valorem.

The PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. McCUMBER. On page 223 I ask that the Senate disagree to the committee amendment beginning on line 16.

The PRESIDENT pro tempore. The Secretary will state the amendment.

The ASSISTANT SECRETARY. On page 223 the committee proposes to strike out paragraph 1582, as follows:

PAR. 1582. Hides of cattle, raw or uncured, or dried, salted, or pickled.

Mr. McCUMBER. Senators will understand that this was in the free list and the committee proposed to strike it out. I ask now that the Senate disagree to the committee amendment, which will place the hides back on the free list.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was rejected.

Mr. McCUMBER. On page 224 I ask that the committee amendment, beginning on line 19, be disagreed to.

The PRESIDENT pro tempore. The amendment will be stated.

The ASSISTANT SECRETARY. On page 224, after line 18, the committee proposes to strike out paragraph 1600, as printed in the House bill, as follows:

PAR. 1600. Leather: All leather not specially provided for; harness, saddles, and saddlery, in sets or parts, except metal parts, finished or unfinished; leather cut into shoe uppers, vamps, soles, or other forms suitable for conversion into manufactured articles; and leather shoe laces, finished or unfinished.

Mr. WALSH of Massachusetts. The action requested by the Senator would put harness and saddlery on the free list?

Mr. McCUMBER. Yes; it would put leather not specially provided for, including saddles, and so forth, made of leather, also upon the free list.

The PRESIDENT pro tempore. The question is upon agreeing to the committee amendment.

The amendment was rejected.

Mr. McCUMBER. On page 225 I ask that the Senate disagree to the committee amendment beginning on line 1.

The PRESIDENT pro tempore. The amendment will be stated.

The ASSISTANT SECRETARY. On page 225 the committee proposed to strike out lines 1 and 2, as follows:

PAR. 1601. Boots and shoes made wholly or in chief value of leather.

Mr. WALSH of Massachusetts. The action the Senator requests will restore boots and shoes to the free list?

Mr. McCUMBER. Yes; it restores boots and shoes to the free list.

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

Mr. SMOOT. Mr. President, I desire to offer an amendment at this time. On page 222 I move to insert a new paragraph, to read as follows:

PAR. 1573a. Gloves made wholly or in chief value of leather made from hides of cattle of the bovine species.

Mr. STERLING. The effect of that is to put the articles named on the free list?

Mr. SMOOT. On the free list.

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from Utah.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, this completes the matters which, under the unanimous-consent agreement, we were compelled to dispose of to-day. The next paragraph which we will present to the Senate will be the paragraph relating to presidential powers. The majority members of the committee will meet to-night after we close the session to-day, and we shall try to have it remolded and printed to-night, so that it will be on the desks of Senators in the morning.

Mr. SPENCER submitted an amendment intended to be proposed by him to the pending bill, which was ordered to lie on the table and to be printed.

PETITIONS AND MEMORIALS.

Mr. WARREN presented resolutions of the Lions Club, of Rock Springs, and the town councils of Wamsutter and South Superior, all in the State of Wyoming, protesting against any action tending to set aside the United States Supreme Court decree divorcing the Central Pacific Railway from the Southern Pacific Co., which were referred to the Committee on Interstate Commerce.

Mr. WILLIS presented petitions of sundry citizens of Cincinnati, Uhrichsville, Dennison, Marion, Columbus, Chesapeake, and Marietta, all in the State of Ohio, praying that only a moderate duty be imposed in the pending tariff bill on lightweight kid gloves, which were referred to the Committee on Finance.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WILLIS:

A bill (S. 3899) granting a pension to Ella Williamson (with accompanying papers); to the Committee on Pensions.

By Mr. HARRELD:

A bill (S. 3900) for the relief of Washington Gill Squires; to the Committee on Military Affairs.

RECESS.

Mr. McCUMBER. If there is nothing more to be presented at this time, I move that the Senate take a recess until to-morrow at 11 o'clock.

The motion was agreed to, and (at 8 o'clock and 5 minutes p. m.) the Senate took a recess until to-morrow, Thursday, August 10, 1922, at 11 o'clock a. m.

SENATE.

THURSDAY, *August 10, 1922.*

(Legislative day of Thursday, August 3, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gerry	Moses	Spencer
Ball	Gooding	Myers	Stanfield
Brandegee	Hale	New	Stanley
Bursum	Harreld	Newberry	Sterling
Calder	Harris	Nicholson	Sutherland
Cameron	Heflin	Oddie	Swanson
Capper	Jones, N. Mex.	Overman	Townsend
Caraway	Jones, Wash.	Pepper	Trammell
Culberson	Kendrick	Phipps	Underwood
Cummins	Keyes	Pomerene	Wadsworth
Curtis	Ladd	Ransdell	Walsh, Mont.
Dial	Lenroot	Rawson	Warren
Dillingham	Lodge	Sheppard	Watson, Ga.
Edge	McCumber	Shortridge	Watson, Ind.
Ernst	McKellar	Simmons	Willis
Fletcher	McLean	Smith	
Frelinghuysen	McNary	Smoot	

Mr. CURTIS. I wish to announce that the Senator from Minnesota [Mr. NELSON] is absent on account of a death in his family.

Mr. UNDERWOOD. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family.

The PRESIDENT pro tempore. Sixty-six Senators have answered to their names. There is a quorum present.

Mr. KENDRICK. Mr. President, I present a telegram transmitting a resolution adopted by the Wyoming Druggists' Association at a recent convention in reference to the chemical schedule of the bill which we have under consideration. I ask that the telegram may be read at the desk and referred to the Committee on Finance.

The PRESIDENT pro tempore. Without objection, the Secretary will read as requested.

The telegram was read and referred to the Committee on Finance, as follows:

[Western Union telegram.]

LARAMIE, WYO., *August 7, 1922.*

Hon. J. B. KENDRICK,
United States Senate, Washington, D. C.:

Our committee as a whole in convention assembly has unanimously adopted the following resolutions and requested that you use all possible influence in the proper direction there, as the retail druggists of the country recently have been charged with "profiteering" on the floor of the United States Senate:

"Whereas the Senate has defeated the embargo on German dyestuffs, chemicals, and medicinals; and

"Whereas the Germans have driven American manufacturers from South and Central America since the late World War; and

"Whereas under German monopoly before the war phenacetine, aspirin, veronal, trional, sulfonal, and similar products sold in the United States at $1 per ounce instead of $1 per pound as at present: Therefore

"*Resolved*, That the Wyoming State Pharmaceutical Association urges the Senators and Representatives in Congress from this State to make adequate provision in the tariff revision bill, H. R. 7456, pending in the Senate, for the protection of American industries and consumers by incorporating the amendment now before the Senate Finance Committee which would prohibit the importation of merchandise into the United States bearing any trade-mark, label, print, or other mark registered in the United States Patent Office and owned by any person domiciled in the United States, unless imported by such owner, provided the owner shall file with the Secretary of the Treasury a certified copy of the registration of the mark."

WYOMING PHARMACEUTICAL ASSOCIATION,
L. R. TYSON, Jr., *Secretary*.

Mr. SHEPPARD. Mr. President, I request that a similar telegram from the Texas State Pharmaceutical Association be printed in the RECORD and referred to the Committee on Finance.

There being no objection, the telegram was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

[Western Union telegram.]

FORNEY, TEX., *August 2, 1922*.

Senator MORRIS SHEPPARD,
Washington, D. C.:

Whereas the retail druggists of the country recently have been charged with profiteering on the floor of the United States Senate; and

Whereas the Senate has defeated the embargo on German dyestuffs, chemicals, and medicinals; and

Whereas the Germans have driven American manufacturers from South and Central America since the late World War; and

Whereas under German monopoly before the war phenacetine, aspirin, veronal, trional, sulfonal, and similar products sold in the United States at $1 per ounce instead of $1 per pound as at present: Therefore

Resolved, That the Texas State Pharmaceutical Association urges the Senators and Representatives in Congress from this State to make adequate provision in the tariff revision bill, H. R. 7456, pending in the Senate, for the protection of American industries and consumers by incorporating the amendment now before the Senate Finance Committee which would prohibit the importation of merchandise into the United States bearing any trade-mark, label, print, or other mark registered in the United States Patent Office and owned by any person domiciled in the United States, unless imported by such owner, provided the owner shall file with the Secretary of the Treasury a certified copy of the registration mark.

TEXAS PHARMACEUTICAL ASSOCIATION,
M. C. ANDERSON, *Fort Worth, President;*
TOM COULSON, *Dallas*,
SAM P. HARBEN, *Richardson*,
COKEY EVANS, *Jewett*,
A. W. GRIFFITH, *Austin*,
HERMAN DRIES, *San Antonio*,
A. H. SEELY, *Cleburne*,
W. D. ADAMS, *Forney*,
Executive Committee.

Mr. SMITH. Mr. President, I have a few telegrams protesting against the duty on salt, which I should like to have referred to the Committee on Finance and printed in the RECORD. They are very short.

There being no objection, the telegrams were referred to the Committee on Finance and ordered to be printed in the RECORD as follows:

[Postal telegram.]

CHARLESTON, S. C., *August 7, 1922*.

Hon. ELLISON D. SMITH,
Senator for South Carolina,
Washington, D. C.:

Request you vigorously oppose proposed tax on salt provided for in tariff pending. As operators Shipping Board tonnage have found it extremely difficult to obtain homeward cargoes which practically impossible make operations financial success without. If this tax incorporated in tariff when passed will preclude salt being imported this country, thereby depriving steamers of one of the few commodities on which they can depend for homeward revenue. Confident that even with salt on free list this industry amply protected, as reliably informed that imports amount to less than 1 per cent of the total quantity of salt produced United States.

THE CAROLINA CO.

[Western Union telegram.]

CHARLESTON, *S. C., August 7, 1922*.

Hon. ELLISON D. SMITH,
United States Senator, Washington, D. C.:

Take this opportunity vigorously protest through you against proposed tax on salt incorporated in Fordney bill now pending. Confident proposed tax 20 cents per hundred pounds will prevent completely importation of this commodity on which American merchant marine relies to material extent for homeward cargo which entirely essential for successful operation.

STREET BROTHERS.

[Postal telegram.]

CHARLESTON, S. C., *August 7, 1922*.

Senator ELLISON D. SMITH,
Washington, D. C.:

We wish to protest vigorously against Fordney bill pending proposing duty $4 per ton on salt imported. The upbuilding of our merchant marine is dependent to large extent on return cargoes from European ports. If this bill passes as now pending, it will positively prohibit importation of salt, and our vessels will be unable to secure return cargoes to South Atlantic ports.

CHARLESTON SHIPPING CO.

[Postal telegram.]

CHARLESTON, S. C., *August 7, 1922*.

Hon. E. D. SMITH,
Senator from South Carolina,
Washington, D. C.:

Regret exceedingly to learn proposed tariff carries tax on salt approximately $4 per ton, which if enacted will result in making it impossible to import salt, as for past year our longshoremen have been idle greater number of days than working. Salt is one of the particular commodities on which they rely for stevedoring work on inbound vessels.

CHARLESTON STEVEDORING CO.

Mr. McCUMBER. Mr. President, I offer the following amendment to section 315, and certain minor amendments to sections 316 and 317.

Mr. UNDERWOOD. I ask that the amendments may be read.

The PRESIDENT pro tempore. The Secretary will read the amendments offered by the Senator from North Dakota.

The reading clerk read as follows:

On page 272, strike out all of the matter beginning with line 3 down to and including line 19, on page 276, and insert in lieu thereof the following:

"SEC. 315. (a) That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended, whenever the President, upon investigation of the differences in conditions of competition in the principal markets of the United States of articles wholly or in part the growth or product of the United States and of like or similar articles wholly or in part the growth or product of competing foreign countries, shall find it thereby shown that the duties fixed in this act do not equalize the said differences in conditions of competition he shall, by such investigation, ascertain said differences and determine and proclaim the changes in classifications or forms of duty or increases or decreases in any rate of duty provided in this act shown by said ascertained differences in conditions of competition necessary to equalize the same in such markets of the United States. Sixty days after the date of such proclamation or proclamations such changes in classifications or in forms of duty shall take effect, and such increased or decreased duties shall be levied, collected, and paid on such merchandise when imported from any foreign country into the United States or into any of its possessions (except the Philippine Islands, the Virgin Islands, and the islands of Guam and Tutuila): *Provided*, That the total increase or decrease of such rates of duty shall not exceed 50 per cent of the rates specified in Title I of this act, or in any amendatory act.

"(b) That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended, whenever the President, upon investigation of the differences in conditions of competition in the principal markets of the United States of articles wholly or in part the growth or product of the United States and of like or similar articles wholly or in part the growth or product of foreign countries, shall find it thereby shown that the duties prescribed in this act do not equalize said differences, and shall further find it thereby shown that the said differences can not be equalized by proceeding under the provisions of subdivision (a) of this section, he shall make such findings public, together with a description of the class or kind of merchandise to which they apply, in such detail as may be necessary for the guidance of appraising officers. In such cases and upon the proclamation by the President becoming effective the ad valorem duty or duty based in whole or in part upon the value of the imported article in the country of exportation shall thereafter be based upon the American selling price, as defined in subdivision (f) of section 402 of this act, of any similar competitive article manufactured or produced in the United States embraced within the class or kind of imported merchandise upon which the President has made a proclamation under subdivision (b) of this section.

"The ad valorem rate or rates of duty based upon such American selling price shall be the rate found, upon said investigation by the President, to be shown by the said differences in conditions of competition in the principal markets of the United States necessary to equalize the differences so found in said conditions of competition, but no such rate shall be decreased or increased more than 50 per cent of the rate specified in Title I of this act upon such merchandise. Such rate or rates of duty shall become effective 60 days after the date of the said proclamation of the President, whereupon the duties so estimated and provided shall be levied, collected, and paid on such merchandise when imported from any foreign country into the United States or into any of its possessions (except the Philippine Islands, the Virgin Islands, and the islands of Guam and Tutuila). If there is any imported article within the class or kind of merchandise, upon which the President has made public a finding, for which there is no similar competitive article manufactured or produced in the United States, the value of such imported article shall be determined under the provisions of paragraphs (1), (2), and (3) of subdivision (a) of section 402 of this act.

"(c) That in ascertaining the differences in conditions of competition, under the provisions of subdivisions (a) and (b) of this section, the President, in so far as he finds it practicable, shall take into consideration (1) the differences in conditions in production, including wages, costs of material, and other items in costs of production of such or similar merchandise in the United States and in competing foreign countries; (2) the differences in the wholesale selling prices of domestic and foreign merchandise in the principal markets of the United States, but in considering prices as factors in ascertaining differences in conditions of competition, only reasonable profits shall be allowed; and (3) any other advantages or disadvantages in competition. In any investigation under the provisions of this section hearings shall be held and a reasonable opportunity to be heard shall be afforded.

"The President, proceeding as hereinbefore provided for in proclaiming rates of duty, shall, when he determines that it is shown that the competitive advantages have changed or no longer exist which led to such proclamation, accordingly as so shown, modify or terminate the same. Nothing in this section shall be construed to authorize a transfer from the dutiable list to the free list or from the free list to the dutiable list. Whenever it is provided in any paragraph of Title I of this act that the duty or duties shall not exceed a specified ad valorem

rate upon the merchandise provided for in such paragraph, no rate determined under the provision of this section shall exceed the maximum ad valorem rate so specified.

"(d) For the purposes of this section any coal-tar product provided for in paragraphs 25 or 26 of Title I of this act shall be considered similar to or competitive with any imported coal-tar product which accomplishes results substantially equal to those accomplished by the domestic product when used in substantially the same manner.

"(e) The President is authorized to make all needful rules and regulations for carrying out the provisions of this section.

"(f) The Secretary of the Treasury is authorized to make such rules and regulations as he may deem necessary for the entry and declaration of imported merchandise of the class or kind of merchandise upon which the President has made a proclamation under the provisions of subdivision (b) of this section and for the form of invoice required at time of entry."

On page 279, line 10, strike out "such merchandise" and insert in lieu thereof "merchandise imported in violation of this act."

On page 279, line 22, strike out "shall find as a fact" and insert in lieu thereof "has reason to believe."

On page 284, after line 19, insert a new section to read as follows:

"SEC. —. (a) That in order to secure information and to assist in carrying out the provisions of sections 315, 316, and 317 it shall be the duty of the United States Tariff Commission, in addition to the duties now imposed upon it by law, to—

"(1) Ascertain conversion costs and costs of production in the principal growing, producing, or manufacturing centers of the United States of articles of the United States, whenever in the opinion of the commission it is practicable;

"(2) Ascertain conversion costs and costs of production in the principal growing, producing, or manufacturing centers of foreign countries of articles imported into the United States, whenever in the opinion of the commission such conversion costs or costs of production are necessary for comparison with conversion costs or costs of production in the United States and can be reasonably ascertained;

"(3) Select and describe articles which are representative of the classes or kinds of articles imported into the United States and which are similar to or comparable with articles of the United States; select and describe articles of the United States similar to or comparable with such imported articles; and obtain and file samples of articles so selected, whenever the commission deems it advisable;

"(4) Ascertain import costs of such representative articles so selected;

"(5) Ascertain the grower's, producer's, or manufacturer's selling prices in the principal growing, producing, or manufacturing centers of the United States of the article of the United States so selected; and

"(6) Ascertain all other facts which will show the differences in or which affect competition between articles of the United States and imported articles in the principal markets of the United States.

"(b) When used in this section—

"The term 'article' includes any commodity, whether grown, produced, fabricated, manipulated, or manufactured;

"The term 'import cost' means the price at which an article is freely offered for sale in the ordinary course of trade in the usual wholesale quantities for exportation to the United States plus, when not included in such price, all necessary expenses, exclusive of customs duties, of bringing such imported articles to the United States.

"(c) In carrying out the provisions of this section the commission shall possess all the powers and privileges conferred upon it by the provisions of Title VII of the revenue act of 1916, and in addition it is authorized, in order to ascertain any facts required by this section, to require any importer and any American grower, producer, manufacturer, or seller to file with the commission a statement, under oath, giving his selling prices in the United States of any article imported, grown, produced, fabricated, manipulated, or manufactured by him.

"(d) The commission is authorized to establish and maintain an office at the port of New York for the purpose of directing or carrying on any investigation, receiving and compiling statistics, selecting, describing, and filing samples of articles, and performing any of the duties or exercising any of the powers imposed upon it by law.

"(e) The United States Tariff Commission is authorized to adopt an official seal, which shall be judicially noticed.

"(f) The second paragraph of section 706 of the revenue act of 1916 is amended to read as follows:

"'Such attendance of witnesses and the production of such documentary evidence may be required from any place in the United States at any designated place of hearing. And in case of disobedience to a subpœna the commission may invoke the aid of any district or territorial court of the United States or the Supreme Court of the District of Columbia in requiring the attendance and testimony of witnesses and the production of documentary evidence, and such court within the jurisdiction of which such inquiry is carried on may, in case of contumacy or refusal to obey a subpœna issued to any corporation or other person, issue an order requiring such corporation or other person to appear before the commission, or to produce documentary evidence if so ordered or to give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof.'"

Mr. UNDERWOOD and Mr. FRELINGHUYSEN addressed the Chair.

The PRESIDENT pro tempore. The Senator from Alabama.

Mr. UNDERWOOD. I should like to ask the Senator in charge of the bill a question. The amendment which has just been read is an amendment to the bill as reported. Without a careful comparison it is difficult to understand where the changes have been made, and I wanted to ask the Senator before the debate proceeds if he would not state to the Senate the exact changes, so that many of us may be saved the burden of making the comparisons.

Mr. McCUMBER. I intended to do that; to go right on with the discussion of the whole matter, but to introduce it by a statement as to the particular changes which have been made.

Mr. UNDERWOOD. I thought the Senator from New Jersey [Mr. FRELINGHUYSEN] was about to discuss the amendment, but before it was discussed I should like to know just what the points of difference are. If it will not inconvenience the Senator, I should like to have him make not an argument as to the reason why the changes have been made but a statement as to the manner in which the provision as reported has been changed by the proposed amendment.

Mr. McCUMBER. I should like to take up the whole question at one time, but I will first explain the differences between the amendment now presented and the amendment as originally reported in the bill. Those differences are very slight, indeed.

Mr. FRELINGHUYSEN and Mr. WALSH of Montana addressed the Chair.

The PRESIDENT pro tempore. Does the Senator from North Dakota yield; and if so, to whom?

Mr. McCUMBER. I yield to the Senator from New Jersey.

Mr. WALSH of Montana. If the Senator from New Jersey desires to address the Senate, I wish to make a suggestion.

Mr. FRELINGHUYSEN. It is only my purpose to offer a substitute for the last amendment, beginning on page 6, in line 18, together with additional sections.

Mr. WALSH of Montana. I wish to submit an observation. That part of the amendment tendered by the Senator from North Dakota this morning, to which the Senator from New Jersey now addresses himself, appertains rather to the subject of amendments to the Tariff Commission act than to paragraphs 315, 316, and 317. I understood that we were to take them up this morning in this order, namely, paragraph 315, paragraph 316, and paragraph 317, so that when those paragraphs are disposed of it seems to me it would be appropriate to take up in connection with amendments to the Tariff Commission act the concluding portion of the amendment now tendered by the Senator from North Dakota.

Mr. McCUMBER. The Senator is correct, and that is the intention.

Mr. FRELINGHUYSEN. Mr. President, I send to the desk a proposed substitute for the last portion of the committee amendment, beginning in line 18, page 6. This amendment practically recites the provisions of the committee amendment, with the addition of several sections. The committee have been agreeable to a portion of the original amendment which I introduced, and I am very glad that they have seen fit to include it in the amendment submitted by the committee. However, I do not feel that the committee have gone far enough in accepting the amendment that I originally proposed. I differ with the committee, and our differences are fundamental.

Mr. WALSH of Montana. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Chair desires to make an inquiry. Has the Senator from North Dakota yielded the floor.

Mr. McCUMBER. If the Senator from New Jersey is going to make a speech I do not want it to be charged up to my time. I have yielded the floor without making my speech, and the Senator can take his time, and I will proceed after he is through.

Mr. WALSH of Montana. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Chair thinks that under the unanimous-consent agreement the Senator from New Jersey must confine himself to section 315.

Mr. FRELINGHUYSEN. May I be permitted to offer at this time a substitute for the amendment submitted by the committee?

The PRESIDENT pro tempore. The Chair is of the opini n that under the unanimous-consent agreement section 315 must be first considered.

Mr. FRELINGHUYSEN. I do not intend to make a speech on this amendment. I intend to offer a substitute, and explain why I am offering it. Am I in order?

The PRESIDENT pro tempore. The Chair believes that the Senator from New Jersey must defer offering his amendment until after section 315 is disposed of.

Mr. FRELINGHUYSEN. May I offer the amendment to the present amendment offered by the committee, and ask that it be read?

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it will be read.

The READING CLERK. On page 284, after line 19, it is proposed to insert the following new section——

Mr. FRELINGHUYSEN. Mr. President, I think I can save the time of the Senate by making a suggestion. I simply want two paragraphs of this amendment read. It is similar to that offered by the committee.

Mr. UNDERWOOD. I think it is an important matter, and if it is going to be presented by way of amendment I wish the Senator would allow it to be read.

Mr. FRELINGHUYSEN. Very well.

The READING CLERK. On page 284, after line 19, it is proposed to insert the following new section:

SEC. —. (a) That in order that the necessary data may be provided (1) to determine and fix the proper rates of duty to equalize wherever possible differences in conversion costs of articles grown, produced, or manufactured in the United States and of articles grown, produced, or manufactured in foreign countries and differences in competitive conditions in the principal markets of the United States, and (2) to amend from time to time the existing rates or forms of duty on one or more articles, as economic or industrial conditions change, in addition to the duties imposed by law, the United States Tariff Commission shall—

(1) Ascertain conversion costs in the principal growing, producing, or manufacturing centers of the United States of articles of the United States, whenever in the opinion of the commission it is practicable;

(2) Ascertain conversion costs in the principal growing, producing, or manufacturing centers of foreign countries of articles imported into the United States, whenever in the opinion of the commission such conversion costs are necessary for comparison with conversion costs in the United States and can be reasonably ascertained;

(3) Ascertain costs of production in the United States, whenever in the opinion of the commission it is practicable;

(4) Select and describe articles which are representative of the classes or kinds of articles imported into the United States and which are similar to or comparable with articles of the United States; select and describe articles of the United States similar to or comparable with such imported articles; and obtain and file samples of articles so selected, whenever the commission deems it advisable;

(5) Ascertain import costs of such representative articles so selected;

(6) Ascertain the grower's, producer's, or manufacturer's selling price in the principal growing, producing, or manufacturing centers of the United States of the articles of the United States so selected; and

(7) Ascertain all other facts which will show the differences in or which affect competition between articles of the United States and imported articles in the principal markets of the United States.

(b) When used in this section—

The term "article" includes any commodity, whether grown, produced, fabricated, manipulated, or manufactured;

The term "conversion cost" means the cost of growing, producing, fabricating, manipulating, or manufacturing an article, including the cost of material as to which there is no prior ascertained cost of conversion;

The term "import cost" means the price at which an article is freely offered for sale in the ordinary course of trade in the usual wholesale quantities for exportation to the United States plus, when not included in such price, all necessary expenses, exclusive of customs duties, of bringing such imported article to the United States.

(c) Not later than December 1, 1923, and at least once every six months thereafter, the commission shall report to Congress the results of the investigations completed at the time of the report showing—

(1) The conversion costs in the United States;

(2) The conversion costs of articles imported into the United States;

(3) The differences between such conversion costs;

(4) The costs of production in the United States;

(5) The scope and methods of the investigations for ascertaining or determining and the items of cost included within such conversion costs and costs of production;

(6) The differences between import costs and selling prices, ascertained in accordance with the provisions of subdivision (a) of this section;

(7) The differences in competitive conditions in the principal markets of the United States;

(8) The rate or rates of duty which it deems necessary to equalize, such differences in conversion costs, import costs, and selling prices, and in such competitive conditions, the proper classification, and whether the duty should be specific, ad valorem, or ad valorem and specific; and

(9) The probable effect in dollars, as nearly as it can be estimated, of each rate proposed as it affects American growers, producers, manufacturers, and consumers; and the probable revenue to be derived from the imposition of each duty.

(d) In carrying out the provisions of this section, the commission shall possess all the powers and privileges conferred upon it by the provisions of Title VII of the revenue act of 1916, and in addition it is authorized in order to ascertain any facts required by this section to require any importer and any American grower, producer, manufacturer, or seller to file with the commission a statement under oath giving his selling prices in the United States of any article imported, grown, produced, fabricated, manipulated, or manufactured by him.

(e) Any commissioner, officer, employee, or agent of the commission who divulges any information or data received relating to the importation, growth, production, fabrication, manipulation, manufacture, or sale of a specific article, except in a report under the provisions of this section or except in so far as he is directed by the commission or by a court of the United States or a judge thereof or by a committee of the Senate or the House of Representatives, and any person who knowingly solicits or receives any such information or data from any such commissioner, officer, employee, agent, or adviser, shall, upon conviction thereof, be punished by a fine of not more than $1,000 or imprisonment for not more than two years or by both such fine and imprisonment.

(f) The commission is authorized to establish and maintain an office in the principal customs port of entry of the United States, or elsewhere, for the purpose of directing or carrying on any investigation, receiving and compiling statistics, selecting, describing, and filing samples of articles, and performing any of the duties or exercising any of the powers imposed upon it by law.

(g) A copy of each report to Congress, under the provisions of subdivision (c) of this section, shall be forwarded to the President, and the President is authorized to require such additional reports and facts as he deems necessary.

(h) The first sentence of section 701 of the revenue act of 1916 is amended to read as follows:

"SEC. 701. That each member shall receive a salary at the rate of $10,000 per annum."

Mr. FRELINGHUYSEN. I ask that the amendment be printed immediately for the information of the Senate.

The PRESIDENT pro tempore. It will be so ordered.

Mr. STERLING. Mr. President, on yesterday I presented an amendment as a substitute for subdivisions (a) and (b) of section 315. I am not offering it now at all; it probably would be improper for me to do so; but I think it would be proper to ask that it be read at the desk at this time. I understand that there is no objection on the part of the chairman of the committee, and I ask that it be read.

Mr. POMERENE. Mr. President, I am not sure that I understood the Senator. Does he mean that he has offered it as a substitute?

Mr. STERLING. I am not offering it at the present time, but I think it would be proper to have it read at the present time.

Mr. POMERENE. But is it to be, when offered, a substitute for——

Mr. STERLING. A substitute for subdivisions (a) and (b) of section 315.

Mr. POMERENE. I know, but of the amendment as originally offered by the Finance Committee or the one offered this morning?

Mr. STERLING. It was drawn to be offered as a substitute for the original offering of the committee.

The PRESIDENT pro tempore. If there be no objection, the Secretary will read the proposed amendment.

The READING CLERK. Beginning on page 272, line 3, it is proposed to strike out down to and including line 19, on page 274, being all of subdivisions (a) and (b) of section 315, and to insert in lieu thereof the following:

SEC. 315. (a) In fixing the rates of duty provided for in this act it is hereby declared to be the purpose of Congress to equalize the differences in conditions of competition in trade in the markets of the United States in articles wholly or in part the growth or product of the United States and in like or similar articles which are wholly or in part the growth or product of competing foreign countries. For the purpose of assuring such equalization the President is authorized to at any time request in writing an investigation by the Tariff Commission of the differences in conditions of competition of any such article or articles. It shall be the duty of the Tariff Commission, upon such request, to investigate said differences in conditions of competition, taking into account differences in conversion costs and costs of production in the United States and in such competing foreign countries and also the costs of importation of any such article or articles, and upon conclusion of such investigation to make report of its findings of facts to the President, including a finding as to what duty or duties in the opinion of the commission are necessary to equalize differences in conditions of competition in trade in the markets of the United States.

If it be found on such investigation that any duty fixed in this act does not equalize the said differences in conditions of competition in trade, the President shall then, upon and according to the findings reported by said commission, have authority to determine and proclaim the changes in classification or forms of duty or the increase or decrease in any rate of duty provided in this act which is shown by any ascertained differences in conditions of competition in trade to be necessary in order to equalize said conditions in the markets of the United States. That 30 days after the date of such proclamation or proclamations such changes in classification or in forms of duty shall take effect and such increased or decreased duties shall be levied, collected, and paid on such merchandise when imported directly or otherwise from the country of origin into the United States: *Provided*, That until further provided by law the total increase or decrease of such rates of duty shall not exceed 50 per cent of the rates specified in this act or in any amendatory act.

(b) If any investigation and report by the Tariff Commission made on the request of the President shall disclose the fact that an industry in the United States is being or is likely to be materially injured by reason of the importation into the United States of foreign merchandise, and if it shall be further shown by such investigation and report that the value of said foreign merchandise as determined under provisions of paragraphs (1), (2), or (3) of subdivision (a) of section 402 of this act is not a certain basis for the assessment of particular duties, the President shall by proclamation make such findings public, together with a description of the class or kind of merchandise to which they apply and in such detail as he may deem necessary for the guidance of appraising officers; that in such cases and upon the proclamation by the President becoming effective as hereinafter provided the ad valorem duty or duty based in whole or in part upon the value of the imported article in the country of exportation shall thereafter be based upon the American selling price, as defined in subdivision (f) of section 402 of this act, of any similar competitive article manufactured or produced in the United States and embraced within the class or kind of imported merchandise upon which the President has made public such a finding and proclamation.

That the ad valorem rate or rates of duty based upon such American selling price shall be the rate found upon said investigation by the Tariff Commission to be necessary to equalize the said differences in conditions of competition of trade in the markets of the United States, but no such rate shall be decreased or increased more than 50 per cent of the rates specified in Title 1 of this act upon such merchandise. Such rate or rates of duty shall become effective 30 days after the date of the said proclamation of the President, whereupon the duty so estimated and provided shall be levied, collected, and paid upon such merchandise in the manner herein provided when imported directly or otherwise from the country of origin into the United States.

Mr. McCUMBER. Mr. President, I desire to say, first, that there has been very little change made in section 315. It is shortened by the proposed amendment; it is more logical, I think, in its construction. It makes clear that which was not clear in the original amendment—that the President shall not

use the American-valuation basis for levying a duty until he has ascertained that the duties which he might levy by an increase of 50 per cent upon the foreign valuation will not effectuate the purposes of the section, and he is to go to the American-valuation basis only when he has ascertained the impossibility of effectuating the purpose by imposing the rate upon the foreign-valuation basis, and has proclaimed that fact, and has, in addition, proclaimed the rate necessary to effectuate that purpose upon the American selling price basis.

Subdivision (c) specifically provides that the President shall not make any change which will raise the duty where the law itself has fixed a maximum rate of duty. That change is in addition to the modification of the amendment as originally proposed.

Mr. UNDERWOOD. Will the Senator allow me to ask him what he means by fixing a maximum rate of duty? Does he mean that if the duty is specific the President can not change it?

Mr. McCUMBER. No; I mean that where the law provides, as in the case of gloves, for instance, that no rate shall be higher than 75 per cent. In the other case it is not a maximum rate.

Mr. UNDERWOOD. Where Congress fixes a specific rate, of course, it has fixed by that the maximum and the minimum. I merely wanted the Senator to make the point clear.

Mr. McCUMBER. The point is clearly expressed that it is only in those cases where the law has declared that the rate shall not exceed a specified ad valorem rate. The President is not authorized to make any change where the law so declares.

Mr. SIMMONS. Mr. President, in the bill a maximum ad valorem rate is fixed, based upon the foreign valuation. The Senator means that if the President shall substitute, in the case of any particular article, the American valuation for the foreign valuation, then the maximum rate fixed in the bill upon the foreign valuation shall apply to the American valuation as fixed by the President?

Mr. McCUMBER. I do not think I quite understand the question of the Senator.

Mr. SIMMONS. In the bill maximum rates are fixed upon the foreign valuation. Now it is proposed to authorize the President, under certain conditions, with respect to certain articles, to substitute the American valuation. If he substitutes the American valuation in the case of an article on which we have fixed a maximum rate, will that maximum rate mean the maximum rate as applied to the American valuation, or as applied to the foreign valuation?

Mr. McCUMBER. It will leave it as applied to the foreign-valuation basis. Under the amendment as drawn the President has no authority to increase by any process a duty beyond that which the law itself declares to be the maximum, no matter whether he should take the foreign valuation or should accept the American valuation. If it would raise that duty so that it would be more than what was fixed by the law upon the foreign valuation, he would be prohibited from exercising his judgment on it.

There is another change. We have provided by this amendment that the President shall take into consideration a large number of conditions which we specify in fixing the rate, such as the difference in the costs of production, the difference in wages, and the difference in the wholesale selling prices; but we have provided against what we regarded as a possible danger, and that is the danger of the American or any selling price of an article being based upon huge profits. Therefore, so far as the question of the selling price is considered as affecting the differences in conditions of competition, the President is limited to an allowance of only reasonable profits in determining what the rate should be.

Again, Mr. President, we have inserted in the amendments which we have offered the provisions contained in the amendment offered by the Senator from South Dakota [Mr. STERLING], and also the provisions contained in the amendment offered by the Senator from New Jersey [Mr. FRELINGHUYSEN]. I think we have inserted practically all of them but subdivision 8 of subdivision (c) of the amendment offered by the Senator from New Jersey.

The amendment of the Senator from New Jersey [Mr. FRELINGHUYSEN] practically states that the Tariff Commission shall fix the equalizing rates—that is, if they recommend to the President what rates or what changes in classifications or forms are necessary, they thereby directly advise the President, of course, that he should follow their advice. The committee thought it hardly proper to place in the hands of a commission composed of three possibly ardent free traders, and three possibly ardent high protectionists, the duty of ascertaining and fixing those rates. We say to that commission, "Ascertain all of the facts essential to advise the President," but we do not say to that commission, "You shall also advise how he shall make these rates to comply with the provision of the law."

I am very doubtful if the six of them could agree upon the proper rate. The free trader would regard a very low rate as the proper rate. A high protectionist, I think, would possibly look at it from an entirely different standpoint, and would advocate a different rate; but when we ask them to get the facts, we do not care whether they are bipartisan or nonpartisan, they can possibly agree upon certain facts, which we ask them to ascertain.

Mr. UNDERWOOD. Will the Senator, for information, allow me to ask him another question?

Mr. McCUMBER. Certainly.

Mr. UNDERWOOD. I understand, then, the proposed amendment does not require or expect the commission to report to the President anything but facts, and does not expect them to report to the President the conclusions based on the facts they ascertain?

Mr. McCUMBER. That is correct.

Mr. UNDERWOOD. Does the Senator, then, think that if this should become a law the President of the United States would have either the time or the opportunity to take the facts presented to him and work out a conclusion from those facts, in the many intricate cases which arise in the consideration of a tariff?

Mr. McCUMBER. I do.

Mr. UNDERWOOD. I do not think the President of the United States would have a chance to do much else, then.

Mr. McCUMBER. I do not want the President to be governed entirely by even the facts which the Tariff Commission may find. We have our Department of Commerce at work gathering statistics and data. We also have our State Department at work gathering statistics and data, and I want the President to have authority to deal with all of them.

Mr. UNDERWOOD. If the Senator will allow me, of course I am very much opposed to the proposal of the Senator. I think this power should continue to be vested in Congress. But if you are going to take away this power from the representatives of the people and put it in the Executive, I have no objection to putting the responsibility on the President, the highest officer in the executive branch of the Government; but I do say that if you are going to do that, it seems to me reasonable that the men who ascertain the facts should also report their conclusions, not that the President should be bound by their conclusions but that he should have the benefit of their conclusions after they have investigated the facts. I see no reason against that——

Mr. McCUMBER. Mr. President, I have but one hour to present my views.

Mr. UNDERWOOD. Let me finish this and I will not interrupt the Senator further. I see no reason against that, unless you expect this commission to report the facts officially and their conclusions unofficially, and not let the country and the Congress have the benefit of their reasoning in considering the matter.

Mr. McCUMBER. Mr. President, if the Senator will read over carefully the directions given to the Tariff Commission, I think he will find that they are to present to the President all facts necessary for almost immediate conclusion as to the rate of duty. I do not want to convert the Tariff Commission into an organ to make tariffs for the United States. I do not want even to introduce that idea. I agree with the Senator entirely that the policy of levying tariffs and the rates on each particular matter is a policy that should always be left to the good judgment of Congress, and we can lay down no general rule under which it would be safe to place the tariff rate-making power in a commission. But the exigencies of the chaotic condition that now confronts us in the commercial world are the only justification for the added power that is to be given the President, and I want it taken away just as soon as those exigencies no longer exist.

Mr. SIMMONS. Mr. President, will the Senator allow me to ask him just one brief question?

Mr. McCUMBER. Very well.

Mr. SIMMONS. I ask the Senator if under the amendment in any case the President can raise the rate without first having an investigation made by the Tariff Commission and a report?

Mr. McCUMBER. He must have an investigation made before he can raise the rate and a full hearing must be given. The source of his information for the most part must necessarily be the Tariff Commission, but he may have information from the other departments, which would also guide him.

Mr. SIMMONS. But he can not act without a report from the Tariff Commission?

Mr. McCUMBER. He can not act without a report and without a full hearing and a declaration of what he finds.

Mr. WALSH of Montana. May I remark that there does not seem to be anything in the amendment which requires him even to consult the Tariff Commission?

Mr. McCUMBER. We provide that for the purpose of assisting the President to fix the rates of duty the Tariff Commission shall furnish certain information and investigate certain things. That is for the purpose of his using that information, of course. None of us want to say that he shall close his eyes to any other information or, if he has from the Federal Trade Commission information which the Tariff Commission does not have and which the Federal Trade Commission have obtained through investigation, that he must wait until the Tariff Commission have duplicated their efforts.

Mr. SIMMONS. I fully understood that the President might act on outside information that he saw fit to obtain from any sources, but the question I had in mind was whether the Senator thought his amendment sufficiently mandatory upon the President to take from him the right to increase the rate without an investigation and report by the Tariff Commission. It did not seem to me that the amendment was quite strong enough for that purpose, that it was merely directory to the President but not mandatory at all.

Mr. McCUMBER. He has to have an investigation made. Under existing law the Tariff Commission is directed to furnish him information upon his request. I do not know how we could make it very much stronger unless we would say that he must wait for the Tariff Commission to act upon something which he may already have obtained from other departments of the Government.

Mr. POMERENE. Mr. President, will the Senator permit me to ask him a question?

Mr. McCUMBER. Certainly.

Mr. POMERENE. I would like the Senator to define a little more clearly, if he can, what is meant by the phrase "determine and proclaim the changes in classifications." I want to explain briefly, so that the Senator may answer me more directly. We do not have a duty on shoes; but suppose we had a duty on shoes and another duty on a certain completed manufactured article of leather, which would be an entirely different proposition. Does the Senator understand by that expression that the President could, in his wisdom, take shoes out of a paragraph which related exclusively to shoes and turn it over to another paragraph which related to other leather goods, thereby advancing the rate on shoes, and then change that rate 50 per cent upward or 50 per cent downward?

Mr. McCUMBER. No. I simply understand by change in classification that in the case of a paragraph containing many articles that it might become necessary to provide different specific or ad valorem or compound duties upon the different articles in the paragraph, in order to provide rates that will equalize competitive conditions. It will be noticed that it is provided that nothing in this section shall be construed to authorize a transfer from the dutiable list to the free list or from the free list to the dutiable list. I did not think that was necessary, but we wanted to make it certain that no claim could be made that he could or should so transfer an article.

Mr. POMERENE. I had that modification in mind, if the Senator will permit me to say so, but, nevertheless, under this provision if there was a duty of 50 per cent in one paragraph and 75 per cent in another paragraph, he could change it from the 50 per cent class to the 75 per cent class and also change it from specific to ad valorem or from ad valorem to specific, and then either add to or take from it 50 per cent. Is not that right?

Mr. McCUMBER. The adding to or taking from must not be more than 50 per cent upon the rate that is fixed by law if he increases it nor less than 50 per cent if he lowers it. If he changes it and puts it into another class which would give it a higher duty he certainly then could not increase that higher duty another 50 per cent. That would be violative of the law.

Mr. POMERENE. That is one of the things about which I have not been quite clear, because if it were a 50 per cent rate and was changed to another paragraph which had a 75 per cent rate, as I construe it, he could then change that rate and add 50 per cent to the 75 per cent.

Mr. McCUMBER. No; I do not think so. The only way he could accomplish that would be by going to the American valuation basis if he found the other valuation was insufficient.

Now, Mr. President, I want to give a little time to the consideration of the proposition that the section as a whole is an unconstitutional delegation of legislative power. Section 315a reads:

SEC. 315a. That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended, whenever the President, upon investigation of the differences in conditions of competition in the principal markets of the United States of articles wholly or in part the growth or product of the United States and of like or similar articles wholly or in part the growth or product of competing foreign countries, shall find it thereby shown that the duties fixed in this act do not equalize the said differences in conditions of competition he shall, by such investigation, ascertain said differences and determine and proclaim the changes in classifications or forms of duty or increases or decreases in any rate of duty provided in this act shown by said ascertained differences in conditions of competition necessary to equalize the same in such markets of the United States.

The bill then provides that 30 days after the date of the proclamation of such changes in the classification of forms of duty such increased or decreased duty shall be levied, collected, and paid on such merchandise so imported. By the same section it is then provided that the rates of duty shall not be increased or decreased more than 50 per cent of the rates specified in the bill.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. OVERMAN in the chair). Does the Senator from North Dakota yield to the Senator from Ohio?

Mr. McCUMBER. I yield.

Mr. POMERENE. I think the Senator perhaps misstated or misread the word. As he quoted the section, he said within 30 days after the date, and so forth.

Mr. McCUMBER. We have changed that to 60 days.

Now, subdivision (b) of said section, after reciting the same as subdivision (a), provides that when the President shall find it shown by the investigation—

that the duties prescribed in this act do not equalize said differences, and shall further find it thereby shown that the said differences can not be equalized by proceeding under the provisions of subdivision (a) of this section, he shall make such findings public, together with a description of the class or kind of merchandise to which they apply, in such detail as may be necessary for the guidance of appraising officers. In such cases and upon the proclamation by the President becoming effective the ad valorem duty or duty based in whole or in part upon the value of the imported article in the country of exportation shall thereafter be based upon the American selling price, as defined in subdivision (f) of section 402 of this act—

And so forth.

Subdivision (c) provides:

(c) That in ascertaining the differences in conditions of competition, under the provisions of subdivisions (a) and (b) of this section, the President, in so far as he finds it practicable, shall take into consideration (1) the differences in conditions in production, including wages, costs of material, and other items in costs of production of such or similar merchandise in the United States and in competing foreign countries; (2) the differences in the wholesale selling prices of domestic and foreign merchandise in the principal markets of the United States, but in considering prices as factors in ascertaining differences in conditions of competition only reasonable profits shall be allowed; and (3) any other advantages or disadvantages in competition.

It then provides that opportunity for hearing shall be given.

It will be observed, Mr. President, that the provisions of section 315 (a) and subdivisions (b) and (c) rest not alone upon the power of Congress to impose duties, but also upon the power of Congress to regulate commerce. The whole grant of the pertinent powers reposed by the Federal Constitution in Congress reads as follows, as found in article 1, section 8:

The Congress shall have power to lay and collect taxes, duties, * * * to regulate commerce with foreign nations.

And in subdivision 18:

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers.

I especially call attention to the fact that the Constitution not only grants the power to Congress to do these things but to make all other laws necessary or proper to make them effective.

Returning now to section 315, subdivision (a), of the bill, it will be noted, first, that the proposed law rests upon the authority to regulate commerce as well as on the authority to collect duties; second, that the President is directed to investigate conditions of competition between domestic and foreign merchandise in the principal markets of the United States, and in such investigation he must find that the duties fixed in the act do not equalize the differences in conditions of competition; third, he must ascertain what those differences are; and, fourth, he must then proclaim the changes either in classification or form of duties or the increase or decrease in any rate of duty necessary to equalize the conditions of competition in the principal markets of the United States.

Mr. President, are the powers granted the President as herein stated in violation of the Federal Constitution? It is charged that this power is violative of the Constitution, upon the ground that it is a delegation of legislative power to the President.

In order to narrow this proposition down to only those questions as to which there may be a clear difference of opinion, we may, by a process of elimination, bring into relief the real debatable questions. We all agree, Mr. President, to the rule

so tersely stated in many legal opinions on that subject that "while the legislature can not delegate its power to make a law it can make a law to delegate a power to determine some fact or state of things upon which the law makes or intends to make its own act depend."

No one at this time, Mr. President, will deny that Congress may delegate to the President the mere administrative duty of ascertaining the difference between the cost of producing an article in a foreign country and the cost of producing a comparable article in this country, and after ascertaining that difference to apply a rate of duty upon the foreign article that will equal the difference. I think we all agree to that.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Ohio?

Mr. McCUMBER. I yield.

Mr. POMERENE. Right in connection with the point that the Senator from North Dakota is now making, I wish to put a question to him. As I understand him, under the decision of the Supreme Court involving similar provisions of the McKinley law it was said, in substance, that when the President found a certain state of facts then a certain specific rate of duty should obtain?

Mr. McCUMBER. Yes.

Mr. POMERENE. Does the Senator from North Dakota distinguish between such a case and a case where the President is given the authority either to increase or decrease the rate to any point within the 50 per cent limit?

Mr. McCUMBER. Mr. President, I will answer that question. We may authorize the President to ascertain the difference in the cost of production of an article at home and abroad; we may say that if he finds that the difference in the cost of the production of an article at home and abroad equals 50 per cent of the foreign valuation he shall apply that 50 per cent as the basis of a duty. He may do that, if we say that that is the rule, just as well as if we said that he might fix certain duties. That is all. He may find that it costs $1 to produce an article in Great Britain and that it costs $1.25 to produce it in the United States, and we declare the policy to be that the President shall fix a duty that will equalize those two costs of production. I am not saying that is what we proposed to do in this instance, for we do not; but I am citing that as one of the things as to which I think we all agree, under all of the authorities, might be done without questioning the constitutional authority.

Mr. JONES of New Mexico. Mr. President——

Mr. McCUMBER. I really wished to give an hour to this subject, and I think I have not over 15 minutes remaining.

Mr. JONES of New Mexico. I am sure we will all consent that the time of the Senator from North Dakota may be extended, for I believe that it will be necessary. I should like to get the view of the Senator upon one phase of his proposition to which he suggests we will all agree, and that is that we could authorize the President of the United States to ascertain the difference in the cost of production at home and abroad and specify a rate of duty which will equalize that difference. That on its face looks like a very simple proposition, and if there were only one concern in the United States producing a given article and if there were only one concern abroad producing the given article, possibly it would be a simple process; but does not the Senator recognize that there is a vast difference between that simple statement and the conditions which actually exist? We have in this country, for instance, a number of concerns producing steel products——

Mr. McCUMBER. I think I can understand what the Senator is driving at, and I can answer the question very quickly.

Mr. JONES of New Mexico. There are a number of concerns producing various other commodities in this country and many concerns producing similar commodities abroad and their costs vary in great degree.

Mr. McCUMBER. I will answer the question. Mr. President, there are a great many foreign producers of many articles that are imported into the United States. Articles are produced in France; similar articles are produced in Great Britain; they are produced in the different cities in the same country, and they are sold at varying prices; yet the appraiser must find the selling price in wholesale quantities in the particular market of exportation. We are granting no wider power than that when we provide that the President shall find the difference between the costs of production. He will have to take the general cost, just the same as the appraiser has to arrive at a general selling price in the place of production, and he may take one city instead of another, and there is no appeal from the decision. The power is granted in a thousand different ways.

Mr. SIMMONS. Mr. President, may I ask the Senator just one question?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from North Carolina?

Mr. McCUMBER. Yes.

Mr. SIMMONS. Suppose the President finds that the wholesale selling price of an article imported from France is one thing and of an article imported from Italy is another thing, and of an article imported from Great Britain is another thing, will he make his finding so as to apply only to the article from Great Britain or only to the article from France, or will he make it apply to importations from all three of those countries, notwithstanding the difference in the selling price?

Mr. McCUMBER. It so happens that when we attempt to equalize conditions in trade we equalize them on the competitive article. Articles that are competitive in one country may not be competitive in another; articles from one country may be driven out of the market entirely. The President can find the source from which the dangerous competition arises, and he must guard against that particular source, even though it may exclude the importations from another country, if it is the source that threatens to destroy or injure the competition in the markets of the United States. That is the case with all our tariffs. The pending bill as it is written excludes many articles from Great Britain that may be imported from France and from Germany.

Mr. SIMMONS. So that, as I understand—and I simply wanted to understand the Senator's position—if the President finds that the competition which is disadvantageous to the United States comes from Italy, he would base his final conclusion and action upon the difference in the cost between Italy and this country.

Mr. McCUMBER. Certainly.

Mr. SIMMONS. Although his action might not be justified if it were based upon the cost in Great Britain.

Mr. McCUMBER. Yes; the Senator is correct.

Mr. President, I think it can not be denied that the President can fix a rate of duty that will measure the difference in the cost of production after he has found it. That is a simple proposition. Likewise, I think that the President may be directed to ascertain the wholesale market price of a comparable article in this and a foreign country and apply a rate of duty which will equalize the difference in the two, if we declare that that is our policy, that we want to equalize the selling price of the competitive articles in this country; in other words, it is not necessary that Congress should prescribe just what the rate should be, but it may leave the fixing of that rate to the President in accordance with the rules provided in the law itself.

But, Mr. President, the mere difference between the cost of production in two countries or the mere difference between the selling prices of two articles in the respective countries may not be regarded by Congress to be a sufficient protective duty, and so Congress may direct the President to ascertain the cost of transporting the article from the foreign country to the principal market in this country and also ascertain the cost of transporting a comparable article from the field of production in this country to the field of consumption in this country. We do not give him that power in this bill, but I say we could give him that power, and he could take that as a basis in addition to the other bases in determining what should be a rate of duty that would equalize the two.

Mr. JONES of New Mexico. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from New Mexico?

Mr. McCUMBER. I do.

Mr. JONES of New Mexico. I should like to make an inquiry regarding that matter. May I inquire to what point in the United States transportation cost would be accepted as the actual cost for the purpose of fixing the duty?

Mr. McCUMBER. Mr. President, it will be observed that in the authority to take into consideration matters which shall guide the President's judgment we have left out of that consideration entirely the question of transportation. Of course, the question of transportation necessarily does figure in the question of competition; but no one wished to give the President the power to take every unimportant article that is produced in a section of the country so far distant that the freight itself would be many times what the article would be worth in the field of consumption under the ordinary tariff duties.

Mr. JONES of New Mexico. Mr. President, if I may be permitted, in order to give point to my inquiry——

The PRESIDING OFFICER. Does the Senator further yield?

Mr. McCUMBER. I yield for a question.

Mr. JONES of New Mexico. I have in mind the fact that the cost of transportation of chinaware from Japan to the United States is about two or three times as much as it is from Europe to the United States, and there would be the question of the difference in cost of transportation from the different countries of the world. Who would make the choice and say what should be the one transportation charge which should be used in fixing the rate?

Mr. McCUMBER. The real thing that the President is to determine is the conditions of competition in our own markets. The article is brought here. It is sold here. The comparable American article is produced here. It is sold here. Reduced down to the final result, the real question is the question of the wholesale quantities in the markets of the United States; but all of these things may be investigated and considered.

So, Mr. President, an export duty levied against or a subsidy given to any article of any country of export may, with equal propriety, be submitted to the President for investigation, with directions to make due allowance for it in arriving at an equalizing duty. So of the difference in exchange and so of any other advantage or disadvantage. In every one of these cases the Senator from Montana and every other Senator must concede that the power to find the facts and apply the rate necessary to equalize the conditions of competition in the United States market may be delegated to the President for the purpose of equalizing conditions of competition in the home market. In this case Congress makes the law and prescribes the conditions under which it is to be made applicable. The President performs only the administrative duty of ascertaining the facts and applying the law to those facts to bring about the result sought under the law. To be sure, the supposed cases are all simple and generally easy of ascertainment; but once admit the principle, and the complexity of or difficulty in the ascertainment of the governing facts can not overturn or destroy the rule.

So far I have cited no adjudications to prove these premises, not because of a lack of them but because they are so numerous that the principle enunciated has become a fundamental and nonassailable rule. I shall, however, present the leading cases in a more general and comprehensive brief which I shall ask later may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, leave is granted.

Mr. McCUMBER. Now let us analyze section 315 in the light of the rule. Does that section in a single respect transgress or overleap the bounds of this simple rule?

In these supposed cases, Mr. President, the guide or standard to which we direct our investigation and for which we apply our ascertained necessary rate is equality of competition. We apply whatever rate is necessary to equalize the differences which the investigation discloses. The methods by which we seek to equalize these conditions may be more circuitous and the means of equalizing the advantages and the disadvantages in competition may be less direct and simple, but they reach to the same ultimate purpose—equality in competition.

Note first, Mr. President, that this section starts out with a declaration of congressional purpose. It declares—

> That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended—

And so forth. Now, what are the purposes and what is the policy "by this act intended"? Why, Mr. President, they are specified in the title itself:

> To provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States—

Those are the three principal purposes.

To encourage the industries of the United States, to what extent is the policy of protection to be carried? That question is answered in this very section 315. The whole section might be summed up in the single phrase "equal opportunity of competition in the American markets." That is the policy; that is its limit; that is just what the President is directed to bring about by the application of the necessary rate to equalize competitive conditions.

What must the President do under this section? He must first investigate the difference in conditions of competition in our own principal markets between a foreign article and a comparable domestic article. What next? He must then find whether the duties fixed in the act itself do or do not equalize said differences in conditions of competition. What next? If he finds such duties do not equalize said differences, he must then ascertain just what duties will equalize them. What next? He must then either change the classification or the form of duty or he must either increase or decrease the rate provided in this bill. He may do one or he may do all three of these things necessary to bring about the result sought by Congress, namely, equality in competition.

It may be here stated in passing that while the President is authorized to change the classification in form, or the rate, the change, after all, is to effect a decrease or an increase in the duty. He may put an article into one class which, by virtue of that classification, would impose a higher rate of duty upon it, or in another class which would impose a lower rate of duty. He could change a specific to an ad valorem, or an ad valorem to a specific; but in either instance all he does in the final result is to raise or lower the duty to be paid.

We seek here to establish a relation of equality in conditions of competition in our markets. That is the real objective, and it must not be subordinated to the means, the mere evidential facts by which it is to be established.

Two men may work out a mathematical problem, each in a different way, and arrive at the same accurate solution. So Congress may direct the President to bring about an accurate result by the application of one or two or three designated methods, or by a combination of any of them that will bring about the result.

The objection that there is a discretion vested in the President as to which one of these rules he will apply is not, to my mind, a valid objection. The real thing is the result to be attained. If we wish to arrive at the result number 9, it makes no difference whether we use the formula $3\times2+3$ or use the formula $4+5$. In either instance we arrive at 9, the result we want. The law directs the President to act, and the law may direct him to act only in one way or direct him to act in one of two or three different ways, whichever seems best to effectuate the purpose.

In most of these cases there must necessarily be left to the officer a degree of discretion. In every case where power is delegated discretion is given. We have innumerable cases where far greater discretionary powers were granted to an administrative officer in the determination of what things were necessary to meet the law's requirements than is given in this section.

Let me read a single provision of section 18 of the rivers and harbors act of 1899, providing for the removal or alteration of bridges which are unreasonable obstructions to navigation. I want Senators' attention to this, if they think we are delegating discretionary power greater than we ever heretofore delegated.

It reads as follows:

> That whenever the Secretary of War *shall have reason to believe* that any railroad or other bridge now constructed * * * over any of the navigable waterways of the United States is an *unreasonable obstruction to the free navigation of such waters* on account of insufficient height, width of span, or otherwise, or where there is difficulty in passing a draw opening or draw span of such bridge by crafts, steamboats, or other water craft, it shall be the duty of said Secretary * * * to give notice to the persons or corporations owning or controlling such bridge so to alter the same as to render navigation through or under it reasonably free, easy, and unobstructive, and in giving such notice he shall specify the changes that are required to be made, and shall prescribe in each case a reasonable time in which to make them.

Just notice that it is left solely to the Secretary to determine, first, what is an unreasonable obstruction. Notice, further, that it is left to the Secretary's judgment as to what alterations shall be made; and, third, that it is left to his judgment to determine what is a reasonable time in which to make the alterations. I can not see that we, by the provision in section 315, give a discretionary power comparable to what we delegated to the Secretary of War in this provision relating to obstructions of navigable streams.

In the case of the Union Bridge Co. *v.* United States (204 U. S. 364) the court sustained the constitutionality of this section, which was challenged on the ground that it was a delegation of legislative power, and the court said:

> It would seem too clear to admit of serious doubt that the statute under which the Secretary of War proceeded is in entire harmony with the principles announced in former cases. In no substantial and just sense does it confer upon that officer, as the head of an executive department, powers strictly legislative or judicial in their nature or which must be exclusively exercised by Congress or the courts.

Mr. President, in the case of the Mutual Film Corporation against the Industrial Commission of Ohio we find a case where there was granted to that commission a power enormously beyond the powers given in this case, from the standpoint of the delegation of authority, and I desire for a moment to consider it.

Appellant sought an injunction to restrain the enforcement of an act of the General Assembly of Ohio passed April 16, 1913 (103 Ohio Laws, 399), creating under the authority and superintendence of the Industrial Commission of Ohio a board of censors of motion-picture films. It was contended (1) that the statute in controversy imposed an unlawful burden on interstate commerce; (2) that it violated the freedom of speech and pub-

lication guaranteed by section 11, Article I, of the constitution of Ohio; and (3) it attempted to delegate *legislative* power to censors and to other boards to determine whether the statute offended in the particulars designated. Concretely the last objection and answer was stated by the court, and I will consider only the last proposition. This is what the court said.

Mr. SIMMONS. What court is the Senator about to quote?

Mr. McCUMBER. This is the Supreme Court of the United States. The court said:

> The objection to the statute is that it furnishes no standard of what is educational, moral, amusing, or harmless, and hence leaves decision to arbitrary judgment, whim, and caprice; or, aside from those extremes, leaving it to the different views which might be entertained of the effect of the pictures, permitting the "personal equation" to enter, resulting "in unjust discrimination against some propagandist film," while others might be approved without question. But the statute by its provisions guards against such variant judgments, and its terms, like other general terms, get precision from the *sense and experience of men* and become certain and useful guides in reasoning and conduct. *The exact specification of the instances of their application would be as impossible as the attempt would be futile.* Upon such sense and experience, therefore, the law properly relies.

Mr. Justice McKenna for the court said (p. 246) that cases have recognized the difficulty of exact separation of the powers of government and announced the principle that legislative power is completely exercised where the law "is perfect, final, and decisive in all of its parts, and the discretion given relates only to its execution."

In this matter the law is concise and definite, that the President, by the application of these rates, is to equalize the conditions of competition in the American markets.

The court held the moving picture censorship act of Ohio was not in violation of the Federal Constitution or the constitution of Ohio either as depriving the owners of moving pictures of their property without due process of law or as a burden on interstate commerce or as abridging freedom and liberty of speech and opinion *or as delegating legislative authority to administrative officers.*

The court further declared, as expressed in the syllabus, that while administration and legislation are distinct powers and the line that separates their exercise is not easily defined, the legislature *must declare the policy of the law and fix the legal principles to control in given cases*, and an administrative body may be clothed with power to ascertain facts and conditions to which such policy and principles apply.

So, Mr. President, in section 315 Congress has declared the policy of the law—equality in conditions of competition—and directs the President, after investigation, to fix rates to effectuate that policy.

Compare the vast discretionary powers that were sustained in the film case with the carefully limited and guarded powers prescribed in section 315, subdivisions (a), (b), and (c).

I want to insert here, without reading, a brief statement of the case of the Union Bridge Co. against the United States (204 U. S. 364). I ask that all of these may be printed in 8-point type.

There being no objection, the matter was ordered to be printed in the RECORD in 8-point type, as follows:

UNION BRIDGE CO. *v.* UNITED STATES (204 U. S. 364).

"The question was whether provisions in section 18 of the river and harbor act of 1899 (30 Stat. 1121, 1153) providing for the removal or alteration of bridges which are unreasonable obstructions to navigation, after the Secretary of War has, pursuant to the procedure prescribed in the act, ascertained that they are such obstructions, were constitutional.

"Mr. Justice Harlan, delivering the opinion of the court, reviewed at considerable length decisions of the court. These conclusions were reached:

"'Congress when enacting that navigation be freed from unreasonable obstructions arising from bridges which are of insufficient height or width of span or otherwise defective may, without violating the constitutional prohibition against delegation of legislative or judicial power, impose upon an executive officer the duty of ascertaining what particular cases come within the prescribed rule *and of proclaiming the precise things to be done as a remedy therefor.*

"'The provisions in section 18 of the river and harbor act of 1899 (30 Stat. 1121, 1153) providing for the removal or alteration of bridges which are unreasonable obstructions to navigation, after the Secretary of War has, pursuant to the procedure prescribed in the act, ascertained that they are such obstructions and proclaimed the necessary remedy therefor, are not unconstitutional either as a delegation of legislative or judicial power to an executive officer or as taking of property for public use without compensation.'

"A more extended statement of the facts and holdings of this case is had in previous notes." (Sec. 6.)

Mr. McCUMBER. I now call attention to the case of Field against Clark. The Finance Committee in its report states:

> These elastic tariff provisions are regarded by the committee as undoubtedly constitutional. (Field *v.* Clark, 143 U. S. 649.)

That statement is challenged by the junior Senator from Montana [Mr. WALSH]. He stated:

> It will be shown presently that Field *v.* Clark affords no justification whatever for the departure proposed; in fact, that if the argument of the opinion in that case is to be followed the provisions under review must be unhesitatingly condemned as violative of the Constitution.

A close analysis of the provisions of the act of 1890 and the therein delegated powers, as instructive of *exactly what was held constitutional* in that case, is convincing that it is an ample and complete justification of this amendment.

The provision, here pertinent, the constitutionality of which was before and discussed by the court in Field *v.* Clark was section 3 of the tariff act of October 1, 1890. The claim among others was that section 3 being unconstitutional rendered the whole act unconstitutional. Section 3 provided that—

> with a view to securing reciprocal trade with countries producing the following articles, and for this purpose—

Now, mark my words—

> * * * *whenever and so often as the President shall be satisfied* that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides * * * *imposes duties or other exactions upon the agricultural or other products of the United States,* which in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States *he may deem to be reciprocally unequal and unreasonable, he shall have* the power and it shall be his duty to suspend by proclamation to that effect the provisions of this act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, *for such time as he shall deem just*—

Thus leaving it entirely discretionary with him as to the time—

> and in such case and during such suspension duties shall be levied, collected, and paid upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country, as follows, namely.

The court, after reviewing many acts of Congress deemed by it similar to this and as a congressional precedent therefor, and upon the authority of the case of the brig *Aurora* (supra) and the announced and approved principles by the supreme courts of Ohio and Pennsylvania, supra, said:

> That Congress can not delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution. The act of October 1, 1890, in the particular under consideration is not inconsistent with that principle. It does not in any real sense invest the President with the power of legislation. For the purpose of securing reciprocal trade with countries and exporting sugar, molasses, coffee, tea, and hides Congress itself determined that the provisions of the act of October 1, 1890, permitting the free introduction of such articles should be suspended as to any country producing and exporting them that imposed exactions and duties on the agricultural and other products of the United States which the President deemed—*that is, which he found to be*—reciprocally *unequal* and *unreasonable* Congress itself prescribed in advance the duties to be levied, collected, and paid.

The only difference between that case and the pending question is that Congress here says, "You shall make the same investigation relating to inequality in competition, and instead of fixing certain rates you shall fix a rate of duty that will equalize that competition; and if the rates which we provide do not fix that difference equally, you may increase those rates not to exceed 50 per cent or decrease them not to exceed 50 per cent, or if you have to proceed under subdivision (b) of section 315, under that standard you may adopt the American standard of valuation and increase the rates or decrease the rates not to exceed 50 per cent."

Mr. POMERENE. Mr. President, will the Senator yield for another question?

The PRESIDENT pro tempore. Does the Senator from North Dakota yield to the Senator from Ohio?

Mr. McCUMBER. I yield.

Mr. POMERENE. The McKinley law fixed specifically these rates. Under the proposed amendment the President, assuming that he finds certain conditions to prevail, is given a discretionary power to raise those rates to any point within 50 per cent above the rates or to lower them to any point within 50 per cent below the rates. Is not that an exercise of legislative discretion?

Mr. McCUMBER. No; I say it is not when we say it must at all times be a rate which he has found to be necessary to equalize conditions of competition. His discretion only is to find the facts and apply the rate that will effectuate that purpose.

Mr. POMERENE. But the rate he fixes is wholly within his discretion.

Mr. McCUMBER. Oh, no; it is not. He must fix a rate that will equal the difference in competition. He can not say

that he will find that it will require a rate of 75 per cent upon the foregin valuation and then raise it only 40 per cent. If he finds that the rate necessary to equalize the conditions of competition requires 75 per cent, he must fix 75 per cent, provided he does not go beyond the 50 per cent additional limitation which we have imposed.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from North Dakota yield to the Senator from Montana?

Mr. McCUMBER. I yield.

Mr. WALSH of Montana. But any conclusion he arrives at is not subject to review anywhere?

Mr. McCUMBER. No, Mr. President; it is not.

Mr. WALSH of Montana. Is not the Senator from Ohio right, then, that the President can fix any rate he sees fit?

Mr. McCUMBER. He is right in saying that the President must fix the rate. We can not keep out of court the question as to whether or not the President has violated the law. That can be brought before the court in a proper proceeding.

Mr. WALSH of Montana. That is not the point.

Mr. McCUMBER. If an officer violates the provisions of law or perpetrates a fraud the matter can be reviewed in a court.

Mr. WALSH of Montana. I merely wanted to submit to the Senator not a willful violation of the law by the President, but simply a mistake by the President. He was perfectly honest about it, but he was quite wrong. He was intending to do the right thing, but he did not get it right.

Mr. McCUMBER. The evidence and the facts on which the President must investigate will all be available and the President must declare what rate is necessary, and when he has declared what rate is necessary he must apply that rate, not a higher rate, not a lower rate, but that particular rate.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Ohio?

Mr. McCUMBER. I yield.

Mr. POMERENE. Will the Senator permit me to ask him another question and put it in a different form for the purpose of eliciting his view? The Finance Committee have seen fit to place the 50 per cent limitation upon the President's power either in increasing or decreasing the rates. Let us assume, for the sake of the argument, that the committee had seen fit not to place these limitations upon that power, but to provide, as the committee do, that he should inquire into competitive conditions and then fix a rate which would meet the situation, without placing any limitation on it, does the Senator think from a constitutional standpoint that power could be sustained?

Mr. McCUMBER. I do.

Mr. POMERENE. Then it is placing in the President an unlimited power to exercise any discretion dependent wholly upon whether or not he finds that a rate is necessary to meet competitive conditions.

Mr. McCUMBER. If he finds that a rate is necessary to meet competitive conditions he is directed under the pending bill to fix the rate and to apply it. I presume there will not be very many cases in which the President will be called upon to act, but there might be. There might possibly be some in the chemical schedule, but probably in no other.

Mr. President, I should like to present and have printed in the RECORD, in eight-point type, a brief statement and analysis of the case of Buttfield against Stranahan and another one discussing the Hannibal-Bridge Co. against The United States.

The PRESIDING OFFICER. Is there objection to the request of the Senator from North Dakota? The Chair hears none and it is so ordered.

The matter referred to is as follows:

BUTTFIELD *v.* STRANAHAN (192 U. S. 470).

The next kindred decision of the Supreme Court was Buttfield *v.* Stranahan (192 U. S. 470), and particularly at page 496. The statute, the constitutionality of which was challenged in that case, was the act of March 2, 1897 (29 Stat. 604), entitled "An act to prevent the importation of impure and unwholesome tea." That act exercised the constitutional power "to regulate commerce with foreign nations" in two particulars: It provided for the establishment of a tea board to select certain samples of tea which when approved by the Secretary of the Treasury and made such and deposited at the various ports of entry should become exclusive standards for the admission of tea into this country. It was claimed that thereby the Secretary and not Congress established the test or rule as to what teas should be imported. The right to import tea into this country was by this act further made dependent upon the importation being deemed or judged by the designated customs examiners as up to these standards of samples selected and approved by the Secretary. Such as was so deemed or judged by the examiners was admitted, and such as was not was rejected and denied entry. Certain teas being rejected at the port of New York as not up to these standards, it was claimed that this act also vested in the officials of the customs a legislative power in that the finding of similarity to the samples, a condition precedent to entry was vested in them, and the constitutionality thereof was accordingly challenged. Denying this claim the court, at page 496 of said volume, said:

"The claim that the statute commits to the arbitrary discretion of the Secretary of the Treasury the determination of what teas may be imported, and therefore in effect vests that official with legislative power, is without merit. We are of the opinion that the statute, when properly construed, as said by the Circuit Court of Appeals, but *expresses the purpose* to exclude the lowest grades of tea, whether demonstrably of inferior purity, or unfit for consumption, or presumably so because of their inferior quality. *This, in effect, was the fixing of a primary standard, and devolved upon the Secretary of the Treasury the mere executive duty to effectuate the legislative policy declared in the statute.* The case is within the principle of Field *v.* Clark (143 U. S. 649), where it was decided that the third section of the tariff act of October 1, 1890, was not repugnant to the Constitution as conferring legislative and treaty-making power on the President because it authorized him to suspend the provisions of the act relating to the free introduction of sugar, molasses, coffee, tea, and hides. We may say of the legislation in this case, as was said of the legislation considered in Field *v.* Clark, that it does not, in any real sense, invest administrative officials with the power of legislation. *Congress legislated on the subject as far as was reasonably practicable, and from the necessities of the case was compelled to leave to executive officials the duty of bringing about the result pointed out by the statute.* To deny the power of Congress to delegate such a duty would, in effect, amount but to declaring that the plenary power vested in Congress to regulate foreign commerce could not be efficaciously exerted.

"Whether or not the Secretary of the Treasury failed to carry into effect the expressed purpose of Congress and established standards which operated to exclude teas which would have been entitled to admission had proper standards been adopted is a question we are not called upon to consider. *The sufficiency of the standards adopted by the Secretary of the Treasury was committed to his judgment*, to be honestly exercised, and if that were important there is no assertion here of bad faith or malice on the part of that officer in fixing the standards, or on the part of the defendant in the performance of the duties resting on him."

The court further said:

"The provisions in respect to the fixing of standards and the examination of samples by Government experts was for the purpose of determining *whether the conditions existed which conferred the right to import*, and they therefore in no just sense concerned a taking of property. This latter question was intended by Congress to be finally settled not by a judicial proceeding but by the action of the agents of the Government, upon whom power on the subject was conferred."

It will be noted that the sufficiency of these samples which were to determine the right of entry of tea into this country was a matter committed to the judgment or selection of the Secretary of the Treasury. It will be further noted that the court predicated its decision upon the principle that Congress *having in the act expressed its purpose*, it was within the constitutional powers of Congress to delegate the *execution of that purpose* to the Secretary of the Treasury. The act, as said by the court, "devolved on the Secretary of the Treasury the mere executive duty *to effectuate the legislative policy declared in the statute*," even though that executive performance involved a choice as to means to that end.

The fact of similarity of the imported teas to these standard samples as to "*purity*," "*quality*," and "*fitness* for consumption" was made condition precedent to admission into this country, and the determination thereof vested in the examiners. Congress here legislated in so far as practicable and delegated to the Secretary the power to establish standards and the examiners the power to find the facts as to similarity thereto necessary to the execution of the law. These officials do not thereby legislate, but they execute the legislation had by Congress by exercising their judgment or decision in the selection of samples and determining similarity, although that selection fixed the duty in the particular case.

Likewise it may be said of section 315, Congress has clearly therein set forth its legislative "purpose." That "purpose"

is made dependent upon and is controlled by varying market values. Wherefore, Congress has in so far as practically possible, by prescribing the facts and conditions of trade in our markets which shall admeasure these duties, prescribed what the duties shall be, and empowered the President to effectuate the congressional purpose to equalize by these duties the selling prices in our markets of similar foreign and domestic goods by ascertaining these facts and their equivalent duties and so proclaiming. This is not legislating but performing acts in execution of legislation.

HANNIBAL BRIDGE CO. *v.* UNITED STATES (221 U. S. 194).

In Hannibal Bridge Co. *v.* United States (221 U. S. 194) the court was again called upon to determine the validity of section 18 of the river and harbor act of 1899.

The statute proceeded under in this case was the same as in Union Bridge Co.'s case, *supra*. After due proceedings the Secretary of War found and advised the Hannibal Bridge Co., the Wabash Railroad Co., and the Missouri Pacific Railway Co. that the bridge over the Mississippi River at Hannibal, Mo., owned or controlled by said companies, was "an unreasonable obstruction to free navigation" or commerce, *and ordered certain specified changes*. The companies refused to comply with the Secretary's order, were duly proceeded against by criminal information, and convicted. On appeal they questioned the constitutionality of the act as an unauthorized delegation of congressional power. At page 205 the court, in denying this contention, said:

"The assignments of error are very numerous. But we feel constrained to say that no one of them causes a serious doubt as to the correctness of the judgment sought to be reviewed. This court has heretofore held, upon full consideration, that Congress had full authority under the Constitution to enact section 18 of the act of March 3, 1899 (ch. 425, 30 Stat. 1153), and that the delegation to the Secretary of War of the authority specified in that section was not a departure from the established constitutional rule that forbids the delegation of strictly legislative or judicial powers to an executive officer of the Government. *All that the act did was to impose upon the Secretary the duty of attending to such details as were necessary in order to carry out the declared policy of the Government* as to the free and unobstructed navigation of those waters of the United States over which Congress in virtue of its power to regulate commerce had paramount control * * *." (Union Bridge Co. *v.* United States, 204 U. S. 364; Monongahela Bridge Co. *v.* United States, 216 U. S. 177; Field *v.* Clark, 143 U. S. 649; Buttfield *v.* Stranahan, 192 U. S. 470.)

Obviously there is not an entire lack of parity in results between a rate of duty and a bridge as an obstruction to commerce. The constitutional power as to the regulation of commerce applies equally to each. The full force and effect of the Union Bridge Co. and Hannibal Bridge Co. decisions, as here applicable, can best be had by bearing in mind that full and complete authority was therein vested in the Secretary to determine and give notice of exactly what would be required to effect free navigation or an unobstructed commerce. Congress having declared the policy of unobstructed navigable rivers by bridges it was competent, the court said, *to delegate to the Secretary full power to determine what was such an obstruction and what remedy should be enforced.* So Congress having declared the policy of equalizing different competitive conditions in our markets may well on that authority authorize the President to determine those differences *and their remedy*. By section 315, however, Congress not only prescribes what the President shall determine to inaugurate action, to wit, differences in competitive conditions, but also prescribes precisely the remedy he shall apply, to wit, a duty equal to those differences or a change in classification which fixes that duty.

It will be noted that in all of the foregoing cases the principle early established in the brig *Aurora* cases and in Wayman against Southard, *supra*, that Congress, having by *general* provisions *declared its policy*, may vest those who are to act under such general provisions with full powers to put that policy into effect as and when prescribed by Congress.

Applying these principles to the proposed provisions, legislative power is exercised when Congress declares that a prescribed duty—that is, one equal to the net differences between two named trade conditions—shall be levied and collected. What the President is required to do is simply in execution of this act of Congress. His duties are neither judicial nor legislative, but purely administrative. He is vested with no discretion, but commanded to act upon certain prescribed conditions or a prescribed state of things to be ascertained and made known in the manner prescribed by Congress.

Mr. McCUMBER. I desire also to have inserted in the RECORD in eight-point type a section of the revenue act of 1916, Thirty-ninth Statutes at Large, with a very short statement and analysis of it.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

THE REVENUE ACT OF 1916.
(39 Stat. L. 799.)

A precisely similar provision in principle is contained in section 805 of the "Revenue act of 1915" (39 Stat. 799), reading:

"SEC. 805. That whenever during the existence of a war in which the United States is not engaged the President *shall be satisfied that there is reasonable ground to believe* that under the laws, regulations, or practices of any country, colony, or dependency, contrary to the law and practice of nations, the importation into their own or any other country, dependency, or colony of any article the product of the soil or industry of the United States and not injurious to health or morals *is prevented or restricted* the President is authorized and empowered to *prohibit or restrict* during the period such prohibition or restriction is in force *the importation into the United States of similar or other articles*, products of such country, dependency, or colony *as in his opinion the public interest may require;* and in such case he shall make proclamation stating the article or articles which are prohibited from importation into the United States; and any person or persons who shall import, or attempt or conspire to import, or be concerned in importing such article or articles into the United States contrary to the prohibition in such proclamation shall be liable to a fine of not less than $2,000 nor more than $50,000, or to imprisonment not to exceed two years, or both, in the discretion of the court. *The President may change, modify, revoke, or renew such proclamation in his discretion.*"

The President therein is required to examine "the laws, regulations, or practices" of foreign nations and their effect upon our commerce, and if thereby "be satisfied" that exportations thereto from this country are "prevented or restricted" he is authorized and empowered to "prohibit or restrict" the importation of like "or other * * * products" into this country "as in his opinion the public interest may require." That paragraph is existing law and is precisely the language of the active provisions of paragraph 317, and what is here contended is too indefinite a definition or delegation of the authority and power of the President under the Constitution.

This section, 805, in legal concept is identical with several other similar sections of the unfair-competition provisions of the revenue act of 1916, Title VIII, of which it is a part. (39 Stat. L. 799.) In legal concept it is in exact accord with the active provisions of amendments 315, 316, and 317 of the pending bill, which have been criticized as unconstitutional by reason of the insufficiency of language therein made determinative of the President's action. The congressional debates show that this provision was originally offered by the late Senator James of Kentucky; that it was stated on the floor of the Senate that it received the approval of the Department of State and was prepared by that department. It distinctly received the approval of Senator UNDERWOOD. See CONGRESSIONAL RECORD, volume 53, part 13, Sixty-fourth Congress, first session, and at page 13485, wherein the following colloquy occurred:

"Mr. SIMMONS. My understanding, from the statement made by the Senator from Kentucky, was that the amendment meets the approval of the department.

"Mr. UNDERWOOD. Well, I want to say to the Senator from North Carolina in reference to this question that I am not opposed to the amendment offered by the Senator from Kentucky; as a matter of fact, I think it is an amendment that will serve a great many people in the United States. It is an amendment that will protect a great agricultural product in the United States against discrimination, and I am glad that the Secretary of State has taken the initial step toward preparing the amendment and submitting it. I intend to support the amendment. I think it will be of great value to the agriculture of the United States in protecting shipments of tobacco into neutral countries against the discriminations that are now being made against it by the warring countries of Europe. I understand that the amendment relates not only to tobacco but to many other products of the United States.

"Mr. SMITH of Georgia. It applies to all of them.

"Mr. UNDERWOOD. I am informed that it is broad enough to apply to all. It is a very meritorious amendment."

The vote upon the bill which included these provisions, and which therefore approved their constitutionality, is found in the same volume at page 13873. The approval of Senator WALSH is noted at page 13872, where his colleague, Senator

MYERS, made the statement, "My colleague [Mr. WALSH] is necessarily absent. He is paired with the Senator from Rhode Island [Mr. LIPPITT]. If my colleague were present and at liberty to vote, he would vote 'yea.'"

It can not well be said that this statute was a war measure in the sense that it was enacted under the constitutional warrant upon such occasions, when by the very terms thereof its application is made to apply "whenever during the existence of a war in which the United States is *not* engaged."

Mr. McCUMBER. I have here rather a lengthy brief or memorandum covering the whole subject. The brief for the most part has been prepared by Judge De Vries of the Customs Court of Appeals. It is rather full and it covers every possible question. While I have to some extent had a hand in the making of the brief, yet for the most part it is his language and his construction. I ask that it may be printed in the RECORD in 8-point type. It is so comprehensive that I think it would be useful to Senators who desire to investigate the whole subject.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. McCUMBER. I wish also to ask that it may be italicized as indicated in the brief itself.

The PRESIDENT pro tempore. Without objection, it is ordered as requested by the Senator from North Dakota.

The brief is as follows:

MEMORANDUM AS TO THE CONSTITUTIONALITY OF THE PROVISIONS OF H. R. 7456, AS REPORTED WITH AMENDMENTS TO THE SENATE APRIL 10, 1922, DIRECTING THE PRESIDENT TO ASCERTAIN AND PROCLAIM CERTAIN DEFINED DUTIES THEREIN LEVIED BY CONGRESS IN TERMS OF FACTS OR A STATE OF THINGS MADE BY THOSE PROVISIONS CONDITIONS PRECEDENT TO AND DETERMINATIVE OF THE COLLECTION OF THOSE DUTIES.

These provisions are typified by section 315, page 272, Title III, of the bill, which for convenience may be taken as the subject of discussion of the principles involved.

A close examination of this paragraph, in the light of the able and most illuminating debate had thereupon in the Senate, will disclose that much of the criticism thereof is answered by the terms themselves of the paragraph. We quote as exemplar of all section 315 (a), as follows:

"SEC. 315. (a) That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended, whenever the President, upon investigation of the differences in conditions of competition in trade *in the markets of the United States* of articles wholly or in part the growth or product of the United States and of like or similar articles wholly or in part the growth or product of competing foreign countries, shall find *it thereby shown* that the duties fixed in this act do not equalize the said differences in conditions of competition in trade he shall, by such investigation, ascertain said differences and determine and proclaim *the changes* in classifications *or* forms of duty *or* increases *or* decreases in any rate of duty provided in this act *shown by* said ascertained differences in conditions of competition in trade necessary to equalize the same in the markets of the United States; that 30 days after the date of such proclamation or proclamations such changes in classification or in forms of duty shall take effect and such increased or decreased duties shall be levied, collected, and paid on such merchandise when imported directly or otherwise from the country of origin into the United States: *Provided*, That until further provided by law the total increase or decrease of such rates of duty shall not exceed 50 per cent of the rates specified in this act or in any amendatory act."

Obviously the facts or state of things herein authorized to be ascertained and proclaimed by the President are:

(1) A difference in competitive trade conditions in our markets between like or similar foreign and domestic articles.

(2) That the particular duty applicable thereto prescribed by the act does not equalize such difference.

(3) The changed "classification" or changed "form," or "increase" or "decrease" of duty, any or all of such *shown by* the aforesaid ascertained facts or state of things *necessary* to equalize this ascertained difference, under the terms of the act.

In no particular is the President by that language invested with the slightest discretion as to any of the commanded performances.

He can act upon and proclaim only those "differences in conditions of competition" "in the markets of the United States," and the duty "shown by" such differences necessary to equalize the same. These ascertained "facts" or "state of things" "shown by" these trade conditions are by Congress made the initiative and the full control of the President's action and the measure of the proclaimed duty.

Likewise, he can not elect to proclaim a change of a rate or classification in his discretion. The language of the provision authorizes and directs that he shall proclaim *that* rate or *that* classification only, or both, "*shown by*" the ascertained "differences" "*necessary* to equalize the same in the markets of the United States."

That is the legal formula employed, and, under all the decisions and the able arguments in the Senate, that formula *is*, in legal concept, constitutional. If the words or phrases employed render it doubtful whether or not they execute that formula, such becomes a matter of correction, but absolutely not an evidence of inability of constitutional enactment.

For example, should the term "conditions of competition in trade" be deemed indefinite, specification of these conditions, such as "wholesale market value" or "cost of production," could, in accordance with the political purpose, be substituted therefor or be provided by separate limiting or controlling provision.

In abiding confidence, it is submitted that the foregoing formula is in scrupulous observance of the cardinal rule governing such cases, so well announced in Locke's Appeal (72 Pa. St. 491, 498) and applied and quoted in almost every decision and textbook subsequently speaking to the subject, particularly in Field *v.* Clark (143 U. S. 649) in construing and applying the same in a tax levy case, as follows:

"The legislature can not delegate its power to make a law, but *it can make a law to delegate a power to determine* some *fact* or *state of things* upon which *the law makes*, or intends to make, its own action *depend*."

By section 315 the President fixes no rate of nor lays any duty. He ascertains and proclaims "*facts*" "*or a state of things*" only, and those "facts" or that "state of things" only which Congress by this paragraph prescribes and directs him to ascertain and the equivalent duty mathematically therefrom calculated and proclaimed. Whereupon *Congress* by this act and not the President fixes and levies the duty *so shown by these prescribed "facts"* or "*state of things*" necessary to equalize said market conditions.

And so by the paragraph it is provided that if the ascertained *facts of difference* show a change of classification or change of forms of duty—ad valorem to specific or vice versa—from those prescribed in the act, *necessary* to equalize the differences in trade conditions the President shall, upon such ascertainment, so proclaim, and thereupon *Congress by this act*—and not the President—levies the *so shown* and proclaimed duties or provides the so shown classification.

In other words, having prescribed certain rates of duty predicated upon market values, for the purpose of revenue as well as regulating the commerce of the United States with foreign countries, in view of the uncertain conditions of the world's markets and the inevitable and swift changes in market values and the necessarily tardy remedy by congressional action, in order to more securely effect its intended purpose to equalize in our markets foreign and domestic market conditions, by section 315, Title III, Congress levies additional or equalizing duties to the extent it shall be shown by the differences in competitive market values in the United States necessary to equalize the conditions of foreign competition in our markets, and directs the President to ascertain and proclaim the duties *these differences in market conditions show* to be so necessary.

The extent which the Congress wishes to invest the President with such powers upon such findings—that is to say, whether to raise only or to raise and lower duties, and the limitations to be placed upon the same in either case—is, of course, a question of policy for the Congress. The legal formula of investment of this power, however, is the same in either case, and, as in this section vested, accords with many similar statutes of Congress approved by the Supreme Court since the foundation of our Government.

Indeed, every tariff act levying ad valorem duties or duties wholly or in part such accords with this section. All and every such duty is made dependent upon the finding of a fact by some official, usually the appraiser, vested by Congress with that power, of a defined market value of imported goods.

The constitutional warrant, section 8, Article I, vesting in Congress the power to levy duties, reads: "To *lay* and collect taxes, duties, imposts," and so forth.

It should be ever borne in mind in this inquiry that the constitutional authority of the Congress is not "to lay and collect" a *rate* of duty, but "to lay and collect * * * *duties*, imposts," and so forth. So that the Constitution throws around the *rate* of duty by Congress laid nothing more sacred or mystic than the *basis* of that duty by Congress provided. Each is *equally* a necessary factor of the levy and its calculation. Both are equally necessary integral parts of the exercise by Congress

of its ad valorem import duty levying functions, and the one as well as and equally with the other can, within the Constitution, be legislated. Yet since the foundation of the Government and in every tariff act Congress has laid ad valorem duties and admeasured them by providing as a necessary and integral part of that levy a designated "market value" to be ascertained by a denominated officer. Latterly, and in like but more definite manner, Congress laid these duties and admeasured them by the "wholesale market value in the principal markets of the country of exportation" and delegated to the appraiser the power to find and adopt that value. The finding of what market was the "principal" market of the country of exportation and what evidence constituted "market value" as defined by Congress in that market were by Congress expressly delegated to the appraiser, and his ascertainment and finding thereof has admeasured and consequently fixed, in conjunction with the rate of the statute, every ad valorem duty levied since the foundation of the Government. Moreover, this ascertainment and finding of the appraiser was by Congress made final and conclusive against the taxpayer and the world and not reviewable by any court. See Auffmordt *v.* Hedden (137 U. S. 310, 324), Passavant *v.* United States (148 U. S. 214, 220), Stairs et al. *v.* Peaslee (59 U. S. 521).

Thus in Passavant *v.* United States (148 U. S. 220) the Supreme Court said:

"In the tariff legislation of the Government, Congress has generally adopted means and methods for a speedy and equitable adjustment of the question as to market value of imported articles, without allowing an appeal to the courts to review the decision reached. If dissatisfied importers, after exhausting the remedies provided by the statute to ascertain and determine the fair dutiable value of imported merchandise, could apply to the courts to have a review of that subject, the prompt and regular collection of the Government's revenues would be seriously obstructed and interfered with. The statute authorized no such proceeding, and the circuit court can exercise no such jurisdiction."

In Hilton *v.* Merritt (110 U. S. 97, 107) the court said:

"The plaintiffs in error contended further that a denial of the right to bring an action at law to recover duties paid under an alleged excessive valuation of dutiable merchandise is depriving the importer of his property without due process of law, and is therefore forbidden by the Constitution of the United States. The cases of Murray's Lessee *v.* Hoboken Land & Improvement Co. (18 How. 272) and Springer *v.* United States (102 U. S. 586) are conclusive on this point against the plaintiff in error."

MUSER *v.* MAGONE (155 U. S. 240).

If it is competent for Congress, proceeding under the Constitution, to levy a duty, to enact in integral and necessary part that it shall be laid upon a defined "market value" and then vest in the appraiser the power to ascertain and fix that "market value," why is it not equally competent for Congress, so proceeding, to enact that a duty shall be the difference between two defined market values, as in effect is provided in section 315, and then vest in the President the power to ascertain those market values and the differences between them and proclaim that difference and the equivalent rate of duty?

It is respectfully submitted that if the legal concept of section 315 is unconstitutional, every ad valorem duty now levied is, and all such levied since the foundation of the Government were, in violation of the Constitution.

En passant, the context of the constitutional investment in Congress "to lay and *collect* * * * duties," etc., vesting alike in Congress the power to levy and the power to "collect" duties, coordinating and surrounding each of these vested powers with the same authorization and limitations, in view of the present discussion, prompts the inquiry, whether or not it will be insisted that Congress alone is empowered to "collect" duties and must therefore stand at the customhouse and "collect" all duties in constitutional observance of its sworn duty? Or does the conjoint employment of the word "collect" and its necessary practical performance throw some light upon the intention of the framers of the Constitution in their adoption of the associate word "lay"?

But the constitutional warrant hereinbefore quoted for this legislation, which is that usually considered, is not the entire constitutional grant of power to Congress supporting the amendment. In fact, it omits the most pertinent part sustaining the amendment—subparagraph 18 of said Article I—which expressly relates to and grants Congress a general, unlimited power of legislation to put into execution its constitutional powers of "levying duties" and "regulating foreign commerce," and its thereto related laws. The whole grant of the pertinent powers to Congress reads:

"ARTICLE I, SEC. 8. The Congress shall have power to lay and collect taxes, duties, * * *. To regulate commerce with foreign nations * * *." And, subparagraph 18, "*To make all laws which shall be necessary and proper for carrying into execution the foregoing powers.* * * *."

While Congress alone, therefore, is authorized by the Constitution to lay and collect duties and regulate commerce, the Constitution expressly authorized the Congress to make whatever laws it may choose (except only those expressly inhibited by the Constitution) in execution of and to carry into effect these vested powers.

What authority is to finally determine which of such acts by Congress are "necessary" and proper has long since been held by the Supreme Court to be Congress itself, not reviewable by any court.

Thus in McCulloch *v.* Maryland (4 Wheaton, 316–421, 422) the Supreme Court of the United States, speaking through Chief Justice Marshall, construing these provisions of the Constitution, said:

"We admit, as all must admit, that the powers of the Government are limited and that its limits are not to be transcended. But we think the sound construction of the Constitution must allow to the National Legislature *that discretion*, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it, in the manner most beneficial to the people.

* * * * * * *

"But were its necessity less apparent, none can deny its being an appropriate measure; and if it is, *the decree of its necessity*, as has been very justly observed, is to be discussed in another place. Should Congress in the execution of its powers adopt measures which are *prohibited by the Constitution*, or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects *not intrusted to the Government*, it would become the painful duty of this tribunal, should a case requiring such a decision come before it, to say that such an act was not the law of the land. But where the law is *not prohibited*, and is really calculated to effect any of the objects intrusted to the Government, to undertake here to inquire into the *decree of its necessity*, would be to pass the line which circumscribes the judicial department, and to tread on legislative ground. This court disclaims all pretensions to such a power."

A very recent decision of the Supreme Court to the same effect is Smith *v.* Kansas City Title Co. (255 U. S. 180, 208). The constitutional power of Congress to create Federal land banks and joint-stock land banks as banks for national purposes was therein challenged. The court in part said:

"Since the decision of the great cases of McCulloch *v.* Maryland (4 Wheat. 316) and Osborn *v.* Bank (9 Wheat. 738) it is no longer an open question that *Congress may establish banks for national purposes*, only a small part of the capital of which is held by the Government and a majority of the ownership in which is represented by shares of capital stock privately owned and held, the principal business of such banks being private banking conducted with the usual methods of such business. *While the express power to create a bank or incorporate one is not found in the Constitution*, the court, speaking by Chief Justice Marshall, in McCulloch against Maryland, found authority so to do in the broad general powers conferred by the Constitution upon the Congress *to levy and collect taxes*, to borrow money, *to regulate commerce*, to pay the public debts, to declare and conduct war, to raise and support armies, and to provide and maintain a Navy, etc. Congress, it was held, had authority to use *such means as were deemed appropriate to exercise the great powers of the Government by virtue of Article I, section 8, clause 18, of the Constitution, granting to Congress the right to make all laws necessary and proper* to make the grant effectual. In First National Bank *v.* Union Trust Co. (244 U. S. 416, 419), the Chief Justice, speaking for the court, after reviewing McCulloch *v.* Maryland and Osborn *v.* Bank, and considering the power given to Congress to pass laws to make the specific powers granted effectual, said:

"'In terms it was pointed out that this broad authority was not stereotyped as of any particular time but endured, thus furnishing a perpetual and living sanction to the legislative authority within the limits of a just discretion *enabling it to take into consideration the changing wants and demands of society* and to adopt provisions appropriate to meet *every* situation which it was deemed required to be provided for.'

"That the formation of the bank was required, in the judgment of the Congress, for the fiscal operations of the Government was a principal consideration upon which Chief Justice Marshall rested the authority to create the bank; and for that purpose, being an appropriate measure *in the judgment of the Congress*, it was held *not to be within the authority of the court to question the conclusion reached* by the legislative branch of the Government."

When we bear in mind the remote connection between the legislative functions "to lay and collect taxes," "to borrow money," "to regulate commerce," and so forth, as the powers recited by the court as aided by the creation of national banks, the propriety of this amendment in aid of the power to lay and collect duties can not be questioned.

The here particularly important point, however, is that the exercise of judgment and power by Congress under said subsection 18 of section 8, Article I of the Constitution, in aid and regulation of its power to lay duties and regulate commerce, previously or by the instant act exercised, is wholly within the discretion of Congress and not reviewable by any court for impolicy or abuse. State of Pennsylvania *v.* Wheeling & Belmont Bridge Co. (59 U. S.; 18 How. 421, 439).

While it is well settled that Congress can not under the Constitution, unaided by special constitutional warrant, delegate its legislative power, it is equally well settled that the enactment of a conditional statute to become effective or be suspended upon the ascertainment or determination of a prescribed fact or state of things, condition, or group of conditions, controlling and admeasuring the enforcement of the statute and the time and extent of its application by some administrative or other official, as prescribed by the statute, is not within that constitutional inhibition.

The foregoing analysis clearly shows that this amendment is complete in and of itself, *delegating no power whatsoever to add to its terms*, provisions, or requirements, but delegating solely and only the power to ascertain therein prescribed "facts" or "state of things," upon which the statute by its own terms operates in carrying out the legislative purpose, to wit, market values, differences in market values, and duties equivalent to such values and differences, under the terms of this act.

Perhaps no question of greater magnitude or of more far-reaching consequence in our system of government has ever been presented to our Supreme Court than the principle supporting such legislation. Only upon the extended development of our national enterprises did the importance of the issue become apparent and the question of whether or not our Constitution was adequate to our national development become dominant. Accordingly no question before the Supreme Court has received more extended or thorough consideration. Its more extended consideration and development was initiated in the great case of Field *v.* Clark (143 U. S. 649). This was followed by Buttfield *v.* Stranahan (192 U. S. 470), particularly at page 496, decided in 1904; Union Bridge Co. *v.* United States (204 U. S. 364), particularly at pages 385 and 386, decided in 1907; Monongahela Bridge Co. *v.* United States (216 U. S. 177), particularly at page 192, decided in 1910, and in United States *v.* Grimaud (220 U. S. 506), particularly at page 521, decided in 1911.

In those five cases the Supreme Court so thoroughly considered, amplified, and decided the question that in subsequent decisions the doctrine therein announced has been merely referred to as *stare decisis* as therein determined. (See Hannibal Bridge Co. *v.* United States, 221 U. S. 194, 205; Intermountain Rate cases, 234 U. S. 476, 486; Mutual Film Corporation *v.* Ohio Industrial Commission, 236 U. S. 230, 246; First National Bank *v.* Union Trust Co., 244 U. S. 416, 427; Selective Draft Law cases, 245 U. S. 366, 389; and Knickerbocker Ice Co. *v.* Stewart, 253 U. S. 149, 164.)

The case of Field *v.* Clark may well be considered the foundation case of this doctrine. The opinion was by Mr. Justice Harlan. While it refers to the original case of the Brig *Aurora v.* United States (7 Cranch., 382), wherein for the first time this principle was announced by the Supreme Court of the United States, and the case of Wayman *v.* Southard (10 Wheaton, 1, 41), opinion by Chief Justice Marshall announcing the same doctrine, the decision in Field *v.* Clark is more particularly predicated upon the long-continued sanction given by Congress to precedents of legislation similar to that then the subject of consideration by the court.

The case arose upon an importation by Marshall Field & Co. at the port of Chicago of woolen dress goods and other materials. That firm protested the duties levied under the act of October 1, 1890, claiming the act unconstitutional.

The provision here pertinent, the constitutionality of which was before and discussed by the court in Field *v.* Clark, was section 3 of the tariff act of October 1, 1890. The claim, among others, was that section 3 being so, rendered the whole act unconstitutional. Section 3 provided that "with a view to securing reciprocal trade with countries producing the following articles and for this purpose, * * * *whenever and so often as the President shall be satisfied* that the Government of any country producing and exporting sugars, molasses, coffee, tea, and hides, * * * *imposes duties or other exactions upon the agricultural or other products of the United States*, which in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States *he may deem to be reciprocally unequal and unreasonable*, he shall have the power and it shall be his duty to suspend by proclamation to that effect the provisions of this act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, *for such time as he shall deem just*, and in such case and during such suspension duties shall be levied, collected, and paid upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country as follows, namely:" (Here follows an enumeration of such articles and the prescribed duties.)

The court, after reviewing many acts of Congress deemed by it similar to this and as a congressional precedent therefor, and upon the authority of the case of the brig *Aurora* (supra) and the announced and approved principles by the supreme courts of Ohio and Pennsylvania, *supra*, said:

"That Congress can not delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution. The act of October 1, 1890, in the particular under consideration, is not inconsistent with that principle. It does not, in any real sense, invest the President with the power of legislation. For the purpose of securing reciprocal trade with countries and exporting sugar, molasses, coffee, tea, and hides, Congress itself determined that the provisions of the act of October 1, 1890, permitting the free introduction of such articles should be suspended as to any country producing and exporting them, that imposed exactions and duties on the agricultural and other products of the United States which the President *deemed*, that is, *which he found to be*, reciprocally *unequal* and *unreasonable*, Congress itself prescribed, in advance, the duties to be levied, collected, and paid, on sugar, molasses, coffee, tea, or hides produced by or exported from such designated country while the suspension lasted. Nothing involving the expediency or the just operation of such legislation was left to the determination of the President. The words '*he may deem*' in the third section, *of course, implied* that the President would examine the commercial regulations of other countries producing and exporting sugar, molasses, coffee, tea, and hides, *and form a judgment as to whether they were reciprocally equal and reasonable*, or the contrary, *in their effect upon American products. But when he ascertained the fact* that duties and exactions, reciprocally unequal and unreasonable, were imposed upon the agricultural or other products of the United States by a country producing and exporting sugar, molasses, coffee, tea, or hides, *it became his duty to issue a proclamation* declaring the suspension as to that country, which Congress had determined should occur. He had no discretion in the premises except in respect to the duration of the suspension so ordered. But that related only to the *enforcement* of the policy established by Congress. *As the suspension was absolutely required when the President ascertained the existence of a particular fact, it can not be said that in ascertaining that fact and in issuing his proclamation, in obedience to the legislative will, he exercised the function of making laws.* Legislative power was exercised when Congress declared that the suspension should take effect upon a named contingency. *What the President was required to do was simply in execution of the act of Congress. It was not the making of law. He was the mere agent of the law-making department to ascertain and declare the event upon which its expressed will was to take effect.* It was a part of the law itself as it left the hands of Congress that the provisions, full and complete in themselves, permitting the free introduction of sugar, molasses, coffee, tea, and hides from particular countries should be suspended in a given contingency and that in case of such suspensions certain duties should be imposed."

"The true distinction," as Judge Ranney, speaking for the Supreme Court of Ohio, has well said, "is between the delegation of power *to make the law*, which necessarily involves a discretion as to what it shall be, and *conferring authority or discretion as to its execution* to be exercised under and in

pursuance of the law. The first can not be done; to the latter no valid objection can be made." (Cincinnati, Wilmington, etc., Railroad *v.* Commissioners, 1 Ohio Stat. 88.) In Moore *v.* City of Reading (21 Pa. Stat. 188, 202) the language of the court was: "Half the statutes on our books are in the alternative, depending on the discretion of some person or persons to whom is confided the duty of determining whether the proper occasion exists for executing them. But it can not be said that the exercise of such discretion is the making of the law." So, in Locke's appeal (72 Pa. Stat. 491, 498): "To assert that a law is less than a law because it is made to depend *on a future event or act* is to rob the legislature of the power of acting wisely for the public welfare *whenever a law is passed relating to a state of affairs not yet developed or to things future and impossible to fully know.*" The proper distinction the court said was this: "The legislature can not delegate its power to make a law, *but it can make a law to delegate a power to determine some fact or state of things upon which the law makes, or intends to make, its own action depend.* To deny this would be to stop the wheels of government. There are many things upon which wise and useful legislation must depend which can not be known to the lawmaking power and must therefore be a subject of inquiry and determination outside of the halls of legislation."

While it has been stated by the distinguished Senator from Montana [Mr. WALSH] that the case of Field against Clark is not a "full justification" of this amendment, it is respectfully submitted that when its full import and all therein declared are weighed, it completely supports the amendment *in doctrine* announced, and in the things decided in many respects is squarely authoritative.

Viewing that decision with reference to what delegation *of authority* was in fact necessarily upheld, most important and here pertinent is that the facts, conditions of trade, or "state of things," by comparison of which the President was to determine "reciprocal equality and reasonableness," were the *effects upon our trade of the tariff laws* not only of the United States but of foreign countries. He was to investigate and determine the effect of foreign tariffs upon the exports of our *agricultural and other products* to foreign countries and the effects of our tariffs—free entry—upon imports of certain foreign articles from such countries, *balance and admeasure these resulting trade conditions one with the other*, and, if he "deemed" the relative trade conditions so resulting "reciprocally unequal and unreasonable," so proclaim, suspend our tariff laws, and put into effect certain rates of duty by Congress prescribed, which in turn he might also suspend "for such time as he may deem just."

The true import of section 3 of the tariff act of 1890 in practical operation could only be that the President was to ascertain *the effect in the markets of foreign countries* of the rates of duty established by those countries upon the selling prices of our agricultural and other products, of course, necessarily, as compared with the selling prices of their products competing in said markets, ascertain the effects upon or advantages to the trade of those countries *in our markets* by reason of the free entry permitted by our tariff laws of certain products of such countries, in comparison with our like products, compare and admeasure these ascertained respective *conditions of trade* one with the other, and if thereby he *deemed* these conditions of trade reciprocally unequal and unreasonable, suspend the free-entry provision of our tariff and proclaim in effect in lieu thereof certain rates prescribed in the act. The President was by that act empowered to suspend free entry and proclaim those prescribed rates in effect "whenever and so often as he shall be satisfied" and continue them in effect "for such a time as he shall deem just." In other words, Congress by that act made *both the dutiable rates levied* and the free-entry provisions therein provided effective, *subject to a* finding and proclamation by the President as to competitive *conditions in trade to be by him ascertained and proclaimed* not only in the markets of the United States but also in the markets of foreign countries. The sole pertinent difference between that act and this amendment in principle is that therein Congress prescribed the substitute rates in terms of fixed figures, *and herein Congress has prescribed the substitute rates in terms of prescribed "facts" or "state of things."*

Congress by that act vested in the President the admeasurement of defined trade conditions under and resulting from prescribed rates of duty in foreign countries upon our products therein imported and the determination of their equality with the trade conditions under and resulting from free entry allowed their products in our country as determinative of his action. In other words, that act required of the President the function of admeasuring and equalizing trade conditions with rates of duty—a translation of the one into the terms of the other, a determination of their differences, and proclamation accordingly. That and nothing more is precisely the function by this amendment vested in the President. Of the delegation of this function in that act the Supreme Court in Field *v.* Clark, *supra*, said:

"What the President was required to do was simply in execution of the act of Congress. It was not the making of law. He was the mere agent of the lawmaking department to ascertain and declare the event upon which its expressed will was to take effect."

While Field *v.* Clark approves and announces the *doctrine* supporting the power of Congress to so levy an import duty as by this amendment provided, express declaration, in that many words, as stated by Senators, to sustain a grant of power *to the President* "to fix rates" is not therein had. Nor is that by this amendment attempted. Nor would anyone conversant with the law upon the subject so attempt. What *is* here done by *Congress* is not to delegate a power "to fix rates" but to itself fix or levy a duty, not in terms of fixed figures but in terms of certain prescribed "facts" or "state of things," and authorize and empower the President to ascertain and proclaim the duty or rate thereby fixed by Congress.

It would seem appropriate while comparing section 3 of the act of 1890, as considered in Field *v.* Clark, with this amendment, particularly in view of the criticism of that case by Senators, that two of the justices dissented therefrom to point out that the grounds of dissent therein are cured by appropriate language in this amendment. The grounds of that dissent related solely to the words authorizing action by the President upon an ascertainment which "he may *deem* to be reciprocally unequal and unreasonable," and that he might continue the suspension of the free list or continue proclaimed rates of duty in effect "for such time as he shall *deem* just." It was urged by the dissentients that the word "deem" permitted a judgment by the President, and that the latter phrase vested in him an unlimited discretion. These objections are met and avoided in this amendment by investing the President with no discretion or judgment whatever in proclaiming a duty but authorizing him to proclaim only the duty *shown by prescribed* facts or state of things. So, by the last phrase of 315 (c) he can only suspend a proclaimed duty not in his discretion but as follows:

"That the President, proceeding as hereinbefore provided for the proclamation of such rates of duties, may, when he shall determine that it is *so shown* that the competitive advantages have changed or no longer exist which led to such proclamation, accordingly *as so shown* modify or terminate the same."

It will contribute to the completeness of the consideration of Field *v.* Clark case to note that the majority opinion, appreciating the force of the minority view as stated, justified its disregard of the discretionary import of the word "deem" as employed in the act by holding that the context *implied* that the President would examine all the pertinent laws and regulations of the foreign country "*in their effect upon American products*," wherefore his discretion or judgment was *by the act* not unlimited but so controlled. (See Field *v.* Clark, 143 U. S. 649, at page 693.) In fact, the majority opinion (p. 692) expressly so interprets the word, saying "*deemed*, that is, which he *found* to be." The soundness of the principles and decision enunciated in Field *v.* Clark, however, have so commended themselves to the Supreme Court that they have subsequently been quoted *in extenso* and applied, and the case is uniformly referred to as the leading case upon the subject. (See Union Bridge Co. *v.* United States, 204 U. S., pp. 378 and 383; United States *v.* Grimaud, 220 U. S. 506, 520.)

The next kindred decision of the Supreme Court was Buttfield *v.* Stranahan (192 U. S. 470), and particularly at page 496. The statute, the constitutionality of which was challenged in that case, was the act of March 2, 1897 (29 Stat. 604), entitled "An act to prevent the importation of impure and unwholesome tea." That act exercised the constitutional power "to regulate commerce with foreign nations" in two particulars: It provided for the establishment of a tea board to select certain samples of tea, which, when approved by the Secretary of the Treasury and made such and deposited at the various ports of entry should become exclusive standards for the admission of tea into this country. It was claimed that thereby the Secretary and not Congress established the test or rule as to what teas should be imported. The right to import tea into this country was by this act further made dependent upon the importation being deemed or judged by the designated customs examiners as up to these standards of samples selected and approved by the Secretary. Such as was so deemed or judged by the examiners was admitted and such as was not was re-

jected and denied entry. Certain teas being rejected at the port of New York as not up to these standards, it was claimed that this act also vested in the officials of the customs a legislative power in that the finding of similarity to the samples, a condition precedent to entry was vested in them, and the constitutionality thereof was accordingly challenged. Denying this claim the court, at page 496 of said volume, said:

"The claim that the statute commits to the arbitrary discretion of the Secretary of the Treasury the determination of what teas may be imported, and therefore in effect vests that official with legislative power, is without merit. We are of the opinion that the statute, when properly construed, as said by the Circuit Court of Appeals, but *expresses the purpose* to exclude the lowest grade of tea, whether demonstrably of inferior purity, or unfit for consumption, or presumably so because of their inferior quality. *This, in effect, was the fixing of a primary standard, and devolved upon the Secretary of the Treasury the mere executive duty to effectuate the legislative policy declared in the statute.* The case is within the principle of Field *v.* Clark (143 U. S. 649), where it was decided that the third section of the tariff act of October 1, 1890, was not repugnant to the Constitution as conferring legislative and treaty-making power on the President because it authorized him to suspend the provisions of the act relating to the free introduction of sugar, molasses, coffee, tea, and hides. We may say of the legislation in this case, as was said in the legislation considered in Field *v.* Clark, that it does not, in any real sense, invest administrative officials with the power of legislation. *Congress legislated on the subject as far as was reasonably practicable, and from the necessities of the case was compelled to leave to executive officials the duty of bringing about the result pointed out by the statute.* To deny the power of Congress to delegate such a duty would, in effect, amount but to declaring that the plenary power vested in Congress to regulate foreign commerce could not be efficaciously exerted.

"Whether or not the Secretary of the Treasury failed to carry into effect the expressed purpose of Congress and established standards which operated to exclude teas which would have been entitled to admission had proper standards been adopted is a question we are not called upon to consider. *The sufficiency of the standards adopted by the Secretary of the Treasury was committed to his judgment*, to be honestly exercised, and if that were important there is no assertion here of bad faith or malice on the part of that officer in fixing the standards, or on the part of the defendant in the performance of the duties resting on him."

The court further said:

"The provisions in respect to the fixing of standards and the examination of samples by Government experts was for the purpose of determining *whether the conditions existed which conferred the right to import*, and they therefore in no just sense concerned a taking of property. This latter question was intended by Congress to be finally settled, not by a judicial proceeding but by the action of the agents of the Government, upon whom power on the subject was conferred."

It will be noted that the sufficiency of these samples which were to determine the right of entry of tea into this country was a matter committed to the judgment or selection of the Secretary of the Treasury. It will be further noted that the court predicated its decision upon the principle that Congress *having in the act expressed its purpose*, it was within the constitutional powers of Congress to delegate the execution *of that purpose* to the Secretary of the Treasury. The act, as said by the court, "devolved on the Secretary of the Treasury the mere executive duty *to effectuate the legislative policy declared in the statute*," even though that executive performance involved a choice as to means to that end.

The fact of similarity of the imported teas to these standard samples as to "purity," "quality," and "fitness for consumption" was made condition precedent to admission into this country, and the determination thereof vested in the examiners. Congress here legislated in so far as practicable and delegated to the Secretary the power to establish standards and the examiners the power to find the facts as to similarity thereto necessary to the execution of the law. These officials do not thereby legislate, but they execute the legislation had by Congress by exercising their judgment or decision in the selection of samples and determining similarity, although that selection fixed the duty in the particular case.

Likewise, it may be said of section 315, Congress has clearly therein set forth its legislative "purpose." That "purpose" is made dependent upon and is controlled by varying market values. Wherefore, Congress has, in so far as practically possible, by prescribing the facts and conditions of trade in our markets which shall admeasure these duties, prescribed what the duties shall be and empowered the President to effectuate the congressional purpose to equalize by these duties the selling prices in our markets of similar foreign and domestic goods by ascertaining these facts and their equivalent duties and so proclaiming. This is not legislating but performing acts in execution of legislation.

The case following was that of the Union Bridge Co. *v.* United States (204 U. S. 364), particularly at pages 378 and 387, inclusive. The elaborateness of the opinion indicates the importance with which the case was received and considered by the Supreme Court. The statute the constitutionality of which was challenged was the provision of section 18 of the river and harbor act of 1899 (30 Stat. 1121, 1153) providing for the "removal or alteration of bridges which are unreasonable obstructions to navigation after the Secretary of War has, pursuant to the procedure prescribed in the act, ascertained that they are such obstructions."

The exact words of investment were:

"That *whenever* the Secretary of War *shall have reason to believe* that any railroad or other bridge now constructed * * * over any of the navigable waterways of the United States is *an unreasonable obstruction to the free navigation of such waters* on account of insufficient height, width of span, *or otherwise*, or where there is difficulty in passing the draw opening or draw span of such bridge by rafts, steamboats, or other water craft, it shall be the duty of the said Secretary, first giving the parties reasonable opportunity to be heard, *to give notice* to the persons or corporations owning or controlling such bridge *so to alter the same as to render navigation through or under it reasonably free, easy, and unobstructed;* and in giving such notice he *shall specify the changes*, * * * *that are required to be made*, and shall prescribe in each case a reasonable time in which to make them * * *."

Proceeding thereunder, the Secretary of War found the bridge over the Allegheny River, near where it joins the Monongahela to form the Ohio, an unreasonable obstruction to navigation and the commerce among the States of the United States and required the Union Bridge Co., owners thereof, *to make certain specified changes*. The company refusing, criminal information against it and conviction was had. The authority of the Secretary of War vested by this statute was assailed as an unconstitutional delegation of the legislative power of Congress to regulate commerce among the States.

The precise and here applicable point adjudicated was that whereas the Union Bridge Co. claimed that the duty of regulating commerce among the States, and consequently of what was an obstruction thereof *and what was necessary to be done in regulation thereof*, having been vested by the Constitution solely in Congress, a law enacted by Congress which was made dependent for enforcement upon the finding by the Secretary of War that a particular bridge was an "unreasonable obstruction to commerce," and a direction by him to perform certain acts determined by him necessary to render the bridge not an obstruction to navigation and commerce was a delegation to the Secretary of precisely what the Constitution required to be done by Congress. The Supreme Court held that this provision was not unconstitutional as a delegation of legislative or judicial power to an executive officer. The decision is expressly rested upon the cases of the brig *Aurora*, Field *v.* Clark, and Buttfield *v.* Stranahan, *supra*. Those cases are quoted *in extenso*, construed, and approved. The doctrine as announced by the Supreme Courts of Ohio and Pennsylvania is made the doctrine of the court. Applying that doctrine to the particular case, the court, at pages 385 to 387, said:

"It would seem too clear to admit of serious doubt that the statute under which the Secretary of War proceeded is in entire harmony with the principles announced in former cases. In no substantial, just sense does it confer upon that officer as the head of an executive department powers strictly legislative or judicial in their nature or which must be exclusively exercised by Congress or by the courts. *It has long been the policy of the Government to remove such unreasonable obstructions to the free navigation of the waterways of the United States as were caused by bridges maintained over them.* That such an object was of common interest and within the competency of Congress under its power to regulate commerce everyone must admit, for commerce comprehends navigation and, therefore, to free navigation from unreasonable obstructions is a legitimate exertion of that power. (Gibbons *v.* Ogden, 9 Wheat. 1, 189, 190.) *As appropriate to the object to be accomplished*, as a means to an end within the power of the National Government, Congress, *in execution of a declared policy, committed to the Secretary of War the duty of ascer-*

taining all the facts essential in any inquiry whether particular bridges over the waterways of the United States were unreasonable obstructions to free navigation. Beyond question, if it had so elected, Congress, in some effective mode and without previous investigation through executive officers, could have determined for itself primarily the fact whether the bridge here in question was an unreasonable obstruction to navigation, and if it was found to be of that character could *by direct legislation* have required the defendant *to make such alterations of its bridge as were requisite for the protection of navigation and commerce* over the waterway in question. But investigations by Congress as to each particular bridge alleged to constitute an unreasonable obstruction to free navigation and direct legislation covering each case separately would be impracticable in view of the vast and varied interests which require national legislation from time to time. *By the statute in question Congress declared in effect* that navigation should be freed from unreasonable obstructions arising from bridges of insufficient height, width of span, or other defects. *It stopped, however, with this declaration of a general rule and imposed upon the Secretary of War the duty of ascertaining what particular cases came within the rule prescribed by Congress, as well as the duty of enforcing the rule in such cases.* In performing that duty the Secretary of War will only execute the clearly expressed will of Congress and will not, in any true sense, exert legislative or judicial power. He could not be said to exercise strictly legislative or judicial power any more, for instance, than it could be said that executive officers exercise such power when, upon investigation, they ascertained whether a particular applicant for a pension belongs to a class of persons who under the general rules prescribed by Congress are entitled to pensions. If the principle for which the defendant contends received our approval, the conclusion could not be avoided that executive officers in all the departments, in carrying out the will of Congress as expressed in statutes enacted by it, have from the foundation of the National Government exercised and are now exercising *powers as mere details* that are strictly legislative or judicial in their nature. This will be apparent upon an examination of the various statutes that confer authority upon executive departments in respect of the enforcement of the laws of the United States. *Indeed, it is not too much to say that a denial to Congress of the right under the Constitution to delegate the power to determine some fact or the state of things upon which the enforcement of its enactment depends would be 'to stop the wheels of government'* and bring about confusion, if not paralysis, in the conduct of the public business."

The same provision of the river and harbor act was again challenged upon like constitutional grounds in Monongahela Bridge Co. *v.* United States (216 U. S. 177), at page 192. The court reviewed with approval its previous decisions upon the subject and expressly declined to recede from the doctrine of the Union Bridge Co. *v.* United States and the cases upon which that decision had been predicated.

The statute challenged in the next ensuing case of similar import, United States *v.* Grimaud (220 U. S. 506), was a provision of the act of June 4, 1897 (30 Stat. 35; Rev. Stat., sec. 5388), providing that the Secretary of Agriculture could make rules and regulations governing the national parks, and such a rule so made as to grazing sheep on forest reserves, having the force of law and providing criminal punishment for violation thereof, was not unconstitutional as a delegation of legislative power. The case reached the Supreme Court when one Grimaud, without permit and in violation of the prescribed regulations for the Sierra Forest Reserve, Calif., grazed sheep thereupon and was proceeded against criminally under said regulations. He contended the regulations prescribing a crime were unconstitutional as a delegation by Congress to the Secretary of Agriculture of its power to define and establish what *shall* constitute a crime against the United States. In denying this plea the Supreme Court, quoting from Union Bridge Co. *v.* United States and Field *v.* Clark (supra), said at page 521:

"That 'Congress can not delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution.' (Field *v.* Clark, 143 U. S. 649, 692.) *But the authority to make administrative rules is not a delegation of legislative power, nor are such rates raised from an administrative to a legislative character because the violation thereof is punished as a public offense.*"

This is by far the broadest decision upon this subject, in that it sustained an authority to constitute a crime against the United States delegated to the Secretary of Agriculture *without prescribing* any elements, facts, or state of things controlling of the Secretary in that denouncement.

Such is not the case, however, with section 315. Therein are clearly defined and prescribed the facts and conditions, or state of things, which shall constitute and admeasure the duties laid by Congress to be ascertained and proclaimed by the President.

In Hannibal Bridge Co. *v.* United States (221 U. S. 194) the court was again called upon to determine the validity of section 18 of the river and harbor act of 1899.

The statute proceeded under in this case was the same as in Union Bridge Co.'s case, *supra*. After due proceedings the Secretary of War found and advised the Hannibal Bridge Co., the Wabash Railroad Co., and the Missouri Pacific Railway Co. that the bridge over the Mississippi River at Hannibal, Mo., owned or controlled by said companies, was "an unreasonable obstruction to free navigation" or commerce *and ordered certain specified changes*. The companies refused to comply with the Secretary's order, were duly proceeded against by criminal information, and convicted. On appeal they questioned the constitutionality of the act as an unauthorized delegation of congressional power. At page 205 the court in denying this contention said:

"The assignments of error are very numerous. But we feel constrained to say that no one of them causes a serious doubt as to the correctness of the judgment sought to be reviewed. This court has heretofore held, upon full consideration, that Congress had full authority under the Constitution to enact section 18 of the act of March 3, 1899 (ch. 425, 30 Stat. 1153), and that the delegation to the Secretary of War of the authority specified in that section was not a departure from the established constitutional rule that forbids the delegation of strictly legislative or judicial powers to an executive officer of the Government. *All that the act did was to impose upon the Secretary the duty of attending to such details as were necessary in order to carry out the declared policy of the Government* as to the free and unobstructed navigation of those waters of the United States over which Congress in virtue of its power to regulate commerce had paramount control * * *." (Union Bridge Co. *v.* United States, 204 U. S. 364; Monongahela Bridge Co. *v.* United States, 216 U. S. 177; Field *v.* Clark, 143 U. S. 649; Buttfield *v.* Stranahan, 192 U. S. 470.)

Obviously there is not an entire lack of parity in results between a rate of duty and a bridge as an obstruction to commerce. The constitutional power as to the regulation of commerce applies equally to each. The full force and effect of the Union Bridge Co. and Hannibal Bridge Co. decisions, as here applicable, can best be had by bearing in mind that full and complete authority was therein *vested in the Secretary to determine* and give notice of *exactly what would be required to effect free navigation* or an unobstructed commerce. Congress having declared the policy of unobstructed navigable rivers by bridges, "*or otherwise*," it was competent the court said *to delegate to the Secretary full power to determine what was such an obstruction and what remedy should be enforced.* So Congress having declared the policy of equalizing different competitive conditions in our markets may well on that authority authorize the President to determine those differences *and their remedy.* By section 315, however, Congress not only prescribes what the President shall determine to inaugurate action, to wit, differences in competitive conditions, but also prescribes precisely the remedy he shall apply, to wit, a duty equal to those differences or change of classification.

It will be noted that in all of the foregoing cases the principle early established in the brig *Aurora* cases and in Wayman against Southard, *supra*, that Congress, having by *general* provisions *declared its policy*, may vest those who are to act under such general provisions with full powers to put that policy into effect as and when prescribed by Congress.

Applying these principles to the proposed provisions, *legislative* power is exercised when Congress declares that a prescribed duty—that is, one equal to the net difference between two named trade conditions—shall be levied and collected. What the President is required to do is simply in execution of this act of Congress. His duties are neither judicial nor legislative, but purely administrative. He is vested with no discretion, but commanded to act upon certain prescribed conditions or a prescribed state of facts to be ascertained and made known in the manner prescribed by Congress. Congress, therefore, and not the President, levies this duty in terms of a prescribed "state of facts" to be ascertained and proclaimed by the President.

From the foregoing it is beyond question and will not be disputed that Congress can enact an import revenue or tax statute to be *put into effect, enforced,* or *suspended* upon the ascertainment and proclamation of prescribed facts or a state of things by a denominated official or officials.

The distinguished junior Senator from Montana [Mr. WALSH], in his very able presentation of the question challenging the constitutionality of section 315, stated:

"It is not without significance in this connection that among the vast multitude of cases dealing with the subject of the delegation of legislative power *few, if any, can be found in which the delegation of the taxing power was involved*, the legislatures apparently recognizing, instinctively or otherwise, that it could be delegated or that a well-nigh universal conviction prevails that it is unwise to do so."

The proposed legislation has parallel and precedent in, and to a large extent is patterned after, several well-known, long-enforced, and often-construed acts of Congress which *in principle*, in constitutional and treaty relations and in legal concept, are alike this.

While these are here presented as precedents for the amendment, section 315, they are likewise pertinent to our next inquiry, which is the crucial, determinative, and only real question here involved, to wit:

Can Congress levy an import duty in terms of a fact or state of facts to be ascertained and proclaimed by the President?

The constitutional grant for the several acts referred to, and which will now be considered, is found in section 8 of Article I, as follows:

"SEC. 8. 1. * * * To lay and collect taxes, *duties*, imposts, and excises, * * *; but all *duties*, imposts, and excises shall be uniform throughout the United States.

"2. * * *.

"3. To regulate commerce with foreign nations, and among the several States, * * *.

"4. * * *.

"5. To coin money, *regulate the value thereof, and of foreign coin*, * * *.

"18. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, * * *."

Preliminarily, it may be instanced, as before stated, that every statute prescribing "market value" as a basis for ad valorem duties, and vesting in the appraiser or some officer of the Government acting as such the power to estimate, declare, and apply the same, was a statute in integral and necessary part levying a duty in terms of a state of things to be ascertained by the named official. While the *rate* was fixed by Congress, the *actual duty levied* was dependent upon the state of things determined by the appraiser, which might and often did differ from day to day, according to the country of exportation, or as the state of things constituting "market value" varied and was *found* by the appraiser.

While, of course, these statutes were not delegations of the "legislative" power, they were a delegation of *the authority* to ascertain and apply or declare a duty, in accordance with the legislative purpose prescribed by the statute levying a duty according to and as measured by a legislatively prescribed state of things, to wit, "market values," to be ascertained and applied by a designated official, the complete fixing of which required but the mathematical process of applying the prescribed "rate" to the state of things or basis found by the appraiser. These legislative precedents were early enacted while the debates and controversies of the constitutional convention were clearly in the minds of our legislators and have been repeatedly reenacted throughout our entire natural existence.

Because the authority of Congress to levy and collect tonnage and commodity "duties" is authorized and vested by the same provision of the Constitution, the Supreme Court in discussing the constitutionality of either uniformly refers to and quotes the language and congressional course as precedent of the other. (See particularly Field *v.* Clark, supra.) Upon that authority the same course will here be pursued. (See also Union Bridge Co. *v.* United States, 204 U. S. 364.)

Precisely in principle alike the submitted provisions and substantially so in language was section 5 of the tariff act of 1897 (30 Stat. L. 151, 205). That provision reads:

"SEC. 5. That whenever any country, dependency, or colony shall pay or bestow, directly or indirectly, *any bounty or grant* upon the exportation of any article or merchandise from such country, dependency, or colony, and such article or merchandise is dutiable under the provisions of this act, then, upon the importation of any such article or merchandise into the United States, whether the same shall be imported directly from the country of production or otherwise, and whether such article or merchandise is imported in the same condition as when exported from the country of production or has been changed in condition by manufacture or otherwise, *there shall be levied and paid* in all such cases, in addition to the duties otherwise imposed by this act, *an additional duty equal to the net amount of such bounty or grant, however the same be paid or bestowed. The net amount of all such bounties or grants shall be from time to time ascertained, determined, and declared by the Secretary of the Treasury*, who shall make all needful regulations for the identification of such articles and merchandise and for the assessment and collection of such additional duties."

The provision was in substantially exact language reenacted in the Payne-Aldrich Tariff Act of 1909 (36 Stat. L. 11, 85), and again reenacted in the Underwood-Simmons Tariff Act of 1913 (38 Stat. L. 114, 193), and is presently in force.

Herein Congress levies a duty in terms of a "state of things," to wit, "a duty *equal* to the *net amount*" of a bounty or grant, to be "ascertained," "determined," and "declared" by the Secretary of the Treasury. The "*net* amount" of a bounty or grant always involves, first, a legal determination of the law bestowing the same; and, second, *the effect upon trade and commerce* of the operation of that grant. In the latter respect its determination is often quite alike the determination of the effect upon trade and commerce of import tariff laws. Such bounties or grants in fact often are effected by export laws. Wherefore in this statute we now have, and since July 27, 1897, more than a quarter century, have had a statute precisely alike section 315 levying a duty in terms of a state of things, residing in a condition of trade and commerce and the operation thereupon of laws, to be ascertained and declared by a named official.

During the existence of this statute it has in numerous cases been before the courts for adjudication. Thus, in Downs *v.* United States (187 U. S. 496) the Supreme Court construed this provision as applying to the so-called Russian Sugar Bounty cases. A reading of the intricate findings of fact and conclusions of law necessary upon the part of the Secretary in that case, in order to determine the exact duty to be levied, is convincing of the comparatively simple duties of like nature imposed upon the President by section 315.

In Nicholas & Co. *v.* United States (7 Ct. Cust. Appls. 97) the United States Court of Customs Appeals construed the section as it appeared as paragraph E, section 4, of the tariff act of 1913, as applicable to the so-called potage taxes or allowances made by Great Britain upon spirits exported to this country. That decision by the United States Court of Customs Appeals was on certiorari affirmed by the Supreme Court of the United States (Nicholas & Co. *v.* United States, 249 U. S. 34). Its repeated legislative enactment by Congresses of both political parties is of itself a legislative interpretation of the power to so enact (Field *v.* Clark, 143 U. S. 649).

It may be instructive to delineate the *modus operandi* of this provision from the actual facts occurring in the Nicholas & Co. case. The question of whether or not the so-called allowance by Great Britain upon liquors exported to this country was or was not a bounty within the provisions of section 5, as reenacted in the tariff act of 1913, was long contested by the officials of that country. The Treasury Department at times changed its decision upon the subject. Finally by Treasury Decision 34466, upon the advice of the Attorney General that the decision of whether or not such allowance by Great Britain was or was not a bounty within the provisions of said act of 1913 was "one better fitted for judicial determination than for an expression of his opinion," the amount of such allowance was ascertained and proclaimed by the Secretary of the Treasury in accordance with the provisions of said section 5, as appearing in the act of 1913, *as amounting to 3 pence per gallon upon plain British spirits and 5 pence per gallon on compound spirits.*

Upon an importation at the port of New York of such liquors the collector thereat, in obedience to the proclamation of the Secretary of the Treasury, reported as follows:

"The merchandise consists of British spirits imported from the United Kingdom of Great Britain and Ireland. Following the instructions contained in Treasury Decisions 34466 and 34572, that an export bounty is allowed on plain British spirits of 3 pence per British proof gallon and 5 pence per gallon on compound spirits, a countervailing duty, *equal to the bounty paid*, was assessed under paragraph E of section 4, act of 1913, *in addition to the regular rate of duty* provided for in Schedule H of said act."

The Board of General Appraisers affirmed the decision of the collector (G. A. 7758; T. D. 35595). Upon appeal by the importers to the United States Court of Customs Appeals the decision of the Board of General Appraisers was affirmed. Nicholas & Co. *v.* United States (7 Ct. Cust. Appls. 97), and upon review by certiorari the decision of that court was affirmed by the Supreme Court, Nicholas & Co. *v.* United States (249 U. S. 34).

Thus in all respects a statute precisely similar has long been upon the statute books, is being executed, and had been construed by the highest courts. How can it be said, there-

fore, in the presence of such an approved investment by Congress in the Secretary of the Treasury, to determine from stated things, residing in conditions of trade and commerce as affected by laws and regulations, a duty to be collected and to convert that finding into an applicable form of duty, that Congress can not so empower the President?

There will be noted in passing that Congress, by section 5 and its statutory successors, had vested in the Secretary of the Treasury the determination and *decision* as to the amount of this bounty and its equivalent in additional duties. As a matter of fact, that is a matter of daily practice at almost every customhouse in the country.

In concluding the consideration of this statute it may be well, in view of the debate in the Senate, to state that it provided no review by the courts of the *findings of the state of facts* by the Secretary of the Treasury, though the act levied a duty or tax, and has uniformly been held by the courts as conclusive upon all the courts. In this particular, in a well-considered case (Franklin Sugar Refining Co. *v.* United States, 178 Fed. Rep. 743), the court said:

"It was undoubtedly the intention of Congress, in the enactment of this section, that the findings of the Secretary as to the amount of bounties paid by the foreign countries and collectible upon importation of merchandise as a countervailing duty should be final *so far as any revision or examination by the courts is concerned.* We see no difference between this provision of the act of 1897 and that section in the various tariff acts which requires the Secretary of the Treasury to proclaim the values of foreign coins after they have been ascertained by the estimate of the Director of the Mint, *in so far as the finding of fact is to be regarded as binding upon the courts* under this provision.

"As to the values of foreign coins, the Supreme Court in four cases, to wit, Arthur *v.* Richards (90 U. S. 259, 23 L. Ed. 95); Cramer *v.* Arthur (102 U. S. 612, 26 L. Ed. 259); Hadden *v.* Merritt (115 U. S. 25, 5 Sup. Ct. 1169, 29 L. Ed. 333); and United States *v.* Klingenberg (153 U. S. 93, 14 Sup. Ct. 790, 38 L. Ed. 647), declared that the finding or estimate of the Director of the Mint, as proclaimed by the Secretary of the Treasury, was binding not only upon the collector and the Board of General Appraisers *but upon the courts as well;* and we have no doubt it was the intention of Congress that *in the matter of the collection of the countervailing duties the amount fixed by the Secretary of the Treasury to be collected on importations can not be inquired into by the courts* but must be settled as declared by the Treasury Department. If there has been a mistake the remedy is by appeal to the Secretary. In case that has not been done, the courts can not admit evidence for the purpose of inquiring into the question as to whether the amount fixed by the Secretary was or was not correct."

The precise legal doctrine applicable to such cases will later be stated. But that Congress can lay a duty on imports and authorize some official to determine the same in a prescribed manner without judicial review of the finding is elementary in customs import law and long since established beyond controversy.

There are many acts of Congress providing discriminating duties upon tonnage which are identical in principle and pertinent. It will be noted as stated that the constitutional grant to Congress of the right to levy duties upon tonnage is by the same provision granting such right as to importations. Accordingly and uniformly such acts are reviewed by the Supreme Court as pertinent expositions of the exercise by Congress of its deemed constitutional rights as to each.

Section 4219 of the Revised Statutes in part provided:

"4219. * * * On all foreign vessels which shall be entered in the United States from any foreign port or place, to and with which vessels of the United States are not ordinarily permitted to enter and trade, *there shall be paid a duty* at the rate of $2 per ton; and none of the duties on tonnage above mentioned shall be levied on the vessels of any foreign nation *if the President of the United States shall be satisfied that the discriminating or countervailing duties of such foreign nations, so far as they operate to the disadvantage of the United States, have been abolished.*" * * *

Pertinent here is the investment by that section in the President to suspend tonnage duties upon the finding by him that the discriminating or countervailing duties levied by a foreign nation "so far as they operate to the disadvantage of the United States" were abolished. Thus a condition of trade and commerce resulting from the imposition of duties upon our trade was to be determined by the President as a condition precedent to the suspension of tonnage duties levied by the United States.

Section 2502 of the Revised Statutes provided a discriminating duty of 10 per cent ad valorem in addition to the duties imposed by law *upon merchandise* imported in vessels not of the United States.

Section 4228 of the Revised Statutes provided for the determination by the President of any discriminative duties upon *either tonnage or importations* of any foreign nation as against the United States on his proclamation to that effect, and vested in him a power upon such determination to suspend or discontinue similar discriminations made by this country. The provision as amended July 24, 1897 (30 Stat. L. p. 214), further provided:

"That the President is authorized to suspend *in part the operations* of sections 4219 and 2502, so that foreign vessels from a country imposing *partial* discriminating duties upon American vessels or *partial discriminating import* duties upon American merchandise *may enjoy in our ports the identical privileges* which the same class of American vessels and merchandise may enjoy in said foreign country."

This last provision was construed by the Attorney General not to have been repealed by section 22 of the Dingley Tariff Act of July 24, 1897 (30 Stat. L. 151), but to be continued in force therewith (21 Op. Atty. Gen. 597). It will be particularly noted that the power vested in the President by that statute in determining the *partial* discriminatory duties and putting in effect "identical privileges" *involved the power to determine the equivalent duty which this country would exact in such cases.*

These provisions of the Revised Statutes are in legal concept in exact accordance with the proposed amendment. In each, Congress laid a duty not only upon tonnage but *imports* into the United States, in terms of a state of things or conditions resulting from the effect of laws upon commerce, to be ascertained and proclaimed by the President.

Peculiarly and *exactly parallel* is the amendment to section 4228, of July 24, 1897, enacted coincident with the Dingley Tariff Act. Congress therein fixed no duty in terms of prescribed figures or rates, but levied a discriminating duty on foreign vessels and merchandise in terms of a state of things, to wit, a duty *equal* to that levied by such country on our vessels or merchandise, to be ascertained and proclaimed by the President. That is to say, the President was to investigate the effect upon our exports to the particular country of their laws and the effect of our laws upon the imports hereto from such country, and if he found that their laws discriminated less against our exports thereto than our laws did against their exports to this country, he was to calculate what duty *thereby shown* would enable them to "enjoy in our ports identical privileges," and accordingly suspend wholly *or in part* the tonnage duties levied in section 4219 *or* the discriminating import duties levied in section 2502 and proclaim in effect the duty provided by Congress and ascertained as aforesaid. Most important it should be noted that *the President was here vested with a discretion as to which duty* he would suspend. He might suspend that provided by section 4219 or section 2502, or he might suspend, in whole or in part, both, in his discretion. Likewise with the policy of Congress to equalize discriminations and their effect upon trade, it was within its power to delegate to the President a discretion as to the precise *execution* of the statute, whether as to section 4219 or 2502, or both, just as in this amendment it is competent for Congress, having declared the policy to equalize conditions of competition in our markets, to vest in the President *a discretion as to the execution of that policy* by adopting a change of rate or form of duty or classification, assuming the amendment as drawn so permits an election.

But a close study of these sections of the Revised Statutes, long if not now in force, reveals the same legal concept that supports section 315 in this bill. In all Congress laid or provided a duty in terms of a prescribed state of things, residing in defined conditions of trade as effected by laws operating thereupon, and directed the President to admeasure one set of discriminations and resulting trade conditions against the other, *and to determine what rate of duty thereby shown would equalize the discriminations against or conditions affecting this country. The act levied the prescribed duties upon imports or tonnage into this country.* The President ascertained and proclaimed the same as and in the manner prescribed by the act.

To the same effect is section 1 of the act of July 25, 1892 (27 Stat. L., 167). That section reads:

"SEC. 1. Passage of vessels through St. Marys Falls Canal—tolls: That, with a view of securing reciprocal advantages for the citizens, ports, and vessels of the United States on and after the 1st day of August, *1892, whenever and so often as the President shall be satisfied that the passage* through any canal or lock connected with the navigation of the St. Lawrence River, the Great Lakes, or the waterways connecting the same,

of any vessels of the United States, or of cargoes or passengers in transit to any port of the United States *is prohibited or is made difficult or burdensome by the imposition of tolls or otherwise*, which, in view of the free passage through the St. Marys Falls Canal now permitted to vessels of all nations, *he shall deem to be reciprocally unjust and unreasonable*, he shall have the power, and it *shall be his duty to suspend by proclamation* to that effect for such time and to such extent (including absolute prohibition) *as he shall deem just* the right of free passage through the St. Marys Falls Canal, so far as it relates to vessels owned by the subjects of the Government to discriminating against the citizens, ports, or vessels of the United States, *to to any cargoes, portions of cargoes*, or passengers in transit to the ports of the Government making such discrimination, whether carried in vessels of the United States or of other nations. *In such case and during such suspensions toll shall be levied, collected*, and paid as follows, to wit: Upon *freight* of whatever kind or description *not to exceed* $2 per ton; upon passengers, *not to exceed* $5 each, *as shall be from time to time determined by the President*."

By proclamation of August 18, 1892, the President, under the authority of the above act, and because of claimed discrimination against citizens of the United States in the use of the Welland Canal, proclaimed and enforced *a toll of 20 cents per ton on all freight* passing through St. Marys Falls Canal in transit to any part of the Dominion of Canada. Subsequently, and on February 21, 1913, by proclamation he suspended this ascertained and enforced tonnage duty. (27 Stat. L. 10650.)

So as to section 14 of the act of June 26, 1884, chapter 121 (23 Stat. L. 57), as set forth by the court in Field *v.* Clark (649, 689), as follows:

"By the fourteenth section of the act of June 26, 1884, chapter 121, removing certain burdens on the American merchant marine and encouraging the American foreign trade, certain *tonnage duties* were imposed upon vessels entering the United States from any foreign port or place in North America, Central America, the West India Islands, Bahama Islands, Bermuda Islands, Sandwich Islands, or Newfoundland, and *the President was authorized to suspend the collection of so much of those duties on vessels entering* from certain ports *as might be in excess of the tonnage and lighthouse dues, or other equivalent tax or taxes* imposed on American vessels by the government of the foreign country in which such port was situated, and should upon the passage of the act 'and *from time to time thereafter as often as it may become necessary, by reason of changes in the laws of the foreign countries above mentioned, indicate by proclamation the ports to which such suspension shall apply and the rate or rates of tonnage duty, if any, to be collected under such suspensions.*'"

In execution of that act Presidents Arthur and Cleveland issued proclamations.

This statute is precisely of the same legal concept as amendment 315a. Certain tonnage duties are levied by previous acts of Congress. In view of uncertain and varying future conditions, Congress by this act levied a substitute tonnage duty, in the terms of a certain prescribed state of things, to wit, the difference between the prescribed tonnage duties and the tonnage duties and equivalent taxes imposed by the foreign government on American vessels, and provides that such shall be ascertained and proclaimed by the President. While the act requires the President to "*indicate* by proclamation * * * the *rate* or *rates* of tonnage duty, if any to be collected," Congress had fixed the duty in terms of facts prescribed in the act and directs the President to ascertain and proclaim the equivalent rate.

It is meet to note that in the case of Field *v.* Clark, supra, at page 689, the Supreme Court of the United States *adverted to this provision of the law and all of the foregoing statutes as illustration of the powers* of Congress exercised under the Constitution and as a legislative precedent for upholding the constitutionality of the statute the subject of review in Field *v.* Clark as not in excess of the legislative power. Here again we find Congress levying a duty in terms of facts, or a state of facts, and the President empowered *to ascertain and proclaim a rate of duty which will equalize in our commerce that state of facts*—precisely the thing done in section 315.

Similar statutes are those relating to the ascertainment of the value of foreign coins. The constitutional grant in this particular is subdivision 5 of the eighth section of Article I: "To coin money, *regulate the value thereof*, and of foreign coin * * *."

Therein is an express grant to Congress to by legislation fix the value of foreign coin. Has Congress itself by act in detail fixed the value of foreign coin? Uniformly Congress, having declared its policy *by prescribing the basis of such only* as "the pure metal of such coin of standard value," has confined the necessary ascertainment and proclamations thereof to administrative officials of the Government. More particularly in point is that not only has Congress so enacted, but it has provided that in all reliquidations of duties upon imported merchandise this ascertainment and finding by an administrative official *shall be adopted as one of the elements of dutiable value*. This legislation, in principle, is in exact accordance with the proposed statute. What difference can there be in confiding the ascertainment of the value of foreign money and confiding the ascertainment of the value of foreign merchandise measured by that money to administrative officials? So intimately connected is this subject with that of the collection of duties upon foreign imports that the relevant provisions of recent years have found themselves as parts of our import tariff laws.

The provision long ago and now in principle enforced was a part of the tariff act of August 27, 1894 (28 Stats. L. 552). As section 25 it read:

"SEC. 25. (Value of foreign coins.) That the value of foreign coin as expressed in the money of account of the United States *shall be that of the pure metal of such coin of standard value*, and the value of the standard coins in circulation of the various nations of the world shall be estimated quarterly by the Director of the Mint and be proclaimed by the Secretary of the Treasury immediately after the passage of this act and thereafter quarterly on the 1st day of January, April, July, and October in each year. And the values so proclaimed shall be followed in estimating the value of all foreign merchandise exported to the United States during the quarter for which the value is proclaimed, and the date of the consular certification of any invoice shall, for the purposes of this section, be considered the date of exportation: *Provided*, That the Secretary of the Treasury may order the reliquidation of any entry at a different value whenever satisfactory evidence shall be produced to him showing that the value in United States currency of the foreign money specified in the invoice was, at the date of certification, at least 10 per cent more or less than the value proclaimed during the quarter in which the consular certification occurred."

Perhaps no provision of equal life has been the subject of more litigation than this. Its provisions have been before the Supreme Court for construction in numerous cases.

This section not only vests in the Secretary of the Treasury power to ascertain and proclaim the value of foreign coins, as found and reported to him by the Director of the Mint, but, in line with the proposed legislation, imposes upon all customs officials the duty of acceptance of that proclaimed value in the reliquidation of import customs entries. It requires but the suggestion to prove that this ascertained and proclaimed finding, by virtue of this statute, affects the amount of duties collected upon all imported merchandise. Yet this ascertainment is made and enforced by administrative officials, whereas the Constitution vests in Congress alone by legislation the power to "regulate the value of foreign coin."

In so far as the statute is made expressly applicable and controlling of customs liquidations to that extent, no doubt its constitutionality may be rested in subsection 18 of Article I, section 8 thereof, *supra*, as a law enacted "necessary and proper for carrying into execution," among other powers, section 1 of that article "to lay and collect duties." The statute, however, forms a striking illustration of the declaration by Congress of its policy, to wit, that the value of foreign coins "shall be that of the pure metal of such coin of standard value," and then delegating to the Secretary and Director of the Mint the power to find all the facts and state of facts, to wit, "values," necessary for the execution of the laws.

It is appropriate to here note also that this *finding* and proclamation of facts constituting a material factor in taxes levied upon imports and delegated to the Secretary is not under our laws made or under our Constitution of a right reviewable by any court. (Arthur *v.* Richards, 90 U. S. 259, 23 L. Ed. 95; Cramer *v.* Arthur, 102 U. S. 612, 26 L. Ed. 259; Hadden *v.* Merritt, 115 U. S. 25, 5 Sup. Ct. 1169, 29 L. Ed. 333; and U. S. *v.* Klingenberg, 153 U. S. 93, 14 Sup. Ct. 790, 38 L. Ed. 647.)

The last foregoing statute contributes to this presentation another statutory precedent whereby Congress, having declared its policy as to what shall be the basic principle in the regulation of foreign coins, has delegated the execution of that policy to the Secretary and made his finding of the fact or state of things in pursuance of that defined policy final and the measure of a material component part of all duties levied at the customhouse. Thereby Congress lays this duty in the

terms of prescribed facts or state of facts to be ascertained and declared by the Secretary. Wherefore it is respectfully concluded that an answer to the inquiry, "*Can Congress levy an import duty in terms of a fact or state of facts to be ascertained and proclaimed by the President?*" finds abundant statutory precedent enacted by Congress from the foundation of the Government to the present, approved by the highest courts, and during all of said time and at present constituting an integral, efficient, and important part of our import revenue system. And that is precisely the legal concept of and thing done by section 315.

Legislation upon the subject of the rate-making power of railroad and public utilities commissions affords further pertinent precedents. There is a marked difference, however, in the constitutional requirements where Congress is authorizing a person or board to lay an import customs duty and to fix a freight or passenger rate. The Constitution expressly empowers Congress to lay a "duty," but does not expressly require Congress to establish a freight *rate*. The later, in so far as interstate commerce is concerned, is a "regulation of commerce among the States," and as such rate fixing may rightly be held to be a necessary incidental means to that end. It may well come within the category of the incidental powers granted Congress by subsection 18 of section 8 of Article I of the Constitution to make "all laws which shall be necessary and proper for carrying into execution the foregoing powers," included within which "foregoing powers" is that "to regulate commerce among the several States." Therefore in delegating the duty-levying power different, or at least additional, constitutional requirements must be observed.

That investment in the Interstate Commerce Commission is in very simple language. Its constitutionality has never been considered in any of the courts. Up to the Hepburn Act of June 29, 1906, the Interstate Commerce Commission was not invested with the power to fix a rate. (See Interstate Commerce Commission *v.* Cincinnati, New Orleans & Texas Pacific Railway Co., 167 U. S. 479.)

By the Hepburn Act, however, of June 29, 1906, section 15 (34 Stat. L., chap. 3591, p. 589), that power was granted the commission by Congress. The language of the grant is very simple. It is provided:

"That the commission is authorized and empowered, and it shall be its duty, whenever, after full hearing upon a complaint made * * * it shall be of the opinion that any of the rates, or charges whatsoever, demanded, charged, or collected by any common carrier or carriers, * * * are unjust or unreasonable, or unjustly discriminatory, or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this act, *to determine and prescribe what will be the just and reasonable rate or rates*, charge or charges, to be thereafter observed in such cases as the maximum to be charged; * * * and to make an order"—

And so forth.

Subsequently, by the act of June 18, 1910 (36 Stat. L., chap. 309, 551), that section was amended. The amendment, however, in so far as it vested the commission with power to fix a rate, in no material import differs from the language of the Hepburn Act. While the constitutionality of this provision was never questioned, the act was the subject of comment by the Supreme Court of the United States in Texas & Pacific Railway Co. *v.* Abilene Cotton Oil Co. (204 U. S. 426); Interstate Commerce Commission *v.* United States of America ex rel. Humboldt Steamship Co. (224 U. S. 474); Interstate Commerce Commission *v.* Louisville & Nashville Railroad Co. (227 U. S. 88); and Interstate Commerce Commission *v.* Goodrich Transit Co. (224 U. S. 194).

Should the courts, however, hold that section 315 is in fact subject to the limitations of the constitutional power to "lay * * * duties" as well as or instead of "to regulate commerce with foreign nations," the simple statutory authorization of the Hepburn Act would not suffice, but the rules laid down in Field *v.* Clark (143 U. S. 649) and other like cases cited would have to be observed in the manner done by section 315a.

The legal status or judicial status with reference to the powers vested in the Interstate Commerce Commission as to rate making is well concluded in Willoughby on Constitution, volume 2 (1910), page 1324, as follows:

"That a considerable amount of regulative control over railways may constitutionally be delegated to the Interstate Commerce Commission has not been disputed. It was not until the act of 1906, however, that that body was intrusted by Congress with the authority to fix in specific instances the rates that interstate railways might charge. By that law it is provided that the rates which these companies may legally fix, or which may be fixed for them by the commission, must be "just and reasonable." *This is, practically, the only principle legislatively laid down for the guidance and control of the commission.* The question, therefore, which still awaits final judicial settlement by the Supreme Court is whether this provision of the law may fairly be said to lay down a sufficiently definite rule which the commission is merely to apply to specific cases as they arise to warrant the determination that that body has not been endowed with a discretionary power of fixing rates which is in fact legislative. The opinion may, however, be hazarded that, arguing from Field *v.* Clark, Buttfield *v.* Stranahan, and Union Bridge Co. *v.* United States, the act of 1906 will be sustained. Indeed, in Interstate Commerce Commission *v.* Chicago, Rock Island & Pacific Railway (218 U. S. 88) and Interstate Commerce Commission *v.* Chicago, Burlington & Quincy Railroad (218 U. S. 113) the rate-making powers of the commission seem to be accepted without constitutional question."

More apposite authority will be found in cases arising in the States. The constitutions of several of the States expressly vest the rate-making power as to railroads in the State legislatures. The necessary incident to the development of public enterprises and railroad transportation has made it necessary in almost if not every State of the Union that the legislature delegate this authority to some board or commission. The constitutionality of this delegation of authority has in several of the States been frequently contested.

Thus, in Louisville & Nashville Railway *v.* Garrett (231 U. S. 298, 305) it is stated:

"It has frequently been pointed out that prescribing rates for the future is an act legislative, and not judicial, in kind, * * *. It pertains, broadly speaking, to the legislative power. The legislature may act directly or, in the absence of constitutional restriction, it may commit the authority to fix rates to a subordinate body."

In Atlantic Coast Line Railroad *v.* North Carolina Corporation Commission (206 U. S. 1, 19), the Supreme Court stated:

"The elementary proposition that railroads from the public nature of the business by them carried on and the interest which the public have in their operation are subject, as to their State business, to State regulation, which may be exerted either directly by the legislative authority or by administrative bodies endowed with power to that end, is not and could not be successfully questioned in view of the long line of authorities sustaining that doctrine."

The constitution of the State of Missouri (sec. 1, art. 4; sec. 14, art. 12) provided as follows:

"The legislative power, subject to the limitations herein contained, shall be vested in a senate and house of representatives, to be styled the General Assembly of the State of Missouri." And "The general assembly * * * shall from time to time pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight on said railroads and enforce all such laws by adequate penalties."

Speaking of the power of the State legislature to delegate that authority the supreme court of that State in a well-considered case, State *v.* Public Service Commission (194 S. W. 287–295), stated:

"It is also settled beyond doubt or cavil that this power of prescribing maximum rates for common carriers, which, as we have seen, legislatures possess pursuant to an untrammeled grant of powers to pass laws, may be delegated to a public service commission. To this rule, unless inhibited by express constitutional provision, there is not a reputable exception. * * * He reads the cases in vain who does not concede the authority of the legislature, absent an express constitutional provision which forbids, to delegate to an administrative body the power to fix rates for the carriage of freight and passengers."

Acting under the aforesaid constitutional authority the legislature by the laws of 1913, section 47, page 583, enacted:

"Whenever the commission shall be of the opinion * * * that the maximum rates * * * are insufficient to yield reasonable compensation for the service rendered, * * * the commission shall * * * determine the just and reasonable rates, fares, and charges to be thereafter observed and in force as the maximum to be charged for the service to be performed, notwithstanding that a higher rate, fare, or charge has been heretofore authorized by statute."

The Missouri Supreme Court in the case cited held this to be a properly delegated function by the legislature, even to the extent of setting aside a rate previously established by the legislature itself.

Similar enactments by other States under essentially similar constitutional powers and restrictions have been upheld. (See Chicago, Burlington & Quincy Railroad *v.* Jones, 149 Ill. 361,

376; State *v.* Baltimore & Ohio Railroad, 76 W. Va. 399; State *v.* Railroad Commission, 52 Wash. 33; Georgia Railroad *v.* Smith, 70 Ga. 694, 698; Railroad Commission *v.* Central of Georgia Railway, 170 Fed. Rep. 225, 238.)

It may be said generally of all of these statutes the delegation of authority was to "make reasonable and just rates of freight and passenger tariffs," or to "make just and reasonable rates, fares, and charges."

The general delegation of authority in such cases is quite similar to that delegated the United States Interstate Commerce Commission to fix "just and reasonable" rates.

It is observable that the general ground asserted by the courts in those State cases is that the granting of the power to fix rates is not prohibited by the particular State constitution.

The general rule of construction that State legislatures possess all powers not inhibited by the particular State constitution, while Congress possesses only those powers expressly granted by the Constitution of the Untied States, is not here lost sight of, but it is confidently asserted that the express grant to Congress by paragraph 18, section 8, Article I of the Constitution of power to make all laws "which shall be necessary and proper for carrying into execution" the powers therein granted to "lay duties" and "regulate foreign commerce," may well be deemed a sufficient constitutional warrant of this amendment.

Without indulging a discriminating review of these decisions, it would seem proper to observe that while the language of many upholds a delegation of the *legislative* power, no such claim as to section 315 is made. What is here asserted is that the Congress by this amendment will delegate no *legislative* powers but enact a statute legislatively complete prescribing therein authority to the President to make the same effective as and when therein by Congress prescribed.

We now come to an important consideration attending all delegations by the legislatures of authority to execute a law.

While the Supreme Court, as has been heretofore shown, has repeatedly ruled that it is sufficient for the Congress to declare its general policy delegating to the particular official the authority to fill in the details, Willoughby on the Constitution, volume 2, page 1319, concisely states the most limited rule as adopted by a class of cases, as follows:

"The Congress can not delegate its power to make a law, but it can make a law to delegate a power to determine some *fact* or *state of things* upon which the law makes or intends to make its own action depend. To deny this would be to stop the wheels of Government. There are many things upon which wise and useful legislation must depend which can not be known to the lawmaking power and must therefore be a subject of inquiry and determination outside of the halls of legislation.

"The doctrine thus declared is without objection so long as the *facts which are to determine the executive acts* are such as may be *precisely stated by the legislature and certainly ascertained by the Executive.* When this is not so, the officer intrusted with the execution of the law is necessarily vested with an independent judgment as to when and how the law shall be executed; and when this independence of judgment *is considerable* there *is ground* for holding that the law is not simply one *in presenti* to take effect *in futuro*, but is a delegation by the lawmaking body of its legislative discretion."

The provisions of section 315, however, are well within the more narrow rule.

Are the "facts" or "state of things" prescribed by the amendment and made determinative of his action when ascertained and proclaimed by the President "precisely stated by the legislature," and such as may be "certainly ascertained" by the Executive?

It would seem that the necessary implication, if not mandate of a statute, requiring investigation of conditions "in the *markets* of the United States," clearly directed an investigation of "market values," and when applied to imported merchandise *as imported* necessarily referred to such in *wholesale* quantities. The whole framework of our tariff laws is so obviously thus predicated that no other conception of their reference ordinarily obtains. Indeed, until enactment of the customs administrative act of 1890 the word "wholesale" did not appear in any of the acts making "market value" the basis of tariff calculations. None of the cases defining "market value" as the basis of tariff duties, the Cliquot Champagne case (3 Wall., 70 U. S. 114, 125) or Muser *v.* Magone (155 U. S. 240, 249), in any part mentions the word "wholesale." Nor does the statute construed in the former case provide other than that goods should be invoiced at their "actual market value." See act of March 3, 1863 (12 Stat. L. 727). Moreover, to-day no existing statute employs the word "wholesale" as applied to "market value" as a basis of duties. Thus paragraph R, section 3, of the Underwood-Simmons Act provides duties shall be assessed upon the "actual market value" *or* "wholesale price" of imported goods "in the principal markets of the country from whence exported." Herein, then, "market value" is, as throughout our entire tariff legislation, used as synonymous with "wholesale price." In relating the presidential ascertainment *as to imported goods to market* conditions or values in the "markets" of the United States by a member provision of our tariff laws there would seem to be no question that the reference is to wholesale sales of such.

We may therefore proceed upon the assumption that the literal and legal force of the "facts" or "state of things" "made determinative of the presidential action" by the amendment is the wholesale selling price in our markets of like or similar foreign and domestic articles competing therein and the differences between such as influenced by the competitive conditions attending each. (Supplemental thereto is 315 (c), but it is preferred to make this presentation without aid of that provision.) The debates in the Senate and the plain unequivocal meaning of the language of the section leave unmistakable that such is its unquestionable literal import. The facts or state of things embraced therewithin and therefore made determinative of the presidential action may be reduced to "market values" or "wholesale prices" and the "differences" between them. That such as herein written constitute a mandate by Congress to the Executive "precisely stated" and capable of being "certainly ascertained" is witnessed by legislative precedents and the consistent administrative practice in import customs matters since the foundation of the Government.

Commencing with the tariff act of July 4, 1789 (1 Stat. L. 26), and almost continuously since, Congress has levied ad valorem duties by predicating a prescribed rate upon the "value," "true value," "market value," or "actual market value" of the imported article, a "fact" or "state of things" constituted by Congress in these acts an integral and necessary part of such levy, and *in haec verba* delegated to a denominated official or officials the power to ascertain and apply or declare. The delegation of this authority to these officials for more than a hundred years was in these words alone for example, "actual market value," without words of further definition or direction. While the courts construed the meaning of the phrase and defined what matters could be taken into consideration by the appraisers under this delegation of authority as in the Cliquot Champagne case (3 Wall., 70 U. S. 114) and Muser *v.* Magone (155 U. S. 240), and numerous other decisions, it was not until August 5, 1909, as a part of the tariff act of that date, that Congress further stated in detail and thus more definitely prescribed the facts made determinative of "market value" when ascertained by the appraisers.

If therefore the terms "value" and "actual market value" were deemed and employed by Congress as sufficiently determinative and descriptive of a delegated authority to ascertain and proclaim a duty, or at least an integral and necessary part thereof as prescribed by Congress, why is not the language of this amendment, plainly synonymous with and the literal equivalent thereof, so sufficient?

Nor are we without abundant legislative precedent for the sufficiency, under the stated rule, of the literal expression employed in section 315 made determinative of the presidential action, to wit, "the *differences* in competition in trade in our markets as between like or similar domestic and foreign goods." This specification of facts or state of things and their ascertainment is made by Congress determinative and descriptive of the presidential mandate and authority.

The query, in other words, is, Is this statement or description of facts too indefinite to enable the President to proceed to ascertain and admeasure with, or determine the equality between the same, and an established duty, or therefrom calculate and proclaim a duty equal therewith? If so, Congress by this bill is proceeding to an idle act for this delegation to the President is exactly of the ascertainments the Congress is now endeavoring and has so endeavored in the making of every tariff.

Moreover, there are numerous statutes assigning the President similar powers of admeasuring conditions of commerce as effected by laws operating thereupon, with one another or with prescribed or authorized duties.

Thus by section 3 of the tariff act of October 1, 1890, *supra*, the subject of the decision in Field against Clark, the President was required to determine whether the laws of foreign countries in their effects upon our commerce in their markets were reciprocally "*equal*" and "*reasonable*," as compared with the effects of certain of our laws in our markets upon their commerce. To do so the President necessarily ascertained and

balanced the competitive conditions thus resulting in foreign markets with those in our markets and admeasured the extent each was affected by the rates fixed in the tariff laws of the respective countries, to determine if in trade their effects were equal. He was thereby required to admeasure and balance trade conditions with each other and with tariff rates, and determine their equality as conditions precedent to action. The facts or state of things which determine the Executive acts in this amendment are the same, more "certainly ascertainable," if anything, because of findings in *our* markets.

By section 5 of the act of July 24, 1987, *supra*, the "facts which were to determine the Executive acts" as stated in the section was a finding that any country bestowed a "bounty" or "grant," whereupon the Secretary was to determine and declare a duty equal to the "*net* amount of that bounty or grant." A bounty or grant, as shown by the voluminous litigation under this statute might consist of innumerable devices of law and fact subtly applied in different countries of the world, thereby effecting obscured conditions in competitive trade and their net equality in duties, a state of things extremely difficult of "certain ascertainment." That section, however, containing that mandate by Congress to the Secretary, has existed upon our statutes for decades and is being daily enforced. Certainly the "facts which there control the Executive acts" are neither more "clearly stated" nor more "certainly ascertainable" than the mandate of this amendment to find or determine in *our* markets the "difference" between conditions of competition or wholesale prices as between foreign and domestic goods, and mathematically convert that difference into an equivalent duty.

So, by section 14 of the act of June 26, 1884, *supra*, the "facts which were to determine the Executive acts" were a finding of the effects upon our trade of the operation of tonnage taxes, lighthouse dues, and other "equivalent tax or taxes" imposed by foreign countries. The President was required to so ascertain and remit our tonnage duties *accordingly*, thereby admeasuring said resulting conditions of trade by a rate of duty to be by him found and calculated *as shown* by said conditions and proclaimed. Certainly the effect of those foreign exactions upon our trade was no more "certainly ascertainable" than the effect of our tariff laws upon competing foreign and domestic goods in our markets. Nor was the equalizing *rate* of duty necessary under that statute any the less "certainly ascertainable" than under this amendment.

In the presence of the extended quotation and discussion of the foregoing statutes comparable in legal concept and literal import with this amendment, it seems unwarranted to extend the discussion of obvious applicable precedents.

It may be well to briefly quote what the Congress has deemed and employed in various statutes as a "precise statement" of "certainly ascertainable" "facts which are to determine the Executive acts" in delegating to an officer authority to determine some fact or state of things upon which the Congress has made its own action depend.

In section 25, act of August 27, 1894, Congress provided that "the value of foreign coin * * * shall be that of the pure metal of such coin of standard value" as a sufficient specification of the stated thing to be ascertained.

In the numerous reciprocity, retaliatory, and discriminating import tariff statutes enacted by Congress, wherein conditions of trade are made determinative of Executive action, that they "shall be reciprocally equal and reasonable," is more often than otherwise prescribed as and therefore deemed by Congress a sufficient specification of the facts which are to determine the Executive acts.

Under the Hepburn Interstate Commerce Act of 1906, *supra*, and many State acts indicated, *supra*, in regulation of freight and passenger rates the legislative mandate and specification of authority deemed ample by Congress and the State legislatures is that they shall be "just and reasonable."

In this amendment "the facts that are to determine the Executive acts" are prescribed as the "differences in conditions of competition between foreign and domestic articles," in the last analysis meaning relative wholesale selling prices therein. Because these have been the subject of similar legislative action prescribed for determination by denominated officials now and ever since the foundation of our Government, and because they have during our entire national existence been and to-day are being ascertained daily at every customhouse in the land by our appraisers, there can be no question that such are both "precisely stated" by the legislature and are "certainly ascertainable by the Executive."

Wherefore it is respectfully submitted that the specification of facts or state of things prescribed in the amendment as the basis of action by the Executive is ample and well within the most limited rule thereto relating.

The early embargo acts of Congress afford much light upon the powers of Congress, the extent to which those powers may be delegated, and what amounts to a sufficient specification of facts determinate of Executive action in delegated suspension and enforcement of legislation.

One of the earlier acts of Congress—that of July 4, 1799—levied duties upon imported merchandise. Many, if not all, of the embargo acts vested in the President enforcement and suspension upon a state of things found as prescribed in these acts. In this legislative status action thereunder by the President suspended the then existing duties levied by Congress; wherefore, Congress by these embargo acts vested in the President upon his finding as therein prescribed the power to suspend import duties exactly as he is here empowered.

Perhaps the most concise expression of the constitutionality of these acts, and the philosophy thereof, is found in State of Pennsylvania *v.* Wheeling and Belmont Bridge Co. (18 How. 59; U. S. 421, 439), wherein it is stated:

"During the existence of the embargo, in the year 1808, it was contended that under the commercial power an embargo could not be imposed, as it destroyed commerce. But it was held otherwise; so that the constitutionality of *a regulation of commerce by Congress does not depend upon the policy and justice of such an act, but generally upon its discretion.*

"An embargo is a temporary regulation, and is designed for the protection of commerce, though for a time it may suspend it."

A review of those embargo and similar acts, as approved delegations by Congress of authority to the President to suspend or enforce acts of Congress, and *particularly the literal specifications therein of the facts or a state of things, a finding of which by the President was made determinative of his action*, is had in Union Bridge Co. *v.* United States (204 U. S. 364, 380–381), reviewing them as cited with approval in Field *v.* Clark (143 U. S. 649). The court said:

"In its consideration of this question the court, after referring to the case of the brig *Aurora*, above cited, examined the numerous precedents in legislation showing to what extent the suspension of certain provisions and the going into operation of other provisions of an act of Congress had been made to depend entirely upon the finding or ascertainment by the President of certain facts, to be made known by his proclamation. The acts of Congress which underwent examination by the court are noted in the margin.

"The result of that examination of legislative precedents was thus stated:

"'The authority given to the President by the act of June 4, 1794, to lay an embargo on all ships and vessels in the ports of the United States "*whenever*, in his opinion, *the public safety shall so require*," and under regulations, to be continued or revoked, "*whenever* he shall think proper"; by the act of February 9, 1799, to remit and discontinue for the time being the restraints and prohibitions which Congress had prescribed with respect to commercial intercourse with the French Republic, "*if he shall deem it expedient and consistent with the interest of the United States*," and "to revoke such order *whenever*, in his opinion, *the interest of the United States shall require*"; by the act of December 19, 1806, to suspend for a named time the operation of the non-importation act of the same year, "*if in his judgment the public interest should require it*"; by the act of May 1, 1810, to revive a former act, as to Great Britain or France, if either country had not by a named day so revoked or modified its edicts as not "to violate the neutral commerce of the United States"; by the acts of March 3, 1815, and May 31, 1830, to declare the repeal, as to any foreign nation, of the several acts imposing duties on the tonnage of ships and vessels and on goods, wares, and merchandise imported into the United States *when he should be "satisfied"* that the discriminating duties of such foreign nations, "so far as they operate to the disadvantage of the United States," had been abolished; by the act of March 6, 1866, to declare the provisions of the act forbidding the importation into this country of neat cattle and the hides of neat cattle to be inoperative "*whenever in his judgment*" their importation "may be made without danger of the introduction or spread of contagious or infectious disease among the cattle of the United States," must be regarded as unwarranted by the Constitution if the contention of the appellants in respect to the third section of the act of October 1, 1890, be sustained.'"

A careful study of these acts in full will reveal that undoubtedly the court had carefully considered them in both

these cases, and what in some instance might seem to have been a delegation of discretion as to legislation was not so. The context of the acts will show, it is confidently asserted after careful examination of all of them, that either, as held in Field *v.* Clark, the seeming discretion was impliedly limited by other terms of the act or they related to the *execution* of the act, wherein, we have seen, the Constitution permits a discretion to be vested in the Executive.

Particular attention is invited to the language employed in these acts in specification of the facts or state of things to be found by the Executive as determinative of his action, such as, "if he shall deem it * * * consistent with the interest of the United States" and "whenever in his opinion the interest of the United States shall require" and "if in his judgment the public interest should require it."

A precisely similar provision in principle is contained in section 805 of the "revenue act of 1916," 39 Stat. L. 799, reading:

"SEC. 805. That whenever during the existence of a war in which the United States is not engaged, the President *shall be satisfied that there is reasonable ground to believe* that under the laws, regulations, or practice of any country, colony, or dependency contrary to the law and practice of nations, the importation into their own or any other country, dependency, or colony of any article the product of the soil or industry of the United States and not injurious to health or morals *is prevented or restricted* the President is authorized and empowered to *prohibit or restrict* during the period such prohibition or restriction is in force, *the importation into the United States of similar or other articles*, products of such country, dependency, or colony *as in his opinion the public interest may require;* and in such case he shall make proclamation stating the article or articles which are prohibited from importation into the United States; and any person or persons who shall import, or attempt or conspire to import, or be concerned in importing, such article or articles into the United States contrary to the prohibition in such proclamation shall be liable to a fine of not less than $2,000 nor more than $50,000, or to imprisonment not to exceed two years, or both, in the discretion of the court. *The President may change, modify, revoke, or renew such proclamation in his discretion.*"

The President therein is required to examine "the laws, regulations, or practices" of foreign nations and their effect upon our commerce, and if thereby he "be satisfied" that exportations thereto from this country are "prevented or restricted" he is authorized and empowered to "prohibit or restrict" the importation of like "*or other * * * products*" into this country "as in his opinion *the public interest may require.*" That paragraph is existing law and is precisely the active language of the provisions of paragraph 317 and what is here contended is too indefinite a definition or delegation of the authority and power of the President under the Constitution.

The significant force of these precedents will be more fully appreciated when we bear in mind that they were statutory specifications of findings by the President *condition precedent to his suspending existing rates of duty prescribed by Congress* as well as suspending importations.

Particular attention is invited to these determinative specifications of such facts or state of things by reason of the criticisms made in the Senate of the specifications of such facts in Senate amendment, section 316. A comparison of these acts with amendment will disclose that the specifications of such facts in the former so criticized were copied *verbatim et literatim* from those acts, long enforced by our Executives and often cited and quoted by our Supreme Court as appropriate precedents for the exercise of congressional delegation of authority in such cases. In view of these precedents it is confidently submitted that in order to hold unconstitutional section 315 and section 316 upon that ground it would be necessary to hold unconstitutional the sound legislative basis repeatedly provided by the Congress and approved by the Supreme Court, throughout a century of our early history, in defense and support of our then predominant merchant marine and expanding commerce.

It will be noted that the language of the proposed provisions of law is made applicable not alone to the provisions of the contemplated tariff act, but of all following tariff acts. This, while effecting every contemplated purpose with reference to the pending tariff act, gives the provision the character of an administrative law. The value of that is found in the fact that the Supreme Court has held that administrative tariff laws are not revenue acts levying "duties" within that term as used in the Constitution and the treaties with various nations. As such it readily takes its place among the administrative and regulative laws of the Congress.

That fixing the basis of a duty is an exercise of the constitutional power "to regulate commerce with foreign nations (sub. 3, sec. 8, Art. I) and not the taxing power (sub. 1, sec. 8, Art. I), we reply that Congress in enacting section 315 *is* so proceeding under this section and has so declared by express words therein. That such a declaration in cases of doubt at least will be looked to by the courts as determinative. See Head Money Cases (112 U. S. 581, 394). Congress may employ the instrumentality of a rate of duty upon imports to effect and, in the exercise of its constitutional power, to "regulate commerce with foreign nations." See Russell *v.* Williams (106 U. S. 623).

Thus a provision which had been a member provision of tariff laws from an early date became section 3 of the tariff act of 1872. In substance, it read as follows:

"SEC. 3. That on and after the 1st day of October next there shall be collected and paid on all goods, wares, and merchandise of the growth or produce of countries east of the Cape of Good Hope (except wool, raw cotton, and raw silk, as reeled from the cocoon, or not further advanced than tram, thrown, or organzine), when imported from places west of the Cape of Good Hope, a duty of 10 per cent ad valorem, in addition to the duties imposed on any such article when imported directly from the place or places of their growth or production."

The provision long in our statutes came to be known as the "Cape rule."

That provision was before the Supreme Court in the case of Russell *v.* Williams (106 U. S. 623) for pertinent construction. The case is an interesting one, and is based upon Hadden *v.* The Collector (5 Wall. 107) and Sturges *v.* The Collector (12 Wall. 19), decisions of the Supreme Court of the United States. The importation was one of tea from China. In answer to the challenge before the court that by its terms it repealed certain specified *duties* levied in and by previous acts in force, the court held that it was a general commercial *regulation* applicable without regard to regular duties imposed for the purposes of revenue, *whether such articles were dutiable or free*, in such previous acts. The court said:

"In conformity with the principle of these decisions we are of the opinion that the law in question continues in force in reference to all goods not expressly exempted from its provisions, whether dutiable or free, *and whether new duties imposed are declared to be in lieu of all other duties or not.* Such a declaration is a mere formula to indicate that the duties newly imposed are to take the place of and supersede the previous duties especially imposed in the tariff schedules and not to abrogate any general commercial regulations not expressly mentioned. The duties on tea have been several times changed since 1861; but, in our view, these changes had exclusive reference to the ordinary duties imposed for the purpose of revenue only and not to the standing regulation which we are considering. In 1861 the regular duty on tea was fixed at 15 cents per pound; in 1864, at 25 cents; in 1870, at 15 cents; and in 1872 it was placed with coffee on the free list. In 1861, 1864, and 1870 the duty was fixed in the general tariff laws of those years, respectively, the first two of which also contained the cape clause discriminating in favor of direct importation. The tariff act of 1870 did not reenact this clause, but neither was it repealed; it remained in force as enacted in 1865 until reenacted in the general tariff act of 1872. We do not think that it was necessary to reenact it in 1870 in order to make it operative upon those imports within its scope, the duties of which were revised by that act. The object of that revision was to readjust the regular schedule of duties, not to interfere with the cape rule *as a regulation of commerce*, or any other general regulation not expressly mentioned or referred to in the act and not repugnant to its provisions. Both laws could stand together without repugnancy. The cape rule contained in the act of 1865 could only be regarded as repealed by implication, if repealed at all; and, considering the object and purpose of the rule, such an implication was not necessarily involved in the act of 1870, and therefore will not be inferred."

In this respect the provision under consideration therein by the court, and this proposed statute as drawn, have many precedents in our tariff legislation, and the holdings by the Supreme Court that they are regulations of commerce and not provisions denouncing duties are uniform.

A similar question arose in United States *v.* Nichols (186 U. S. 298, 303) as to section 19 of the customs administrative act of 1890 (26 Stat. L. 131, 139), which provided, as is provided by the current tariff act, that "whenever imported merchandise is subjected to an ad valorem rate of duty * * *

the duty shall be assessed upon the actual market price or wholesale price of such merchandise * * * including the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses * * *," and so forth.

Here is a provision that levies an additional duty to that prescribed in the schedules of the then existing tariff act, according to facts as found by the customs officials. Such provisions are numerous, not only in the current but in all preceding tariff acts since the foundation of the Government. Of this the Supreme Court in United States *v.* Nichols, *supra*, said:

"Though the tariff act of 1883 is not directly in issue in this case, it is pertinent to inquire whether the section above cited respecting duties upon glass bottles were repealed by section 19 of the customs administrative act. We are of the opinion that they were not. *The customs administrative act was not a tariff act, but, as its title indicates, was intended to simplify the laws in connection with the collection of the revenues and to provide certain rules and regulations with respect to the assessment and collection of duties, and the remedies of importers, and not to interfere with any duties theretofore specifically imposed or thereafter to be imposed* upon merchandise imported. Section 19 was intended to provide a general method for the assessment of *ad valorem* duties and to require the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind to be included in such valuation. * * *

"The large number of cases which have arisen under the tariff acts with respect to the proper classification of glass bottles show that in the mass of legislation upon that subject it is difficult to evolve a construction applicable to all such cases or to determine what particular provision of the glassware section shall be applied; but it is sufficient to say that where such elaborate provisions are made for a specific tax on glass bottles, whether filled or unfilled, and whether their contents be subject to *ad valorem* or specific duties, *it was not intended that the general word 'coverings' used in the customs administrative act, which, as before observed, is not a tariff act at all,* was intended to supply any deficiency that might exist in the tariff act with respect to those articles."

Whether, however, section 315 be deemed enacted by Congress as a duty levying provision or regulation of commerce, as authorized by the Constitution, it seems clear that its provisions are, under the authorities and precedents cited, well within the constitutional mandates to the Congress.

This presentation may well be concluded by a consideration seriatim of the remaining constitutional objections urged in the Senate debate.

1. Indirectly only was it asserted that because action by the President under the amendment, in the first instance, could be initiated or disregarded, *in his discretion;* therefore the amendment was unconstitutional. The reference is to the introductory words of the amendment: "*Whenever* the President upon investigation * * * shall find * * *," etc. If that objection were tenable the vast majority of similar statutes enacted by Congress would for that reason have been unconstitutional. The long continued congressional interpretation and persistent usage are sufficient to avoid this objection. Citation of a few precedents will suffice. The French embargo act of June 4, 1794 (1 Stat. L. 372), initiated action upon the part of the President in the discretionary words: "*Whenever* in his opinion the public safety shall require * * *." Section 3 of the act of October 1, 1890 (26 Stat. L. 567, 612), approved in Field *v.* Clark, *supra*, initiated action by the President in the words: "*Whenever* and *so often as* the President shall be satisfied * * *." Section 18 of the river and harbor act of March 3, 1899 (30 Stat. L. 1121, 1153, c. 425), approved in Union Bridge Co. *v.* United States (204 U. S. 364), initiated action by the Secretary of War by the words: "That *whenever* the Secretary of War shall have reason to believe * * *." An examination of the similar statutes enacted throughout our national existence reveals that the uniform statutory method of *initiating* action thereunder, as distinguished from the statement of facts *determinative* of executive action heretofore considered, was as in this amendment written. The justification of the well-settled practice is essayed by Willoughby on the Constitution, volume 2, page 1318, section 775, as follows:

"The qualifications to the rule prohibiting the delegation of legislative power which have been earlier adverted to are those which provide that while the real lawmaking power may not be delegated, a discretionary authority may be granted to executive and administrative authorities: (1) To determine *when* and *how* the power conferred are to be exercised, and (2) to establish administrative rules and regulations, binding both upon their subordinates and upon the public, fixing in detail the manner in which the requirements of the statutes are to be met and the rights therein created to be enjoyed.

"The principle which permits the legislature to provide that *the administrative agent may determine when the circumstances are such as require the application of a law* is defended upon the ground that at the time this authority is granted the rule of public policy, which is the essence of the legislative act, is determined by the legislature. In other words, the legislature, as it is its duty to do, determines that, under given circumstances, certain executive or administrative action is to be taken, and that, under other circumstances, different or no action at all is to be taken."

Whatever may be said of the logic of the rule its universal legislative exercise and application has no doubt established its soundness beyond controversy. Field *v.* Clark (143 U. S. 649, 690).

2. The constitutionality of the amendment is further challenged upon the ground that the legislative policy is not *expressly* recited in the paragraph. The legislative practice in this particular is not uniform. No decision has been produced, however, and it is confidently asserted that none can be, so holding. While a few of the legislative precedents expressly write in the statute the legislative policy sought to be effected, the vast majority do not. To sustain this contention would lead to endless confusion in application of the first and paramount principle of legal construction as old as statutory law itself, to wit, "that the intention or purpose of the legislature is the first and highest rule of statutory interpretation." If it were held that the courts could not indulge the long-established rule and practice of ascertainment of the legislative purpose of this amendment by examining its context and its relation to other statutes *in pari materia*, an unwarranted exception to the established law of legal construction would be introduced. That the familiar rule of statutory construction, that the statute itself is its best expositor, "reading it from its four corners," applies here, as with other statutes, was the view of Congress and the courts, and is applicable to such statutes as this amendment, is manifest from the precedents and decisions.

Thus, while section 3 of the act of October 1, 1890, expressly declared the legislative policy or purpose "That with a view to secure reciprocal trade with countries producing the following articles, and for this purpose," section 18 of the river and harbor act of 1899 made no *express* declaration of legislative policy or purpose. The Supreme Court, however, in Union Bridge Co. *v.* United States (204 U. S. 364, 385-386), construing that act took judicial notice of the "policy of Congress" to remove obstructions from navigable waterways and, obviously from the context, held that the purpose "declared" by Congress.

An examination of the statutes quoted and construed, *supra*, wherein the policy of the Congress in enacting the statute is held controlling, discloses that in few if any of those statutes was the legislative policy or purpose *expressly* stated in, but was left to be inferred from, the context of the act.

The debates in the Senate and the context of this amendment show that the legislative policy or purpose is plainly evidenced by its context and its associate sections in the proposed act.

3. It is also asserted that the amendment is unconstitutional in that it permits the President a discretion after the prescribed investigation whether he will proclaim a changed rate of duty or classification or form of duty.

Heretofore it has been shown that the language of the amendment itself forbids exercise of such an election. The amendment *requires* the President to proclaim only that rate of duty *or* that form of duty *or* that classification "shown by" the state of facts investigated "necessary" to equalize the ascertained differences in conditions of competition.

But, it may be said, suppose those ascertained differences show more than one of these authorizations a rate of duty or a form of duty or a change of classification equally sufficient for the purpose or "necessary" thereto, must not the President in that situation exercise a discretion as to which he will proclaim? The answer is that though we assume the latter situation to be *always* present and the former argument untenable, and that the President is by that part of the amendment in all cases invested with a discretion as to which he will proclaim; nevertheless, the amendment is in that particular constitutional.

It can not be successfully, and probably will not be, disputed that the purpose of the amendment is to equalize any differences in conditions of competition resulting after application of the prescribed rates of duty and other provisions of the act between foreign and domestic goods in our markets. That is

the obvious policy of Congress *and the thing legislated* by the amendment. When this is accomplished under the amendment the policy of the Congress and *the legislation* to that end by this amendment is completely fulfilled. The authority in the amendment to proclaim a change of rate or classification or form of duty relates solely to the *execution* of the thing legislated in its pursuance. The policy of the Congress and the thing legislated is accomplished regardless of which change is proclaimed by the President. These are but instrumentalities or means of *execution* of the law.

The point is accurately stated in Field *v.* Clark (143 U. S. 649, 693-694), saying:

"The true distinction," as Judge Ranny, speaking for the Supreme Court of Ohio, has well said, "is between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be, *and conferring authority or discretion as to its execution*, to be exercised under and in pursuance of the law. The first can not be done; *to the latter no valid objection can be made.*" (Cincinnati, Wilmington, etc., Railroad *v.* Commissioners, 1 Ohio St. 88.)

This quotation by the Supreme Court has been repeatedly approved by that court and later adopted as its own doctrine. Union Bridge Co. *v.* United States (204 U. S. 364, 382).

The principle was expressed in another form by that court in Buttfield *v.* Stranahan (192 U. S. 470, 496), *supra*, upholding the legislative designation of the Secretary to select and adopt tea standards and providing a finding by the examiner of similarity thereto as conditions precedent to the importation of teas. Undoubtedly the Secretary exercised a judgment or election in selecting these standards; they were, however, means provided by Congress in execution of the act. The Supreme Court here pertinently said:

"Congress legislated on the subject as far as was reasonably practicable, and from the necessities of the case was compelled to leave to executive officials the duty of *bringing about the result pointed out by the statute.* To deny the power of Congress *to delegate such a duty* would, in effect, amount to declaring that the plenary power vested in Congress to regulate foreign commerce could not be efficiently exerted."

Willoughby on the Constitution, volume 2, chapter 775, page 1318, expresses the same thought in the following language:

"The qualifications to the rule prohibiting the delegation of legislative power which have been earlier adverted to are those which provide that while the real law-making power may not be delegated, a *discretionary authority may be granted to executive and administrative authorities:* (1) To determine *when* and *how* the powers conferred are to be exercised; * * *."

A statutory instance of such a discretion being vested in *execution* of a statute, complete in all *legislative* details, was heretofore shown. By the act of July 24, 1897, the President was vested, in order to carry out the purposes of that statute, with the authority of either reducing the tonnage duties provided in Revised Statutes 4228 or the import duties provided in Revised Statutes 2502.

That a *discretion* may be vested as to the execution of a statute, as well as other here applicable expressions, will be found asserted in the late decision of the Supreme Court, Mutual Film Co. *v.* Ohio Industrial Commission (236 U. S. 230, 246), as follows:

"To sustain the attack upon the statute as a delegation of legislative power, complainant cites Harmon *v.* State (66 Ohio Stat. 249). In that case a statute of the State committing to a certain officer the duty of issuing a license to one desiring to act as an engineer if 'found trustworthy and competent,' was declared invalid because, as the court said, no standard was furnished by the general assembly as to qualification, and no specification as to wherein the applicant should be trustworthy and competent, but all was 'left to the opinion, finding, and caprice of the examiner.' The case can be distinguished. Besides, later cases have recognized the difficulty of exact separation of the powers of government, and announced the principle that legislative power is completely exercised where the law 'is perfect, final, and decisive in all of its parts, and the *discretion given only relates to its execution.*'"

While the earlier tariff acts prescribed this duty of the appraiser in the various terms stated, no statutory definition of "market value" was prescribed by Congress prior to the tariff act of August 5, 1909. Theretofore this congressional mandate of authority was unqualified save by the legal force and effect of the term "market value," or some like phrase. Thereunder the appraiser exercised necessarily many discretions. The legislative evolution of this delegated power, in present-day form, is embraced in paragraphs "K," "L," and "R" of Section III of the current tariff act of October 3, 1913 (vol. 38, pt. 1, Stat. L., pp. 185, 186, and 189).

Therein is confided to the appraiser an absolute discretion as to which market in the country of exportation he shall select as the "principal market" thereof. His selection or decision thereof is final upon all the world.

The Supreme Court, in Stairs *v.* Peaslee (59 U. S. (18 How.) 521), construed the phrase. The subject of decision was "cutch." It was shown to be produced in the East Indies only, Calcutta being the market of *exportation.* It was, however, shipped to Halifax, thence consigned to the importers at Boston. It was shown that London and Liverpool were the principal markets of the British dominions for cutch. There was a division of opinion among the judges of the United States Circuit Court of Appeals at Boston, wherefore they certified the following question to the Supreme Court of the United States:

"Whether, in estimating the dutiable value of the cutch, the appraisers should have taken the value at the market of Calcutta, or London and Liverpool, or Halifax, at the period of the exportation from Halifax."

In answering, the court ruled:

"It follows, therefore, as the cutch in question was shipped and invoiced from Halifax, that it was the duty of the appraisers to estimate and appraise it according to its value *in the principal markets of the British dominions.* What markets within these dominions were the principal ones for an article of this description was a question of fact, not of law, and to be decided by the appraisers, and not by the court. They, it appears, determined that London and Liverpool were the principal markets in Great Britain for the goods in question, and appraised the cutch according to its value in these markets. And as the appraisers are by law the tribunal appointed to determine this question, their decision is conclusive upon the importer as well as the Government."

So, by paragraph "L" there is vested in the appraiser a discretion or decision whether he will accept for appraisement purpose "actual market value" in that it is there provided that if such "can not be ascertained *to the satisfaction of the appraising officer,*" he can proceed to find "cost of production" and adopt the same in his determination of this controlling factor in fixing the duty to be laid in the particular case.

And, further, by the same paragraph in certain cases of consigned goods, the appraiser is required to admeasure the duty otherwise ascertained by him with the American selling prices of such or similar goods less certain deductions, *decide* which is the higher and adopt that as the essential factor controlling and determinative of the duty laid by Congress.

All of these decisions or elections by the appraiser are but in execution of the mandate of Congress to ascertain and adopt "a market value" as an integral part of a duty laid by Congress in part in terms of that fact.

Clearly whether the President proclaims a change of rate or form of duty or classification is but the selection of one of the means prescribed by Congress in the amendment for its *execution*, and the delegation of a discretion in exercise of judgment in that particular is not, under all the authorities, a violation of the constitutional inhibition against a delegation of the legislative power. The thing here legislated is that the said ascertained *differences* shall be equalized. The authorized *means to that end in execution of the thing legislated*, the differences being ascertained, are the enumerated changes. By all the authorities and precedents a discretion or judgment as to these in the execution is under the Constitution permissible.

4. It is objected that no judicial or other review is allowed or allowable from either the President's *findings* of fact or legal interpretations in execution of the amendment.

Preclusively, it may be well to bear in mind that Congress itself by this amendment levies the duty in terms of facts or a state of things, and that the President merely executes the statute in the manner therein prescribed. Any judicial review, therefore, allowed or had of the findings of the facts or state of things and the equivalent duty proclaimed by the President would be a review of a congressional conclusion of fact fixing a rate of duty. It seems trite to say that would be inhibited by the Constitution as an usurpation by the judiciary of the constitutional powers vested in Congress.

The consistent holdings of the courts is to the same effect. It has heretofore been pointed out that the findings of the appraisers of market value, entering into and a necessary part of a duty is not the subject of judicial review and the Constitution is not thereby violated.

The similarity of this congressionally delegated authority to ascertain a duty levied by Congress in terms of facts with that by this amendment provided has heretofore been discussed.

Upon this point of finality under the Constitution, the Supreme Court, in Hilton *v.* Merritt (110 U. S. 97, 107), stated:

"The plaintiffs in error contend further that a denial of the right to bring an action at law to recover duties paid under an alleged excessive valuation of dutiable merchandise is depriving the importer of his property without due process of law, and is therefore forbidden by the Constitution of the United States. The cases of Murray's Lessee *v.* Hoboken Land & Improvement Co. (18 How. 272) and Springer *v.* United States (102 U. S. 586) are conclusive on this point against the plaintiff in error."

Of like import is Muser *v.* Magone (155 U. S. 240, 246–247):

"The conclusiveness of the valuation of imported merchandise made by the designated officials, in the absence of fraud, is too thoroughly settled to admit of further discussion. Hilton *v.* Merritt (110 U. S. 97), Auffmordt *v.* Hedden (137 U. S. 310), Passavant *v.* United States (148 U. S. 214). In Auffmordt *v.* Hedden it was said: 'The Government has the right to prescribe the conditions attending the importation of goods, upon which it will permit the collector to be sued. One of these conditions is that the appraisal shall be regarded as final. * * * The provision as to the finality of the appraisement is virtually a rule of evidence to be observed in the trial of the suit brought against the collector.'"

A later expression to the same effect is found in Buttfield *v.* Stranahan (192 U. S. 470, 492–493):

"The power to regulate commerce with foreign nations is expressly conferred upon Congress, and being an enumerated power is complete in itself, acknowledging no limitations other than those prescribed in the Constitution. Lottery Case (188 U. S. 321, 353–356); Leisy *v.* Hardin (135 U. S. 100, 108). Whatever difference of opinion, if any, may have existed or does exist concerning the limitations of the power resulting from other provisions of the Constitution so far as interstate commerce is concerned, it is not to be doubted that from the beginning Congress exercised a plenary power in respect to the exclusion of merchandise brought from foreign countries, not alone directly by the enactment of embargo statutes but indirectly as a necessary result of provisions contained in tariff legislation. It has also, in other than tariff legislation, exerted a police power over foreign commerce by provisions which in and of themselves amounted to the assertion of the right to exclude merchandise at discretion. * * *

"As a result of the complete power of Congress over foreign commerce, it necessarily follows that no individual has a vested right to trade with foreign nations which is so broad in character as to limit and restrict the power of Congress to determine what articles of merchandise may be imported into this country *and the terms upon which a right to import may be exercised.* This being true, it results that a statute which restrains the introduction of particular goods into the United States from considerations of public policy does not violate the due-process clause of the Constitution."

Likewise with the investment by Congress in the Secretary of the Treasury of the authority to ascertain and declare the amount of duties equivalent to bounties granted by foreign countries; and the like investment by Congress in the Secretary of the Treasury to ascertain and proclaim the value of foreign coins, by the same act made an integral factor of import customs duties. These findings and the equivalent duties declared thereupon have uniformly been held by the courts not to be reviewable in the courts, and that the failure to provide express statutory denial of that right was within the Constitution. The authorities upon that well settled point heretofore quoted will not be here repeated.

Whether or not, however, should the President in the commanded ascertainment of these facts, thus made final and proclaimed, *fail to follow the law* investing him with that power by this amendment or misinterpret some law affecting his findings of fact, his acts in that respect would be subject of judicial cognizance, in a proper case, is another question.

That situation develops a question of law. While the contrary view has been asserted, the opinion is here hazarded that such failure of the President to follow or his misinterpretation of a law entering into his conclusions would, in a proper case made, be the subject of judicial cognizance. If that is true no express authority therefor need be written in the amendment, but the question could and would be raised on protest as now provided before the Board of United States General Appraisers.

While it is true that the President can not be haled before the courts to explain his official acts, nevertheless his official acts without or in violation of the Constitution and statutes of the United States would seem to be of judicial cognizance.

That is true of every official of the Government. Certainly it was not the purpose of the fathers to put an official, officials, or bodies of the same above or beyond or to permit them to act in violation of the Constitution or laws of the land. While it was once a seriously debated question in the country whether or not the Supreme Court could hold an act of Congress in violation of the Constitution, and is to-day the subject of papers by eminent judicial authorities, the question would seem to be too well settled in the affirmative for serious controversy.

The true and applicable doctrine was clearly employed in an opinion by Chief Justice Chase in the great case of State of Mississippi *v.* Johnson, President (4 Wall., 71 U. S. 475, 500), as follows:

"The Congress is the legislative department of the Government, the President is the executive department. Neither can be *restrained in its action* by the judicial department; though the acts of both, when performed, are *in proper cases subject to its cognizance.*"

Apt and pertinent illustration and vindication of this pronouncement as to Congress is had in Field *v.* Clark (143 U. S. 649). Congress, of course, enacted the tariff act (McKinley law) of October 1, 1890. Marshall Field & Co., of Chicago, upon payment of certain duties at that port, by due protest before the Board of United States General Appraisers raised the question that in that enactment the Congress, for several specific reasons, had not followed or observed the Constitution, and that therefore the act was unconstitutional. If the citizen can challenge the *performances of Congress* as in violation of or did not pursue the Constitution in directly fixing a rate of duty, and the appropriate judicial avenues therefor are now provided by law, affording final decision by the Supreme Court, why can not that right be likewise litigated when Congress fixes the rate in terms of a state of facts authorizing the President to ascertain and proclaim the same, and the collector proceeds to and does collect the duty so levied?

The pronouncement of Chief Justice Chase as to Congress includes and is authority for the exercise by the citizen of the same rights when the object whereof is effected by an act of the Executive. Upon that authority and precedent, therefore, it would seem that while the performances of the President under this amendment would not be the subject of judicial cognizance to review his *findings of facts* constituting a proclaimed duty *as a finality*, nevertheless should the President, in reaching the proclaimed result, have failed to follow the law delegating his authority or misinterpreted a law which entered into and effected the result proclaimed, such would be the subject of judicial cognizance. An exactly parallel case is Downs *v.* United States (187 U. S. 496), affirming Downs *v.* United States (113 Fed. Rep. 144).

The here pertinent point was best expressed in the opinion of the Board of General Appraisers before whom the case arose and whose very meritorious opinion was approved and adopted in full by the Circuit Court of Appeals, Fourth Circuit, in turn affirmed by the Supreme Court. Therein the doctrine is thus stated:

"Under the authority conferred by this law, the Secretary of the Treasury has duly 'ascertained, determined, and declared' the net amount of the bounty or grant which, in his judgment, was bestowed by the laws of the Russian Government upon the exportation of this sugar. (T. D. 20, 407, dated December 12, 1898; T. D. 22, 814, dated February 14, 1901.) It is not denied by either party to this suit that, if in fact any bounty or grant was bestowed, the Secretary's finding as to its amount was correct. Moreover, it would seem that the decision of that officer as to this particular fact, being made in pursuance of a special statutory authority, would be quite as conclusive on this board and the courts as the finding of the value of foreign coin by the Director of the Mint, under the provisions of section 25 of the tariff act of 1894, a statute strictly analogous, which finding has been held to be conclusive, and not reviewable by this board or the courts. (U. S. *v.* Klingenberg, 153 U. S. 93, 14 Sup. Ct. 790, 38 L. Ed. 647; Wood *v.* U. S., 72 Fed. 254, 18 C. C. A. 553, explaining Klingenberg's case; Hadden *v.* Merritt, 115 U. S. 25, 5 Sup. Ct. 1169, 29 L. Ed. 333.) *It is conceded, however, that the decision of the Secretary as to whether the laws of Russia do in fact bestow such a bounty or grant is reviewable by this board*, as it involves the construction of the laws of Russia relating to the precise subject matter covered by said section 5, above cited. The jurisdiction of the board in this particular has been sustained by the United States Circuit Court of Appeals for the Second Circuit in the recent case of United States *v.* Hills Bros. Co. (46 C. C. A. 167, 107 Fed. 107)."

Likewise, while we have heretofore shown that the finding of market value by appraisers, an integral part of import duties, is conclusive *as to the facts found*, nevertheless, the same is reviewable in the courts for a failure to *pursue* the statute as prescribed by Congress. In United States *v.* Passavant (169 U. S. 16, 20) the court said:

"And while the general rule is that the valuation is conclusive upon all parties, nevertheless the appraisement is subject to be impeached where the appraiser or collector *has proceeded* on a wrong principle *contrary to law or* has *transcended the powers* conferred by statute." (Oberteuffer *v.* Robertson, 116 U. S. 499; Badger *v.* Cusimano, 130 U. S. 39; Robertson *v.* Frank Brothers Co., 132 U. S. 17; Erhardt *v.* Schroeder, 155 U. S. 124; Muser *v.* Magone, 155 U. S. 240.)

To the same effect is Muser *v.* Magone (155 U. S. 240, 247):

"Yet, though the valuation is final and not subject to review and change and reconstruction by the verdict of a jury, it is open to attack *for want of power to make it*, as where the appraisers are disqualified from acting, or have not examined the goods, *or illegal items have been added independent of the value*. The principle applied in such cases is analogous to that by which proceedings of a judicial nature are held invalid because of the absence of some strictly jurisdictional fact or facts essential to their validity."

Orders or finding of the Postmaster General in fraud cases have likewise been held reviewable, though no statute so provides. In American School of Magnetic Healing *v.* McAnnulty (187 U. S. 94, 108) the Supreme Court said:

"That the conduct of the post office is a part of the administrative department of the Government is entirely true, but that does not necessarily and always oust the courts of jurisdiction to grant relief to a party aggrieved by any action by the head or one of the subordinate officials of that department which is *unauthorized by the statute* under which he assumes to act. The acts of all its officers must be justified by some law, and *in case an official violates the law* to the injury of an individual, the courts *generally have jurisdiction* to grant relief."

An extended citation of other similar authorities may be found in Mills and Gibbs *v.* United States (8 Ct. Cust. Appls., pp. 39 to 60, inclusive).

It will be unnecessary to multiply precedents from the numerous cases in the books. Those quoted seem ample authority for the conclusion that while under the amendment the President's proclaimed ascertainments would be a finality as to the facts and consequent duty proclaimed, nevertheless his proceedings would, under existing procedure, be the subject of judicial cognizance upon the ground that he had exceeded his authority, failed to follow, or misinterpreted a law.

For examples of judicial cognizance of acts of the President made in accordance with authorizations by Congress in ascertainment of whether or not such acts were performed *ultra vires* of the authorization may be cited Wilcox *v.* McConnel (38 U. S. 496, 512), wherein the following pertinent pronouncement was had:

"Hence we consider the act of the War Department, in requiring this reservation to be made, as being in legal contemplation the act of the President; and consequently that the reservation thus made was, in legal effect, a reservation made by order of the President within the terms of the act of Congress."

To the same effect Wolsey *v.* Chapman (101 U. S. 755, 770), United States *v.* Midwest Oil Co. (236 U. S. 459, 468), wherein the famous order of withdrawal of oil lands by President Taft was finally reviewed and upheld by the Supreme Court. (See also United States *v.* Morrision, 240 U. S. 192, 212.) In none of these cases was the President haled before the court, though the doctrine of review as stated may well be said to be *stare decisis*.

5. It is asserted and rightfully that "necessity" is frequently invoked to support such delegations of congressional authority. If such finds logical and relevant place in a consideration of the constitutionality of a law, it must find support in some provision of that instrument.

It is here urged, for example, that if commercial conditions rendered this legislation *necessary* to lay a duty or to regulate our commerce with foreign nations, the courts would uphold its constitutionality upon that ground. Such a constitutional warrant of authority is found in subparagraph 18 of Article I, section 8, of the Constitution, providing: "The Congress shall have power to lay and collect taxes, duties * * *." "To regulate commerce with foreign nations * * *," and subparagraph 18, "*To make all laws which shall be necessary and proper for carrying into execution the foregoing powers* * * *."

Congress may, therefore, enact any law which is "necessary" to execute the power of Congress to lay and a statute laying duties or regulating our commerce with foreign nations.

Such enactments are in the nature of statutory regulations of the taxing and regulative powers of Congress. The constitutional warrant is broad and unlimited, extending to "*all* laws which shall be *necessary* and proper for carrying *into execution* the foregoing powers." In passing it may be well to emphasize this broad constitutional power of Congress to make all laws *necessary* to carry *into execution* the power to tax and regulate commerce.

It would seem thereunder that Congress, having laid a duty or provided a regulation of commerce in terms of a state of facts as by section 315, is, by the Constitution, granted *unlimited* power in providing therein or otherwise for the *execution* of that law. Congress can therefore authorize the President to act in his discretion as to the provided means to that end, or in any way Congress may deem wise, under this express authorization of the Constitution so long as this authorization is by Congress deemed "necessary and proper."

The authority that determines what statutory regulations in such cases are "necessary" and proper has long since been decided by the Supreme Court. In McCulloch *v.* Maryland (4 Wheat. 421, 422) it is stated:

"We admit, as all must admit, that the powers of the Government are limited, and that its limits are not to be transcended. But we think the sound construction of the Constitution must allow to the National Legislature *that discretion*, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it in the manner most beneficial to the people.

* * * * * * *

"But were its necessity less apparent, none can deny its being an appropriate measure; and if it is, *the decree of its necessity*, as has been very justly observed, is to be discussed in another place. Should Congress, in the execution of its powers, adopt measures which are *prohibited by the Constitution*, or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects *not intrusted to the Government*, it would become the painful duty of this tribunal, should a case requiring such a decision come before it, to say that such an act was not the law of the land. But where the law is *not prohibited*, and is really calculated to effect any of the objects intrusted to the Government, to undertake here to inquire into the *decree of its necessity* would be to pass the line which circumscribes the judicial department and to tread on legislative ground. This court disclaims all pretensions to such a power."

Whether or not the particular delegation of authority in the Executive is "necessary" is a question for the Congress alone and not the courts. Congress having enacted the particular amendment, its necessity is not open to question in the courts nor subject to judicial cognizance. The only forum of discussion and final decision as to the necessity for such a statute is the Congress.

Of the matters which might well be taken into consideration by the Congress in determining the *necessity* for this amendment is that without it there is no vested power in any official or board of the United States to meet the swift changes in duties and regulations possible and frequently made by almost every other nation of the world. Almost if not every foreign country is legally equipped by investment, in some official or board, of plenary power to raise or lower their tariff rates or change their regulations so as to momentarily meet every exigency created by commercial conditions and the laws and regulations of competing nations. Some evidence of how long is required under our system, heretofore in vogue, to effect a tariff change may be had from the length of time uniformly required to enact an import tariff law. Moreover, since the World War every other commercial nation of note has proceeded to equip its officials with executive means of speedy defense and aggression in commerce.

Furthermore, the diligent inquiry upon part of the present committees of Congress, aided by officials of the Government, have disclosed that values, and particularly foreign values upon which the rates of our import duties are fixed, are more unstable than for decades past. It has been stated upon the floor of the Senate that the market values of one nation have changed as much as 25 and 28 per cent in a single month. It is a matter of common knowledge, and a necessarily inevitable fact, that a post-war readjustment of the world's prices and influencing currency values must so materially vary in short periods of time that they are unsafe bases upon which to rest our necessary revenues and the defense of our industries without providing, in any measure so predicated, a power in some official in order to preserve our revenues and industries and correct errors made to change its provisions with a swiftness equal to that possessed by other nations, and adequate of the ever-changing values upon which the act is based, with the attendant necessarily disastrous results.

From the foregoing it is respectfully submitted that it is entirely competent for the Congress to lay import duties, in terms

of "facts" or "state of things," and empower some official or tribunal to ascertain and proclaim those facts or that state of things and the equivalent duty whereupon the same shall be collected.

The question has been suggested whether or not, should sections 315, 316, and 317 be held unconstitutional, that would render invalid the whole act. That question would seem to have been conclusively answered in Field *v.* Clark, *supra*, pages 695–696, and the authorities therein cited and quoted. By that appeal there was also challenged the constitutionality of paragraph 231, section 1, of the tariff act of 1890 granting bounties upon sugar produced in the United States (26 Stat. L., 567–583).

The court dismissed consideration of section 3 of the act herein reviewed, saying:

"The court is of opinion that the third section of the act of October 1, 1890, is not liable to the objection that it transfers legislative and treaty-making power to the President. Even if it were, it would not, by any means, follow that other parts of the act, those which directly imposed duties upon articles imported, would be inoperative. But we need not in this connection enter upon the consideration of that question."

And then obviously proceeded to give its reasons in another, the following, connection, as follows:

"Appellants contend that Congress has no power to appropriate money from the Treasury for the payment of these bounties, and that the provisions for them have such connection with the system established by the act of 1890 that the entire act must be held inoperative and void. The question of constitutional power thus raised depends principally, if not altogether, upon the scope and effect of that clause of the Constitution giving Congress power 'to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States.' (Art. I, sec. 8.)

"It would be difficult to suggest a question of larger importance or one the decision of which would be more far-reaching. But the argument that the validity of the entire act depends upon the validity of the bounty clause *is so obviously founded in error* that we should not be justified in giving the question of constitutional power here raised that extended examination which a question of such gravity would, under some circumstances, demand. Even if the position of the appellants with respect to the power of Congress to pay these bounties were sustained, it is clear that the parts of the act in which they are interested, namely, those laying duties upon articles imported, would remain in force. 'It is an elementary principle,' this court has said, 'that the same statute may be in part constitutional and in part unconstitutional, and that if the parts are *wholly independent of each other that which is constitutional may stand, while that which is unconstitutional will be rejected.*' (Allen *v.* Louisiana, 103 U. S. 80, 83.) And in Huntington *v.* Worthen (120 U. S. 97, 102) Mr. Justice Field, speaking for the court, said:

"'It is only when different clauses of an act are *so dependent upon each other that it is evident the legislature would not have enacted one of them without the other*—as when the two things provided are *necessary parts* of one system—that the whole act will fall with the invalidity of one clause. *When there is no such connection and dependency, the act will stand, though different parts of it* are rejected.' It can not be said to be evident that the provisions imposing duties on imported articles are so connected with or dependent upon those giving bounties upon the production of sugars in this country that the former would not have been adopted except in connection with the latter. Undoubtedly the object of the act was not only to raise revenue for the support of the Government but to so exert the power of laying and collecting taxes and duties as to encourage domestic manufactures and industries of different kinds, upon the success of which, the promoters of the act claimed, materially depended the national prosperity and the national safety. But it can not be assumed, *nor can it be made to appear from the act*, that the provisions imposing duties on imported articles *would not have been adopted except* in connection with the clause giving bounties on the production of sugar in this country. *These different parts of the act, in respect to their operation, have no legal connection whatever with each other.* They are entirely separable in their nature, and, in law, are wholly independent of each other. One relates to the imposition of duties upon imported articles; the other to the appropriation of money from the Treasury for bounties on articles produced in this country. While, in a general sense, both may be said to be parts of a system, neither the words nor the general scope of the act justifies the belief that Congress intended they should operate as a whole, and not separately, for the purpose of accomplishing the objects for which they were respectively designed. *Unless it be impossible to avoid it, a general revenue statute should never be declared inoperative in all its parts because a particular part relating to a distinct subject may be invalid.* A different rule might be disastrous to the financial operations of the Government, and produce the utmost confusion in the business of the entire country."

And so it clearly can be said of these amendments that the bill is complete without them, could stand as such in their absence and, in fact, without them its integrity be the more secure. The question appears so well settled that further discussion would seem unwarranted.

Mr. McCUMBER. Mr. President, I think that is all I desire to say at this time.

Mr. WALSH of Montana. Mr. President——

Mr. SIMMONS. If the Senator thinks there is any difference in legal contemplation between the authority given the President to increase the rates of duty within the limits of 50 per cent and the authority given the President to set aside the law which provides for foreign valuation and proclaim the American valuation, I would be very glad to have the Senator's views with reference to that distinction.

To my mind, there is a very marked distinction between the power which is intended to be given to the President with reference to the raising of rates and the power given to the President to nullify or to a certain extent set aside the application of the law providing for foreign valuation and substituting therefor American valuation. In other words, in one case we are authorizing the President to carry out the law of Congress and furnishing him a rule by which he may carry out that law increasing the rate, and in the other case we are authorizing the President to set aside a specific enactment of Congress—namely, that fixing the foreign valuation as the basis for the purpose of levying taxes—and substituting therefor the American valuation, a valuation which is not anywhere enacted into law and which does not appear upon the statute books. I should like to ask the Senator from North Dakota if he does not think that possibly presents a different legal question from the one which he has been so ably discussing?

Mr. McCUMBER. Mr. President, with the permission of the Senator from Montana [Mr. WALSH]——

The PRESIDING OFFICER. The Senator from North Dakota still has the floor, the Senator from North Carolina desiring to ask him a question. After the Senator from North Dakota shall have answered the question of the Senator from North Carolina, the Chair will recognize the Senator from Montana.

Mr. McCUMBER. Mr. President, I shall now very briefly answer the Senator from North Carolina. There is no difference whatever in the character of the power delegated, whether it is delegated to make rates which are based upon the foreign valuation basis or upon the American valuation basis; the authority is exactly the same in either case. We have a provision in the proposed law for ascertaining the values of products in a foreign country. We can not always ascertain their value with precision and ascertain for what they are sold. They may be articles, for instance, that are not sold at all in the foreign country and which are imported only into the United States for sale. We have got to fix rates of duty upon articles of that character. Therefore we have a provision in the proposed law to meet such cases. We define the American valuation basis in section 402, subdivision (j). Subdivision (b) of section 315 provides that the American valuation shall be adopted when the foreign valuation, together with the power to increase rates 50 per cent, will not effectuate an equalization in conditions of competition.

Now, let me illustrate this by a single case. Here, we will say, is an article which is produced in Great Britain, which costs $1, and we put upon it a duty of 25 per cent. We find that the American article is put on the American market and may be sold only at a reasonable profit for $1.50. If the President is to take the foreign valuation, he may increase the rate provided of 25 per cent, which would be 25 cents, to the extent of 50 per cent of 25 cents, which would be 12½ cents, making the rate 37½ per cent; but he finds that 37½ per cent does not measure up to that which is necessary in order to equalize the difference, that it would require 50 per cent to do so. Therefore he is authorized to take the American valuation as a basis in determining what the rate may be.

Mr. NICHOLSON. Mr. President, will the Senator from North Dakota yield to me for a question?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Colorado?

Mr. McCUMBER. I yield.

Mr. NICHOLSON. I was unavoidably absent from the Chamber during the major part of the Senator's address concerning the pending question, and therefore desire now to ask him a question. Where we have in the proposed law fixed specific rates and ad valorem rates, does the power proposed to be conferred upon the President go to the extent of giving him the right to change specific duties?

Mr. McCUMBER. It is proposed that the President may change specific duties to ad valorem duties or he may change ad valorem duties to specific duties, always bearing in mind that the final ad valorem duty which may be fixed shall not bring about the imposition of a duty that is an increase beyond 50 per cent of either the ad valorem or the specific or the compound duty.

Mr. NICHOLSON. Is it proposed in the pending legislation to confer upon the President a like right to reduce a duty within a limit of 50 per cent as well as to increase it within a limit of 50 per cent?

Mr. McCUMBER. Yes; under the proposed legislation the President would also have authority to reduce a duty within the limit of 50 per cent.

Mr. CURTIS. Mr. President, I merely wish to ask the chairman of the committee if he will not ask that his amendment may be printed for the use of the Senate? When the amendment was presented this morning it was not ordered to be printed, and we have only the committee print. I am told by the officers of the Senate that many requests are being made for copies of the amendment.

Mr. McCUMBER. If the Senator from Kansas will make the request that the amendment may be printed I shall be glad.

Mr. CURTIS. I request that the amendment offered this morning by the Senator from North Dakota, which we have been discussing, may be printed.

The PRESIDING OFFICER. The Senator from Kansas asks unanimous consent that the amendment proposed by the Senator from North Dakota may be printed. Without objection, it is so ordered.

Mr. WALSH of Montana. Mr. President——

Mr. LENROOT. Mr. President, will the Senator from Montana yield to me in order that I may offer an amendment so as to have it pending?

The PRESIDING OFFICER. The Chair will recognize the Senator from Wisconsin for that purpose. The Senator from Wisconsin offers an amendment, which will be printed and lie on the table.

Mr. LENROOT. I desire that it may be the pending amendment. It is an amendment to the committee amendment.

Mr. TOWNSEND. I ask that the amendment proposed by the Senator from Wisconsin to the committee amendment may be read.

The PRESIDING OFFICER. The Secretary will read the amendment to the amendment.

The READING CLERK. It is proposed wherever the words "conditions of competition" occur in the pending amendment that they be stricken out and that in lieu thereof the words "cost of production" be inserted.

The PRESIDING OFFICER. The amendment proposed by the Senator from Wisconsin to the committee amendment will be printed.

Mr. WALSH of Montana. Mr. President, on a former occasion I addressed the Senate on the features of the bill now under consideration and argued that they are violative of constitutional principles. I shall to-day review at least in outline the argument then made; but, before proceeding to that discussion, I desire to submit some very general observations touching the policy of these amendments.

Whatever doubt may be entertained by anyone concerning the constitutionality of the amendments under consideration, no doubt ought to exist in the mind of anyone, in my judgment, as to their unwisdom. Their stoutest defenders will probably disclaim any attachment whatever to the principle they represent as a feature of a permanent tariff policy; indeed, they hasten to convey the assurance that, were it not for the chaotic business conditions which prevail throughout the world and the instability of foreign exchange, they could not be induced to embrace it or even to tolerate it. Some apology, Mr. President, is certainly in order for such an astounding delegation of the functions of Congress to the Executive, vesting him with an authority no constitutional monarch may exercise, in character quite like that for the assumption of which kings have been brought to the block.

No emergency, however grave, can justify the surrender into the hands of the President of the taxing power intrusted by the people to their representatives in Congress, no matter how profound may be his statesmanship or how exalted may be the character of the man who for a brief period may be elevated to that high office. If this encroachment upon the liberties of the people is either sanctioned or condoned, there is no man wise enough nor prescient enough to foresee the ultimate consequences.

It is said that an exigency exists demanding this departure from the settled policy of our Government. Our skies are never wholly clear; emergencies continually confront us, and when they are wanting an ambitious President or an indolent or subservient Congress will have no difficulty whatever in conjuring up such.

The revered fathers of our Republic were very deeply apprehensive concerning the likelihood that the President, in view of the extensive powers they were reposing in him, and particularly of the enormous patronage at his disposal, might exercise an undue influence over the action of Congress. They took pains to insert in the great charter which they gave us some provisions which were intended to guard against or to mitigate that evil. They would have been horrified at the idea of conferring on the President of the United States the power to impose customs duties, to raise customs duties, to lower customs duties, carrying with it the opportunity to ruin or enrich the citizen, to shower wealth upon him the like of which Croesus never knew or Monte Cristo ever dreamed of. There would be more terror, Mr. President, to the business man in the presidential frown if this provision become a law than was ever occasioned by a general bank panic. There would be a new significance to him in the plaint of Wolsey:

> O, how wretched
> Is that poor man that hangs on princes' favors!

An unscrupulous political leader, presumed to have some influence at the White House, particularly if the incumbent were a candidate for reelection, would find in a law of that character a convenient instrument for fat-frying purposes, a resource of such rich possibilities as no campaign manager ever commanded in this country or in any other. At its worst a law of that character would be a menace to the perpetuity of our institutions, and at its best it would be a constant, ever-present obstacle to the stability of industrial conditions, an element of uncertainty in any calculations the business man might make concerning his future operations in any enterprise affected by tariff rates.

This bill has now been before the Congress for something like 16 months. It may be before the President for his signature by the 1st of October next, or it may, by reason of a disagreement among the conferees—the two Houses being understood to be at variance with respect to a very important principle of the bill—go over the session; but whenever it becomes a law uncertainty will still confront the cautious manufacturer or other producer. His calculations as to his future operations may be upset any day by a presidential order affecting rates that react on his business. Even the filing of a complaint asking an increase or a reduction of rates inspired by private malice or the work of some meddlesome Mattie or in an honest, commendable purpose by citizens injuriously affected to relieve themselves from burdens will constrain him to conservatism in his operations. Thus the wheels of industry will be checked, and the chilling effect which this act must inevitably have upon our foreign trade reflected on industry here will be intensified. Unfortunate, sir, as it may be that rates which are now fixed amid the shifting conditions which prevail should continue after normal times shall have demonstrated that the rates were too high or too low, it can scarcely be so disastrous as to have all the rates subject to change overnight.

I address myself now to the question of the constitutionality of this extraordinary delegation of power. I shall, as I said, attempt to review only in outline the argument heretofore made with respect to the matter. All concede the general principle that legislative power can not be delegated; that the representatives of the people, chosen for the purpose of making the laws, must make those laws and can not delegate that power to anyone else. That certain powers may be delegated to administrative officers and executive officers, however, is not open to doubt.

The Finance Committee, in their original report upon this bill, contented themselves with sayings that the powers here conferred are entirely justified by the case of Field *v.* Clark, reported in One hundred and forty-third United States. Apparently they are not so confident about that now. I have not had an opportunity to examine the briefs which have been submitted this morning—one, as we are told, by one of the judges of the Court of Customs Appeals. I can not refrain from expressing my surprise that a judge of a court before which the law will necessarily come

for consideration and construction should venture to advise in advance the Congress of the United States concerning the constitutionality of the measure or of any provisions in it.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from North Carolina?

Mr. WALSH of Montana. I do.

Mr. SIMMONS. I want to say to the Senator that I have been advised that he was one of the chief assistants in the framing of the law.

Mr. OVERMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the junior Senator from North Carolina?

Mr. WALSH of Montana. I yield.

Mr. OVERMAN. Do they say who that judge was?

Mr. WALSH of Montana. We were told that it was Judge De Vries of the Court of Customs Appeals, who advises us in advance that the law which he will be called upon to pass upon is a constitutional measure.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Ohio?

Mr. WALSH of Montana. I do.

Mr. POMERENE. Occupying, too, a life position. I am astonished that any judge occupying that position should come here as an advocate of legislation going to the fundamental principles of a finance bill.

Mr. WALSH of Montana. I was told, however, that the question had been investigated by the attorney for the Tariff Commission, and I have been very courteously furnished by the commission with a copy of an opinion by their official counsel, who reaches the conclusion that the legislation is constitutional. It starts out, however, with the following declaration:

> Field *v.* Clark (143 U. S. 649) does not decide the question whether rates as well as facts can be left to Executive determination. The law therein construed—section 3 of the tariff act of 1890—prescribed the rates of duty to be collected.

I think that proposition must be accepted on all hands, and it is important for the reason that not only is that case not a direct authority for the legality of the provisions under consideration, but the attention of the Senate has been called to no case arising under the legislation of Congress or arising under the legislation of the various States where the taxing power was ever delegated to any official whatever. Many delegations of power have been under review by the courts. There is such a wealth of learning on the subject that it is difficult for one without exhaustive study to follow understandingly the discussions of the courts in relation to it; but among them all, from beginning to end, there appears never to have been considered an attempt to delegate power, as it is attempted here, to an executive officer to fix tax rates; and it must necessarily follow either that the policy has been universally condemned, or else that the conviction is general that it is beyond the power of the legislature to do anything of the kind.

Mr. President, the mind most naturally and readily is directed to the statutes which authorize the Interstate Commerce Commission or other bodies of similar character to fix the rates, in the case of the Interstate Commerce Commission for the transport of passengers or freight, and in the case of public-service commissions generally the rates of the corporations under their supervision and direction. Upon reflection it must be conceded that there is a wide difference between the delegation of power of that character and the delegation of power to fix tax rates.

Mr. WATSON of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Georgia?

Mr. WALSH of Montana. I yield to the Senator.

Mr. WATSON of Georgia. The Senator who is addressing the body will, of course, see at once the difference between a delegation of power to legislate by the President within a definite limit and to a definite end and this peculiar delegation of power in which he is given a strictly judicial power. That is to say, he may hear and determine the question of raising a rate or lowering a rate, or adopting one method of valuation or adopting another. He may decide yea, or he may decide nay, and he is, therefore, gifted with a strictly judicial as well as legislative power. Therefore, I ask the attention of the Senator from Montana to the fact that in this bill—this minor portion of the bill, which will soon become the major portion of the bill in its power to devour the minor portions of it—the President is given the judicial power, the legislative power, and left the executive power; and therefore all three separated branches are united in him, and he is made truly a monarch.

Mr. WALSH of Montana. The observations of the Senator from Georgia are entirely pertinent and quite sound, Mr. President.

Now, I want to direct the attention of the Senate, if I can, to the difference between the cases to which reference has been made and the case that is before us.

In practically every case in which the delegation of power was sustained by the Supreme Court of the United States, reference is made to the impracticability or practically the impossibility of dealing with the question in any other way; and that is the foundation for the rule as laid down by the courts generally. We understand the general rule to be that legislative power can not be delegated, and yet everybody will realize that legislative power is delegated to municipalities and other subordinate divisions of the State, and that because from time immemorial delegations of power to exercise authority locally have been extended and sustained.

Mr. STERLING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from South Dakota?

Mr. WALSH of Montana. I do.

Mr. STERLING. Is not that, however, largely because there is no prohibition in the constitutions of the several States that delegate to municipalities legislative authority?

Mr. WALSH of Montana. No. As a rule, the constitutions of the various States declare that "all legislative power is hereby vested in the legislature."

Mr. STERLING. But is not this the rule—that unless the power is expressly prohibited in the State constitution the power exists on the part of the legislature, whereas with reference to the Federal Constitution power must be given, either expressly or impliedly, before it can be exercised?

Mr. WALSH of Montana. The distinction to which the Senator refers undoubtedly obtains; but when the constitution says "All legislative power is vested in the assembly," the assembly still may delegate power to local bodies, simply because that was the custom at the time the constitution was adopted; and such a provision is not to be understood as denying the power so to delegate authority. The power delegated will fall within that class—that is to say, where the power to delegate exists by virtue of a long-established custom—or else it exists by virtue of the fact that it is impracticable to deal with the problem in any other way.

For instance, in the case of United States against Grimaud, reported in Two hundred and twentieth United States Reports, in which the statute authorizing the Secretary of Agriculture to establish rules and regulations governing the forest reserves was under consideration, the court said:

> In the nature of things it was *impracticable* for Congress to provide general regulations for these various and varying details of management. Each reservation had its peculiar and special features, and in authorizing the Secretary of Agriculture to meet these local conditions Congress was merely conferring administrative functions upon an agent, and not delegating to him legislative power (220 U. S. 516).

Senators will observe that it says:

> In the nature of things it was impracticable for Congress to provide general regulations.

Reference has been made to the case of Buttfield against Stranahan, to which I shall refer again, in which the court said:

> To deny the power to Congress to delegate such a duty (to fix tea standards) would in effect amount to declaring that the plenary power vested in Congress to regulate foreign commerce *could not be efficaciously exerted.*

So, likewise in a very learned opinion rendered in a Florida case, the court said:

> The complex and ever-changing conditions that attend or affect the performance of the useful public service rendered by common carriers make it *impracticable* for the legislature to prescribe all the necessary rules and regulations.

Reference was made by the distinguished Senator from North Dakota to the case of the Union Bridge Co. against the United States, to which I shall recur hereafter. In that case the court said:

> But investigations by Congress as to each particular bridge alleged to constitute an unreasonable obstruction to free navigation and direct legislation covering each case, separately, would be *impracticable* in view of the vast and varied interests which require national legislation from time to time.

So, Mr. President, it must appear, in order to warrant a delegation of power of this character, that it is impracticable, almost impossible, for Congress to enact the necessary legislation to meet the situation. But what can be said in that regard with respect to the levying of customs duties? It is not impracticable to do it at all, because we are actually doing it now, and we have done it without delegating power to any extent since the commencement of our Government in 1789.

One of the first statutes passed by the Congress of the United States was a law for the purpose of raising revenue by the imposition of customs duties in which the rates were specifically prescribed, and from that time down to this Congress has done the same thing. So it can not be said that it is impracticable for Congress to legislate upon this particular subject.

In addition to that, all the authorities agree that wherever power of this kind is delegated to an administrative officer it is subject to review by the courts, in order to determine whether the law has been followed and complied with or not, and if provision is not made, or provision does not exist, for such a review in the courts the act can not be sustained.

That principle has been recognized in all of our legislation. The Interstate Commerce Commission is authorized to fix railroad rates, and to do many other things in connection with the operation of railroads and common carriers generally; but every order it makes is subject to review in the courts, as provided in the act.

In exactly the same way, when we authorized the Federal Trade Commission to issue an order commanding any person complained of to desist from practices in trade alleged to be unfair, an opportunity was given to review in the courts the decision thus made by it, that it might be set aside if the facts did not justify the order that was made.

So we gave a power of review in the case of the "packer" legislation. It becomes necessary, therefore, every time we thus delegate power to fix rates of any kind, or to make any rule or order affecting the rights of a citizen, to give him an opportunity to go into the courts to review any action taken under the power granted and to have it annulled if it shall be oppressive in any way or contrary to the rule laid down by the statute. I want to advert to what is said in a few of the authorities upon that question.

I refer, first, to the Florida case, to which I adverted a few moments ago. It is there said:

> In a number of well-considered cases it has been distinctly held that where a valid statute, complete in itself, enacts the general outlines of a governmental scheme or policy or purpose and confers upon officials charged with the duty of assisting in administering the law authority to make, within designated limitations *and subject to judicial review*, rules and regulations, or to ascertain facts upon which the statute by its own terms operates in carrying out the legislative purpose, such authority is not an unconstitutional delegation of legislative power. (Pp. 649–650.)

In a very learned discussion of this subject of the delegation of legislative power by the late Justice Timlin, of the Supreme Court of the State of Wisconsin, the conditions which justify a delegation of power by the legislative branch are set out as follows:

> The delegated power must be limited either locally or to a particular subject matter, as, for instance, the regulation of a specified corporation, department, or bureau; and when exercised be of a lesser degree of conclusiveness than a statute; that is to say, *subject to judicial review as to its reasonableness, fairness, and impartiality.*

So that such a review is an essential feature of any delegation of power proper to be exercised by the legislature. Wanting here, it necessarily follows that the provisions under consideration can not be sustained.

But not only is it wanting here, but the President of the United States is not amenable to suit by any private citizen upon any question arising under the administration of his high office, as has been repeatedly determined by the Supreme Court. Indeed, it is doubtful whether Congress could authorize the bringing of a suit against the President of the United States for any act done in his official capacity. Moreover, he is not subject to the process of subpœna to bring him into court to disclose the facts upon which his decision is founded. He is not even obliged, under the statute, to write an opinion disclosing what information he had upon the subject, or how he arrived at the conclusion which he has announced.

Another feature of the case is equally difficult. It has been admitted in the course of the argument that if power be delegated by Congress to an administrative officer to fix rates or to establish regulations it must lay down some definite rule which must be followed by the officer so empowered. He can not be intrusted with discretion to follow one policy or to follow another policy as he may see fit and as he thinks would best subserve the public interests. The policy is to be declared by Congress, and he must walk in the line that is laid down by Congress.

Under the act in question the President, when he finds upon investigation that the rates fixed by the bill do not equalize conditions in competition, is authorized to do any one of four different things. In the first place he may raise or lower the rates. In the second place he may change the classification. In the third place he may change the form of the duty from ad valorem to specific or from specific to ad valorem. Fourth, he may substitute the American valuation for the foreign valuation. Any one of those four things he is at liberty to do as, in his judgment, will best promote the public interest.

Let me illustrate the principle to which we here appeal. It is disclosed very clearly in two cases arising in the State of Wisconsin. A statute was passed by the legislature of that State which authorized the judge of one of the courts, the circuit court, I think, to issue a charter or certificate of incorporation to a village complying with its requirements. It was necessary to submit a map of the territory, a census of the population, and a statement of the resources of the municipality to be. Then it was declared that, considering those things, if the court believed it to be in the public interest that the charter should be granted he should issue the same.

That statute was held void because the power could not be reposed in the judge of the court to determine what is or what is not in the public interest. The statute was then amended so as to provide that whenever there was laid before the circuit judge a map of the territory and a census of the region to be incorporated in the city and he found that otherwise the application conformed to the law he was to issue the charter. In other words, he had nothing to do except to determine what the facts were, and if he found the facts to be as prescribed in the statute then he should issue the charter. So here, Mr. President, we can not under any circumstances repose in an administrative or an executive officer the power to say which one of two or three or four different courses it would be the wiser or the better to pursue.

Mr. WATSON of Indiana. Would the Senator mind stating the case he just cited?

Mr. WALSH of Montana. The first case is the case of In re Incorporation of Village of North Milwaukee (93 Wis. 616); the later case is State *v.* Lammers (113 Wis. 398).

I am not unmindful of the argument made by the Senator from North Dakota to the effect that whichever one of these four courses the President takes under the power granted, he is governed and controlled by the provision that it must be for the purpose of equalizing the differences in competition in trade; that that is the end to be attained, although he may reach the end by any one of these four different routes. But that does not answer the contention at all.

Of course, the purpose is, as declared in the statute, to bring about equality in conditions of competition as between a foreign product and a domestic product. But he may follow any one of these four courses with a view to attain that end, and he will follow that course which to his mind most accurately or most nearly or most effectively brings about that end.

It is a question of policy as to which one of them will most effectively and accurately bring about the result. Since we began enacting customs laws, down to this good hour, there has always been a controversy as to whether certain rates should be specific or whether they should be ad valorem. It is a question of very delicate and oftentimes profound policy, and scarcely a tariff bill comes before Congress for consideration which does not give occasion to spirited debate between the advocates of the one way of arriving at equality in conditions rather than the other way.

Everybody understands how these things operate. The President to-day finds that a certain specific rate will equalize conditions as they now exist at this very hour, but, of course, if the price of the commodity goes down the duty goes down with the ad valorem rate, whereas in a case of the specific rate, whatever changes may ensue, that rate remains the same. So that it is not a question of arriving at just exactly what will equalize conditions to-day, but to-morrow and the next day. In the consideration of the bill the Senate struck out a provision fixing an ad valorem rate upon importations of wool, because they desired to give the woolgrower the amount of protection which was intended to be accorded him whether the price went up or went down. Thus it becomes a question of policy. So, too, changing the commodity from one paragraph to another paragraph involves a matter of judgment and discretion, a matter of policy upon the one side or upon the other. That is a fatal feature of the amendment under consideration that has no counterpart whatever in any of the statutes under consideration in the cases to which reference was made by the distinguished Senator from North Dakota.

But finally, Mr. President, all concede that whenever a delegation of power is made it becomes necessary for the Congress to lay down a clear, precise rule which can be followed, so that the condition upon which action is to be predicated can be ascertained with a reasonable degree of accuracy. I have not seen that principle expressed more pointedly or more clearly

than by Judge Willoughby in his celebrated work on the Constitution, in that part of it in which he considers the case of Field *v.* Clark. He there said as follows:

The court can not delegate its power to make a law, but it can make a law to delegate a power to determine some fact or state of things upon which the law makes, or intends to make, its own action depend. To deny this would be to stop the wheels of government. There are many things upon which wise and useful legislation must depend which can not be known to the lawmaking power, and must therefore be a subject of inquiry and determination outside of the halls of legislation.

The doctrine thus declared is without objection so long *as the facts which are to determine the executive acts are such as may be precisely stated by the legislature and certainly ascertained by the executive.*

The facts must be such as may be "precisely stated by the legislature" and exactly "determined by the executive." Now, what is the rule laid down here? It is that the rates shall be fixed "so as to equalize the differences in conditions of competition." The duty shall be fixed at such rate as shall equalize the differences in the conditions of competition. We are not unfamiliar with the contention frequently made in this Chamber, and not at all unpopular throughout the country, that rates should be fixed at the difference in the cost of production here and abroad. The committee have chosen to discard that old and somewhat well-known rule—sustained somewhat generally by public opinion. They have chosen to substitute some other rule. They want some other test than that thus declared or, of course, they would have used the very language in which it has been customarily expressed. Thus, Mr. President, the Republican platform in 1908 declared as follows:

In all tariff legislation the true principle of protection is best maintained by the imposition of such duties as will equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries.

The last clause, "together with a reasonable profit to American industries," was added in that platform in 1908 to the principle as it had theretofore been advocated within and without this Chamber.

As I understand the amendment offered by the senior Senator from New Jersey [Mr. FRELINGHUYSEN]—I have not had an opportunity to examine the amendment offered to-day, but the amendment heretofore offered by him—it was in strict conformity with the principles thus so frequently supported, namely, the difference in what he speaks of as the conversion cost—that is to say, as he explained, the difference in the cost of production at home and abroad. I shall advert to this presently.

I am calling attention to the fact that the Senate Committee on Finance, in the amendments which they have tendered to us, do not choose to follow, for some reason or other, the well-supported rule to which I have adverted. But if they did do so, let us consider for a moment about what that means. How shall the President ascertain the difference in the cost of production at home and abroad and fix a rate which shall equal such difference? As pointed out in the discussion of the subject this morning, the cost of production varies in different countries. It has been disclosed in the debates time and again that at the present time Germany, with respect to many commodities, can produce at a cost much less than other competing European countries or perhaps even Asiatic countries. When the President goes to ascertain what is the difference in the cost of production between this country and the countries abroad, which country shall he take as his guide? Shall he fix the rate at what will equalize the difference in competition between this country and Germany, or between this country and France, or between this country and England, or shall he average them all and govern himself accordingly?

But we do not end our difficulties there. As pointed out, if the rates were fixed at such a figure as would take care of the differences in the conditions of competition between this country and Germany, they would have to be so high that all importations from other European countries would be excluded and we would give to Germany a monopoly of our foreign trade in this country. So it is, Mr. President, with respect to individuals in the same country. I have no doubt that the same conditions exist in Germany and in this country. Some of our manufacturers are able to produce their products at a much less price than their domestic competitors. Mr. Gary stated some time ago that the United States Steel Corporation is able to produce steel at $5 a ton less than any competing independent company in this country. When we come to consider the difference in the cost of production shall we take as the standard the foreigner who has the highest cost of production or shall we take as the test the foreigner who has the lowest cost of production?

So with the other factor, the cost in the United States, shall we take the producer who has the most efficient plant, the greatest business organization, the most highly developed system, or shall we take the man who operates in a small way, whose costs are high, whose plant is inefficient, and so on? In other words, what the Congress may do easily it is simply impossible for the President to do under such a rule as is suggested. That is to say, the Congress is not obliged to be logical. We may fix any rate we see fit and we may solve the situation when it is utterly impossible for the Executive or an administrative officer to do it. But when we come to consider the question before us under the rule which is prescribed by the committee, we are involved in difficulties compared with which those to which I have heretofore adverted are slight indeed. The test it proposes is the differences in the conditions of competition. Now that involves something more, obviously, than the differences in the cost of production. But what more does it involve?

At an early stage of the debate the Senator from North Dakota [Mr. MCCUMBER] said the guiding principle which actuated the Finance Committee in fixing rates in the bill was to fix them at such an amount as would equalize the difference in the cost of production plus the cost of transportation to this country. Well, either under that rule or under the general statement that the rates must be fixed so as to equalize the differences in conditions of competition, how can we avoid taking into consideration the cost of transportation in this country from the point of production to the point of consumption? Take manganese, for instance, produced in my State and throughout the Western States. A small duty was put upon manganese equal possibly to the difference in the cost of production in this country and in Cuba or Brazil, but by no means high enough to equal the difference in the cost of transportation from the mines of the West to the consuming centers in the East as compared with the cost of transportation from the countries of foreign production. That is one of the conditions of competition.

Will the President be obliged to take into consideration those differences in the cost of transportation in order to arrive at what rate will equalize the differences in conditions of competition? That is one of the conditions of competition. But if that is the case, taking manganese again for the purpose of illustration, from what point to what point will he calculate the cost of transportation? Shall he take into consideration the difference in the cost of transportation from Butte to Duluth or from San Francisco to Pittsburgh or from Denver to Birmingham? We immediately get an impossible problem which is presented to the President by the rule.

But there is more than that. The committee have given us a detailed rule from which to determine the significance and meaning of the general rule to which I have adverted before. Thus—

(c) In ascertaining the differences in conditions of competition, under the provisions of subdivisions (a) and (b) of this section, the President, in so far as he finds it practicable, shall take into consideration (1) the differences in conditions in production, including wages, costs of material, and other items in costs of production of such or similar merchandise in the United States and in competing foreign countries—

Now it will be observed that this is a frank abandonment of the old rule of difference in the cost of production, as the President may go further under this rule and take into consideration—

(2) the differences in the wholesale selling prices of domestic and foreign merchandise in the principal markets of the United States, but in considering prices as factors in ascertaining differences in conditions of competition, only reasonable profits shall be allowed.

Now there is a very important consideration. That gets us to the rule which was laid down in the Republican platform of 1908, that tariff rates should not only cover the differences in competition but also be high enough to give the American manufacturer a reasonable profit upon his goods. Of course, everybody understands that the European manufacturer, as a rule, is content with a lower rate of profit than is the American manufacturer. I am glad it is so. We in this country are not satisfied with the living conditions which prevail in Europe, neither are our energetic and enterprising people satisfied with the small margin of profit which manufacturers in Europe, as a rule, realize from their business. When, however, the President is called upon to determine what is a reasonable profit, what guide has he? A reasonable profit in one line of business might be 5, 6, or 7 per cent, but it would be entirely inadequate in another line of business. In respect to one commodity the profit ought to be very high, while with respect to another it ought to be extremely low, as in the case of staple commodities. How then is the President to determine what is a reasonable profit upon any particular commodity?

Moreover, Mr. President, the same man often handles a long line of goods. Take steel manufacturers, for instance. When it comes to a rate of duty that ought to be imposed upon some particular commodity, how can the President determine what

the rate of duty should be in order that there should be a reasonable profit upon the sale of a particular commodity?

Subdivision 3 of this section of the amendment, giving the element to be considered, continues:

Any other advantages or disadvantages in competition.

Mr. President, that was a little different in the original draft as it came before. In that draft it was as follows:

(c) That in any investigation provided for in this section account may be taken of the price at which like or similar merchandise is sold in the United States and competing foreign countries, wages, prices of materials, and all other items in costs of production of such similar merchandise in the United States and competing foreign countries and any advantages of domestic and foreign producers in competitive trade, including laws and regulations affecting the same.

In other words, the President was obliged to convert into dollars and cents any advantage that might arise by reason of the laws of this country as compared with the laws of the competing country.

Mr. TOWNSEND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Seantor from Michigan?

Mr. WALSH of Montana. I yield.

Mr. TOWNSEND. I have not been in the Chamber all the morning and I am wondering if there has been any proposition presented to amend the provision with reference to this subject.

Mr. WALSH of Montana. The Senator from Wisconsin [Mr. LENROOT] has proposed an amendment to it.

Mr. TOWNSEND. Such an amendment has been offered?

Mr. WALSH of Montana. Yes.

Mr. President, it has been frequently charged on this floor that the rates have been fixed in the pending measure not in order to take care of the difference in the cost of production here and abroad but in order to insure to the American manufacturer the prices which he is now asking for his products; and apparently the President, under this rule, is required not only to take into consideration the difference in the cost of production here and abroad but he is also to consider the wholesale prices here and the wholesale prices abroad and to allow that element to enter into his computation of what is the rate that will equalize the difference in competition here and abroad.

However, Mr. President, let us get back to the rule of the amendment as it has finally come before us. No change is really made in the meaning by the excision of the words "including laws and regulations affecting the same." The language of the pending proposal is exceedingly broad—"any other advantages or disadvantages in competition." Why will not that include the difference in the cost of transportation? Take manganese again for the purpose of illustration. It is brought here from Brazil or from Cuba in ballast at practically no cost at all. On the other hand, the American producer is obliged to pay the exorbitant, and I might even say the extortionate, freight rates to carry his products clear across the continent. So the conditions of competition are such that he can not compete with the foreign producer; yet here the President is obliged to take into consideration any advantage and to fix the rate at such a figure as will absolutely equalize the differences in the conditions of competition, though the Congress has refused expressly to fix the rates so high.

Let us go a little further, Mr. President. Everybody realizes that many elements enter into the matter of competition between traders in the same commodity. Many goods sell in this country—particularly women's clothes and perhaps also fabrics of various kinds that are of foreign make—simply because they are of foreign make. One goes to a tailor, who tells him, "Here is a domestic piece of goods, and here is one of foreign manufacture." The price is fixed upon both, but the tailor calls attention to the fact that the one piece is foreign goods, expecting that that will attract the customer, who will pay a higher price for that kind of goods. No one can gainsay the fact that because many articles are of foreign manufacture they command a higher price upon the American market. How shall the President convert the advantage which the foreigner has because his goods are of foreign make into dollars and cents and thus determine the rate which he is called upon to fix?

The amendment as originally drawn provided that the President was to take into consideration any advantage arising from the laws. That language is not found in the proposition as it is amended. It now reads "any other advantages," but it is really here in effect, although not so expressly stated.

It is contended that the foreign manufacturer and foreign producer of goods have a decided advantage over our producers in this country because the manufacturers and producers in foreign countries are allowed to combine, while our manufacturers and producers are forbidden to combine, an advantage which must be converted likewise by the President into dollars and cents in order to arrive at the rate which will actually equalize competitive conditions.

A multitude of factors enter into competition that defy reduction to a mathematical basis.

Mr. EDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from New Jersey?

Mr. WALSH of Montana. I yield.

Mr. EDGE. If the authority is delegated at all to the President to review and take into consideration possible changes in tariff duties, does the Senator contend that the latitude should not be sufficiently comprehensive to enable the President at least to weigh any possible advantages or disadvantages, whatever they might be, in order to reach a logical and proper conclusion?

Mr. WALSH of Montana. No; I do not so contend. I should say that, if we were going to lodge the power in the President at all, we ought not to tie him down by any hard and fast rule, but we ought to allow him to attack the problem exactly the same as Congress attacks the problem and give consideration to everything which would be pertinent to the question before us. However, the point I am making is that when that is done the Constitution is violated.

Mr. EDGE. Leaving aside the constitutional question, which I can not discuss, do not the general terms of the language, as well as the specific meaning of the words "other advantages or disadvantages in competition," tend to give the President just exactly that authority in order to enable him to discover everything that might possibly affect the determination of the rates?

Mr. WALSH of Montana. The Senator will understand that I am not finding any fault with that as a matter of policy.

Mr. EDGE. I thought the Senator was.

Mr. WALSH of Montana. Oh, no; I am arguing now that it is proposed to lay down an impossible rule; the President can not carry it out.

The PRESIDING OFFICER. If the Senator from Montana will suspend for a moment, the Chair feels that he should advise him that he has used his hour on the paragraph. Under the ruling of the Chair the Senator is at liberty to consume an hour on the amendment pending.

Mr. WALSH of Montana. Mr. President, before concluding I desire to advert to a few of the cases which, in the judgment of the chairman of the Finance Committee, warrant this delegation of power.

Mr. BORAH. Mr. President, before the Senator proceeds to that discussion will he permit me to interrupt him?

The PRESIDENT pro tempore. Does the Senator from Montana yield to the Senator from Idaho?

Mr. WALSH of Montana. I yield.

Mr. BORAH. As I view this authorization to the President, he may under the power conferred, assuming that it is constitutional—and I will leave that question out of consideration for the moment—practically remake this entire tariff bill?

Mr. WALSH of Montana. Within a range of 50 per cent.

Mr. BORAH. Yes; but within the wide discretion which he has as to investigation, and so forth, 50 per cent is only in a sense a limitation. A President who believed in a very low tariff could give us a tariff law imposing very low tariff rates, while a President, on the other hand, who believed in a very high protective tariff could give us a very high protective tariff law under the discretion which is proposed to be lodged in him.

Mr. WALSH of Montana. There is no doubt about that.

Mr. BORAH. So that he could practically make the entire tariff law.

Mr. WALSH of Montana. There is no doubt about it; that is the point I am making, that no two men will be able to take this rule, either as it is expressed generally in the proposed statute or as it is expressed in detail, and arrive at exactly the same result. In other words, it becomes very largely a matter of predisposition and discretion on the part of the President. I also wish to call attention particularly to the proposition that no matter what the President does, no matter at what conclusion he arrives, whether the action taken by him does or whether it does not equalize the difference in conditions of competition, nobody can question his action; so that we really do invest him with perfectly unrestrained power to fix whatever rate he sees fit within the limit of 50 per cent.

Mr. LENROOT. Mr. President, will the Senator yield at that point?

Mr. WALSH of Montana. I yield.

Mr. LENROOT. May I suggest that two men might take the same factors into consideration and yet not arrive at exactly

the same results, but, under the pending amendment, the two men might not take into consideration the same factors, which would be a very different proposition.

Mr. WALSH of Montana. Yes; and we have seen the situation illustrated here on this floor time and again. Both sides of the Chamber have taken exactly the same facts and figures furnished them by the Tariff Commission, and one side would reach the conclusion that a rate of duty of 20 per cent would equalize the differences in the cost of production here and abroad, while the other side would maintain that the rate would have to be at least 50 per cent in order to equalize the difference.

Mr. LENROOT. My point is that where they are not required to take into consideration the same factors it makes it that much more indefinite.

Mr. WALSH of Montana. Exactly; and whenever the factors are thus doubtful——

Mr. BORAH. Mr. President, I do not want to take up the Senator's time, because I know it is limited. I merely wish to make a brief statement, in order that my position may not be misunderstood. I should like very much to see some kind of a tribunal created so that we could have tariff laws hereafter which were not made as the pending bill has been made; but I do not believe that it is wise policy, even if we had the constitutional power, to lodge this authority in the President, and I do not believe that we have the constitutional power to lodge it in the President so that the President could do really effective work in the way of making a tariff. I think it would be a wise thing if we could create some kind of a commission and exhaust the power of Congress in that commission to enable the commission to go as far as it possibly could under the Constitution in making a tariff law.

Mr. WALSH of Montana. I desire to say to the Senator that that will be under consideration immediately after the disposition of paragraphs 315, 316, and 317, upon the amendment tendered by the senior Senator from New Jersey [Mr. FRELINGHUYSEN] and the Senator from New Mexico [Mr. JONES], but I am in entire accord with the views now expressed by the Senator from Idaho. I also deplore this method of attempting to fix tariff rates. I am convinced, however, that the widest latitude that we can give to the Tariff Commission is to authorize them not only to find the facts but also to recommend to Congress the rates which they believe ought to be enacted, and then Congress can either enact those rates or depart from them, as they see fit. However, that is a matter which will come up directly.

Mr. President, much reliance seems to be placed by the Senator from North Dakota in support of his contention upon the bridge case, involving the statute which authorized the Secretary of War to direct the removal of an obstruction to navigation in one of the navigable streams unless the bridge were made to comply with the requirements laid down by him; but that is a very simple matter. The United States can prevent the occupation of a navigable stream by any kind of a structure. It can say that none shall be placed there at all; and having the power to say that no structure shall be placed there at all, of course, it can say, "You can place there only such a structure as is approved by the Secretary of War." But the court not only put its decision upon that ground but put it upon the ground to which I have heretofore adverted, namely, that it is impracticable to deal with the problem in any other way.

They say:

> By the statute in question Congress declared in effect that navigation should be freed from unreasonable obstructions arising from bridges of insufficient height, width of span, or other defects. It stopped, however, with this declaration of a general rule, and imposed upon the Secretary of War the duty of ascertaining what particular cases came within the rule prescribed by Congress, as well as the duty of enforcing the rule in such cases. In performing that duty the Secretary of War will only execute the clearly expressed will of Congress, and will not, in any true sense, exert legislative or judicial power. He could not be said to exercise strictly legislative or judicial power any more, for instance, than it could be said that executive officers exercise such power when, upon investigation, they ascertain whether a particular applicant for a pension belongs to a class of persons who, under the general rules prescribed by Congress, are entitled to pensions. If the principle for which the defendant contends received our approval, the conclusion could not be avoided that executive officers in all the departments, in carrying out the will of Congress as expressed in statutes enacted by it, have from the foundation of the National Government exercised and are now exercising powers as to mere details that are strictly legislative or judicial in their nature. This will be apparent upon an examination of the various statutes that confer authority upon executive departments in respect of the enforcement of the laws of the United States. Indeed, it is not too much to say that a denial to Congress of the right, under the Constitution, to delegate the power to determine some fact or the state of things upon which the enforcement of its enactment depends would be "to stop the wheels of government" and bring about confusion, if not paralysis, in the conduct of the public business.

Then reference was made to the case of Buttfield against Stranahan, the tea-standard case, considering a statute in which it was provided that the Secretary of Agriculture should fix standards of tea, and that if the teas did not come up to this standard they should be excluded from the country. But Congress has plenary power to exclude from this country any commodities that it may see fit. No one has any right to introduce commodities into this country from another country except by the express or the tacit permission of Congress, and Congress can lay down the conditions under which commodities may be imported from a foreign country, and may declare that teas can not be imported into this country unless they conform to the regulations of the Secretary of Agriculture. But I called attention awhile ago to the further declaration of the court in that case that it would be impracticable to legislate with respect to the matter except the power were thus delegated.

No answer whatever thus far, so far as I have been able to discover, has been made to the contention which I have advanced, that the power thus delegated, in order to be constitutional, must be subject to review by the courts in order to determine whether the statute was actually followed or was not followed by the legislative officer to whom the power had been intrusted.

The brief to which I called attention, though, prepared by counsel for the Tariff Commission, has the following to say about that:

> Nor does denial of appeal from the Executive action go to the essence of the constitutional question. Congress has the power to limit or prevent litigation in governmental matters, and has in fact made the decision of the Commissioner of Navigation final in the interpretation of laws relating to the collection and refund of tonnage taxes.

That refers, no doubt, to section 3 of a statute approved July 5, 1884:

> That the Commissioner of Navigation shall be charged with the supervision of the laws relating to the admeasurement of vessels, and the assigning of signal letters thereto, and of designating their official number; and on all questions of interpretation growing out of the execution of the laws relating to these subjects, and relating to the collection of tonnage tax, and to the refund of such tax when collected erroneously or illegally, his decision shall be final.

That is to say, the commissioner demands of a vessel owner the payment of a tonnage tax, and he has misconstrued the law and demanded of the shipowner more than the law requires him to pay. That statute has been given different constructions. A number of the courts have held that all that that statute means is that the Commissioner of Navigation, who is a subordinate of the Secretary of Commerce, shall determine the matter finally and that the question shall not go up to his chief. Another court has decided that it goes beyond that, and that it denies the man who has overpaid the right to go into court and demand a refund of the excess tax that he has paid. That the former decision is correct I can not entertain a doubt, because I can not believe that Congress ever intended to deny to the citizen the right to go into court to recover an excess tax which had been exacted of him by the collector. But, however that may be, even if the construction contended for is correct, it simply means this: The Government of the United States can not be sued except with its consent, and it refused to give its consent to be sued in this particular case. That is all that that decision amounts to. It does not by any means lay down the proposition that any legislation that Congress may enact, delegating power, is valid, even though there is no redress in the courts from oppressive action or action that does not follow the statute.

Mr. President, I recognize how futile it is to discuss questions of this kind in this body.

I entertain no doubt, from my past experience, that the decision of this very important question of constitutional law will follow almost exactly the votes upon other features of the bill. The division, in all probability, will be just exactly the same. However, I could not content myself without expressing my very pronounced conviction that this is an unwarranted action on the part of Congress, and that, as a matter of policy, it is vicious and most unwise.

Mr. EDGE. Mr. President, I have already briefly discussed the intent of the pending amendment, and I am going to take only a few moments of the time of the Senate to discuss it further.

Of course it is impossible for a layman to determine the constitutionality or unconstitutionality of the section proposed. I have great regard for the knowledge of the law possessed by my friend from Montana, and yet on this side of the Chamber many able lawyers are equally positive that the pending amendment is entirely constitutional. I recognize that we take an oath to support the Constitution. I do not know what a layman is to do under those circumstances but to try to assist in preparing and developing legislation, and if the question of constitutionality is raised, as it is being very seriously raised

in this important change in policy, then wait for the natural course of a decision from the Supreme Court, which I suppose in due time, should this become a part of the law, will be handed down. In the meantime it appeals to me that our activities should be along the line of endeavoring to organize machinery which will meet practically a situation which I think everyone will agree, whether questioning the constitutionality of the pending amendment or otherwise, should be met and must be met by some elasticity in the administration of tariff legislation or the imposition of tariff duties.

I assume, from the few words the Senator from Idaho uttered, that he is not in sympathy, and of course the Senator from Montana is not in sympathy, with this amendment; but they apparently both recognize that the present policy of administering the tariff could be greatly improved in order to meet the business and economic conditions which we must face, especially in these days, with much more frequent changes, much more seriously affecting our daily business life than perhaps ever before in the history of the country. Therefore, I am convinced that it is the duty of Congress to at least prepare the machinery. If it is unconstitutional we will be so informed in due time.

There seems to be no method—certainly no method has been suggested—whereby we can introduce elasticity in tariff schedules in order to meet rapidly changing conditions, other than the method suggested by the Committee on Finance. My colleague [Mr. FRELINGHUYSEN] proposes to go a step further, in an amendment already introduced, in order that an existing tribunal of the Government—the Tariff Commission—may be charged with securing and disseminating additional information upon which changes in tariff schedules can be based. I think the two taken together are not only necessary but they furnish a practical method through which we can to some extent, at least, meet a situation which I think we must all agree exists.

We have been laboring for months on a tariff bill. We have heard arguments on both sides, frequently inspired by sectional demands and conditions, all of which has gone to demonstrate the necessity for higher or lower schedules, and we have voted upon them time after time, time after time; and the bill is now, perhaps, three-quarters or seven-eighths passed so far as the individual schedules are concerned. Yet I know that we all feel that we have not sufficient information, speaking individually, to be equipped to vote very intelligently on the schedules as presented either by the committee or by individual amendments. The committee, I know, have worked hard and earnestly and zealously, and have secured all the information that it was possible to secure in order to guide them in presenting and suggesting the various schedules upon which we have acted; and yet we know that in these days, shortly after the Great War, when abnormal conditions exist throughout the world, it is absolutely impossible for any Congress to produce a tariff bill which will meet scientifically or semiscientifically the conditions which exist to-day.

We have been working for months, and in the two Houses for over a year, taken together, on tariff legislation. The country demands a solution of many other problems, and is entitled to it. Business awaits congressional action more than it has ever before in the history of the country awaited congressional action. It is unthinkable to anticipate a return to the consideration of tariff legislation in the near future, after this bill shall be disposed of. So what are we going to do when the bill is passed and becomes a law, so far as that great responsibility is concerned? If we do not erect or prepare some machinery to meet a situation which every one of us must know we will be asked to face, a change in conditions in countries abroad, in their manufacturing outputs, conditions of exchange, conditions of rehabilitation which will permit them to increase their products and their output, all of which affect prices and competition with our products—if we do not erect some machinery to meet a situation which will go to the very bedrock of the daily life of all classes of the people, then, in my judgment, we will not have fulfilled a very clear duty which confronts us.

Much of the criticism of the Senator from Montana seems to be predicated upon a possibility of the President of the United States, not necessarily abusing this great power, but being importuned by political representations and thus, perhaps without full knowledge, being induced to make a decision raising or lowering tariff duties which might not be based upon a full knowledge of the situation. It seems to me that if that criticism could be applied at all, it could be more justly applied to Congress. Here the Members of the Senate and of the other House, representing as they do certain subdivisions of the country, are approached on every hand by letter, committee, and otherwise, to particularly look after the interests of this or that manufacturing industry or other organization, and the Members of Congress naturally feel some individual responsibility to look after those requests. If the concentration of some qualified responsibility in the President should be carried out, it seems to me that the result, instead of inviting political control in the making of a tariff, would be just the opposite. The President is President of the entire country. He does not represent any particular congressional district, farming industry, or other activity. He must listen to any suggestions of a change of tariff, as the amendment clearly defines, with a careful consideration of the differences of conditions of competition, having power, of course—as it should be, in my judgment—to take into account and into consideration everything entering into that competition.

So any decisions made by the President of the United States would, it seems to me, be to a great extent removed from sectional control and influence, which everyone of us knows perfectly well have had much to do with the passage or defeat of many a schedule in the last three or four months of tariff consideration, and always will have.

I feel that that particular criticism is unjustified; if the amendment becomes a law I feel that it will result in a more general view being taken of the necessities of the tariff, perhaps bringing the East and West, the North and the South, nearer together in viewpoint; and the President of the United States having certain power, representing all sections of the country, those powers qualified by carefully defined amendments, in my judgment would help in providing a still more scientific tariff than could possibly be prepared in the ordinary and usual manner with all the labors and earnestness of any committee of the Senate.

Mr. President, this is the only suggestion of a provision which would be at all practicable and would permit of some elasticity, enabling us to meet the changed conditions which we know must frequently arise; and I think it is most important that it be included in the bill. We have attempted to write a bill with the knowledge that American valuations and foreign valuations are far apart because of the difference in value of the currencies of the various countries of the world.

I am perfectly well aware of the fact that they could be equalized by computing them in terms of the American valuation, but with countries like Germany, with the mark only in the last week depreciating several hundredths of a cent, and with all these changes coming almost overnight, for us to pass a hard and fast tariff bill, as we must necessarily do in the ordinary way, with no opportunity whatever to change it until it is brought back to Congress, would simply keep the industrial world of this country in a condition of unrest which would put further and further away the natural desire of the Members of both parties, on both sides of the Chamber, to encourage industry, and to bring employment to millions of men still looking for work. Senators, we well know a duty imposed to-day may be inadequate to-morrow. Must Congress continue giving consideration to the tariff to correct such admitted inequalities or shall we proceed as business men and remove the question, to some extent at least, from sectional or partisan debate? We provide the policy, certainly the President will not depart from it only to meet such inequalities.

So I feel that it is our duty to either adopt this or some other plan—and I have heard of no other plan—in order that the President of the United States, the only authority to whom the power could be delegated, can use his best judgment, under qualified restrictions, in meeting and helping solve this great problem.

Why should we fear to trust the President of the United States, a man elected by the direct votes of all the electors of the country? I do not like the disposition which seems to more or less prevail in these days of suspicion that we can not trust our public servants. If the time has arrived when we can not trust the President of the United States to use his very best judgment in a matter of such extreme importance to the happiness and contentment of every class of citizens of the country, then God help the future of the Republic.

If we have made an error in adopting this plan of legislation, and thus delegating some of our responsibilities, we have the power to repeal at any time Congress is in session, and if no other plan is suggested, even if this is of doubtful constitutionality, then we will not perform our full duty, we will not give to the business men of this country the help, the assistance, the real cooperation demanded, in order that we can take advantage of the markets of the world which are awaiting American enterprise and American ingenuity.

Mr. NICHOLSON. Mr. President, as to many of the items to which the Senator has called attention, relating to our foreign commerce, could we not be fully protected if we re-

sorted to the American valuation instead of the foreign valuation? Would not that accomplish all the Senator desires to secure by this change?

Mr. EDGE. It would accomplish all we could desire so far as the conditions existing at the time this bill became a law were concerned, but the design to provide elastic administration of the tariff law is in order to afford a means of meeting conditions which may and undoubtedly will arise after we are through with the tariff bill and it becomes necessary to meet those conditions.

Mr. NICHOLSON. The American valuation would meet the conditions, because that follows prices up and down, so that the country would be amply protected if we adopted the American valuation instead of the provision proposed here.

Mr. EDGE. If the Senator will read the language of the proposed amendment, I think he will change his view on that. I assume, although I am not a member of the committee, that it was designed to meet many other conditions, in addition to the actual difference in the cost of the product, when the committee used the language "conditions of competition." In other words, there are many conditions in competition besides the cost of the articles, which would have to be considered by the President, which the Finance Committee can not consider beyond the facts produced at the time the bill was before the committee. So that that language, I assume, has been used for the specific purpose of enabling the President to meet a sudden condition developed on the other side, where American valuation would not solve the problem at all.

Mr. NICHOLSON. I can not conceive of any situation which would arise where the American valuation would not solve the problem.

Mr. EDGE. The American valuation is simply computed upon the cost of the article.

Mr. NICHOLSON. Certainly.

Mr. EDGE. Many other conditions arise in trade between countries besides the fluctuation in the cost of articles, for instance, transportation costs.

Mr. POMERENE. Mr. President, I feel that little can be added to what has been said by the very able Senator from Montana [Mr. WALSH] on the subject of the constitutionality of the pending amendment. At the same time it has been insisted on the other side of the Chamber that this provision is constitutional, and that opinion is based very largely upon the opinion of the Supreme Court in the case of Field against Clark in One hundred and forty-third United States Supreme Court Reports.

My own study of this question has convinced me that if the constitutionality of this amendment can be sustained, it must be based upon some other authority than Field against Clark. I want to discuss this opinion very briefly and then try in a few minutes to apply its principles to the pending amendment. The Supreme Court in the consideration of that case laid down this principle:

> That Congress can not delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution.

I think no one will question that principle. The difficulties come, if at all, in the application of the principle to a given state of facts. What were the facts in that case?

The Congress of the United States sought to place upon the free list sugar, molasses, coffee, tea, and hides, and the President was authorized, when he found that other nations imposed exactions and duties on the agricultural and other products of the United States, and found that those duties were reciprocally unequal and unreasonable, to suspend the privilege of free importations. But if he did it, what was the result?

It was not left to the discretion of the President to determine what duty should be levied against those imports in the future, but the Congress of the United States specifically defined what those duties should be. In other words, there was nothing left to the discretion of the President of the United States. The only thing that he was empowered to do was to ascertain whether in fact other nations had imposed exactions and duties on the agricultural and other products of the United States. When he found that to be so and issued his proclamation, by that very fact the duties which were prescribed by the Congress went into effect.

Now, let us see what the Supreme Court said a little further on. It quotes from Judge Ranney, of the Supreme Court of the State of Ohio, than whom no greater or better judge ever lived in Ohio. He lays down the distinction between a legislative power and an Executive power in these words:

> The true distinction is between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be, and conferring authority or discretion as to its execution, to be exercised under and in pursuance of the law.

Now, what is the Congress doing when it enacts a tariff law? At present the Underwood-Simmons law is in operation. The pending bill proposes to change the rates of duty. The Congress of the United States is exercising legislative discretion when it changes or seeks to change those duties or determines to leave them where they are.

Shall the duty be 25 per cent or 50 per cent? Shall it be a specific duty or an ad valorem duty? Shall we adopt the foreign valuation or the American valuation? Are not those legislative problems? Do they not appeal to the legislative discretion of the Congress of the United States? When we leave it in their power to determine whether it shall be a specific duty or an ad valorem duty, whether it shall be levied according to the American valuation or the foreign valuation, is not that an exercise of a discretion? Why, Mr. President, I can not think that any serious question could be entertained about it.

Now, let us see what the pending amendment provides. It declares that if the duties which we are fixing do not equalize the differences in conditions of competition and this fact is ascertained by the President, then there is conferred upon him certain powers, and what are they? First, he can change the classification; that is, he can take a given item out of one paragraph where one duty is levied and transfer it to another paragraph where a different duty is levied. Is not that an exercise of legislative discretion? Is not that just as much an exercise of legislative discretion as it is when we here on the floor of the Senate change an item from one paragraph to another?

Let me go further. We provide in the pending bill in certain instances a specific duty, in certain other instances an ad valorem duty, and in certain other instances a combination of both the ad valorem and the specific duties. When we determine whether we are going to adopt the one or the other or the combination of the two, are we not exercising our legislative discretion? When we say to the President, "If you find that competitive conditions are such as to interfere with our industrial development, you shall have the right to change from a specific to an ad valorem or from an ad valorem to a specific," is that a power different from that which we are here exercising?

Let me go a step further. The House, exercising its legislative discretion, declared in favor of the American-valuation plan in the levying of duties. Never, I think, in my legislative life have I heard of a greater propaganda than has been exercised in favor of that plan. The Republican members of the Finance Committee, after a very careful investigation of the subject, declared against the American-valuation plan. Were they not exercising a legislative discretion when they so declared? When the Republican members of the Finance Committee, by a vote of 7 to 3, turned down the American-valuation plan for the foreign-valuation plan, was not that an exercise of legislative discretion? They came to that conclusion because they found, in their judgment, that plan would be utterly impracticable and unworkable. Now, after the majority members of the Finance Committee had declared that the plan was unworkable, they come in by the pending amendment and seek to confer upon the President of the United States the power to change the bill from a foreign-valuation plan, which is practicable and which is workable, to a plan which they say is impracticable and unworkable. Is not that an exercise of legislative discretion? What else can it be?

Why, Mr. President, suppose we had the question before us in our legislative capacity and we concluded to-day that we were going to change from a specific to an ad valorem duty or from an ad valorem to a specific duty or from the foreign valuation to the American valuation, or seek in certain instances to extend an embargo; what is that but an exercise of a legislative power? And yet the Senate of the United States is now, instead of exercising that power itself, seeking to confer it upon the President. Mr. President, I have the greatest confidence in the personal integrity of the President of the United States. I am sure that if the power were conferred upon him he would seek to exercise it in accordance with his best ability. Let us go a step further.

We say after months of investigation that we are going to levy certain duties. The distinguished Senator from North Carolina [Mr. SIMMONS] made the statement on the floor of the Senate a few weeks ago that in his judgment the average duties under the Senate committee bill would be about 45 per cent or perhaps higher. The duties under the Dingley law I believe were, on an average, about 40 per cent. I may not be quite accurate about the rate, but that is approximately correct. What is it that is sought to be done here? Assuming for the sake of the argument that the average duties here are 45 per cent, it is proposed to put it in the power of the President to add 22½ per cent to those duties or to take 22½ per cent from them. In

other words, he would have the discretion to go up 50 per cent or down 50 per cent. He would have the right to fix those duties at any point between the present duties and 50 per cent higher or between the present duties and 50 per cent lower.

The Congress of the United States, presumably, when it passes the bill expects to secure from its operation a certain amount of revenue by taxation at the customhouses, and yet we confer upon the President of the United States the power to say, "No; I want more duty collected at the customhouses," or "I want less duty collected at the customhouses." Is not that the exercise of a discretionary power? If the Congress of the United States were seeking to enact a law which would bring $400,000,000 annually into the Treasury, and sought so to change the bill that it would bring in $600,000,000 annually, would not that be the exercise of a legislative discretion? How, then, can it be less if it is exercised by the President himself?

Again, let me discuss for a few moments the policy of the legislation. I mean no offense when I say that certain interests have been here in season and out of season laboring, I will not say improperly, with members of the Finance Committee and other Members of the Senate seeking a change in this rate and a change in that rate. We know the difficulties that have confronted us all the way in the exercise of discretion. Duties in the bill have been changed from time to time. Was not that the exercise of legislative discretion? Think of the difference in the situation. Here in the Senate are two Members from each State and in the other House there is one Member from each congressional district. Presumably the two Senators and the one Representative can keep their respective legislative bodies informed as to conditions in their respective States or districts, but here we are seeking to impose upon the President himself the necessity of taking action in accordance with all the knowledge that is supposed to be in the possession of 96 Senators and 435 Representatives.

More than that, think of the situation. It is true that under the provisions of the pending amendment before a change is made notice is supposed to be given to interested parties. Who are the interested parties?

Mr. WALSH of Montana. I will say to the Senator from Ohio that that provision has been changed.

Mr. POMERENE. The provision as originally framed was as I have stated it. Has that been changed?

Mr. WALSH of Montana. That has been changed.

Mr. POMERENE. Does the Senator have the change in mind, so that he can advise me concerning it?

Mr. WALSH of Montana. That is important in considering the question. As it is now proposed to be amended, the provision reads:

> In any investigation under the provisions of this section hearings shall be held and a reasonable opportunity to be heard shall be afforded.

Mr. POMERENE. Without giving notice?

Mr. WALSH of Montana. That is what it provides.

Mr. POMERENE. Very well. Who are the people who are interested?

Mr. WALSH of Montana. Will the Senator suffer another interruption?

Mr. POMERENE. Yes.

Mr. WALSH of Montana. The wool schedule has been the subject of particularly vicious attack; the newspapers of the country have been making that industry particularly the target of their attacks. I should like to inquire of the Senator from Ohio whether he thinks those newspapers will desist or will they carry on their campaign before the President of the United States, should this proposed legislation be enacted?

Mr. POMERENE. Oh, Mr. President, that was just what I was leading up to. Campaigns for changes in tariff rates are going to be continued, so that, instead of having 16 months consumed by the Congress of the United States in enacting tariff legislation, we are going to have continuous assaults made by one interest or another upon the tariff law before the President of the United States.

Mr. WALSH of Montana. May I ask the Senator if he thinks the dye interests will cease their effort to secure an embargo?

Mr. POMERENE. No, Mr. President, the dye interests will never cease their efforts in that direction.

Mr. WALSH of Montana. Likewise let me ask the Senator if he thinks it will be possible for the President to discharge the duties proposed to be conferred upon him, and whether, as a matter of fact, he will not be obliged to assign them to subordinates who will be subject to the importunities of interested parties?

Mr. POMERENE. There can be no doubt about that. No one for a moment dreams that the Chief Executive of the United States, I care not who he may be, can have the time or the ability to sit down and hear and determine all these questions. He must depend upon some board to perform that duty, and he must ultimately take their advice and their judgment, not his own.

Mr. President, let me go a step further. Often manufacturers contract to sell their manufactured products many months in advance of their fabrication. Perhaps those who are dealing with a particular manufacturing plant might want to buy; they may be making their contracts for the material, and necessarily the producers will make their contracts dependent upon other elements, such as the tariff rate which is levied upon that product. What is to happen? Is the producer going to base his price upon one schedule of tariff rates or upon another schedule of tariff rates?

I come from a great industrial State. I know what the manufacturers say every time a tariff bill is up for consideration. A number of them who are engaged in protected industries have said to me from time to time, "We are not particularly interested in the rate of duty, but we are interested in having the duty settled, in having it fixed, and when it is fixed we shall adjust our business to the rates thus determined."

How are they going to adjust their business to the tariff rates when they may be changed, not by Congress but by the President of the United States, every 30 or 60 days? I do not, of course, mean to say that they would be changed that frequently, but I do mean to say that the President has the power to change them.

Then again, suppose that we are approaching a presidential election and some people may be interested in the tariff one way or the other. We have not been able to keep the tariff out of politics when Congress has been legislating concerning the matter. How could we keep the tariff out of politics when the President is in fact legislating?

Let me make another suggestion. The stocks and bonds of many great industrial corporations are listed on the stock exchange. Every once in a while we have a bull market, and again a bear market. Assume, for the sake of the argument, that there is an attempted combination of a number of very large interests, which perhaps bond their plants and issue preferred stock equal in amount to the value of the plant, and then they issue a large amount of watered stock and it becomes necessary for some of the speculators or promoters to manipulate the market. Before we are aware of it, if it is a dye interest or a steel interest or a pottery interest or a chemical interest, or any other kind of an interest, we will have a delegation of distinguished gentlemen coming to Washington and insisting that certain duties be raised because the working men in their employ can not get proper wages unless those duties are raised. So we shall have somebody here as the adviser of the President attempting to make an investigation. If the investigations which they make are not more thorough than some investigations about which we know, there will probably be a recommendation for an increase in duties relating to the products of that plant. Likewise we may have a reduction in the duties which affect the price of their raw material. This amendment, if it becomes a law, will give a splendid opportunity to assist the manipulators of the stock market. No; that should not be.

Then, after the President has before him the findings of his assistants, the question arises in his mind, Shall I change from a specific duty to an ad valorem duty, or from an ad valorem duty to a specific duty? Shall I raise the duties 50 per cent or any part thereof, or lower them 50 per cent or any part thereof? Shall I change the classification, or shall I change from the foreign valuation to the American valuation? Who will say, who dares say that is not an exercise of discretion—legislative discretion, if you please?

Then I recur to what the great Judge Ranney said:

> The true distinction is between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be, and conferring authority or discretion as to its execution, to be exercised under and in pursuance of the law.

If we change the rate of duty on cotton goods under the Underwood law from 35 per cent ad valorem to 45 per cent, as proposed under the pending bill, is that not a legislative act? Admitting that, who can say, who dares to say, that when the President changes it from 35 per cent ad valorem to 45 per cent he is not exercising a legislative power or discretion? To put the question, it seems to me, is to answer it.

The PRESIDENT pro tempore. The question is upon the amendment proposed by the Senator from Wisconsin [Mr. LENROOT] to the amendment of the Senator from North Dakota [Mr. MCCUMBER].

Mr. LENROOT. Mr. President, I do not propose to enter into any extended discussion of the constitutional question which

exists in this amendment and which to my mind is a very grave one. It has been ably argued upon the one side by the Senator from North Dakota [Mr. McCUMBER], and upon the other by the Senator from Montana [Mr. WALSH]. I only venture to express my own judgment for whatever it may be worth after having read the authorities which have been so well collected by the Senator from Montana upon this question, that it is my judgment that the phrase "conditions in competition" is so vague and so indefinite as to invalidate the entire section if it should become a part of the law.

I do not agree with the Senator from Montana, if I understood him correctly, that Congress can not delegate to the President the power to ascertain facts upon which he may proclaim a duty. Congress itself, as in the McKinley Act, might fix the duties definitely, to take effect upon the happening of an event to be found by the President.

Mr. WALSH of Montana. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Montana?

Mr. LENROOT. I yield.

Mr. WALSH of Montana. I do not want to enter into any controversy with the Senator about that matter; but, having expressed the opinion that the phrase "differences in conditions of competition" is so vague as to invalidate the provision under consideration, would the Senator care to express an opinion as to whether, if these amendments should be incorporated in the bill and should be found to be invalid, the whole bill would fall?

Mr. LENROOT. I think not under the doctrine of Field against Clark.

Mr. WALSH of Montana. But the Senator will observe that in the case of Field against Clark no provisions were affected except those involved, which constituted only six articles; but every article in this bill is subject to the provisions of section 315. Every rate in the bill is subject to that section.

Mr. LENROOT. It is as to the changing of the rate.

Mr. WALSH of Montana. Exactly.

Mr. LENROOT. Of course until the power is exercised the rates fixed by Congress stand.

Mr. WALSH of Montana. In Field against Clark there were only six commodities involved—only six. The court held that the grant of power to change the rate as to those six articles could not be held to invalidate the entire bill. In that case the proceedings were brought against Marshall Field & Co. The commodities involved in the case were not of the six classes of commodities referred to; they were ordinary dry goods, I suppose. The court held that the six commodities only being affected by the provision, the bill as a whole did not fall; but here is a provision which affects every rate in the bill, every commodity in the bill.

Mr. LENROOT. My own view upon that subject, for whatever it may be worth, is this: Congress definitely fixes the rates. It provides, or attempts to provide, a method by which those rates may be changed. We will assume that the method so provided is invalid, as beyond the power of Congress; but it is not so intertwined with the other portions of the bill that it can not be separated. In fact, it is separate, and it seems to me the test would then be applied by the court: "Can it fairly be said that this invalid section was an inducement to the enactment of the remaining portions of the bill, and that but for this section which is invalid the rest of the bill would not have been enacted?"

Mr. WALSH of Montana. The Senator has quite accurately stated the rule. Now let us see what the facts are: The House has adopted the American valuation plan. The Senate has refused to adopt the American valuation plan and proposes the foreign valuation plan, with these elastic provisions intended to accomplish the same result that the House expects to accomplish by the American valuation plan. In other words, the Senate substitutes the foreign valuation plan, modified in this way, for the House American valuation plan; so that it seems to me necessarily to follow that the Senate would not have adopted these rates based upon the foreign valuation plan but for the provision here according to which they might be changed to meet the changing conditions which were provided for by the House valuation plan.

Mr. LENROOT. If the Senator be correct, it merely adds weight to my objection to the amendment in its present form, and simply adds further reason why, if it be possible, amendments should be made to this section that will bring it clearly within the constitutional powers of Congress; and that is what I have endeavored to do, Mr. President, in the amendment that I have proposed, striking out the phrase "conditions of competition" wherever it occurs in the amendment, and substituting therefore the phrase "cost of production," so that the rate which the President will be empowered to proclaim will be the difference in the cost of production.

I think the Senator from Montana will concede that that at least is a very much more definite standard or rule than is the term "conditions of competition," because the determination of differences in cost of production clearly involves the ascertainment of facts, and in the ascertainment of those facts whoever does investigate the subject must take into consideration the same factors; and here is my primary objection to the term "conditions of competition":

The Senator from Montana truly stated in his address that two men might arrive at different conclusions as to what constituted a difference in conditions of competition. It is likewise true that two men might arrive at different conclusions as to what constituted difference in cost of production; but that would be merely a difference in judgment upon the facts, both men taking the same factors into consideration, while if the rule is to be differences in conditions of competition two men might investigate that subject and arrive at different conclusions because they had not taken the same factors into consideration in investigating the subject.

To illustrate that, power is here given to the President under this phrase "conditions of competition." He might in one case consider and add to a difference in cost of production a freight rate from San Francisco to the city of New York. He might or might not take that into consideration. That is optional with the President under this amendment. That is a matter of legislative policy that to my mind can not be delegated.

Another factor that he may or may not take into consideration under this amendment is this: The President might resolve that to equalize differences in competition he would allow to the American manufacturer a profit of 25 per cent, or he might not allow it. That is discretionary with him. That is a matter of public policy to be declared by the legislative body, and one that in my judgment can not be delegated to the Executive.

So, I might go on and give many illustrations as to this delegation of discretion that Congress has not laid down the rule. Under this phrase Congress has not said to the President what factors he shall take into consideration in arriving at his conclusion.

The chairman of the committee says, however, that that is taken care of in paragraph (c), which provides:

> That in ascertaining the differences in conditions of competition, under the provisions of subdivisions (a) and (b) of this section, the President, in so far as he finds it practicable, shall take into consideration—(1) the differences in conditions in production, including wages, costs of material, and other items in costs of production of such or similar merchandise in the United States and in competing foreign countries; (2) the differences in the wholesale selling prices of domestic and foreign merchandise in the principal markets of the United States, but in considering prices as factors in ascertaining differences in conditions of competition, only reasonable profits shall be allowed; and (3) any other advantages or disadvantages in competition.

Can it be said that that restricts the President in any way to any rule or lays down the factors that shall be considered by him in arriving at his decision? It merely says that among other things he shall, if he finds it practicable, take certain things into consideration; but he may or may not do it, as he sees fit.

Mr. STERLING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from South Dakota?

Mr. LENROOT. I yield.

Mr. STERLING. Suppose the bill provided that in considering the differences in competition he should take into consideration certain factors. Would that cure it?

Mr. LENROOT. Certainly not; because he might then take other factors into consideration, using his judgment and his discretion, that Congress has not prescribed.

Mr. STERLING. Could not the bill limit him in the consideration of the matter to certain factors?

Mr. LENROOT. It certainly could; and that is merely another way of reaching what I have attempted to reach in my amendment. Of course it could. For instance, Congress could prescribe that he should take into consideration freight rates or that he should not take into consideration freight rates. That would settle that one way or the other as a factor to be taken into consideration. Congress could in this amendment prescribe that he should take into consideration profits or should not take into consideration profits. That would settle that one way or the other; but as the amendment stands now Congress makes no order upon the subject, prescribes no rule; and the President is at liberty to exercise any policy he sees fit to adopt with reference to the subject. So much for that.

Then, with reference to the American-valuation clause, the Senator from North Dakota argues that this is not an objectionable alternative which can in any wise invalidate the amendment, because the President can exercise his power under paragraph (b) only if he first finds that the equalizing of conditions

of competition can not be arrived at through the exercise of the power delegated in (a), and the chairman of the committee gave us an illustration of the difficulty of arriving at foreign valuation, in which case the President would be at liberty to exercise the authority under (b).

That would be a good argument but for the limitation provided in paragraph (a). With this limitation it will not be the difficulty in arriving at the foreign valuation which would induce the President to exercise the power under (b), but because of the prohibition we find in (a) to exercising the power beyond a certain point. In other words, it makes necessary an examination into the differences in conditions of competition if that phrase shall remain, or costs of production if my amendment shall prevail, and if he finds the difference in cost of production to be 60 per cent in excess of the existing rate in the bill, he can only increase the rate 50 per cent.

Under the bill, the President can not apply that. He can not go higher than 50 per cent. So, in the face of the declaration of Congress to the President that he shall not do this thing, we give him authority, in the next paragraph, to do the thing we have forbidden him to do in the previous paragraph.

I very seriously question whether we can delegate power to the President to do either one of two things, his power to do the thing in the second instance depending upon the prohibition upon the part of Congress for him to exercise it in the first, if that be the reason for his not being able to do so. So there again is raised a very serious question.

Mr. WALSH of Montana. Mr. President, does the Senator agree that a case might easily arise in which the differences in the conditions of competition might be equally well met by increasing an ad valorem rate or by substituting a specific rate?

Mr. LENROOT. Yes.

Mr. WALSH of Montana. Or by increasing a specific rate and substituting an ad valorem rate?

Mr. LENROOT. Yes.

Mr. WALSH of Montana. Then the President would be entitled to choose which of the two courses he would pursue, either of which would accomplish the end sought.

Mr. LENROOT. That is true.

Mr. WALSH of Montana. And in either case the ad valorem rate would act differently from the specific rate.

Mr. LENROOT. That is also true. Of course, the ad valorem rate might be equivalent to a given specific rate the next day after it was put into effect, and a month later it might be a very different specific rate. Of course, that is true.

The term "cost of production" has been used time and time again in the debate upon this bill, and wherever costs of production have been ascertained, or have come anywhere near being ascertained, the chairman of the committee has relied upon differences in cost of production to measure the rate the committee has proposed. But now the committee abandons cost of production and substitutes for it this very vague and indefinite term "conditions of competition."

For myself, I can see only one possible purpose in that, and that is to give to the President practically unlimited authority to change these rates within the minimums and maximums provided for in the amendment.

Mr. SIMMONS. Mr. President, the Senator has stated that the President probably could not invoke the power to proclaim the American valuation unless the addition of 50 per cent to the specific rate provided in the bill should fail to bring about equality in conditions of competition.

Mr. LENROOT. Hardly that. I stated that as one of the conditions. Of course, it might be that he could not, or found that he could not, ascertain the foreign costs, in which case he might immediately go to the American valuation, without reference to the 50 per cent.

Mr. SIMMONS. After he has exhausted the 50 per cent, if he has not equalized conditions of competition, he can then proclaim the American valuation for the purpose of further increasing the effective protection.

I wanted to ask the Senator if he did not think, under those two authorities to increase, that the rates might be increased, not 50 per cent, but, possibly, 75 or 100 per cent?

Mr. LENROOT. Oh, yes; and the chairman of the committee very frankly stated, as I understood him, that that was one of the purposes of paragraph (b). I do not think very highly of a proposition which, on the face of it, in the first paragraph limits the increase or decrease to 50 per cent upon foreign valuation, but if the President shall find that a rate should be higher, in order to equalize conditions, than Congress has authorized in the first instance, he shall then be permitted to turn to another section and do in an indirect way that which is prohibited in another part of the bill. It does not seem to me that that is very frank with the American people, to accomplish an increase of, perhaps, 100 per cent when, on the face of the legislation, it would seem to be limited to 50 per cent.

If the object of the committee was only to have American valuation imposed in cases where the foreign valuation could not be ascertained, why was this 50 per cent limitation put in in the first instance at all? Why was it not made higher than 50 per cent, when the committee very frankly confesses that when the President turns to the American valuation, the 50 per cent upon the American valuation will be a very much greater imposition than the 50 per cent upon foreign valuation?

Mr. McCUMBER. Would the Senator be willing to so amend the provision that the President, without respect to what the percentage may be, shall add a duty which will, in all cases, measure the difference in the cost of production?

Mr. LENROOT. No; I would not.

Mr. McCUMBER. Giving him unlimited authority?

Mr. LENROOT. No; I would not.

Mr. McCUMBER. By what would the Senator limit it, then?

Mr. LENROOT. I would limit it by some figure. If it is to be 50 per cent upon foreign valuation, I would make the same limitation if American valuation is to be applied to get at the basis of value; but I would not have two different limitations, one perhaps twice as great as the other.

Mr. McCUMBER. But in neither instance would the rate more than measure the difference between the cost of production, if we want to take the Senator's amendment. Is he willing that in every instance which may arise, without any further limitation, the President might increase a rate to equalize the difference in the cost of production?

Mr. LENROOT. I am not.

Mr. McCUMBER. Very well. That is exactly the conclusion the committee arrived at, and they determined that the President should not go beyond a certain figure, but we believed that there might be a few instances, very few, indeed, which could not be sufficiently guarded by the foreign valuation basis; that there might be some few in which the increase of 50 per cent on the foreign valuation would not measure the difference, and we were willing in those few cases to give the President a different standard.

Mr. LENROOT. Why, then, did not the committee do it directly?

Mr. McCUMBER. Because in the great majority of cases we did not want to give him the full power to increase in every instance a sufficient amount to measure the difference.

Mr. LENROOT. Mr. President, what have we here? We have in one paragraph a prohibition against increasing the rate more than 50 per cent upon the foreign valuation, and then we have a provision that if the difference in cost of production is greater than that 50 per cent, so that he can not apply it because of the prohibition enacted by the law itself, he may turn to another provision of the law and do that which is prohibited in one other provision of the law.

Mr. McCUMBER. He may do that simply to arrive at a certain equalization scheme. All we seek is equalization, and the Senator wants to limit the equalizing to that of cost of production at home and abroad. We want to take other things into consideration than merely that single element as applied to the foreign and to the domestic markets.

Mr. LENROOT. I know the Senator does, and when I said I was not willing to agree to a general proposition which would direct the President to impose rates, without limitation, equal to the difference in the costs of production at home and abroad, I, of course, had in mind, as the Senator must have had in mind, that we have many articles in this country where we would not think, as a matter of public policy, of imposing tariff rates equal to the difference in the costs of production at home and abroad.

They have tried to grow tea in the State of North Carolina. That happens to be upon the free list, so that it does not exactly apply; but should I be asked to stand for a proposition, when I am pleading for a provision based on the difference in the cost of production, which has no limit? Of course not. My criticism is that this is a limitation on the face of an amendment which is not a limitation in fact, a limitation of 50 per cent upon foreign valuation, which would lead the American people to believe that these rates can not be increased more than 50 per cent; but if the duty is more than 50 per cent, then the committee say that through another plan and another scheme the rates may be increased 100 per cent, 50 per cent on another plan, which is equal to 100 per cent on the plan covered by the first paragraph, which is limited to 50 per cent.

Again, Mr. President, on the matter of policy, there are many rates in the bill where the specific rate has been applied and where the members of the committee have frankly stated that

they did not believe the rate proposed by the committee and adopted by the Senate was sufficient to cover the difference in the cost of production at home and abroad. Congress, as a matter of policy, refused to go any higher because, Republicans and Democrats alike will admit, I think, we had reached a point, from the standpoint of protection, if you please, where we were not justified in imposing a rate of duty so high as to cover the difference in cost of production at home and abroad, when the American people would be better off to take the importations of that particular article and not continue the industry in this country.

One illustration, and a very good one, is barytes ore, that we had up in the very beginning of the debate, where it was shown that it would require 100 per cent ad valorem on the raw crude ore to cover the difference in the cost of production and transportation from the mines in Georgia and the mines in Missouri to the point of consumption.

I then took the position that the American people ought not to be called upon to pay any such tax upon a material upon which the hand of man had not devoted any labor except that of mining the raw material. And yet, Mr. President—the Senate has not yet acted upon the amendment—even though the House rate shall be adopted instead of the increase which the Senate committee proposes, it will be possible under this provision as the committee have it, with the President taking into consideration and adding the freight rate from Missouri to the Atlantic coast, to have more than 100 per cent ad valorem duty upon barytes ore. That is merely typical of many items in the bill.

I want frankly to say that at some time before the amendment is voted on I propose to offer an amendment providing that in no case shall any duty be imposed under the provisions of this amendment that shall exceed a given percentage ad valorem on the foreign valuation. It may be 75 per cent. I shall be willing to discuss what it should be, but there ought to be some limitation somewhere so that the President of the United States shall not have the right to destroy a policy adopted by the Congress of the United States in the framing of the bill.

Mr. McCUMBER. Mr. President——

Mr. LENROOT. I yield to the Senator from North Dakota.

Mr. McCUMBER. In order that I may understand the position of the Senator, does he desire to strike out subdivision (b) entirely—that is, that provision which allows the President to go to the American valuation? It seems to me if that is what he wants and is arguing for it can be accomplished very simply by cutting that out entirely and relying upon the foreign valuation basis, increasing beyond 50 per cent if we think best or decreasing beyond that, but it can be met by cutting that out entirely.

Mr. LENROOT. It might be met that way.

Mr. McCUMBER. Does the Senator prefer that plan?

Mr. LENROOT. I will say very frankly that the Senator very well knows that the American valuation would just about double the rates, I think, generally speaking. I should be glad to have the Senator's opinion about it.

Mr. McCUMBER. I want to say to the Senator that this method of meeting certain specified cases—not specified in the bill, but well understood by the committee—was in the first instance to prevent the necessity of continuing an embargo, and that it was intended to cover some of the chemicals and dyestuffs that might require a greater expansion of the duties than would be provided in paragraph 315, subdivision (a). Of course, we have voted out the embargo proposition entirely and we have left the bill in such shape that as to some of the chemicals it would be impossible to maintain an industry that we regard as essential under the general rule which is provided in subdivision (a). That was the real purpose. It may be that the President might abuse that purpose. I do not think that he will. I do not think anyone else will. But if the Senator is fearful of that and that injury might be worked, I do not know that I would have any serious objection to striking out the subdivision relating to American valuation.

Mr. LENROOT. I did not have in mind going so far as to strike out the subdivision with reference to American valuation. What I did have in mind was merely that the President ought not to exercise the power under subdivision (b) because he was prohibited from exercising it to the full extent under subdivision (a) when there would be no difficulty in doing it except for the prohibition. I have no objection to having the second paragraph in force, for the reason that the chairman stated, where it is difficult or impossible to arrive at the foreign valuation; but I do say it ought not to be resorted to simply because the prohibition of 50 per cent exists in the first paragraph. I think it very seriously endangers the constitutionality of the amendment itself when the prohibition is given in one paragraph and then, because of the prohibition, the President is permitted to exercise the power in another paragraph.

Mr. McCUMBER. The Senator, of course, will admit that we must consider both paragraphs together. The provision is that the President shall apply one rule. The provision is if that rule will not effectuate the purpose, namely, equality of competition, then he shall apply another rule. It may be open to the criticism the Senator has stated, that he might go directly and apply the later rule or increase the rate under subdivision (a), but in any event the only purpose is to effectuate equality of competition or trade. Other things being equal, I myself would prefer to strike out subdivision (b) and give a little more elasticity in subdivision (a).

Mr. LENROOT. Would the Senator then be willing, too, to fix a maximum ad valorem that would apply in all cases?

Mr. McCUMBER. We have it. If we strike out subdivision (b), we have then a maximum that shall not exceed 50 per cent above what is already fixed in the bill.

Mr. LENROOT. I do not mean that kind of a maximum. I mean a maximum that where the Senate has adopted the highest rate which it thought it should adopt as a matter of public policy, such rate ought not to be increased by the President. The committee has taken care of it in the case of ad valorem.

Mr. SMOOT. Yes; that is taken care of.

Mr. LENROOT. It is taken care of in the case of ad valorem, but not in the case of specific.

Mr. McCUMBER. I do not think there is a single instance in the specific rates where we have stated that the specific rate shall not be higher than this. In every instance we have used the words "ad valorem."

Mr. LENROOT. But in cutlery enormous increases were made in specific rates. In some of them I know I would not want to go any higher, as a matter of public policy, irrespective of the differences in cost of production as to some of those goods.

Mr. McCUMBER. Let me first state to the Senator that we have declared in the bill that where the bill has fixed a maximum ad valorem rate—of course that is the only maximum rate we fix——

Mr. LENROOT. That would not, of course, take care of the specific rates.

Mr. McCUMBER. Then the President shall have no power to increase that rate.

Mr. LENROOT. I understand that takes care of those cases—and there are not many of them—where we have fixed a maximum ad valorem. We have done it in the case of cotton cloth and in the case of cotton gloves; but I do know, and I am sure the Senator from Utah [Mr. SMOOT] will corroborate me, that there are many other items in the bill where the Senator himself stated that the rate did not equal the difference in cost of production but that it was as high as should be adopted as a matter of public policy.

Mr. SMOOT. I think I can name three products in the bill as to which I believe with all my heart the rate named will perhaps be needed under circumstances existing to-day, and not more than that rate. Not more than one that we really know of is absolutely necessary, and that is as to certain chemicals which are used in time of warfare which we can not produce in this country against Germany. I do not believe that the President will exercise this power in any other case.

I frankly state now that the rates which were written in the bill in paragraphs 25 and 26—namely, 7 cents a pound and 60 per cent ad valorem—were put in there with the avowed purpose of effecting an embargo upon certain of those goods. That is the reason why I voted against the embargo. In fact, I am opposed to any kind of an embargo anyhow, but I believed that the rate itself there was an embargo and there was no need of putting in an embargo provision. It was put in there deliberately for that purpose.

As to not exceeding 5 per cent of the production in this country, the products of chemicals are amply protected by the rates we have agreed to in paragraphs 25 and 26. There are, I will admit, perhaps 5 per cent of the production of the items in paragraph 26 of the bill as to which the rate of 7 cents a pound and 60 per cent ad valorem will not protect the industry in the United States. Therefore I wanted the President to have the power to transfer them from the foreign valuation to the American valuation. That is the only way in which we can do it unless we have an embargo.

Mr. LENROOT. I am not objecting in that kind of case.

Mr. SMOOT. I think the only one other case, and it would be so small and so limited that it is hardly worth considering, is the toy industry. The only question to decide is whether we want the toy industry in the United States. I will say to the Senator that some of the toys can not be protected with the rates that are given here. It is a question of policy for the

President to decide whether that line of toys, which was established here during the war, shall be maintained in the future. If it is to be maintained he would have to exercise that power. I do not know of anything else of that character in the bill, not a paragraph nor a schedule nor an item outside of those that I have mentioned.

Mr. UNDERWOOD. Will the Senator from Wisconsin allow me, merely for information, to ask the Senator from Utah [Mr. SMOOT] a question?

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Alabama?

Mr. LENROOT. I yield.

Mr. UNDERWOOD. I have been very much interested in what the Senator from Utah has said. I understood him to say that, in his opinion, the rates provided in the pending bill now are up to the standard which is contemplated if the President should fix the rates?

Mr. SMOOT. That is, on all of the items with the exception of those that I have mentioned.

Mr. UNDERWOOD. Those on the free list, and except the three items that the Senator has mentioned?

Mr. SMOOT. Yes.

Mr. UNDERWOOD. And the Senator thinks that the rates on the other items are up to that standard?

Mr. SMOOT. I think so.

Mr. UNDERWOOD. Therefore, taking the basis of the bill as it now stands, the Senator from Utah is not only protecting the difference in cost between production here and abroad but he is, in addition, protecting the profits?

Mr. SMOOT. Oh, no; I did not say that.

Mr. UNDERWOOD. That is the standard which is fixed in the proposed amendment.

Mr. SMOOT. I assume that if the President should exercise the power, in most instances that would be the case, but the President is not going to do that.

Mr. UNDERWOOD. We can not assume that the President will not exercise his power.

Mr. SMOOT. I think we may do so.

Mr. UNDERWOOD. We shall have given him the power and we shall practically have given him instructions to exercise it. I do not want to interrupt the debate, but I think this is very vital. The Senator from Wisconsin charged that if this amendment were adopted as it now stands we should be conferring upon the President the power and the duty to increase these rates, and the Senator from Utah, as I understood him—and I want to understand the situation—replied to the Senator from Wisconsin that he knew of but three rates which were now in the bill as to which this power which it is proposed to give to the President could function. Of course, the power proposed to be given to the President is not only to fix the rates to cover the difference in the cost of production here and abroad but, in addition to that, to protect the profit of the manufacturer.

Mr. SMOOT. No, Mr. President.

Mr. UNDERWOOD. That is what I understood the Senator to say.

Mr. SMOOT. I wish now to say frankly to the Senator from Alabama, if he wishes to know my attitude, that if the difference between the cost of production in this country and the foreign country, and nothing more, were to be made the rule for fixing tariff duties, the United States would be the dumping ground of the world. I will tell the Senator from Alabama why, if the Senator from Wisconsin does not object to my doing so; or, if he does, I will do it in my own time. It will take but a few moments.

Mr. UNDERWOOD. Of course, the Senator from Utah and I differ very much on that material question; but as to this question of fact, I am very much interested. The Senator from Wisconsin has challenged this amendment on the ground that it would confer upon the President the right to increase a large number of the rates in the bill higher than they already are; and the Senator from Utah reacted on that by saying that he knew of but three such rates.

Mr. SMOOT. I previously stated that on the floor of the Senate.

Mr. UNDERWOOD. Now, when I ask the Senator from Utah if he means to say that the standard of the bill is up to the maximum standard of the amendment he seems to retract. I do not know exactly where he stands.

Mr. SMOOT. I think that the rates generally in the bill are protective rates and that the President would never at any time use the power of transferring the basis of fixing rates from the foreign valuation to the American valuation in order to raise the rate more than 50 per cent.

Mr. UNDERWOOD. I do not say the President would do that, but what I am talking about is raising the rates 50 per cent without changing the basis of valuation.

Mr. SMOOT. There may be, on a foreign valuation, some few items as to which no one could tell, because the conditions in the world are so unsettled to-day that there is not a living soul who can forecast what is going to happen three months from now.

Mr. TOWNSEND. Mr. President, there is one consideration to which I think the Senator from Alabama [Mr. UNDERWOOD] has not referred, but which constitutes one of the reasons why I have favored some such provision as the pending amendment, namely, that conditions are likely so to change to-morrow or it may six months from now that the rates that have been agreed to here may be altogether too high, or it is possible that in some instances they may be too low. So without regard to what we may think about the rates which are now fixed in the bill the pending amendment or some other such provision is desirable in order to meet the changed conditions of to-morrow.

Mr. UNDERWOOD. I was not discussing that question. Of course I have my own views on that subject, but the question that I was discussing and was interested in discussing was what I understood to be the assertion of the Senator from Utah [Mr. SMOOT] that the rates as fixed at present in the bill had reached the maximum at which they could be fixed under the pending amendment.

Mr. SMOOT. I was speaking of the question as to whether or not the basis of laying duties was to be transferred to the American valuation. That was the subject we were discussing.

Mr. President, I made the statement that if the cost of production alone is taken into consideration, America will be the dumping ground of the world. I wish to state why in that case it will be the dumping ground of the world. Any manufacturing concern that runs full time, for 12 months in the year, can make goods at least 10 per cent cheaper than it can if it runs only part time.

I know in the manufacture of woolen goods I have figured it out time and time again that if I ran a mill full time, for 12 months in the year, the cost of producing the goods was 18 per cent less than if I ran the mill but 7 or 8 months in the year. That grew out of the fact that in either event the same rate of taxation, the same overhead charges of every name and nature, and other expenses had to be met; so that running 7 months in the year as compared to 12 months made a difference of 18 per cent in the cost of producing the goods.

If it is only a question of the cost of goods, all the foreign countries will see that their plants run 12 months in the year; and they can sell to us for 5 per cent, yes, for 10 per cent, less than the regular price at which they sell to the world, and yet make money out of all of their goods because of the decrease in the cost of production by reason of running full time.

It is a business proposition. If I were a foreign manufacturer rather than to see my help scattered, rather than to close up my mill, or rather than to let the overhead expenses pile up on the cost of the goods which I was making, I would enter the American market and I would see that my mill ran 12 months in the year, thereby making the cost of the goods which I sold to the balance of the world cheaper. I would sell my goods in the American market; and that is what will happen unless some safeguard is provided against it. It is therefore not a question merely of the difference in cost of production here and abroad.

Mr. LENROOT. Mr. President, with reference to the cost of production, the Senator must remember that the difference in the cost of production does not take into account the landing charge and the ocean freight rate, and those are all to the advantage of the American manufacturer. The difference in cost of production had, I supposed, been accepted as the Republican doctrine for a good many years. There was one Republican convention, which was well remembered by us all, where there was added in the Republican platform the words "plus a reasonable profit," and that phrase met with condemnation by Republicans all over the United States.

Mr. SMOOT. That was in the Republican platform of 1908.

Mr. LENROOT. Mr. President, this is the third tariff revision in which I have participated. The first one was the Payne-Aldrich law. In that law it was agreed that the difference in the cost of production, wherever it could be ascertained, should be the test. It is only now when we are beginning to hear Republicans say they are not satisfied with a tariff which does equalize the difference in the cost of production. I wish to say that Republicans had better be satisfied with a tariff that does equalize the difference in the cost of production or the American people may not be willing to give them that much.

Mr. SMOOT. Mr. President——

Mr. LENROOT. I yield.

Mr. SMOOT. I think the Senator has heard me make the statement before on the floor of the Senate that if the President is given this power I think there will be many, many more occa-

sions when he will exercise it in lowering rates than in increasing them; in fact, if the conditions become normal, I expect the President of the United States to lower, I was going to say, the majority of rates.

Mr. LENROOT. Mr. President, he is very much more likely to do so if the phrase "cost of production" is embodied in the law than if the phrase "conditions of competition" shall remain, where every interested man who wants a rate kept up or increased can go before the President and demand protection for his profits and protection for his freight rates.

Mr. SMOOT. Of course, the Senator from Wisconsin knows the Senator from Utah does not want that.

Mr. LENROOT. I am sure he does not.

Mr. SMOOT. If I thought anything of that kind would grow out of the wording of the amendment, or that that would be the result, I would vote against it. So far as I am personally concerned, I am perfectly willing to accept the phrase "cost of production" and then let the question be determined in the investigation as to every item entering into the cost of production.

Mr. LENROOT. It surely will. It will cover overhead, as the Senator well knows.

Mr. SMOOT. Certainly; and if an article is selling in the American market, of course, then, in determining the cost of producing it so as to sell at wholesale in the American market, there would be taken into account the amount of freight that would be paid on the foreign article landed in the United States.

Mr. LENROOT. Mr. President, I am very glad, indeed, to have the statement of the Senator that he is willing to accept the amendment. I wish to say that I am not opposed—in fact, I am very much in favor of some power being given to the President to adjust the tariff rates, not upon the theory that he would immediately change any of the rates which are provided in the bill, although I personally should hope that he might lower some of them, but I would not expect that. However, conditions are changing from day to day. It has been impossible, Mr. President, as everyone knows, to debate this bill upon accurate information or to ascertain what will be proper protective duties, because information which we may have that is six months old is valueless to-day because of changed conditions.

Until the world becomes stabilized conditions will remain abnormal and will change from time to time. So I do want the President to have power under proper restrictions and under a rule laid down which will stand the test of the courts to change the rates within reasonable limitations so that they may be adjusted to changed conditions; but, Mr. President, though I have great confidence in the President, I do not believe that the power should be delegated to him to change a rate without a previous finding and recommendation of some competent, expert authority. So, at the proper time I shall propose an amendment providing that before the President shall proclaim a rate there shall be an investigation and finding by the Tariff Commission. He may or may not accept that finding; he may reject it if he chooses; but there should be a record of an investigation. There should be an opportunity for interested parties to be heard, and there ought not to be in a matter so important as this the slightest suspicion, however unfounded it may be, as I am sure it would be in the case of the present President of the United States, that secret influences had been brought to bear upon him to increase the tariff rates or change them because of political influence. I believe the Tariff Commission should first make the investigation, should make the report to the President, and then let the President act upon that report, because if that is done the country will know, and the country is entitled to know, the facts upon which an increase or a decrease, if you please, of a rate shall be based.

Mr. FLETCHER. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from Florida?

Mr. LENROOT. I yield.

Mr. FLETCHER. The Senator from Utah suggested that very likely the exercise of power on the part of the President would be toward reducing rates rather than raising them. I am wondering if the Senator from Utah will be satisfied with an amendment, or if the Senator from Wisconsin would favor one, limiting the power of the President under this proposed amendment to reduction of rates?

Mr. SMOOT. It is limited to 50 per cent.

Mr. FLETCHER. To reduction?

Mr. SMOOT. Why, certainly.

Mr. FLETCHER. But no power to raise them?

Mr. SMOOT. Yes; a power to raise them, too.

Mr. FLETCHER. But, I say, would the Senator be willing to limit the power of the President to a reduction of rates, without having any power to raise them?

Mr. SMOOT. No; I would not, Mr. President.

Mr. LENROOT. Mr. President, I am not going to take further time of the Senate.

Mr. CURTIS. Mr. President, I should like to ask the Senator if he does not know that it is the intention that the President shall use the Tariff Commission in securing the information and reports suggested in his amendment? While it is not specifically mentioned in the pending amendment, yet, of course, that was his intention.

Mr. LENROOT. I think that is the President's intention; I am very frank to say that; but I think it ought to be in the law.

Mr. SMOOT. I will say to the Senator that the reason why it was not put in the law was this: The President also intends to get information from the Department of Commerce. He also intends to get information from the State Department. We make appropriations by the millions of dollars to the State Department and the Commerce Department to have representatives, commercial attachés, visit all the principal markets of the world. They collect that information, and it is here in the departments.

Mr. LENROOT. My amendment does not interfere with that.

Mr. SMOOT. I am aware of that; but the committee thought that there was no need of mentioning any particular agency from which the President could get the information. I know, however, that the President of course would go immediately to the Tariff Commission for it, in connection with the other two departments.

Mr. LENROOT. Then there ought not to be any objection to providing that there should be this investigation by this body of experts, and a public report. If their report is not followed, the President, of course, will be called upon to give and will give to the country some reason for not following it; but it will be a very great safeguard to the public, and a protection to the President himself, if such a provision as this is put into the law.

I am not going to offer this amendment now, Mr. President, because the exact phraseology of it will depend upon whether the term "cost of production" or the term "conditions of competition" is used.

Mr. STERLING. Mr. President, may I ask the Senator from Wisconsin a question?

The PRESIDENT pro tempore. Does the Senator from Wisconsin yield to the Senator from South Dakota?

Mr. LENROOT. I do.

Mr. STERLING. Will the Senator's amendment, yet to be offered, as he states, contemplate an investigation by the Tariff Commission in any particular case?

Mr. LENROOT. It will, in every case, before the President can proclaim a rate.

Mr. STERLING. And the President is not to be bound, as I understand the Senator now, according to the rate fixed by the Tariff Commission?

Mr. LENROOT. He is not.

Mr. STERLING. Does the Senator from Wisconsin deem it inadvisable to require that the rate proclaimed by the President shall be the rate fixed by the Tariff Commission, or according to the opinion of the Tariff Commission?

Mr. LENROOT. Mr. President, I would rather not enter that field of controversy. I know where we would get on that kind of a proposition, and I do have hope that this proposition of mine, which, it seems to me, everyone ought to be willing to agree to, will be accepted; but I would have very grave doubts of the fate of my amendment if I did adopt the suggestion of my friend from South Dakota.

Mr. STERLING. I do not offer it quite as a suggestion, I will say to the Senator; I was simply asking a question.

Mr. LENROOT. I am not a member of the Finance Committee, and I am very frank to say that if I could write this amendment I would write it differently, as I suppose every other Senator would if he could have his own way about it. I realize that no Senator can have his own way about these things. We have to compromise these differences, and do the best we can. I have offered what seemed to me to be a reasonable and fair compromise upon this matter. I do want to urge, in conclusion, that from the standpoint of the validity of this provision I do feel it absolutely necessary that this definite term "cost of production" be adopted, or else that the phrase "conditions of competition" be so defined and prescribed as to furnish the rule and standard for the President, and that he will not have the discretion to determine the factors upon which the conclusion shall be based.

Mr. McCUMBER. Mr. President, just for a few moments I desire to direct my remarks to the Senator from Wisconsin [Mr. LENROOT].

It may appear to those Members of the Senate who have known nothing about the work of the committee that this question of whether the committee should adopt the phrase "differences in conditions of competition" or the phrase "differences in cost of production" had not received careful consideration. Mr. President it has had very careful consideration, not only from the legal standpoint but from the practical standpoint; and while I could not go very far into the question of the discussion of the legal aspect of the case, I did present sufficient authorities to indicate the view of the Supreme Court on the question of delegation of authority of this character, and then, in addition, I had printed in the RECORD many pages with numerous authorities meeting, and meeting squarely, every objection that is made.

Ever since I have been in the Senate I have had to listen to the arguments of great constitutional lawyers declaring that this and that was unconstitutional, and never could stand before any court in the United States; and in every instance the Supreme Court has overruled the constitutional lawyers and held that the matter was constitutional; so I take with a great deal of salt this everlasting argument that practically everything that is presented is unconstitutional.

Mr. WALSH of Montana. Mr. President——

The PRESIDENT pro tempore. Does the Senator from North Dakota yield to the Senator from Montana?

Mr. McCUMBER. I yield to the Senator.

Mr. WALSH of Montana. I sympathize with the remarks now made by the Senator, because I have myself listened to these repeated declarations of unconstitutionality in connection with measures that do not meet our approval on the grounds of policy; but——

Mr. McCUMBER. The Senator has not heard from me very many instances when I have declared that this thing or that was unconstitutional.

Mr. WALSH of Montana. No; the Senator has not heard many from me, either.

Mr. McCUMBER. No.

Mr. WALSH of Montana. My arguments have generally been on the side of sustaining the action of Congress, rather than otherwise.

Mr. McCUMBER. I will admit that.

Mr. WALSH of Montana. But we ought not to allow the statement of the Senator to go unchallenged when within the last two years the Supreme Court of the United States has held three separate acts of the Congress unconstitutional—the first child labor act, the second child labor act, and the futures trading act.

Mr. McCUMBER. When that law was discussed, a long time ago, some of us thought it was unconstitutional. I will admit that I declared some time ago that I regarded it as unconstitutional; but there was such a demand for it that we took our chances, and the court did declare that it was unconstitutional. The vast number of cases that have been fought upon the ground of unconstitutionality, however, that being the basis of the principal objection, have been held by the Supreme Court to be constitutional.

Mr. WALSH of Montana. Mr. President, I should add another one. The Lever Act was also held unconstitutional.

Mr. McCUMBER. Yes. I think the Senator probably will find two or three, maybe four, in the last quarter of a century where the question of constitutionality was raised and debated in the Senate; but if the Senators will take the trouble—and I will admit that it is more trouble than most of them would feel like taking—to read over the many cases that are cited in the brief I have had inserted in the RECORD, I think they will be satisfied that the phrase "conditions of competition" or "equalizing conditions of competition in the principal markets of the United States" is sufficiently definite as a rule which the Executive is required to use in applying the rates. It is just as definite and certain as the question of the differences in production. One is just as easy to ascertain as the other.

Are there any reasons, Mr. President, why we should hold to the proposition that the rule should be equality in conditions of competition rather than equality in the matter of production? What is the purpose of the whole bill? It is to give the American at least equal opportunity in his own markets—equal, not superior; but we want, in heaven's name, to give him an equal opportunity. Your cost of production does not give him an equal opportunity; but suppose it did? I should like to look at the smokestacks of our factories in the United States after you have had one year of operation of equality in cost of production. What does it mean? The very most you can claim for it is that it gives a 50-50 opportunity in the American market.

Are you satisfied as Americans with red American blood in your veins to divide the industries of the United States 50-50 with the foreigner? If you are, then take this confounded proposition and ram it down the throats of the American people. How are you going to apply your proposition of equality of production? What does it mean? You purchase a product in a foreign country to convert into a manufactured article. You purchase the same kind of an article in this country. Suppose the raw product is the same, and that the cost of conversion in this country is a certain amount more than the cost of conversion in the other country. Or suppose, with the cost of the raw material, plus cost of conversion—which makes your cost of production—that the cost is 50 per cent more in this country, then you stop right there. The foreign country may give a bounty of 50 per cent. That is not a part of the cost of production, is it? Not a bit of it. Under this cost-of-production scheme you can not use anything but the cost of raw material, plus cost of conversion, and you are at the mercy of the thousands of laws which might be passed by the foreign country, putting the American at a disadvantage, laws which the foreigner can change in council in a night, and which you can not change in four years; and you have your American industry subservient and subject to whatever legislation a foreign country imposes to meet conditions.

Mr. LENROOT. Mr. President, is it the Senator's opinion that the rates of this bill are higher than the differences in the cost of production?

Mr. McCUMBER. I believe that in many instances they are higher, and in many instances they are lower. I take the position that it is the duty of the American Congress to look after American interests. There may be certain products on which we want to impose a duty that is more than the difference in the cost of production, where we want to give an advantage to the American producer over and above the mere matter of the difference in the cost of production, which will insure the development of the industry in the United States.

Again, it may be that it costs as much to produce a bushel of wheat across the Canadian border line from my State as it costs in my State. Am I therefore to say that if the Canadian can live and is willing to live in a state or condition where his expenses are one-half what the American has to pay for living that I must get down to his level? Must I put myself in the position, under this difference-in-the-cost-of-production scheme, where I say to the Canadian, "Though you do not pay half the taxes I do, do not support the schools I do, get your clothing for half what I pay, or for much less than I pay; though your whole standard of living is below that to which I have been accustomed, I will have no protection against you, and you can flood the American market and drive down the cost of production and put me down to your own condition of living?" That is a matter of policy. I will vote to give the American a better standard of living and a higher price for his products in order that he may have more with which to maintain the schools and the thousands of things which are necessary in a civilized life. Those things were considered, and they were considered carefully.

Mr. WALSH of Montana. Mr. President, if that is the proper view to take—that is to say, if we should take into consideration that the Canadian does not pay as much taxes as the American, that his clothes do not cost as much, and so on—those are not conditions of competition, and would it not be necessary to expand the rule so as to give the President power to go beyond the conditions of competition?

Mr. McCUMBER. I want Congress to go beyond that. I would not limit that power to the Congress itself. I would be willing to limit it so far as the President is concerned. I would say that he might not be granted that power. I am answering the suggestion of the Senator from Wisconsin, that the Republican doctrine should be to have a fast rule that no one could avoid, a rule that our tariff should always be measured by the difference in the cost of production at home and abroad.

There are a great many things which enter into the question of what is a political necessity. Agriculture, as we know, has been at the very lowest stage in this country for the last two years, and we built it up. We protect our steers as against Canadian steers, and we do not care a continental what it costs the Canadian. What we want is a good price for our steers, whether the Canuck is getting a good price or not. That is his lookout, not ours.

Mr. WALSH of Montana. Mr. President, I desire to remind the Senator that a good many of us believe that the trouble

is that we have restricted our foreign markets by these oppressive tariff rates.

Mr. McCUMBER. That is one of the things which must be taken into consideration in all these matters. We take a little different view from that of the Senator from Montana. I have never followed the doctrine that we must buy of a particular country just as much as we sell to that country. Our whole course of commerce in the entire life of the country has shown that no such rule has ever prevailed. For half a century under protection we sold twice as much to Great Britain as we bought from her. She sold to some other country with which she was in closer communication, or where she had an advantage, more than she bought from that country, and in that way she was able to buy more from us; and just so long as the old earth continues with its mountains and its glens, its rivers and its deserts, its oceans, its rainfall and lack of rainfall, with the yellow man and the black man and the brown man, there will be conditions of commerce between the countries whereby we can trade and sell the things which we produce and buy the things which we do not produce, and that is the most healthy commerce on the face of the earth.

Mr. LENROOT. Mr. President, I would like to ask the Senator what England paid us with when she bought more from us than she sold to us.

Mr. McCUMBER. The Senator has said before that we have all the gold in the world, and therefore England can not pay us unless she can sell us something and get our gold. But I would a little prefer that England should sell to some other country than us, even if she sells for credits, and that we buy from that other country and put our gold into that particular country for the things which we do not produce, and let Great Britain get her gold from that other country in selling them things she produces and desires to sell to them.

Mr. LENROOT. Does the raw material which we buy for our own use anywhere equal our surplus agricultural products and our surplus manufactured products, which we must export?

Mr. McCUMBER. Mr. President, people buy our agricultural exports because they can get them here cheaper than anywhere else, and not because they love us. There is no question of brotherly affection in commerce. They buy them because they have to have them and can not get them anywhere else so cheaply as they can get them in the United States. But I am being diverted somewhat by these questions from the question I wanted to argue.

Mr. SIMMONS. Mr. President, if it be true that the manufacturing countries buy their food supplies and their agricultural requirements from this country because they can buy them cheaper here than in any other country in the world, why are we afraid of the competition of other agricultural countries with the agricultural products of this country?

Mr. McCUMBER. It so happens that Canada does not buy our wheat, and that is the country which produces wheat and that is the country which can flood our market. I am not afraid of a country which produces that which we do not produce. We can buy what we want of them, and we can trade what we produce and what that country does not produce. In that way we have our home market for the things which we do produce, and we have the foreign market for our surplus of the things which we do produce, in exchange for other things which we buy that do not come in competition with our products.

Mr. JONES of New Mexico. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from North Dakota yield to the Senator from New Mexico?

Mr. McCUMBER. I yield for a question.

Mr. JONES of New Mexico. I am very much interested in the statement which the Senator has just been making, and I should like to know whether or not the Senator from North Dakota understands that if the amendment which he is offering, to enable the President of the United States to fix duties upon the rates specified, is agreed to it will operate to keep in the United States any articles which are used in the United States; in other words, what does the Senator understand the language of his amendment to mean when he says that the duty shall be fixed so as to equalize the conditions of competition? Does he understand that language to mean that it will create an embargo upon everything which is produced in this country; that it will prohibit the importation of comparable articles?

Mr. McCUMBER. Why, Mr. President, I am surprised that the Senator asked that question. He knows that equality in conditions of trade in a given market means that the American shall at least have an equal chance with his competitor. Now, it really is not giving him any more, but where we say equality shall consist in equalizing the cost of production, then we leave out certain elements which would give the foreigner a great advantage. I want to give an equality, if I am going upon that basis, which protects the American in his home market and which will protect him against any exigency in the matter of bonuses, in the matter of duties, or other conditions which affect the value of the product and its competitive opportunity in the United States market.

Mr. JONES of New Mexico. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield further to the Senator from New Mexico?

Mr. McCUMBER. I yield.

Mr. JONES of New Mexico. I must confess that I had put a different construction on it from that which I understand the Senator from North Dakota now to put upon it. The Senator from North Dakota is arguing that we should not have the foreign article sold in this country.

Mr. McCUMBER. No; I am not arguing that at all, Mr. President. I have stated that as a rule it would be better for this country if it produced within its own borders everything that was necessary for its people, and that it even should have the exclusive sale of products in the country, provided—I did not say it previously in this argument, but I say it now—that there would be no danger of combination. I believe in competition. I believe we have to have foreign competition, even in the products which we produce in this country, to equalize, to bring down, to stabilize prices upon a reasonably profitable basis. So I do not want to exclude the foreign importations. But I want the American to have a little the best of it.

Mr. JONES of New Mexico. Will the language used in the Senator's amendment give the American the best of it, and if so, under what construction?

Mr. McCUMBER. It will give him the best of it in this respect. He is right here at home. He can fill his orders quickly. He knows his own country better than any foreigner can know it. He can respond more quickly to conditions. Now, that is an advantage in itself, and even though other conditions were absolutely equalized by a system of duties, the American would have a little advantage, and I want him to have it.

Mr. JONES of New Mexico. If we equalize the conditions of competition, will we not have to take into consideration all the additional factors to which the Senator has just referred?

Mr. McCUMBER. No. We will not take into consideration the question of the intelligence of the American in obtaining his own market as compared with the intellectuality of the foreigner in securing foothold. We will make the conditions equal, and then if the American can gain in the race by reason of his superior knowledge of his own country and its conditions and his ability to respond more quickly to an order, we will give him that condition; but that is not taken into consideration in the matter of merely equalizing conditions of competition.

Mr. JONES of New Mexico. Does not the Senator believe that the question of organization and capacity and a number of similar elements are necessarily taken into consideration when we undertake to equalize the conditions of competition?

Mr. McCUMBER. No, Mr. President, I do not. If a majority of Senators think that we ought to have the Senator's amendment I shall not object seriously, but there are some weaknesses in it that ought to be pointed out. I will point out two of them, the first of which is that the foreign country may grant a bounty, and that could not be taken into consideration in the matter of the cost of production. It might, on the other hand, impose an export duty. That could not be taken into consideration, because it would be no part of the real cost of production at home and abroad.

Now, Mr. President, there is another weakness. As we have drawn the amendment, in arriving at equality in conditions of competition we seek to avoid what I believe to be more or less a real danger to-day, and that is an excessive cost of production in the United States. Here is a business producing a certain product. It may pay unreasonable salaries to its officers. It may be run extravagantly. It may pay an unreasonable wage scale. It my wish to uphold that cost of production and say that it shall uphold it in comparison with the cost of production of the foreign article, where the same salaries are not paid and where the same profits are not obtainable. Therefore we have put in the element of reasonableness of profit, which must be considered by the President in determining what should be a reasonable equalization of the rates and conditions.

So, Mr. President, I do not think that it is a better phrase to use, but I want the matter to go through the Senate. I think it is important that we have this provision. If there are a number of Senators who believe that it is better to use the term "difference in cost of production," I am willing to yield the point to get a united party upon that proposition.

Mr. WALSH of Montana. Mr. President, before the Senator takes his seat I should like to address a question to him. Is it the Senator's opinion that the Congress might pass a valid act which constituted practically all this situation? Assume that no tariff bill at all is passed, but just an act to this effect: "The President is hereby authorized to impose duties upon all commodities introduced into this country in such an amount as shall equalize the differences in competition in the markets of the United States."

Mr. McCUMBER. I would not want to go just exactly that far. The courts sustain the proposition that in many cases the Congress can not ascertain just what ought to be done in this case and that case, with a thousand conditions, and pass a general law that will meet them all. Therefore it may prescribe a rule and impose upon an officer the duty of ascertaining the facts in a given case, or possibly 100 or 100,000 cases—I do not know that that would necessarily make the difference—and then applying a rate that will meet the rule.

Mr. WALSH of Montana. Let me ask the Senator if that is not what we are really doing here when we say to the President, "We fix these rates, but you can change them all just as you see fit, following this rule"? What is the difference, from the standpoint of the constitutionality of the proposition, between that and our prescribing no rates at all but saying "Fix the rates"?

Mr. McCUMBER. I wish to just mark the line of demaracation between a law which might be regarded by the court as a delegation or a surrender of all authority over a subject and a law that would fix a rule to govern in those cases in which there may be such a change of conditions as would justify the laying down of a rule to be measured up to by the executive officer. It is difficult to draw the line.

But, Mr. President, suppose in the State of Ohio we had 500 cities, each of which may have an electric street railway. Now, we may have a commission—and possibly could have a State commission if it did not interfere with the rights of the cities—to find reasonable rates for passengers on the trolley lines. They might be authorized to find a different rate for each different city according to the conditions of that city. We would not have to lay down a rule that the rate should be the same in every case any more than we would be compelled to lay down the rule that the rate of duty should be the same in every case.

Mr. JONES of New Mexico. Mr. President, using the illustration which the Senator from North Dakota has just given, I wish to suggest that we have manufacturing establishments in this country whose costs vary as much as 100 per cent.

Mr. McCUMBER. Yes.

Mr. JONES of New Mexico. There can be only one duty fixed on a given article. I do not understand that the Senator from North Dakota proposes to have one duty fixed on foreign articles that come in competition with A's products and another duty with respect to B's products which are of a similar kind. The Senator certainly does not mean that. We have got to take one duty to cover all of these different costs in the United States. I will ask the Senator under this proposal which costs is to determine? How he is going to meet that proposition? To my mind, it is just as unsolvable as it would be to try to fix one reasonable rate for 500 public utilities of the same kind in different cities.

Mr. McCUMBER. Mr. President, in the various factories in the different cities in England, where a given commodity is produced and exported, undoubtedly the cost of production varies; but I would not say, because there were so many different prices and different costs of production in different mills in England, that the rule as sought to be fixed by the Senator from Wisconsin [Mr. LENROOT] to ascertain the difference in the cost of production is an impossible rule, for it is not.

Now, Mr. President, I wish to read—and I desire to read it really for the benefit of the Senator from Ohio [Mr. POMERENE]—section 804 of the law of 1916:

> That whenever any country, dependency, or colony shall prohibit the importation of any article the product of the soil or industry of the United States and not injurious to health or morals, the President shall have power to prohibit, during the period such prohibition is in force, the importation into the United States of similar articles—

The Senator from Ohio would say, "If the President must ascertain what are 'similar articles,' that is a legislative function." But the act goes even further and provides—

> or in case the United States does not import similar articles from that country, then other articles, the products of such country, dependency, or colony.

Who is to determine what those other articles shall be? Of course it is a legislative function to determine upon what articles the retaliation shall take effect. I will agree with the Senator from Ohio that that is purely a legislative matter. The foreign country may prohibit the importation into its domain of live stock from the United States. We in turn may retaliate and say, "We will entirely prohibit the importation of their woolen goods," or "We will entirely prohibit the importation of their cotton goods." Of course, Congress could determine whether or not we would say the prohibition should apply to woolen goods or to cotton goods; but under the law I have cited authority is given to the President to use his discretion. He may pick out anything which the offending country produces and exports to this country and prohibit its importation here; he may use his judgment as to how many articles and the kind and character of articles whose importation may be prohibited; yet the Supreme Court of the United States has sustained that provision.

Mr. President, the Senator from Wisconsin stated his objection to this provision to be that we have provided that the President shall, if practicable, ascertain the difference in the cost of production at home and abroad; that, if practicable, he shall ascertain the difference in the selling price at home and abroad. The Senator from Wisconsin thinks the provision is objectionable because of that fact. Well, let us see. Suppose the President can ascertain the difference in the cost of production at home and abroad—that is one of the things which he is given power to ascertain—but that he can not ascertain the difference in the conversion, here and abroad, or selling prices in the principal markets of the United States. We say "Get all if it is practicable to do so, but, if it is not practicable to get all, get what you can." It is a proper limitation, and without it the law would be absolutely defective, because, in most instances, the President could not get every one of these facts, but he could get a sufficient number of them upon which to base a computation of the difference in competitive conditions. Mr. President, so far as I am concerned, in accordance with the statement made by the Senator from Utah [Mr. SMOOT], I am willing to modify the amendment in order to meet the desire of what seems to be a large number of Republicans on this side of the Chamber that we substitute the words "cost of production" for "conditions of competition," although, I will say most frankly, that I think the policy indicated in the committee amendment is the preferable one to pursue.

Mr. TOWNSEND. Mr. President, I had intended to say something upon this subject. I shall content myself, however, with expressing my views on the general proposition later, when the Frelinghuysen amendment shall be under consideration. I am, however, so deeply interested in this particular feature of the bill that I am anxious to have it speedily adopted; and, inasmuch as the Senator from North Dakota [Mr. McCUMBER], having charge of the bill, has consented to the proposition which I favor, I shall not detain the Senate with any further remarks at this time.

The PRESIDENT pro tempore. The question is upon the amendment proposed by the Senator from Wisconsin [Mr. LENROOT] to the amendment reported by the committee.

Mr. WALSH of Montana. Mr. President, before the vote is taken I desire to ask unanimous consent to have printed in the RECORD in the ordinary 8-point type two articles discussing the feature of the bill which is now under consideration. One is from The Manufacturer, which is the official mouthpiece of the Manufacturers' Club of Philadelphia, an organization which I understand is stoutly in favor of the principle of a protective tariff. The other is from the Baltimore Sun and is entitled "Taxation by Executive Fiat."

The PRESIDENT pro tempore. Without objection, the request of the Senator from Montana is granted.

The matter referred to is as follows:

PREDICT RISE IN MEDIUM-PRICED CLOTHING AS RESULT OF 33-CENT RATE IN PROPOSED TARIFF—PHILADELPHIA MANUFACTURERS EXPRESS DISSATISFACTION WITH PHRASEOLOGY CHANGES, DYE SCHEDULE, AND PRESIDENT'S POWER TO INCREASE OR LOWER RATES.

[Philadelphia Bureau, Daily News Record.]

PHILADELPHIA, May 8.—"The basic wool duty of 33 cents a pound clean content is likely to invite the bitterest sort of criticism of that schedule, and, therefore, of the entire tariff bill," observes a recent edition of The Manufacturer, official mouthpiece of the Manufacturers' Club of Philadelphia, in discussing the Fordney bill as rewritten by the Senate Finance Committee. Dissatisfaction with the change in general phraseology, with the dye schedule, and with the power invested in the President of increasing or lowering the rates 50 per cent is also expressed.

It predicts a material increase in the price of medium and lower grades of clothing will result from the 33-cent clean-content rate and makes the following comment on the wool schedule:

* * * * * * *

OPPOSE PRESIDENT'S POWER.

Objection to the power vested in the President to increase or lower the rates is more definitely expressed as follows:

"If it is the idea of the majority members of the Finance Committee that the tariff bill ought to be adopted as they have submitted it, based upon foreign valuation, with a presidential prerogative of altering these rates to any point within a 50 per cent increase or decrease, and then, if that does not meet the presidential views of the existing necessity, to establish any rate to apply to the American value, provided only that such rate shall not be increased or decreased more than 50 per cent of the rate specified in the bill, we believe the majority members of the committee will find their views in marked conflict with prevailing opinion in Congress and throughout the country.

"In the first place, there is no valid or logical justification for creating the permanent cloud of uncertainty that would hang over and menace American business as a result of such—as the President has been pleased to term it—flexibility of the tariff. We regarded this recommendation by the President as extremely ill advised at the time it was made, and we did not hesitate to frankly say so.

"It may be accepted as almost a foregone conclusion that no Republican President would employ this prerogative to increase rates, except after prolonged investigation and hearings by the Tariff Commission. It is even doubtful if he would do so then. Permissive powers are seldom employed by the Executive; and this shifting of legislative authority from the Congress to the President simply serves to impose upon the latter a responsibility which, if properly met, would occupy practically his entire time, to the exclusion of all other duties. Upon the other hand, it gives to a Democratic President the full authority to wipe out every protective rate in a tariff bill with a single sweep of the pen.

DOUBT TRANSFER CONSTITUTIONALITY.

"We seriously doubt the constitutionality of such a transfer of legislative authority to the executive branch of the Government. Of course, the Senate Finance Committee in offering the proposal evidently regards it as constitutional. But there has never been a law that has been declared unconstitutional by the courts that was not passed by Congress in the firm conviction that it was constitutional.

"These functions can not be properly carried out by a Chief Executive. Nor should they be put in the hands of any one individual. Tariff legislation is something for Congress to determine. The putting into law of the propositions made in the Finance Committee bill would create permanent uncertainty as to rates of duty, disorganize business, and be hurtful alike to the American manufacturer and the foreign importer. The producers of the United States demand stability in tariff protection. That is why they demand the American valuation for ad valorem duties; it is based on the most stable of all things in the financial world—the American dollar. Adoption of the proposal offered by the Finance Committee would only add to the instability of tariff matters, so that no one, manufacturer or importer, could tell what was directly before him in the way of tariff duty."

* * * * * * *

[Editorial from the Baltimore Sun of July 9, 1922.]

TAXATION BY EXECUTIVE FIAT.

"Sections 315, 316, and 317 of the pending tariff bill should be eliminated. These sections propose to give power to the President of the United States, after certain findings of fact by executive bureaus, (1) to change tariff classifications, (2) to change the method of assessing ad valorem duty, and (3) to raise or lower the rate of taxation as far as he considers necessary up to 50 per cent.

"The indefinite propositions which are supposed to move him to action relate to so-called unfair trade affecting a domestic industry, to unequal costs of production, to restraint of trade, and other indefinite causes.

"This is not protection. This is not a tariff policy. This is nothing short of taxation of the citizen by Executive discretion.

"This presidential power will be capable of making or breaking particular industries. It sets up a political machine under which no business affected, directly or indirectly, by tariff rates will dare to be out of the favor of the administration. Compared to this new power, political power through patronage distribution is a trifle, a bagatelle.

"There are those who claim it is constitutional. There are others who claim, perhaps not without reason, that the courts will not hold illegal a transfer of legislative power to the Executive, if utilitarian or social reasons can be urged in its support.

"This scheme is presented on the plausible claim of scientific tariff making by so-called experts. It is pressed as promoting efficiency in government. Whether technically legal or not, it is in fact a grant of legislative power to the executive department of a character unknown to our history. It plainly violates the historical division of powers supposed to be a necessary safeguard of our liberty. In the hands of an unscrupulous, partisan, or narrow-minded Executive, or of unscrupulous or theoretical or loose-minded subordinates it is capable of grave abuse. It is bureaucracy run mad.

"In its very nature this power must be delegated. The President himself with his multitudinous duties could never in fact act himself or do more than glance at the claimed results of the investigations. Yet the action taken would always speak with the sanction of his name and high office.

"If we are to have the highest tariff in our history, let us have it with certainty. Let us know where we stand. Let business adjust itself to the new rates until such time as the people reverse their policy at the polls.

"To have the tariff subject to change at the will of the executive department, speaking in the name of the President, will create and perpetuate business unrest and uncertainty—will keep us on a hot griddle sweating under a perpetual agitation for tariff change. Any certain rates made as a result of logrolling or protected combinations are better than this danger.

"This is especially so at a time when the business of the country needs, more than ever before, to know with certainty the conditions it has to face in order to get back to normal.

"It is to be hoped, indeed, that the sober second thought of the statesmen in the Senate, irrespective of party, will save us from this scheme to leave the tariff problem unsettled and to perpetuate uncertainty in the business world."

Mr. LENROOT. Mr. President, I send to the desk a proposed amendment to the pending amendment, and ask unanimous consent that it may be printed and lie on the table.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JONES of Washington submitted an amendment intended to be proposed by him to the pending bill, which was ordered to lie on the table and to be printed.

Mr. DIAL. Mr. President——

Mr. McCUMBER. Mr. President, I rise to a point of order to ascertain the right which may exist under the unanimous-consent agreement to bring up other measures. The Senator from Georgia [Mr. HARRIS] informs me that he must leave tomorrow and he desires to have a measure considered. I know that he can not do so except by unanimous consent, and I am not certain that it can be done even by unanimous consent, but I would be willing to grant unanimous consent, if it can be done. The Senator from Georgia may make his request, and the Chair can pass on it.

COTTON STATISTICS.

Mr. DIAL. Mr. President——

The PRESIDENT pro tempore. The Senator from South Carolina.

Mr. DIAL. I ask unanimous consent, from the Committee on Commerce, to report back favorably, with amendments, the bill (S. 3757) authorizing the Department of Commerce to collect and publish additional cotton statistics and information.

The PRESIDENT pro tempore. The Senator from South Carolina asks unanimous consent, out of order, to submit a report from the Committee on Commerce. Is there objection? The Chair hears none, and the report is received.

Mr. DIAL. I now ask unanimous consent for the immediate consideration of the bill. I presume that it will create no discussion.

The PRESIDENT pro tempore. The Senator from South Carolina asks unanimous consent for the present consideration of the bill which has just been reported by him. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. HARRIS. Mr. President, I wish to say that the bill has the approval of Secretary Hoover, of all Senators from the cotton-growing section, and has likewise been recommended by all the cotton organizations of the South. It has also been unanimously reported by the committee. It merely provides for securing statistics of cotton on hand in the world on July 31 of each year.

It is believed by many who are in a position to know that the supply on hand is not as great as has been published. The publication of such erroneous estimates has a tendency to depress the market, and I believe that when accurate informa-

tion is given it will show a much smaller stock on hand and thereby increase the price.

The PRESIDENT pro tempore. The Secretary will state the amendments which have been reported by the committee.

The amendments were, on page 1, line 10, after the word "ginneries," to insert "compresses"; on page 2, line 1, after the words "on hand on," to strike out "September 1, December 1, and March 1" and to insert "July 31"; in line 3, after the word "after," to strike out "each of these" and to insert "this"; in the same line, before the word "and," to strike out "dates" and to insert "date"; in line 10, after the word "on," to strike out "September 1, December 1, and March 1" and to insert "July 31"; at the beginning of line 15 to strike out "each of these" and to insert "this"; in the same line, before the word "and," to strike out "dates" and to insert "date"; in line 16, after the word "law," to insert "exclusive of linters"; on page 3, line 16, after the word "on," to strike out "September 1, December 1, and March 1" and insert "July 31"; and on page 4, after line 2, to strike out section 5, as follows:

SEC. 5. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $25,000, or so much thereof as may be necessary, for carrying out the provisions of this act for the fiscal year ending June 30, 1923.

So as to make the bill read:

Be it enacted, etc., That, in addition to the cotton statistics now required by law to be collected and published, the Secretary of Commerce is authorized and directed to have collected and published cotton statistics and information in the following manner:

(1) The Director of the Census shall collect information showing the quantities and grades of baled cotton on hand at cotton ginneries, compresses, manufacturing establishments, warehouses, and other places where cotton is ginned, manufactured, stored, or held. Such information shall show the number of bales of cotton of the grades tenderable under the law on hand on July 31 of each year, and shall be published as soon as possible after this date and be distributed in the same manner as other cotton statistics are now required by law to be distributed.

(2) The Director of Foreign and Domestic Commerce shall cause periodic surveys of the cotton situation in foreign countries, to be made through representatives in such countries, for the purpose of summarizing the world cotton situation on July 31 of each year. These statistics and information obtained from such surveys shall be published as soon as possible after this date, and the statistics shall include available facts and careful estimates of cotton production, cotton consumption, and of the quantities, kinds, and grades of cotton tenderable under the law, exclusive of linters.

SEC. 2. That the information furnished by any person under the provisions of this act shall be considered strictly confidential and shall be used only for the statistical purpose for which it is supplied. Any employee of the Bureau of the Census who, without the written authority of the Director of the Census, or any employee of the Bureau of Foreign and Domestic Commerce who, without the written authority of the Director of Foreign and Domestic Commerce, shall publish or communicate any information given him under the provisions of this act shall be guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not less than $300 nor more than $1,000, or by imprisonment for a period of not exceeding one year, or both such fine and imprisonment.

SEC. 3. That it shall be the duty of every owner, president, treasurer, secretary, director, or other officer or agent of any cotton ginnery, manufacturing establishment, warehouse, or other place where cotton is ginned, manufactured, stored, or held, whether conducted as a corporation, firm, limited partnership, or by individuals, when requested by the Director of the Census or by any employee of the Bureau of the Census acting under the instructions of such director, to furnish completely and correctly, to the best of his knowledge, all of the information concerning the quantities and grades of baled cotton held on July 31 of each year.

SEC. 4. That any owner, president, treasurer, secretary, director, or other officer or agent of any cotton ginnery, manufacturing establishment, warehouse, or other place where cotton is ginned, manufactured, stored, or held, who refuses or neglects to furnish the information requested under the provisions of this act, or who intentionally gives answers that are false shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not less than $300 nor more than $1,000, or by both such fine and imprisonment.

The amendments were agreed to.

The bill was reported to the Senate as amended and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ORDER FOR RECESS.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock a. m.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

PETITIONS AND MEMORIALS.

Mr. WILLIS presented resolutions unanimously adopted by the Council of Auxiliaries of the American Legion, of Cleveland, Ohio, protesting against the recognition of the soviet government of Russia or the establishment of trade relations with such government, which were referred to the Committee on Foreign Relations.

Mr. CAPPER presented resolutions adopted by the biennial convention of the General Federation of Women's Clubs, favoring the passage of the so-called truth in fabric bill, which were referred to the Committee on Interstate Commerce.

REPORTS OF THE COMMITTEE ON CLAIMS.

Mr. CAPPER, from the Committee on Claims, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (H. R. 4145) for the relief of Leonidas Sawyer (Rept. No. 848); and

A bill (H. R. 7662) for the relief of F. R. Messenger (Rept. No. 849).

Mr. CAPPER, from the Committee on Claims, to which was referred the bill (H. R. 7912) to provide a method for the settlement of claims arising against the Government of the United States in sums not exceeding $1,000 in any one case, reported it with amendments and submitted a report (No. 850) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JONES of Washington:

A bill (S. 3901) to abolish the inspection districts of Apalachicola, Fla., and Burlington, Vt., and the office of one supervising inspector, Steamboat-Inspection Service; to the Committee on Commerce.

By Mr. CALDER:

A bill (S. 3902) for the relief of the Riverside Contracting Co.; to the Committee on Claims.

EXCESSIVE INTEREST RATES OF FEDERAL RESERVE BANKS.

Mr. HEFLIN submitted the following resolution (S. Res. 335), which was referred to the Committee on Agriculture and Forestry:

Whereas it has been charged on the floor of the Senate that the amendment to the Federal reserve act authorizing the charging of progressive interest rates had been obtained largely as a result of express and definite assurances given to Members of Congress by W. P. G. Harding, governor of the Federal Reserve Board, that the object and purpose of said legislation was to secure a fairer and more equitable distribution of the funds of the Federal reserve system and was expressly designed to prevent the undue absorption of Federal reserve funds in certain large cities at the expense of the great farming interests in the West and South, and at the expense of the smaller business man throughout the country; and

Whereas the official records show that the said "progressive rates" after the passage of the law were put into effect only in the agricultural sections of the West, South, and Southwest, including the four Federal reserve districts of Atlanta, St. Louis, Kansas City, and Dallas, and were not put into effect in New York and other big money centers, where the funds of the Federal reserve system were principally loaned; and

Whereas the official records show that its country banks were charged unconscionable and wholly indefensible interest rates, and that these inhuman rates were exacted from many banks in the States of Alabama, Colorado, Nebraska, Kansas, Oklahoma, Texas, Louisiana, Mississippi, and others; and

Whereas the reserve board defeated two resolutions offered by the former Comptroller of the Currency, one designed to limit interest rates to 6 per cent per annum, and when that was defeated another limiting interest rates charged by Federal reserve banks to 10 per cent per annum; and

Whereas the undue concentration of Federal reserve funds to the big cities is illustrated in the fact that in the autumn of 1920 the official records show that the national banks in New York City, in proportion to their total loans and discounts, were being accommodated with three times as large an amount of Federal reserve funds as were the 7,600 "country" national banks throughout the entire United States: Therefore be it

Resolved, That the Federal Reserve Board be requested to obtain from the Federal Reserve Banks of Atlanta, St. Louis, Dallas, and Kansas City statements showing all cases where interest ranging between 10 per cent and 87½ per cent per annum, both inclusive, was exacted from member banks, giving names of the banks, their capital and surplus, and location, where 10 per cent per annum or more was charged on loans and rediscounts, the rate and amount of interest charged in each instance as expressed in dollars and cents; also let the statement show whether the Federal reserve banks have refunded to each member bank from which such exactions were made the amount of such interest collected in excess of 10 per cent per annum upon each loan upon which such interest was charged.

THE COTTON INDUSTRY.

Mr. SMITH submitted the following resolution (S. Res. 336), which was referred to the Committee on Agriculture and Forestry:

Whereas the carry over or present stock of American cotton as given by official statistics is less than the normal carry over; and

Whereas the present condition of the growing crop indicates a yield far below the world's demand for American cotton; and

Whereas the entire carry over plus the indicated yield would not meet the world's demand; and

Whereas the ravages of the boll weevil are more extensive and severe than ever before in the history of the ravages of this pest, making the yield entirely problematical; and

Whereas the cost of producing cotton under these adverse conditions has been enormously increased; and

Whereas the price of cotton in the markets has failed utterly to respond to these conditions; and

Whereas the consumption of American cotton, both at home and abroad, has shown a progressive increase: Therefore be it

Resolved, That the Agricultural Committee of the Senate be authorized and empowered to investigate all matters pertaining to the subject of supply and demand and marketing of cotton, with a view of determining whether any undue methods or practices are being employed by the trade in restraining the natural operation of the law of supply and demand. Be it further

Resolved, That the committee be empowered to use such methods as in its judgment are necessary to obtain the information desired.

EXECUTIVE SESSION.

Mr. McCUMBER. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 5 o'clock and 35 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Friday, August 11, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate August 10 (legislative day of August 3), 1922.

PROMOTIONS IN THE REGULAR ARMY.

CHAPLAINS.

To be chaplains with the rank of captain.

Chaplain James Lemuel Blakeney from August 5, 1922.
Chaplain John Joseph Byrne from August 6, 1922.
Chaplain Francis Forbes Donnelly from August 7, 1922.

APPOINTMENT IN THE REGULAR ARMY.

ADJUTANT GENERAL.

To be major general.

Col. Robert Courtney Davis, Adjutant General's Department (Infantry), Acting The Adjutant General, to be The Adjutant General for a period of four years from date of acceptance, with the rank of major general from September 1, 1922, vice Maj. Gen. Peter Charles Harris, who retires from active service August 31, 1922.

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 10 (legislative day of August 3), 1922.

MEMBER OF THE FEDERAL FARM LOAN BOARD.

John H. Guill, jr., to be a member of the Federal Farm Loan Board.

UNITED STATES ATTORNEY.

D. Q. Morrow to be United States attorney, southern district of Ohio.

POSTMASTERS.

ALABAMA.

Jacob J. Matson, Sylacauga.

ARIZONA.

Catherine T. Dupen, Warren.

CALIFORNIA.

Hazel B. Hough, Arrowhead Springs.
Otto B. Liersch, Corning.
Thomas D. Walker, Walnut Creek.

MASSACHUSETTS.

Molly A. Gilman, Allerton.
Grace G. Kempton, Farnumsville.
Annie F. Corcoran, North Oxford.

NORTH CAROLINA.

Thomas R. Hundley, Draper.
Forney L. Abernethy, Mount Holly.
Simon S. Strother, Stantonsburg.

NORTH DAKOTA.

Anfin Qualey, Aneta.

OREGON.

Drusilla M. Crance, Cornelius.

SOUTH DAKOTA.

Hoyt S. Gartley, Nisland.

TEXAS.

Eddie C. Slaughter, Goose Creek.
John E. Carson, San Saba.
John R. Ratcliff, Wallis.

WEST VIRGINIA.

Claude W. Harris, Kimball.

WYOMING.

Thomas B. Wright, Riverton.

SENATE.

FRIDAY, *August 11, 1922.*

(Legislative day of Thursday, August 3, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, the pending question being the amendment of Mr. LENROOT to the amendment submitted by Mr. McCUMBER on behalf of the Committee on Finance as a substitute for section 315 reported from the committee.

Mr. McCUMBER. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Borah	Gerry	McNary	Smith
Brandegee	Gooding	Myers	Smoot
Bursum	Hale	New	Spencer
Calder	Harreld	Newberry	Stanfield
Cameron	Harris	Nicholson	Sterling
Capper	Heflin	Norbeck	Sutherland
Colt	Jones, N. Mex.	Oddie	Townsend
Culberson	Jones, Wash.	Overman	Trammell
Cummins	Keyes	Pepper	Underwood
Curtis	Ladd	Phipps	Wadsworth
Dial	Lenroot	Pomerene	Walsh, Mont.
Dillingham	Lodge	Ransdell	Watson, Ga.
Edge	McCumber	Rawson	Watson, Ind.
Ernst	McKellar	Sheppard	Willis
Fletcher	McKinley	Shortridge	
Frelinghuysen	McLean	Simmons	

Mr. UNDERWOOD. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family.

Mr. CURTIS. I desire to announce that the senior Senator from Minnesota [Mr. NELSON] is necessarily absent on account of a death in his family.

The PRESIDENT pro tempore. Sixty-two Senators have answered to their names. There is a quorum present.

Mr. TOWNSEND. Mr. President, I desire to be heard briefly upon the amendment which is now pending before the Senate. I am very much in favor of it and have favored such legislation since the consideration of the Payne-Aldrich law, when I presented my views on this subject but my efforts received very scant consideration at that time. I then believed and still believe that the methods employed in amending tariff bills are not calculated to accomplish the good which any party having charge of the bills desires. Certainly they are clumsy, unscientific, and always unsatisfactory to the country. There must be some better way and it should be our duty to find that way.

I realize that so long as there are strong differences of opinion as to whether we should have a tariff for protection, with revenue incidental, or a tariff for revenue with protection incidental, this question may be involved in politics. Tariff revision is so important, it so seriously affects business and industrial life it should be divorced from politics as much as possible. I believe that we have reached that point in the history of our country when the great mass of the people believe in a tariff for protection. That fact has been demonstrated over and over again on the floors of Congress during the consideration of the pending bill. Many Senators of the minority party have voted for protective duties on articles competing with similar products of their States. They did this either because they thought such duties were necessary and desirable or because they knew that their constituents were favorable to such protection. I have no doubt a great majority of the people of the United States to-day believe in a protective tariff. The question, therefore, which should be honestly considered and determined is what should the rates be in order to afford adequate protection to American industries and to American labor. I have always believed that those rates should, as near as could be, be measured by the difference in the cost of production at home and abroad. That to me is an entirely just rule, and I can not conceive how any patriotic American can contest it.

This, however, forces upon my consideration the fact of the difficulties which always arise when we attempt to revise a tariff law. It stands to reason that the Members of Congress, with their multiplied responsibilities and duties, their limited

business experience, necessarily can not understand the conditions affecting all of the 4,000 or more items which are always embraced in a tariff measure. They must rely upon expert information if they are to decide the question even approximately correctly.

Years ago, when the Payne-Aldrich bill was under consideration, I advocated an amendment which would authorize the Tariff Commission to determine what the rates should be and, from time to time, make such changes, not in the rates as a whole but as to individual items, as new conditions might suggest, adhering always to the rule of the difference in the cost of production. It is necessary, of course, first, that a rule be fixed by Congress upon which duties shall be based. It would be no different in principle from the rule which now maintains in the interstate commerce law. Congress has declared that railroad rates and charges shall be just and reasonable. It recognizes that it can not, of course, fix such rates itself. Therefore it has authorized the Interstate Commerce Commission to fix such rates, which is a purely ministerial duty, as shall be just and reasonable. That can be also done in reference to tariff duties, assuming, of course, as I must assume, that we lay down the principle of a protective tariff and state what the rule shall be for fixing rates of duty. Having done that, I have no fear as to the constitutionality of such a provision when enacted into law. Therefore I am not at all hesitant in voting for such a measure at this time.

I favor also the other provision which the junior Senator from Wisconsin [Mr. LENROOT] has stated he was going to introduce, namely, to instruct the Tariff Commission to investigate, collect, and report all the facts necessary for the President to determine what rates should be adopted in order that American industry and labor may be protected against cheaper foreign production to the end that differences in cost of production may be equalized. I am a protectionist; not, perhaps, so radical a protectionist as is the chairman of the Committee on Finance, the Senator from North Dakota [Mr. MCCUMBER], or as is the chairman of the House Ways and Means Committee [Mr. FORDNEY]. I believe that rates may be made too high. I believe generally that rates never should be higher than the rule which I have suggested, where that can be determined. I realize, of course, that possibly the bill before the Senate violates that rule in many respects, but I do not know with certainty; under existing world conditions I can not know. No one can. I have voted for some rates which seemed to me to be too high; but the conditions being such that I necessarily could not know what the cost of production is here or abroad under the existing situation, I voted for them because I knew that our people needed protection and I would rather it would be a little too high than a little too low, but with the hope, however, that the rates may be adjusted by the method suggested in the amendment which I am supporting and made to comply with the rule which I have stated and which is now under consideration.

Mr. President, I am going to support also the amendment which will be offered by the Senator from New Jersey [Mr. FRELINGHUYSEN], because it is in line with what I am now discussing. If we are to maintain the protective tariff in this country, we must adopt and conform to some scientific rule and not leave the fixing of tariff rates entirely to guesswork. This is the worst time which could possibly have been selected for Congress to attempt to legislate intelligently on the tariff, but it seemed necessary to legislate.

I am finding no fault with the Committee on Finance; indeed, I have only praise for the splendid efforts they have put forth and the untiring energy which they have displayed in their work; but we have now reached the point where I hope we may agree on the amendment which has been offered by the junior Senator from Wisconsin, providing that rates shall be based on the difference in the cost of production, as nearly as that may be ascertained, and then the tariff shall provide the facts upon which the President may act to maintain the rule.

Of course, I recognize that there are difficulties in the execution of such a rule; there would be difficulties under any method which we might employ of legislating on the tariff; but I see fewer difficulties and fewer obstacles in the enactment of a just tariff under this method which will maintain adequate protection in the United States than under any other method which has been followed in the past or which has been proposed.

I, too, have been through three tariff revisions since I have been a Member of Congress, and in every case the same difficulties have confronted us which confront us now. We have the radicals of both sides, but between the two is that great mass of Republican Senators and Representatives and I believe the great mass of the American people who want a protective tariff and who should not be obliged to suffer the loss and disturbance which are inflicted upon them every time there is a change in the national administration. They want it based upon a rule of reason such I believe as is suggested in this amendment.

Mr. President, while I do not care to occupy the time of the Senate longer, I did feel like indorsing this proposition. There is much more that could be said in its favor. It seems to me that its wisdom should appeal to every thoughtful Senator. I am hopeful that this amendment will be adopted. I am satisfied that it does not offend the Constitution. The pending proposal is in strict and direct accordance with the rule which governs the Interstate Commerce Commission in fixing rates; the principle is the same. I hope that it will be adopted. This ought to be the last tariff revision ever attempted by Congress. I believe that it will be if this amendment is enacted into law.

Mr. STERLING. Mr. President, in presenting an amendment in the nature of a substitute to subdivisions (a) and (b) of section 315 on yesterday, not formally offering it at that time, I had two objects in view: First, to make more certain and definite the language relative to the purpose of Congress, and second, to provide the most obvious means for the investigation of tariff rates, namely, the Tariff Commission. I do not know that I shall offer formally the proposed substitute now; I hardly think I shall, and that in view of the amendment offered yesterday by the Senator from Wisconsin and of an amendment which I understand he intends yet to offer relative to the investigations by the Tariff Commission. But, in view of the question of certainty and in order to leave the proposed statute as little as possible open to the objections that it delegates legislative power to the President of the United States, I shall be inclined to offer a part of the substitute which I presented on yesterday.

The Senator from North Dakota [Mr. MCCUMBER] in his statement on yesterday said that the language of the title of the bill governs and that the intent of Congress relative to differences in competition or differences in conditions of competition was plainly apparent from the language of that title. The title of the bill is:

To provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States.

But I submit, Mr. President, that Congress may "provide revenue" and have little reference to differences in conditions of competition. I can imagine that Congress may "regulate commerce," as it purports to do by the title of this bill, but that regulation of commerce will have little connection with the determination of conditions in competition, or differences in conditions of competition, to use the language of the bill. Congress may by this act and under this title "encourage the industries of the United States," but it may do that without any, or at least, but little reference to differences of conditions of competition in the markets of the United States. Hence I say that the title of this bill furnishes little index to the intentions of Congress in regard to equalizing differences in conditions of competition, and, therefore, I have sought to make it definite and certain as to the intent of Congress and what the President may do in an administrative way in the matter of equalizing differences in conditions of competition, and I have, by what I think fairly apt language, stated them in this proposed amendment.

I read first the language of the amendment offered by the Senator from North Dakota. It says:

SEC. 315. (a) That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended, whenever the President, upon investigation of the differences in conditions of competition in the principal markets of the United States of articles wholly or in part the growth or product of the United States—

And so forth.

That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended.

What is "the policy of the Congress by this act intended"? There is no express declaration of what that intention is, so far as the equalization of the differences of conditions in competition is concerned. Nowhere on the face of this act will you find a succinct declaration as to what its intentions are.

As a substitute for that language I would put this, namely:

In fixing the rates of duty provided for in this act it is declared to be the policy of Congress to equalize the differences in conditions of competition in trade in the markets of the United States in articles wholly or in part the growth or product of the United States and in like or similar articles—

And so forth.

Mr. MCCUMBER. Mr. President——

The PRESIDENT pro tempore. Does the Senator from South Dakota yield to the Senator from North Dakota?

Mr. STERLING. I yield.

Mr. McCUMBER. If, as we have introduced the amendment, it is adopted, it therefore becomes a part of this act; and if it becomes a part of this act and this act declares that the President shall equalize the differences in conditions of competition of an article in our markets, then the Senator must agree that that fixes the policy just exactly as though we had declared it in the language which the Senator says we should declare preceding this. I can not see a bit of difference in the position of the Senate in the matter of a declaration of the policy.

Mr. STERLING. There is this difference, Mr. President: You expect to show the intention by the powers you confer upon the President in the matter of equalizing the differences in competition. You have not declared it the purpose of Congress to bring about the equalization of the differences in conditions of competition. You say that the act so intends, and then you go on and confer these powers upon the President of the United States, and from that the Senator from North Dakota would have the inference drawn that the intent is to bring about the equalization of the differences in the conditions of competition, whereas I say in express terms that in fixing these rates it is the declared purpose of the Congress to equalize the differences in conditions of competition. That is the difference.

Mr. McCUMBER. Surely, if the Senator will allow me, he will not say that it is not the declared policy to equalize the conditions of competition when we declare that the President shall equalize the conditions of competition.

Mr. STERLING. You declare that the President shall, but the declaration that I want to see here in this act is that Congress declares it to be the purpose in so many words.

Mr. McCUMBER. Congress declares that the President shall fix rates that shall equalize; therefore it must be the policy of Congress that the rates so fixed shall equalize.

Mr. STERLING. Mr. President, in adopting this form of statement for this part of section 315 I have in mind the great and outstanding precedent in regard to it. What does Congress say in the act of June 29, 1906, amending the interstate commerce act? It does not fix a rate, of course, but it declares and says that the rate shall be just and reasonable. I would have Congress here declare that it is the purpose by this legislation to equalize the differences in conditions of competition.

I am not insensible, either, in thinking of this language as the more apt language under the circumstances, of the pretty serious attacks that have been made upon this provision on the ground that it is a delegation of legislative power to the President. My idea was this: I believe that the President should have the power that is intended to be conveyed here. I thoroughly believe in it, he acting, of course, after investigation and advice of the Tariff Commission; but I want it to appear that it is the act of Congress, as we do in the interstate commerce act, leaving it plain that the acts of the President are to be purely administrative. There we say that the rates shall be just and reasonable. Here we should say that it is the purpose of Congress in fixing these rates to equalize differences in conditions of competition and not leave it to be charged or inferred that the President is to fix and equalize rates of duties at discretion, regardless of the real purpose of Congress. When the President does act, it should be according to the purpose of Congress as expressly declared.

As I say, I am not insensible of the objection made that this is a delegation of legislative power to the President. My contention is that under the language that I have seen fit to choose here it will be less open to that objection than in the language of the amendment of the Senator from North Dakota, and will accomplish the same purpose. It accomplishes it in more direct, plain, and less involved language than is found in the language of the Senator from North Dakota, and leaves nothing for inference or doubt.

Mr. President, there is another thing about which I wish to speak briefly, and that is the amendment of the Senator from Wisconsin [Mr. LENROOT] now pending, in which he proposes to substitute for the language "differences in conditions of competition" the familiar statement "differences in costs of production."

In a sense I sympathize with that; but, Mr. President, I must confess that in a sense I sympathize, too, with the statement made yesterday by the Senator from North Dakota so plainly and forcibly, the fear being on his part and the fear being on the part of other members of the Finance Committee that the term "cost of production" will not include or cover all that would be involved, all the factors that should be taken into consideration in determining what are the differences in conditions of competition; and I can not help but believe that all real differences in conditions of competition ought to be taken into consideration. While I shall support the amendment of the Senator from Wisconsin in this respect, I shall do it with the hope that the term "costs of production" shall be liberally and reasonably construed, so as to take in and embrace every reasonable factor that enters into the differences in conditions of competition.

So far as the main argument is concerned upon the other side, in regard to this bill being objectionable because it is a delegation of legislative power, especially within the limitations I have suggested, I do not think it is. But we must make it plain that it is the purpose of Congress that these differences shall be equalized, and that the function of the President is that of an administrator in accomplishing that purpose. Adopting the language of the court in Field against Clark—

> The words "he may deem" imply—

So says the court—

> that the President would examine the commercial regulations of other countries producing and exporting sugar, molasses, coffee, tea, and hides, and form a judgment as to whether they were reciprocal, equal, and reasonable, or the contrary, in their effect on American products.

I think, Mr. President, that the decision in that case is a basis for the firm belief that this act, in conferring this power upon the President, such as it is, after Congress has determined upon the equalization of these differences, is within the scope of the power of Congress.

We say in the interstate commerce act, taking that, I think, and the decisions under it, as a precedent beyond which we need not go, that railroad rates must be just and reasonable; and this is practically the only principle legislatively laid down for the guidance and control of the Interstate Commerce Commission.

I think that is all I care to say, except that I am thinking of offering an amendment to the first part of the substitute offered by the Senator from North Dakota, as I have already indicated.

Mr. BURSUM. Mr. President, I desire to offer the following amendment. Add at the end of section 315:

> Ad valorem duties shall not be changed to specific duties, nor shall specific duties be changed to ad valorem duties. This provision shall continue in effect and force until November 30, 1924, and thereafter no duties shall be changed except by authority of Congress.

The PRESIDENT pro tempore. Does the Senator from New Mexico offer his amendment to the original amendment or to the substitute proposed by the Senator from North Dakota?

Mr. BURSUM. It is to be added at the end of the section. It does not strike out anything. It simply adds to the amendment offered by the Senator from North Dakota at the end of the section.

I will state my reason for offering this amendment to the amendment.

The Senate has spent a great deal of time in deciding whether a specific duty or an ad valorem duty would best serve the purpose for which the duties have been imposed in the bill. It seems to me that it would be unwise to grant any authority which would permit the setting aside of the principle involved, which has been established by the Congress. We can readily understand that, in the case of some items, a specific duty can best serve the purpose, and after thorough consideration by the Congress of the matter of the method of levying the duties, and having established a principle, it seems to me it would be very unwise to authorize any change in that principle established.

The PRESIDENT pro tempore. The Chair desires to announce that, in his opinion, the amendment offered by the Senator from New Mexico is not in order until the amendment offered by the Senator from Wisconsin [Mr. LENROOT] to the amendment is disposed of.

Mr. BURSUM. This is an amendment to the committee amendment.

The PRESIDENT pro tempore. It will be in order if offered after the disposition of the amendment proposed by the Senator from Wisconsin. There can not be two amendments to the proposed substitute pending at the same time.

Mr. BURSUM. Then may the amendment lie on the table, to be taken up as soon as the amendment of the Senator from Wisconsin is disposed of?

The PRESIDENT pro tempore. That course is perfectly proper.

Mr. FRELINGHUYSEN. Mr. President, is this the parliamentary situation?—there is an amendment, offered by the Senator from North Dakota, pending to the committee amendment.

The PRESIDENT pro tempore. There are two propositions pending before the Senate, one the original section 315 reported by the committee. The Senator from North Dakota has moved to strike out that section and insert another. There can be an amendment moved to either the original section or the substitute offered by the Senator from North Dakota in order to perfect those propositions, but, inasmuch as the Senator from Wisconsin has offered an amendment to the substitute offered by the Senator from North Dakota and it is pending, there can not be another amendment pending to that substitute at the same time. But the Senator from New Mexico will have an opportunity, after the amendment of the Senator from Wisconsin is disposed of, to offer the amendment he now proposes.

Mr. BURSUM. Mr. President, I propose to offer an amendment limiting the life of the provision authorizing the President to change rates to November 30, 1924.

The PRESIDENT pro tempore. The two propositions are susceptible of any number of amendments.

Mr. BURSUM. I agree; but I was simply speaking on what I propose to offer, and I am not at this time speaking of any amendment which has been introduced. In view of the ruling of the Chair, I presume I am in order in stating my position with reference to a proposed amendment, the same as the Senator from South Dakota [Mr. STERLING] was a few moments ago, and I now propose to speak only of the proposed amendment. Am I in order?

The PRESIDENT pro tempore. The Chair construes the unanimous-consent agreement to mean that any Senator can speak upon section 315, considering it as a paragraph, or he can speak upon an amendment proposed to that section. The Senator can speak on the section at this time, but if he speaks upon an amendment he must speak upon the amendment proposed by the Senator from Wisconsin.

Mr. BURSUM. I submit that the proposed amendment is intended to amend section 315, and necessarily the provisions of section 315 come under discussion. If I am in order in that regard, I will proceed.

Mr. McCUMBER. Mr. President, if the Senator will allow me, the Senator from South Dakota discussed the amendment of the Senator from Wisconsin, which is the pending amendment to the amendment, and it is the only amendment which can be discussed at the present time. Of course, I assume the Senator can refer to some other proposed amendment in discussing that amendment.

Mr. SIMMONS. Mr. President, I call for the regular order.

Mr. McCUMBER. This is the regular order.

Mr. SIMMONS. The regular order is the discussion of the amendment of the Senator from Wisconsin.

Mr. McCUMBER. That is just what I am suggesting.

Mr. SIMMONS. The discussion on the part of the Senator who has the floor has reference to another amendment.

Mr. McCUMBER. I am trying to get back to the amendment of the Senator from Wisconsin.

Mr. BURSUM. Mr. President, I shall try to confine my discussion to the amendment of the Senator from Wisconsin.

As I see that amendment, I do not think it is workable. At first I believed that it would be helpful, but since reading the amendment and digesting it, it seems to me that it is impracticable, for the reason that it provides for the ascertainment of the production cost in this country. I assume that if that amendment were agreed to in determining a rate of duty the difference in the cost of production of the domestic article as compared with the cost of the foreign article would have to be taken into consideration. It is a well-known fact that it is almost impossible to obtain the cost of production of a foreign article. That is a matter which is not within our reach, and there is no way I know of whereby the cost of production in foreign countries can be ascertained.

It is not practicable. It would require years to obtain it, and entail a great deal of expense. If the basis for levying a duty shall be the selling price of the imported article, or the purchase cost, then the comparison should be with the selling price of the domestic article in the chief markets of this country. Therefore I hope the amendment to the amendment will not be agreed to.

CLAIMS AGAINST GERMANY.

Mr. OVERMAN. Mr. President, there is rather an interesting, if not a startling and astonishing, piece of news in the New York Times of this morning, the first column. I know that under the unanimous-consent agreement I can not say anything about it, but I ask unanimous consent to print this article in the RECORD, and to say just a word.

Mr. McCORMICK. Reserving the right to object, what does the Senator purpose to discuss?

Mr. OVERMAN. I wish to say only a few words. The article is headed:

Germany signs agreement with us to adjust claims. Mixed commission——

Mr. McCORMICK. If consent is given to the Senator to say a few words, there will be others who would like to say a few words on the subject.

Mr. OVERMAN. I merely want to enter my protest against such action by the State Department while there is pending in this body a bill, introduced by the Senator from Alabama [Mr. UNDERWOOD], to appoint an American commission to hear American claims.

Mr. McCORMICK. The Senator has made his protest; and I shall object to further debate.

The PRESIDENT pro tempore. The Chair desires to state that, in view of the fact the subject of the grant of power to the President in the pending bill must be voted upon to-day, the Chair will not allow any debate upon a request of the kind made by the Senator from North Carolina. Is there objection to the request of the Senator from North Carolina that the article to which he refers may be printed in the RECORD? The Chair hears none, and it will be printed as requested.

The article is as follows:

[From the New York Times, August 11, 1922.]

GERMANY SIGNS AGREEMENT WITH US TO ADJUST CLAIMS—MIXED COMMISSION WILL DETERMINE AMOUNT OF LOSSES TO AMERICANS FROM THE WAR—JUSTICE DAY IS THE UMPIRE—HE IS APPOINTED BY HARDING AT REQUEST OF WIRTH THAT AMERICAN BE NAMED—COMPACT EFFECTIVE NOW—NO APPARENT INTENTION BY ADMINISTRATION TO SUBMIT TO SENATE FOR RATIFICATION.

[Special to the New York Times.]

WASHINGTON, August 10.—The signing in Berlin to-day of an agreement between representatives of the United States and Germany for the determination of the amount of American claims against Germany was announced this evening by Secretary Hughes.

The agreement provides for a mixed claims commission of two commissioners, one to be named by the United States and the other by the German Government, with an umpire to settle matters on which the commissioners can not agree.

President Harding to-day named William R. Day, Associate Justice of the United States Supreme Court, as umpire, acting upon the expressed desire to have an American citizen appointed.

There appears to be no intention on the part of the administration to make the operation of the agreement contingent upon ratification by the Senate. The agreement, in fact, itself provides that it shall "come into force on the date of its signature."

TEXT OF THE AGREEMENT.

Secretary Hughes made public to-night the text of the agreement, as follows:

"The United States of America and Germany, being desirous of determining the amount to be paid by Germany in satisfaction of Germany's financial obligations under the treaty concluded by the two Governments on August 25, 1921, which secures to the United States and its nationals rights specified under a resolution of the Congress of the United States of July 2, 1921, including rights under the treaty of Versailles, have resolved to submit the question for decision to a mixed commission and have appointed as their plenipotentiaries for the purpose of concluding the following agreement:

"The President of the United States of America * * *; and

"The President of the German Empire * * *;

"Who, having communicated their full powers, found to be in good and due form, have agreed as follows:

ARTICLE I.

"The commission shall pass upon the following categories of claims, which are more particularly defined in the treaty of August 25, 1921, and in the treaty of Versailles:

"1. Claims of American citizens, arising since July 31, 1914, in respect of damage to or seizure of their property, rights, and interests, including any company or association in which they are interested, within German territory as it existed on August 1, 1914.

"2. Other claims for loss or damage to which the United States or its nationals have been subjected with respect to injuries to persons, or to property rights and interests, including any company or association in which American nationals are interested, since July 31, 1914, as a consequence of the war.

"3. Debts owing to American citizens by the German Government or by German nationals.

ARTICLE II.

"The Government of the United States and the Government of Germany shall each appoint one commissioner. The two Governments shall, by agreement, select an umpire to decide upon any cases concerning which the commissioners may disagree, or upon any points of difference that may arise in the course of their proceedings. Should the umpire or any of the commissioners die or retire, or be unable for any reason to discharge his functions, the same procedure shall be followed for filling the vacancy as was followed in appointing him.

ARTICLE III.

"The commissioners shall meet at Washington within two months after the coming into force of the present agreement. They may fix the time and the place of their subsequent meetings according to convenience.

ARTICLE IV.

"The commissioners shall keep an accurate record of the questions and cases submitted and correct minutes of their proceedings. To this end each of the Governments may appoint a secretary, and these secretaries shall act together as joint secretaries of the commission and shall be subject to its decision.

"The commission may also appoint and employ any other necessary officer or officers to assist in the performance of its duties. The compensation to be paid to any such officer or officers shall be subject to the approval of the two Governments.

ARTICLE V.

"Each Government shall pay its own expenses, including compensation of its own commissioner, agent, or counsel. All other expenses which by their nature are a charge on both Governments, including the honorarium of the umpire, shall be borne by the two Governments in equal moieties.

ARTICLE VI.

"The two Governments may designate agents and counsel who may present oral or written arguments to the commission.

"The commission shall receive and consider all written statements or documents which may be presented to it by or on behalf of the respective Governments in support of or in answer to any claim.

"The decisions of the commission and those of the umpire (in case there may be any) shall be accepted as final and binding upon the two Governments.

ARTICLE VII.

"The present agreement shall come into force on the date of its signature."

CHANCELLOR'S NOTE TO PRESIDENT.

The note requesting President Harding to designate the umpire, which was addressed to Ambassador Houghton at Berlin, is as follows:

"MR. AMBASSADOR: The agreement concluded to-day for the settlement of the amount of American claims for damages provides by Article II that on the basis of an agreement between the two Governments concerned an umpire shall be chosen. The German Government is convinced of the intention of the American Government to carry out in an accommodating and just manner the settlement of the questions still to be solved between the two States concerned, the way to which is opened by the signature of the agreement. It is still further strengthened in this belief by the assurances received by your excellency.

"The German Government believes that the distrust of nations toward one another brought about by the war and the severe economic damages which it caused to all countries concerned can be most certainly done away with if these countries decide to approach the solution of the questions which have arisen between them as a consequence of the war in a generous manner and in the spirit of mutual accommodation. The German Government welcomes the fact that the American Government intends to take the initiative in this connection.

"In order to make this possible, and in order to give the American Government a proof of its confidence the German Government has the honor to request the President of the United States to cause an American person, seeming to him suited for this responsible office, to accept the position of umpire such as is contemplated in the above-mentioned agreement.

"I should be grateful to your excellency if you would transmit this proposal of the German Government to the President of the United States. At the same time I take advantage of this occasion to renew to you, Mr. Ambassador, the assurance of my most distinguished consideration.

"WIRTH."

Justice Day, who has been selected as umpire of the claims agreement, was admitted to the bar in 1872 and began the practice of law at Canton, Ohio, the same year. He served as judge of the court of common pleas of Ohio from 1886 to 1890; was appointed United States judge for the northern district of Ohio in 1889; served as Assistant Secretary of State from March, 1897, to April 26, 1898, and as Secretary of State from April 26, 1898, to September, 1898, when he became chairman of the Peace Commission at Paris at the close of the war between the United States and Spain. He was judge for the sixth circuit, 1889–1903, and has been Associate Justice of the Supreme Court since February, 1903.

—

HOUGHTON THANKS CHANCELLOR.

BERLIN, August 10.—An agreement for the appointment of a commission to settle the claims of the United States against Germany was signed this evening by Alanson B. Houghton, the American ambassador, and Chancellor Wirth.

Ambassador Houghton expressed his gratitude to the Chancellor for the accommodating attitude of the German Government throughout the progress of the negotiations. He declared that the German request to have the United States Government name an umpire for the commission was an unusual procedure in international law and was indicative of Germany's good will and implicit faith that she would receive fair treatment.

—

DEMOCRATIC PROTEST EXPECTED.

WASHINGTON, August 10 (Associated Press).—Agreement between the United States and Germany under which a commission will be named to pass upon American claims growing out of the war was assured general support by Republican leaders to-night, but there was promise of sharp Democratic criticism on the ground that the commission could not act without approval of Congress.

The agreement, as announced to-night by the State Department, was interpreted as serving to annul the plan of Senator UNDERWOOD, of Alabama, the Democratic leader, whose bill, proposing an American commission to pass upon American claims and authorizing utilization of German properties held by the Alien Property Custodian to meet such claims, if necessary, still is in the hands of the Senate Judiciary Subcommittee.

Chairman CUMMINS said to-night the committee would meet soon, possibly this week, to consider its report on the bill.

Senator UNDERWOOD could not be reached to-night, but close associates with whom he has discussed the question said he held that the President did not have power to establish a claims commission independent of Congress.

Republican leaders said the agreement would mean the dropping of the plan for a treaty with Germany setting up a joint claims commission. President Harding and Secretary Hughes are known to have discussed recently with Republican leaders the plan adopted for an Executive agreement with Germany, instead of a treaty, thus avoiding the necessity of obtaining Senate ratification with its prospects of a long fight, in view of Senator UNDERWOOD'S position for an American commission.

Among those with whom the matter was discussed recently was Senator BORAH, of Idaho, Republican member of the Foreign Relations Committee, and leading irreconcilable toward the Versailles treaty, who to-night expressed satisfaction with the procedure adopted.

"I have no doubt as to the propriety of the Executive proceeding in this way" said Senator BORAH. "I am particularly gratified over the arrangements for two Americans to sit on the commission."

Senator BORAH said there were many precedents in diplomatic procedure for the plan pursued, notably, he said, the Alsop claim against Chile, which was settled by former Secretary of State Knox without reference to Congress.

Other Republican leaders said the administration plan provided merely for establishing the claims against Germany and Germans and the amounts, but that a commission could not provide for their settlement and would not have jurisdiction over the German property taken over by the Alien Property Custodian. The latter, under the Versailles and Berlin treaties, still remains for the disposal of Congress, they held.

Senate leaders said they did not expect Senator UNDERWOOD to drop his bill, but rather thought he would press it more vigorously in view of the new situation and demand an expression from Congress, both on the matter of an American commission to pass on American claims and on the disposition of seized German property.

ADDRESS BY REVEREND DOCTOR SPENCE AT SENATOR CROW'S FUNERAL.

Mr. PEPPER. Mr. President, on the occasion of the funeral of the late Senator CROW an address was delivered by Rev. Dr. W. Hamilton Spence, pastor of the First Presbyterian Church of Uniontown, Pa., which those who heard it think worthy of a place in the RECORD. I ask unanimous consent that it may be printed in the RECORD in 8-point type.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"I am never called upon to perform a service like the present one, to do justice to the dead—which is among the highest obligations that devolve upon the living—without feeling that some one who had been far longer and more intimately associated with the deceased could more fittingly voice respect for the character of the departed and more correctly appraise the services he rendered. I would not attempt an account of the career of so prominent a citizen as Senator CROW in the presence of those who have been associated with him in various ways for almost a lifetime, or presume to analyze the character of one whom so many present are now thinking of even more as a personal friend than as a public character.

"My own associations with him were of an entirely personal nature, which naturally has to do with determining one's judgment; but these associations, always affectionate and confidential, were long enough and intimate enough to enable one to discover something of his inner self, the man within the man.

"This no subtlety of mind was necessary to discover, for it was frank and obvious.

"The time and place of a man's birth, the character and extent of his education, his environment, and inheritances are but incidents and episodes, the arena on which he pursues his purpose, the instruments by which he accomplishes his will. An account of these is valuable in a biography as exhibiting the conditions under which a life pursues its purpose and accomplishes its work; but the most valuable point in every biography lies behind and beneath a man's sayings and doings, in the central and controlling idea of the man himself. He is the real center of interest, his personality.

"Personality, that vague, indefinable something that singles out one from the many, establishes distinction, is assertive yet attractive, giving an unmistakable sense of the possessor being all there at every moment and at every point of his contact with people and affairs—one could not but feel that Senator CROW was a personality, a force within himself, compelling and virile; moved more from within than without; daring to think his own thoughts and repose upon his own convictions.

"This qualified him for leadership; endowed him with initiative. Leadership came to him as a birthright. Nature intended him to be a leader.

"He possessed personal qualities that drew people to him—that, because he was lovable, kindly, and sympathetic.

"By these he led quite as much as by special abilities to command, exceptional though these were.

"His large following was as much personal as partisan, and many drew to him, adhered to him, worked with him in the field of public life because he was the kind of man he was, because he was WILL CROW, winsome, companionable, magnetic, and because his loyalty to those who attached themselves to him need never be matter of doubt.

"He had the gift of making friends; and this gift was greatly his strength.

"He possessed the instinct to divine how others feel and thought, the genius almost to an uncanny degree to foresee how people would react. He could put himself in their place, think himself into others. And while never losing his own individuality or becoming but an echo or reflection of others, it made others feel they belonged to him and he to them, that their interests were one.

"An outstanding quality, universally conceded and generously admired, was his extraordinary freedom from malice. 'He reviled not again.' He was sensitive, like us all, could be hurt, often

was, but the resentment felt could be restrained and the flash of anger not allowed to kindle into the nursed flame of hate. The sun went not down upon his wrath. Impulse was curbed this side of retaliation, and upon many an occasion it was transmuted into an act of favor, converting the antagonist into a friend; a more conciliatory and forgiving spirit we have not known.

"And this can but suggest another quality many felt to be a high distinction in him—self-control.

"It was not wholly temperamental; for temperamentally he was not phlegmatic; he was alive all through, could flash under provocation like the most sanguine of us; but he learned to bank the inner fire, to silence the call of the blood. Knowing that one is unfit to be intrusted with responsibility, is unable to command the allegiance of others who has not first come to possess and command himself, he schooled himself in that hardest of schools, self-discipline, until self was well in hand, and had developed the power that belongs only to self-restraint. Strange power, is it not, that a man can come to stand above himself, to command the uses of his own soul as if two, two in one, himself the commander and the commanded. That power Senator CROW acquired in an eminent degree.

"Kindly of disposition by nature he preferred to be generous and to be attentive to the interests of others, a trait most easily misconstrued especially in a public man, to be but a means to one's own ambitious ends! But those who knew Senator CROW well and would impartially judge knew that his kindliness was not assumed nor motived by sinister purpose. It was his own disposition functioning naturally. Never too tired to listen to the wants of others, however humble of station, never too busy to make the attempt to relieve them.

"I alluded to his gift of making friends. To be sure he had enemies, rather antagonists. But what of these he had were not personal but political, incidental to any man in public life. As such they were periodic rather than continuous; and as such were of the most forgetting and forgiving kind. The kind of enmities that were aroused came and went, leaving no rancor behind; for he was a man hard to dislike.

"His virtues were his own, were of the fiber of his own manhood. What faults were attributed to him as a public man we shall be ready to say were mainly those of the system, the political environment amid which he worked and aspired.

"I think that distinction may frankly and must fairly be made in varying degrees with every one of us.

"Every man is himself plus his environment, and it is within and by means of just that environment he must work out his life accomplishments.

"It is enough for us to prize and appraise the virtues that another has made his own, that he has fought for and accomplished, and to leave the rest with God, who will doubtless generously sift out the grain from the chaff and credit to us all the equity that our lives have accumulated.

"Strong of will, fixed of purpose, and with so much to live for, a future seemingly but begun in a larger way, his ambition and dream, a future promising to become national as well as State, it was not easy for him to yield voluntarily to the last clear call.

"But, with the grace of God, he fought it out and could say 'Thy will be done.' When fought out there came to him a peace, a strength not his own, the resignation not of compulsion but of trust in the wisdom of Him to whom no life is fragmentary or unfinished however seemingly foreshortened or brief. At 52 years of age he passed from our midst, dead too soon for himself and for us. But in the Sacred Book we are *told that with* God the years of man's life, as his acts, are not counted, but weighed.

"In conclusion I may say, as an efficient servant of the people in his eminent sphere the Commonwealth owes him its gratitude and an enduring place in its public memory.

"It may well be, too, that with no little pride this community may remember it fitted him for and gave him to the Commonwealth, reflecting upon it, as he did, the luster of a record many might envy, and leaving behind in it a vacancy not many can fill.

"Mighty always is the hallowing influence of death upon us. His more than most.

"In its presence forgotten is every resentment, buried every defect. It causes us to recall the departed only at their best and to bestow upon them only our charity and love.

"Well should it induce us to bestow upon the living only our forebearance and aid."

HOSPITALIZATION OF EX-SERVICE MEN.

Mr. HARRIS. Mr. President, I ask permission to place in the RECORD two telegrams and a letter from World War veterans in Georgia relative to the veterans' hospitals.

In this connection I wish to say that the Lenwood Hospital at Augusta, Ga., is not a fireproof hospital, and the soldier boys receiving treatment there run the risk of losing their lives in the event of a conflagration. I sincerely hope that something may be done to remedy this, and I have taken up the matter with the Veterans' Bureau and the Supervising Architect of the Treasury Department.

There being no objection, the telegrams and letter were ordered to be printed in the RECORD, as follows:

GRIFFIN, GA., *August 9, 1922.*

Senator W. J. HARRIS,
Washington, D. C.:

This post invites your assistance to see that appropriations for establishing Government hospitals be used now for that purpose to properly treat disabled veterans.

R. B. WHITE,
Post Commander, American Legion.

—

WAYNESBORO, GA., *August 7, 1922.*

Senator W. J. HARRIS,
Washington:

While the American Congress has been liberal in appropriations for hospitals, through the pernicious activity of Brigadier General Sawyer in interfering with the United States Veterans' Bureau sorely needed hospitals have not been built. In the fifth district 500 beds for mental cases are needed. These are the men, if any, who should certainly be entitled to the best possible treatment from the Government. Won't you use your influence to have this awful state of affairs remedied?

A. W. NEELY,
Commander B. L. I. Post, American Legion.

—

ATLANTA, GA., *August 5, 1922.*

Hon. W. J. HARRIS,
United States Senate, Washington, D. C.

MY DEAR MR. HARRIS: At a meeting of La Voiture No. 217, de La Societe des 40 Hommes et 8 Chevaux, held last night, it was unanimously voted to send the following telegram to Brigadier General Sawyer, and I was instructed by La Voiture to send a copy thereof to you for your information:

"Voiture No. 217, de La Societe des 40 Hommes et 8 Chevaux, last night passed resolution strongly resenting your unwarranted action in personally blocking United States hospital program. We respectfully ask that you stand aside. It is the will of the American people that the money appropriated by Congress be used immediately in building hospitals for disabled men. Here in the South we need 500 beds for mental cases. We know the needs of our disabled men and you do not. In the name of humanity, we appeal to you to stand aside."

Respectfully yours,

DAVID J. MEYERHARDT,
Correspondant Locale.

FREIGHT RATES ON MELONS.

Mr. HARRIS. Mr. President, I ask to place in the RECORD, from the Augusta Chronicle, an editorial relative to the high freight rates on watermelons, showing that the freight paid was as much as the amount received for the melons, with the editorial comment of the Americus Times-Recorder.

Several times heretofore I have complained of the high freight rates on watermelons and other agricultural products. Unless the Interstate Commerce Commission further reduces the rates the production will be discouraged and the railroads will lose the freight revenue.

There being no objection, the editorial referred to was ordered to be printed in the RECORD, as follows:

[From the Augusta Chronicle.]

COMPLAINT OF A MELON GROWER.

The Americus Times-Recorder has just received a most interesting communication from Fred B. Arthur in which he reveals an example of what the farmers are up against. He says:

"Recently I shipped one car of melons from my farm to Boston, Mass. Have just received returns of the sale and delivery of this car of melons and it shows that they brought $189.31, and the freight on this car was $189.60, leaving a deficit of 29 cents, not saying anything of the loading charges, commissions, etc.

"Now, it took me six months to grow these melons with fertilizers and tedious work and it took the railroads 36 hours to carry them to Boston.

"'Stop, look, and listen.'

"Where does justice and right prevail? I would have been glad to have gone 50–50 with the roads, but na, na! Nothing for the farmer and all to the roads.

"For the past 60 years this very thing has held the farmers in the background. Will it be otherwise? Will our law ever be changed so that the farmer will have a living showing? If so, pray tell me when?"

The Times-Recorder says:

"Mr. Arthur is fully justified in asking the question. And we can not answer him. We do not believe that the remedy lies in law. Intelligent organization on the part of the farmer, standardization of his products, growing of bigger melons, and marketing through cooperative agencies appears to offer the way to better days for the farmer."

We are sure that the melon growers' associations are in position to, and will, make some statement on Mr. Arthur's communication, for certainly his experience is a discouraging one.

GERMAN REPARATION PAYMENTS—THE TARIFF.

Mr. HARRIS. Mr. President, several days ago Hon. A. P. Brantley, of Blackshear, Ga., one of the leading business men of the South and one of a family of several remarkable brothers, among them being former Congressman William G. Brantley, who so ably represented his district in Congress for many years, sent me two editorials from the Journal of Commerce, of New York, which I ask to place in the RECORD.

There being no objection, the editorials referred to were ordered to be printed in the RECORD, as follows:

[From the New York Journal of Commerce of July 14, 1922.]

FINANCIAL UNWISDOM.

Sound international finance appears, for the time being at least, to be a lost art. Public life in all of the major countries of the world is dominated for the most part by political opportunists, men who can not see off the end of their noses or who lack the courage or the vigor to "stand before a demagogue and damn his treacherous flatteries without winking." But nowhere is the lack of vision more striking or more deplorable than in the handling of the vexing problems growing out of postwar international indebtedness.

Many shafts have been directed at France for her failure to assume a more reasonable attitude toward the reparations question. Without doubt that country has persisted in most regrettable fashion to harp on the undoubted and unjustified injury that was inflicted upon her by Germany and to reiterate the fact—for fact it certainly appears to be—that without the aid justly demanded of Germany she will be unable to reconstruct her own affairs and at the same time meet in full her obligations to her former allies—forgetting all the while that mere insistence upon the impossible will not multiply the loaves and fishes of Germany.

The fact, however, must not for a moment be overlooked that the Teutonic attitude of mind and heart has by no means been one of "sweet reasonableness." Nor have her policies been characterized by straightforwardness and vigor. Her position has been a hard one; her troubles are not all pretended. The victors have probably demanded more than was humanly possible of the vanquished. Beneath a sort of pseudoprosperity the discerning eye has long been able to perceive the germ of economic death. It nevertheless remains highly improbable that Germany has done all that she could toward repairing the enormous and wanton damage of her savagery. A united Germany, capably led, could have come much nearer meeting the demands of the Allies than she has, and in doing so would have regained much of the respect she so utterly lost during the years of her insanity. Moreover, her own internal situation would have been greatly improved thereby and her case for a modification of the reparations program would have been immeasurably stronger. Her course from the beginning and her diplomacy have been characterized far more by sham and hypocrisy than would have been dictated by an enlightened self-interest.

Yet it does not lie in our mouths to criticize very severely. We have steadfastly refused to lend even our counsel. We insist that our debtors shall pay us to the last farthing and at the same time proceed to make it definitely impossible that they do what we demand of them. As long as we continue to hold aloof from Europe, as long as we in Shylock fashion demand our pound of flesh, and as long as we persist in tariff monstrosities and ship gratuities we can hardly condemn others for broadly similar practices.

The world is badly in need of financial statesmen. In Germany, in France, in our own country, their services are urgently required. France demands the impossible of the Germans, who by devious means and doubtful diplomacy seek to avoid doing even what they can. We demand interest on huge funds, and even full capital repayment from the French, who point to their inability to pay us in the absence of recovery of huge sums from Germany, and continue to squander what they have on unnecessary armies and socialistic folderols. Is it impossible to bring these groups together in conference, where reason, moderation, and plain business foresight will displace passion and deluded selfishness?

Individuals exist in each of these countries who could reach a reasonable accommodation in less time than our officials at Washington have wasted in considering a soldiers' bonus. Their services could easily be secured if only they were really wanted. How can the rank and file be aroused to the danger of the present situation and to the need of reaching a sane settlement promptly? It is commonly said that the people would not "stand for" any such procedure. Has any vigorous and straightforward attempt been made to gain their consent to an intelligent program? Certainly there is indication enough of widespread dissatisfaction with things as they are now going. It ought not to be an impossible task to convert this negative discontent with recalcitrance and incompetence into active support of a sane and constructive program.

—

[From the New York Journal of Commerce of July 14, 1922.]

"SCIENTIFIC" TARIFFS.

The fundamental obstacle in the way of scientific tariffs which are always proposed when Congress is wrangling over percentages and commercial bodies are adopting resolutions for or against ad valorem rates is that every tariff bill involves a conflict of both theories and interests. Is the primary purpose of a tariff to raise a revenue or to keep out foreign goods? The unscientific tariff attempts to do a little of each, but a scientific tariff can not do that; it must aim at one or the other of these two ends and allow the other to be merely incidental.

The next difficulty is that if the tariff is to be primarily protective it assumes what has got to be proven; it assumes what is in dispute, with plenty of evidence to be offered on each side. Are the costs of production greater here than abroad, and if so, in about what proportion?

Certainly wages are higher, but that does not always mean that the cost of production is higher. Our exports of manufactured goods are large and growing, and they are very much larger than our imports of manufactured goods. There is something the matter with this easy and superficial assumption that because wages are higher costs of production are higher.

A scientific tariff is presumed to be one constructed by business men or economic experts in distinction from politicians. But the politicians have no interest in the rates, except so far as they are themselves business men affected by them or wish to serve the interests of such business men. If the conclusions of the experts are not satisfactory to the politicians, the latter will not accept them. The politicians have the power of determining what the duties shall be, and they think they know what will be popular or what is important for their localities. No power on earth will make them subordinate these to the conclusions of a board of experts.

We have tried it several times. We have had "scientific" tariffs, or parts of tariffs, but no one whose interests, pecuniary or political, were likely to be adversely affected thereby has accepted anything of the sort for a minute; he has devoted every energy to defeating the tariff scientists or the experts. And he has succeeded because he has found plenty of others of like mind. This does not prove that the experts were not right; it proves that pecuniary interests are always too strong for scientific conclusions.

The most serious effort we ever made to get a scientific tariff was just 40 years ago, through the Tariff Commission of 1882. There were nine able men on that commission, and President Arthur did not appoint a single free trader or revenue tariff man; the Democratic members were more or less protectionists. The commission traveled around the country for months and gave hearings at great length and submitted a huge amount of important information with a report in the form of a draft for a tariff bill reducing rates in general about 20 per cent.

But men in Congress, or their constituents, did not want duties reduced. The House passed the commission's bill; the Senate struck out everything after the enacting clause and attached a bill that has been generally estimated to have reduced duties 3 or 4 per cent on the whole, and that was passed by both Houses of Congress.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. UNDERWOOD. Mr. President, I desire to discuss the pending amendment. I regard the amendment proposed by the Senator from North Dakota, now pending before the Senate, as the most important feature of the bill brought before us for consideration. We have spent weeks and months in determining what the tariff taxes shall be on imported articles coming in at the customhouses. This action on the part of Congress has been in conformity with the precedents which have preceded us for over a hundred years, from the beginning of the Government. It has always been assumed and recognized in the past that the Congress of the United States could act intelligently upon tax matters and could probably adjust customs tariff rates.

In recent years it has been proposed to aid the Congress in its action by appointing tariff boards and tariff commissions to ascertain facts in reference to the cost of production, and the points of competition in articles coming in at the customhouse on which tariff taxes were levied. But heretofore the efforts to aid the Congress have been confined to the ascertainment of facts to be laid before the Congress, leaving the final determination of the amount of the tax on each article to be decided, under constitutional methods, by the Congress itself.

We now face a proposal, coming from the majority members of the Finance Committee of the Senate, to revolutionize entirely the procedure in levying customs taxes, to largely divorce the legislative branch of the Government from a determination of these questions, and vest in the executive branch of the Government the final determination of the facts and the rates which shall be applied in the future in regard to customs taxes.

I do not believe that such a procedure is within the terms of the Constitution. I do not believe that the Congress can divorce itself from the responsibility which the Constitution of the United States puts upon the Congress to control the taxes levied on American citizens and to fix them.

We had a very able argument yesterday by the Senator from Montana [Mr. WALSH], expressing most clearly and most forcefully his viewpoint as to why the pending provision of the bill is in violation of the Constitution of the United States. In large measure I agree with what he said. The question of its constitutionality has been discussed from every angle during the pendency of the measure and I shall not delay the Senate to repeat what has already been said or to go into an extended argument as to the constitutionality or the unconstitutionality of the proposed amendment. However, I want to say in passing that those who favor the amendment do not base their arguments as to its constitutionality on the question that the Congress can divorce itself from the power of levying taxes, but they reach out into the domain of foreign commerce and contend that under the Constitution the Congress can regulate foreign commerce, which is true, and that the Congress can delegate its power to regulate foreign commerce in the same way that it has already delegated its power to regulate commerce among the States to commissions or bodies other than the Congress itself.

Now, Mr. President, I think the point where that argument is weak and where it fails is in this respect: Are we regulating commerce or are we passing a bill to tax the American people? Are we raising revenue to support the Government or are we engaged in passing a bill to regulate commerce? The title of the bill is:

To provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

But what is the first provision? It is "to provide revenue," which means to levy taxes. The other question involved in the bill with reference to the regulation of foreign commerce is an incident to the question of levying taxes to provide revenue

to support the Government; it is not the main constitutional purpose of the bill. I am inclined to believe that if the taxes were not levied primarily to support the Government of the United States, no Senator on the floor of this body would contend that the bill was constitutional. We undoubtedly have the right to regulate commerce in the way of exercising a control over its outward flow or inward flow across the borders of the country, but that is not the question involved here.

The amendment, although it may as an incident to the proposition of taxation regulate the commerce between foreign countries and our home people, has for its primary purpose the levying of taxes, levying taxes at the customhouse, and it is through the power to levy that tax that the commerce is regulated.

I do not believe that anyone would contend for a moment that we could delegate the broad power of taxation to the Executive branch of the Government. I do not believe that anyone would contend for a moment that such a course was contemplated by the Constitution of the United States. In fact, the men who wrote the Constitution were so jealous of retaining the power of taxation in the hands of the Representatives of the American people that they even provided that no tax bill should originate under this Government except in the House of Representatives, which at that time was the only part of the legislative branch of the Government that was directly elected by the people.

Now, it does not make any difference whether in levying taxes the President's power is limited to 50 per cent in increasing or decreasing a rate, or whether the bridle is taken off, and he is given the unlimited right to increase and decrease taxes. It makes no difference so far as the principle is concerned. If to the extent of 50 per cent of the present rate of taxation he can change a tax or write a new tax in lieu of what is now on the statute books, then if the Congress should delegate him the power he could write the rate entirely regardless of the limitations that are put on it.

Now, we can not escape the fact, if the pending provision shall be enacted into law, that within the limitation of that 50 per cent, a change of 50 per cent of the rate fixed in the bill, the President would be vested with the power to change the tax laws of the country to the same extent that the Congress is vested with that power now. What are we attempting to do under the pending bill? We have a tax law on the statute books providing certain rates of taxation on certain commodities coming through the customhouses of the United States. That is the existing law. The Senate now has before it a bill which, if it becomes a law, will change those rates, some of them to a greater extent than 50 per cent of the present rates, but many of them not to a greater extent than 50 per cent of the present rates.

If we should adopt the amendment offered by the Senator from North Dakota [Mr. MCCUMBER] what would we do? We would substitute for the present law the tax rates of the pending bill, and then we would give to the President of the United States the power to amend those rates provided he keeps within the 50 per cent limit.

Now, is not that a delegation to the President of the same power, within that limitation, which exists in the Congress today? I understand, of course, that the answer to that by those who favor the measure is that Congress has heretofore delegated the power to fix rates, instancing the reciprocity terms of the McKinley bill. But, Mr. President, under the terms of the reciprocity features of the McKinley bill the rate of taxation was fixed. The President of the United States was given the privilege of applying those rates upon the happening of an event, just in the same way as we might provide for the taking effect of the rates in the pending bill upon the happening of an event, as we really do. We provide that upon the passage of the bill and signature thereof by the President the rates shall immediately take effect, but we could provide in the bill that they should take effect on the first day of January next or we could provide in the bill that they should take effect on the day when there is the next full moon in August. But that would not be limiting taxation; that would not be affecting the taxation; that would not be making the rate. Congress would be merely prescribing the time or the happening of the event when the rates of tax should go into effect. That is all there was in the precedents which heretofore have been referred to.

Now, Senators in favor of the proposal say that is all that is contended for in the clause of the pending amendment; but I differ with them on that proposition. The clause of the amendment of the Senator from North Dakota does not fix a rate at all. It puts a limitation upon the power of the President to make a rate and it provides that he shall not reduce or increase a rate more than 50 per cent of the existing rate; but it does not fix any rate of taxation whatever. It leaves the question of fixing the rate of taxation entirely in the hands of the President of the United States within the limits of the bill. Here is the basis on which the President is authorized to fix the rates:

(c) That in ascertaining the differences in conditions of competition, under the provisions of subdivisions (a) and (b) of this section, the President, in so far as he finds it practicable, shall take into consideration (1) the differences in conditions in production, including wages, costs of material, and other items in costs of production of such or similar merchandise in the United States and in competing foreign countries—

Next—

(2) the differences in the wholesale selling prices of domestic and foreign merchandise in the principal markets of the United States, but in considering prices as factors in ascertaining differences in conditions of competition, only reasonable profits shall be allowed; and (3) any other advantages or disadvantages in competition. In any investigation under the provisions of this section hearings shall be held and a reasonable opportunity to be heard shall be afforded.

Mr. President, if this proposed legislation be agreed to, the President of the United States is going to be authorized to levy taxes under the terms which I have just read. Is there any happening of a certain event provided for when the President shall act in levying taxes? No. Is there anything definite in that provision to guide the President in determining when he shall impose these taxes? The proposed statute leaves it entirely to the discretion of the President. In the first place, it provides that he is to fix the tax at such a rate that there shall be nothing more than a reasonable profit. Who determines what shall be the reasonable profit? It is the mind of the President of the United States; he is to fix the tax at what he determines is not in excess of the cost of production and a reasonable profit. Now, I ask, Mr. President, if, under those circumstances, the mind of the Congress, the legislative branch of the Government, is controlling the power of taxation or whether Congress, within the limitations of the bill, has delegated to the President of the United States the power to determine what taxes shall be paid by the American people at the customhouses of this country? I do not think there can be any doubt about the matter. It will be the Executive mind of the Government that will hereafter regulate the amount of taxes at the customhouse rather than the legislative determination of the matter. Therefore, it is clear to me that these provisions of the bills are not within the terms of the Constitution of the United States.

More than that, Mr. President, I think that this proposal is a direct retreat of the Congress of the United States from the authority which it holds from the American people to levy the taxes that must be paid. I think that this action is a retreat of the Congress of the United States from the responsibility that rests on its shoulders and which it has no right to delegate. I think that those who vote for a provision of this kind plead guilty to the charge that the Congress of the United States is incapable of functioning within the powers conferred upon it by the Constitution of the United States; that they plead guilty to the fact that they are unable properly to levy customs taxes and to guard the rights of the American people upon any theory of taxation we may propose to have, whether it be a revenue theory or a protective theory. Those who support this proposition abdicate their functions. They say to the American people, "We are incompetent; we are unable to serve you longer in this matter."

Notwithstanding that our predecessors for more than a hundred years have been enabled to enact legislation along these lines which has been more or less satisfactory to the American people, we have reached the point where we admit our own incompetency. That is the only plea that has been made on the floor in favor of this amendment. I have listened to the debate on the part of those who have advocated the delegation of this great power to the President of the United States, and the basis of every speech which has been made in advocacy of the proposition has been the contention that the Congress of the United States is no longer capable of properly enacting tariff legislation, and therefore we must delegate the power to the executive branch of the Government because of our own incompetency.

Mr. President, it may be that Congress, facing the misshapen bill which is now pending before the Senate, may have some justification for reaching that conclusion, for if the pending bill has been drawn on any theory whatever in adjusting these customs taxes, I have been unable to ascertain what it is.

Mr. WALSH of Montana. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Montana?

Mr. UNDERWOOD. I yield.

Mr. WALSH of Montana. The argument which the Senator from Alabama is making, that the pending proposition, if adopted, would be an abandonment of the functions of Congress into the hands of the Executive, has reminded me that in the year 1918, when we were considering what was known as the Overman bill, which permitted the transfer of the powers of one department to another upon the order of the President, a then distinguished Member of this body spoke as follows. I read from the CONGRESSIONAL RECORD:

> If the Senate of the United States is going to accept an Executive mandate and pass this bill, with every suggestion of amendment refused, Congress can only fittingly complete the program by delegating the taxing and appropriation power, adjourn, and go home.

Mr. UNDERWOOD. May I ask who was the Senator who uttered the language which has just been read by the Senator from Montana?

Mr. WALSH of Montana. The then speaker is the present President of the United States. So perhaps Congress now had better take the advice then given, delegate the taxing power to the President and go home.

Mr. UNDERWOOD. I think that is what this bill amounts to; and I thank the Senator from Montana for his suggestion in regard to the matter. It is a plea of guilty to the charge of incompetency whenever the Congress of the United States passes a measure delegating its constitutional powers to the executive branch of the Government, as it proposes to do in the pending amendment.

More than that, Mr. President, outside of the constitutional question, outside of the shameful confession that is being made by the Congress of the United States in advocating the surrender of its powers, I oppose this proposition because it is very dangerous to the people of the United States to put into the hands of the Executive—and I am not criticizing the present Chief Executive; there is no personal political allusion in what I intend to say; I will apply the remarks to all the Executives we have had in the past and to all we may have in the future—I say it is very dangerous to place this great power of taxation in the hands of any one man.

Of course, I know the President of the United States will not exercise this power personally. He will appoint some agent or agents to do so. As the amendment was originally drafted, the committee proposed to put the responsibility of determining the rates primarily on the Tariff Commission, but, as the amendment now stands, they take away that responsibility; they limit the responsibility of the Tariff Commission merely to an ascertainment of facts, to be laid before the President of the United States, and then leave it entirely to the discretion of the President, without any limitation whatever, except that he must not raise a rate over 50 per cent and he must not lower the rate over 50 per cent, as to how much tax he shall levy on the American people.

As I have said, of course I know, as every other Senator knows, that the President in his great office, with the vast amount of work which confronts him, will be unable to exercise this power himself, and that he must delegate it to somebody. It is left absolutely wide open; no responsibility is fixed on the men to whom the power is to be delegated. The President may consult the Tariff Commission after they have reported the facts to him and write their conclusions as to what taxes shall be levied upon the American people into the law, or he may abandon the Tariff Commission and consult the Department of Justice, the Department of State, or the Department of Commerce, or he may consult the clerks in his own office, or he may, if he desires, after the ascertainment of the facts, consult the special interests which are going to profit by the levying of this taxation. No man will know who writes the tax bills of America hereafter. We will know that a Tariff Commission will lay before the President certain facts, and there the door closes. From that time on until the tax rate is fired into the face of the American people it will be in obscurity; it will be in secrecy; it will be hidden behind the doors of the executive branch of the Government, and what influences may enter there you do not know.

I am not talking about corrupt influences in the sense of corrupting personally the President of the United States, because I believe that when a man achieves that high and exalted office the very position he occupies, unless he is a fiend indeed, must make him personally honest; but there are political influences that face every man in political position and in the exercise of political power, and when you confer on the President of the United States in this amendment the power of levying taxes on the American people in secrecy and behind closed doors, as you do in this bill, you put in his hand a tremendous power that may be used for the political advantage of either himself or his party.

I know, because I have sat on the committees that have written the tax bills of Congress too many years not to know, that within the range of 50 per cent of existing rates you may write a rate in many instances that will destroy an industry, or you may write a rate that will make those in the industry enormously wealthy by giving them a monopoly of their business without foreign competition to regulate prices. You know that as well as I do; and when you put in the hands of one man the right to exercise this power in the secret recesses of his closet, without having to give to the world or to give to Congress the influences that directed his judgment or the reasons why he finds a rate or the names of the men who approached him and solicited a change in taxation, you are putting in the hands of one man the most enormous power to oppress the American people that has ever been granted in the history of this Government. You are putting in the hands of one man the greatest power for political corruption and political advantage that has ever been conferred since the beginning of the Government.

It will not be necessary in many instances to make a very great change in the rate to turn the channels of dollars into the pockets of special industrial enterprises or to take them away. When one man has that power, does anybody doubt that the political committees of himself and his party can have their treasuries swelled to bursting by the gifts of those who are interested in the decisions to be rendered?

I am not intending this statement to reflect on the President of the United States or any other man, but I am saying that you are giving this power to the President of the United States, a power that he alone can exercise, that he can be approached in secret, and the American people will hardly know that the change of rates is made until long after it has happened and they feel the burden of taxation resting upon their necks.

This power in many instances can not only be used to make but it can be used to destroy, and when you put this power in the hands of one man, what is going to be the effect not only on the burdens that the American people must bear in the future but on future elections in the United States? Are you going to organize in this way a machine that will wrest the control of elections from the American people unless it gets so great that we have a political revolution to tear it down? No, Mr. President; whenever you adopt this measure the Republican Party will plead guilty to its own incompetency to legislate, and it will put in the hands of its own Executive a power that no Executive in this world should possess.

But there is more than that. The basis on which you propose to fix these rates, if carried out by the President of the United States, will necessarily raise every rate in this bill, within the limitation of the 50 per cent, to a point where it will prevent competition in the future. As was well said by the Senator from Wisconsin [Mr. LENROOT] yesterday, you not only propose in this bill that the President of the United States shall take the difference in cost of production as the basis on which to levy a rate but you intend to add to that a reasonable profit. If you automatically and thoroughly worked out the problem of ascertaining the exact difference in cost of production at home and abroad and made that the basis of your rate of taxation, you would very shortly cut off all importations of commodities that the manufacturing interests of the United States are able to make in sufficient quantities to supply the demand of the home market. Of course, there are some commodities of which we do not produce enough to supply the needs of the American people; but of those commodities where we are capable of supplying the home demand, if you have accurately fixed the rate at the customhouse at a point where it equalizes the difference in cost at home and abroad, then the foreign producer or manufacturer is kept out, because in addition to the difference in cost before he comes into the American market he must pay the cost of carriage, the ocean freight rates, the insurance rates, and all other costs of entering our market, and with that given as an advantage to the American producer he can always drive his competitor out of the field; but, in addition to that, in this bill you propose to authorize and direct the President of the United States to add to that a reasonable profit.

You put no limitation on the President as to whether he shall say 5 per cent is a reasonable profit on the cost of production or whether he shall say 50 per cent is a reasonable profit on the cost of production. What he may determine no man can tell, because every President of the United States may have his own viewpoint as to what is reasonable; but, at any rate, there is going to be that reasonable profit in addition to the cost of production which, within the limitation of the 50 per cent raise that he is entitled to make, will exclude foreign

competition entirely, and necessarily must do so, and you will have a prohibitive tariff wall around this country on all that class of articles embraced in this bill where the American producer produces in sufficient quantities to supply the demands and needs of the American people.

Mr. LENROOT. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Wisconsin?

Mr. UNDERWOOD. I yield.

Mr. LENROOT. Does the Senator base his statement that the President, in addition to the cost of production, is authorized and directed to add a profit, upon the language of paragraph (c) of the amendment, where it is provided that in ascertaining the difference in selling prices only reasonable profits shall be allowed? Is that what the Senator refers to?

Mr. UNDERWOOD. I read it a moment ago. I will read it to the Senator again. If the Senator will refer to the printed amendment offered by the Senator from North Dakota, on the bottom of page 4, he will find a paragraph which begins on line 18, and on page 5 he will find this language, commencing on the second line:

> But in considering prices as factors in ascertaining differences in conditions of competition, only reasonable profits shall be allowed.

Mr. LENROOT. The Senator, of course, understands that if the amendment I have proposed is adopted it will necessitate an entire revision of paragraph (c), and it is my understanding that the committee itself will suggest such a revision, which will eliminate the clause to which the Senator refers. If the committee does not, I wish to very frankly say that I will.

Mr. UNDERWOOD. The Senator means he will try to do so if the committee does not.

Mr. LENROOT. Yes; and I have every confidence of being successful; but I believe the committee itself will do so, because that can only have a bearing if the phrase "conditions in competition" is rejected.

Mr. UNDERWOOD. The Senator will probably be successful, because his amendment improves the committee amendment, and he will undoubtedly get enough votes on this side, if he can muster a corporal's guard on the other side, to make his amendment go. But I hope the committee will again change its mind. The great thing about the committee which reported this bill is the fact that they have been most generous in the positions they have taken. They have not been dogmatic, and stood on any position. If there is any item in this bill they have not changed their minds about once or twice or half a dozen times, I do not know what it is. So, of course, I can not for a moment argue this question from what the committee may do to-night or to-morrow. I am arguing the case from the position of the committee as it presents it at this time. The Senator may have very much later information about what is going to happen than I.

Mr. LENROOT. No doubt the Senator can see that if the amendment is adopted paragraph (c) as it stands will be squarely in conflict with paragraph (b) and paragraph (a), based on the cost of production, and I assume, of course, that the committee would then harmonize the balance of the bill to conform to the rule adopted by the Senate.

Mr. UNDERWOOD. As I said, this whole business is indefensible, from my standpoint, is without justification at all; but the high peak of the point where it is indefensible is this question of directing the President to add a reasonable profit after ascertaining the difference in cost, and I agree with the Senator that if the committee will graciously change its mind again and strike that provision for reasonable profit out of this paragraph it will very greatly improve the situation, and if the committee *will not* do it, so far as I am concerned, I should be very glad to vote with the Senator from Wisconsin and try to force the committee to do it.

But that does not relieve the situation entirely in writing these tariff rates. As I said awhile ago, if you add to the difference in cost a reasonable profit, you know beyond peradventure that you will have a prohibitive tariff wall built around the United States in regard to competitive products, but even if you fix the rate so as just to equal the difference in cost of production, after accurately ascertaining that, you will practically have a prohibitive tariff wall built around the United States. You will cut off revenue, because no matter how small the advantage is, when the American manufacturer has a permanent advantage in the sale of competitive commodities fixed by law the foreign competitor is going to keep out of our markets forever, not that there may not be periods when he could bring his products over the line in small quantities; not that there may not be periods when he may bring them over in large quantities, if he can advertise and develop his business, but in active competition in business it is human nature that one business competitor is going to put the other out of the field by underselling him if he can.

The foreign competitor must build up his business by advertising his goods, by having storehouses and other means of distribution at a large initial cost for building up a business in ordinary commodities, as a rule; of course, there may be exceptions to the rule. When he has done that and has to pay a tax that will equal the difference in the cost of production at home and abroad, and then, in addition to that, pay the cost of carriage from his home place to this market, the American manufacturer has only to lower his price to a small amount above the difference in cost of production, with the transportation charges added to it, and out goes the foreign competitor, and once out of the field he is not going to come back and spend his money to build up a business when he knows that under the law of the United States he can be thrown out again, and all of his expenditure in building up his business lost.

If the amendment proposed by the Senator from Wisconsin is not agreed to, we know absolutely what is going to happen, that a prohibitive wall will be built around the United States in all competitive articles. But even if you adopt his amendment and strike out this question of giving a reasonable profit to the American producer by law, whatever that may mean, even if you strike that out you still have this bill arranged so that if the President of the United States complies with its terms, you are going to build a prohibitive wall, in the way of taxation, around the American people and allow the special interests within the wall to levy their taxes on the American people by way of higher prices.

There is no use in discussing this clause further on my part. It is merely taking up the time of the Senate unnecessarily. Occasionally a small revolution organizes on the other side of the Chamber. A dozen or 15 men can not stomach some item in this bill, and they revolt against it, and, with the aid of the Democratic votes on this side of the Chamber, they tear it out. But it is only a step or two. This bill has been before the Senate since last April. Everybody knows it is an indefensible bill. It is the only great piece of legislation I have ever seen before the Congress of the United States in my experience in Congress where the majority of the press holding allegiance to the party in power repudiated the pending legislation, as they do in reference to this bill.

The bill is indefensible from every standpoint. It is indefensible because its rates are the heaviest rates of taxation ever levied at the customhouse. It is indefensible because these rates are not levied for taxes, they are not levied to equalize the difference in the cost; they are levied to increase prices. Read the arguments which have been made in advocacy of the rates in this bill, and every one of them in the end rests on the proposition that the rates are levied in order that the producer of the articles may get higher prices from the American people—not from anybody else, because the rates do not apply if you carry the commodity beyond the shore line of the United States.

So the majority admit that the rates in this bill are levied to raise prices. There is no report here, there is no statement of facts, except in scattered, individual cases, to show anything about the competitive points in the bill or the cost of production. The entire argument is that somebody, some special class, needs more money, and therefore we will pass this bill and put up the taxes, so that the producer may put up his prices and exploit that much more money out of the pockets of the American people for some favored class. You are afraid you have not done enough of it, that you have not gone far enough in your action of favoritism to class and clan, and therefore you bring in this amendment and say that you are going to give your President power to increase these rates 50 per cent over what you have written. In other words, if special interests in this country are not able to exploit the American people sufficiently under the terms of the bill which you have spent four months in presenting to the Senate you are now going to give the President of the United States the right to exploit them to the extent of 50 per cent raises over the rates you have put in the bill.

We are in the minority; you have a majority on the other side of the Chamber of 24, which is a very large majority in a body composed of 96 Members. We can only make our protests; but I say to the majority party that these protests have been made in the past. Before this day, in the high tide of Republican power, in order that you might court the favor of special interests, you have passed legislation levying unjustifiable taxes on the American people, and you have been punished for it.

I am thankful to say that although we can not stop this infamy, although we can not prevent the passage of this bill,

we can let the American people know that the rates of taxes levied within the covers of this bill are not in the interest of the Treasury of the United States, are not levied primarily in the interest of conducting the Government of the United States, but are levied at the behest of the special interests which have haunted the doors of this Capitol since this bill came before us.

In addition to that you are going to consummate the whole matter by delegating your power to the President of the United States, and authorize him to levy such taxes on the American people, behind closed doors, as he thinks in his judgment they can stand and pay, with nobody seeing who approaches the Executive. When we have it here, it is under the sunlight that shines through the dome of the Capitol. You can not approach one man in the House of Representatives, you must approach 435; you can not approach one man in the Senate, you must approach 96, as long as we follow the constitutional method.

When there is a scheme to be put over, when there is a special privilege to be granted, and there are 96 men in the Senate and 435 men in the House, it is very difficult to keep the matter a secret. If that scheme is wrong, if it is unjustifiable, if it is a steal of the rights and moneys of the American people, through the dome of this Capitol the light of God shines and the American people will sooner or later learn the facts. But when it is proposed to divorce the Congress of this power and put it in the hands of one man to exercise it in the secret recesses of his chambers, without opportunity for the American people to know what influences are being brought to bear upon him, it is endangering every fabric of our Government.

Mr. McCUMBER. Mr. President, I ask the Senator from Wisconsin [Mr. LENROOT] to allow me to propose certain amendments as they come along and which cover, I think, everything in his amendment; but inasmuch as, taking the amendment alone as it stands, we would have to make other modifications, it would be better to do it in the order in which the modifications should be made.

Mr. LENROOT. I have not had an opportunity to check over all the changes, but I have no doubt they are correct. For the purpose of complying with the Senator's request I will withdraw my amendment to the amendment, with the view of the committee offering amendments covering the point that is covered by my pending amendment.

The PRESIDENT pro tempore. The amendment offered by the Senator from Wisconsin to the amendment of the committee is withdrawn.

Mr. McCUMBER. On behalf of the committee I send to the desk a number of amendments covering section 315, and in a short time I shall present others covering sections 316 and 317. As they are separate amendments, I shall offer them in the order in which I have placed them as I send them to the desk.

Mr. UNDERWOOD. Mr. President, as this is a very important change the committee is about to make, and some of the absent Senators may desire to know what is going on, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hale	Myers	Stanfield
Borah	Harreld	New	Stanley
Bursum	Harris	Newberry	Sterling
Calder	Heflin	Nicholson	Sutherland
Cameron	Jones, N. Mex.	Norbeck	Swanson
Capper	Jones, Wash.	Oddie	Townsend
Caraway	Kendrick	Overman	Trammell
Colt	Keys	Pepper	Underwood
Cummins	Ladd	Pomerene	Wadsworth
Curtis	Lenroot	Rawson	Walsh, Mont.
Dial	Lodge	Sheppard	Warren
Dillingham	McCormick	Shortridge	Watson, Ga.
Edge	McCumber	Simmons	Watson, Ind.
Ernst	McKellar	Smith	Willis
Gerry	McKinley	Smoot	
Gooding	McNary	Spencer	

The PRESIDENT pro tempore. Sixty-two Senators have answered to their names. There is a quorum present.

Mr. TRAMMELL. Mr. President, if it is in order, I desire to propose an amendment in the nature of a new paragraph to the amendment offered by the chairman of the committee. If it is in order at the present time I desire to have it read.

The PRESIDENT pro tempore. The Senator from North Dakota has offered an amendment to the committee amendment, which is now pending. It will be stated.

The ASSISTANT SECRETARY. In section 315, found on page 1 of the amendment, in lines 8 and 9, strike out the words "conditions of competition in the principal markets of the United States" and insert in lieu thereof the words "costs of production."

The PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from North Dakota to the amendment proposed by him on behalf of the committee.

Mr. McCUMBER. Mr. President, the Senator from Alabama [Mr. UNDERWOOD] has reiterated a statement which he has made time and again ever since he has been in the Congress of the United States, and when there was a Republican tariff bill before the Congress, namely, that it was the most inexcusable bill ever presented to the American people. I shall not take any time whatever in discussing the adjectives which he used upon this occasion in characterizing the bill, nor need I take a great deal of time in considering the half slurring reference to the committee having to change its mind upon schedules and rates. It is a very simple and easy task to frame a tariff bill for revenue only in such a manner that it will simply provide for an ad valorem rate of duty on everything that comes into the United States. It does not require a great deal of forethought and not even a great deal of intelligence in the matter of differentiating the rates fixed in such a measure; but, Mr. President, when we frame a bill upon a protective basis, and frame it at a time when world prices are chaotic and uncertain and extremely changeable, we must necessarily, if we have such a bill before the Congress for several months, make changes as new conditions present themselves.

It is equally true, Mr. President, that if a change in a rate is made, either by the committee or by the Senate against the will of the committee, on a single article, there is forced upon the committee the necessity of changing the rate upon every item into which that product goes. Of course that requires a number of changes, depending upon the principal change which is made. When the Senator from Alabama [Mr. UNDERWOOD] was in the House of Representatives he introduced a bill—a simple bill, of course, a tariff for revenue bill—and it became a law in the latter part of 1913. God Almighty was merciful to the Democratic Party in permitting a war which prevented the full operation of that law. It was as though an individual had taken a pound of strychnine into his stomach and it so happened that just at the time he was about to have the paroxysm of pain that would result in death somebody came along with a stomach pump and relieved him. The stomach pump in this particular instance was the great European war. Had that war not happened, I think the American people would have better appreciated the situation in which they would have been left, and with greater enthusiasm would have welcomed any change in our tariff program.

Mr. President, I intend at this time merely to indicate what changes have been suggested at this morning's meeting of the majority of the Committee on Finance. It is true we have made changes different from those which we recommended on yesterday; but a tariff for protection is always a party partisan tariff, and the Republican Party of the Senate is now responsible for the character of such a tariff bill. It is quite natural, therefore, that, representing every section of the country, with varied and different interests, Senators should entertain differing views and views at variance with those of the majority of the committee. That was indicated in the discussion of yesterday. Therefore, for the purpose of composing and compromising the differences of opinion on this subject—not to conform with the views upon the other side of the Chamber—we have this morning recommended a number of changes.

The first change proposed is to substitute the words "cost of production" for those which were previously recommended, namely, "differences in the conditions of competition" in our markets. In presenting this change, the committee has not modified its views one iota. I am still of the same conviction that I expressed on yesterday, that the language which we then proposed was the better language; but I was satisfied that to insist on that language would bring on a long contest and conflict between Members on this side of the Chamber and therefore agreed with the revision that was made by the committee this morning.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from North Dakota yield to the Senator from Idaho?

Mr. McCUMBER. I yield; but I do not desire to extend my remarks unduly.

Mr. GOODING. I shall be brief. I wish to ask the Senator from North Dakota if the Lenroot amendment as proposed is adopted, will it not eliminate from consideration the question of freight rates in ascertaining the difference between the cost of production in this country and foreign countries? Is not that the purpose of the amendment?

Mr. McCUMBER. No. I hardly think that is the whole purpose of the amendment.

Mr. GOODING. We were so advised by the Senator from Wisconsin.

Mr. LENROOT. The Senator is entirely mistaken.

Mr. McCUMBER. I do not think that was the whole purpose of the amendment, but that would be the effect of it, of course.

Mr. GOODING. That is the effect of it.

Mr. McCUMBER. As now proposed, the committee amendment does not state that in fixing the rate the cost of transportation shall be taken into consideration.

Mr. GOODING. As at first framed, that point was covered, so that freight rates might be taken into consideration. I ask the question now if the Lenroot amendment, if adopted, would not make that impossible?

Mr. McCUMBER. Mr. President, it is not one of the factors which the President is required to consider in arriving at what is the difference in the cost of production. I might go further and say that I hardly think even any of the other questions will have much bearing, because, after all, the real thing that the President must determine is the difference between the cost of production at home and abroad; but it has been so modified by the Senator from Wisconsin, himself, as we have recommended it, that the President does take into consideration the question of bounties and other advantages or disadvantages under which the foreigner may operate. To that extent it may include the advantages and disadvantages of transportation as between this country and the foreign country, but, in my judgment, he can not take into consideration the question of the cost of transportation of an article from the field of production to the field of consumption in this country. I think I have answered the Senator.

Mr. President, I wish briefly to state just what changes we have recommended: First, as I have said, we have recommended that for the phrase "differences in conditions of competition" there shall be substituted the phrase "cost of production."

Next under the amendment as now drafted—and this is in accordance, to some extent at least, with the views of those from the western section of the country—the President is prohibited from changing the form of the duty. Under the amendment as it was proposed he could change either the form or the classification. We now limit the power to a change in rate and a change in classification, but where the law provides a specific duty the President can not change that and make it an ad valorem duty, and where the law provides a compound duty the President must still retain the compound-duty feature in the changed rate.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Idaho.

Mr. McCUMBER. I yield to the Senator.

Mr. GOODING. I am not quite sure that I understood the Senator from North Dakota. He says, as I understand, that under the amendment as now proposed the President can not take into consideration transportation charges from the field of production to the place of consumption in fixing the duty.

Mr. McCUMBER. I do not think he can.

Mr. GOODING. Then, the question of freight rates must be eliminated entirely from consideration.

Mr. McCUMBER. The fact is that all he does is to find the difference in the cost of production. Under the provision, however, as amended he takes into consideration, of course, any bounty or other advantage or disadvantage under which the foreign producer may operate and send his products into the United States. I do not think that the President could take into consideration the question of the freight rates between California and New York. I wish to be candid with the Senator in that respect.

Mr. GOODING. That is a very vital matter to Idaho and Wyoming and all other Western States, and I wanted to be clear in reference to it.

Mr. McCUMBER. Yes; but I do not think that the President had that power under the provision as it was originally reported.

Mr. LENROOT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Wisconsin?

Mr. McCUMBER. I yield.

Mr. LENROOT. While that is true, it also prohibits the President in fixing the foreign cost from adding a freight rate from the foreign point of production, in the case of wheat, for instance, to the city of Chicago, where it is placed on the market.

Mr. GOODING. The chairman of the Finance Committee has been very positive in his views in the past, as I remember, that the freight rate should be taken into consideration in fixing a protective duty. I merely wish to say to him now that he has eliminated it entirely from this bill as an element to be taken into consideration in the fixing of rates.

Mr. McCUMBER. Mr. President, the chairman of the committee has not changed his mind at all that every matter affecting the cost of laying the article down in the principal centers of consumption should be taken into consideration and given due weight in determining the question of a protective tariff rate. Of course, it must still be left to the policy of Congress whether it will give a protection that will always include the cost of bringing an article from one point in this country to another point. Congress has exercised that judgment in a number of cases, and has declared that it will not impose a duty sufficiently high to allow a product to be mined in Idaho or in the State of Washington and brought into New Jersey, the place of principal consumption, and meet any competition.

As an illustration let me cite the case of barytes. Those from the Missouri plants who desired to secure a duty on barytes to allow them to compete with the eastern markets were turned down by the committee. We said: "It would so increase the cost of barytes where it may be needed that the justice to you will be more than overbalanced by the injustice to the consumer"; and we made a partially sufficient rate. We made a rate so high that the barytes producer in Missouri could hold the Chicago market, but could not get into the eastern market. We made it sufficiently high so that the foreign producer, while he could get into the eastern market, because of our freight rates could not reach the Chicago market.

I think I have made myself clear upon that point. That was a question of policy, of how far Congress would go; and we do not want to deprive Congress of that right, and say to the President: "You may ignore that policy entirely, and though but a small portion of a product is produced in Idaho or Washington—maybe not one-fiftieth of what we consume in the United States—you may enormously raise the price of all the imported articles." That must be left for Congress.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from New Mexico?

Mr. McCUMBER. I yield.

Mr. BURSUM. Does not the Senator from North Dakota appreciate that it is impossible, from a practical standpoint, to secure complete data with reference to costs of production of foreign-produced articles?

Mr. McCUMBER. In some instances it is going to be more or less simple. In some instances it is going to be very difficult, I believe.

Mr. BURSUM. Therefore, as a rule the selling price of the foreign article in the foreign market is what would be taken as the basis, and it would be fair that in arriving at the cost of the domestic article it should be based upon the price in the chief markets of this country. Production naturally implies the marketing of the product wherever the markets are so located geographically that they will naturally take over the particular article which may be in question; but if you limit the cost of the domestic-produced article to the cost of production, you will eliminate a large portion of the actual cost to the producer which is necessary in marketing that product.

Mr. McCUMBER. Oh, yes; the Senator is correct in that.

Mr. GOODING. Mr. President, will the Senator yield again?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Idaho?

Mr. McCUMBER. Yes; and then, after I have yielded to the Senator, let me finish this little statement.

Mr. GOODING. Yes. I wanted to have this made clear, because it seems to me vital.

Mr. McCUMBER. Each Senator will have one hour in which to argue this matter in the way in which he wants to present it.

Mr. GOODING. Yes; but I want to say this to the Senator: It was very proper, of course, for the Finance Committee to take into consideration all of these questions, and quite proper for it to permit the barytes mines of Missouri to ship as far as New York City, or part way only, and apparently the committee acted on that; but you have not given the President that power at all as far as freight rates are concerned. That is what the Lenroot amendment means—the elimination of any consideration of the cost of freight rates entering into the cost of production; so the President, to my mind, has not the power that he should have in order to find out what is the actual cost of production, because freight rates are a part of the cost of production. The farmer pays all the freight rates all the time.

The man who ships to market a ton of barytes or anything else or any ore of any kind pays the freight rate every time.

Mr. McCUMBER. Of course, if the Senator could convince the President that freight rates from the place of production to the place of ultimate consumption were a part of the cost of production, he need not worry then about the way the bill is drafted, but I do not agree with him that as it is drafted, when we speak of the cost of production, we include such freight charges, no matter who has to pay them.

Mr. President, there is another feature in which we have made a very great change. I suggested in the argument yesterday that we might as well eliminate subdivision (b) entirely if we were going to restrict the President in taking into consideration all of these matters, and if we were going to abandon the principle of the difference in the competitive field in the markets of the United States. We took that matter up this morning, and again we considered the objection, which I think is quite a valid objection from some standpoints, namely, that under subdivision (a) of section 315 we limit the power of the President either to raise or to lower the rate of duty more than 50 per cent, while in the very next paragraph we give him the power to raise or to lower every one of those more than 50 per cent by adopting the American-valuation basis. The real purpose of the American-valuation basis was to take care of the schedule pertaining to chemicals and dyes. It was evident that the raise of 50 per cent on a very few coal-tar intermediates and finished chemicals and dyes might not be sufficient; and therefore in the reconsideration this morning the committee determined to limit that right to go to the American-valuation scheme to those two paragraphs, one relating to intermediates and the other to finished coal-tar products, such as dyes and chemicals. They are paragraphs 25 and 26.

The next matter which was taken under consideration by the committee, and upon which a change was made, was the matter of the President being compelled to defer any decision until he had had an investigation made and a report submitted to him by the Tariff Commission. That we have done in an amendment which provides that he can not make his proclamation until there has been an investigation by the Tariff Commission and, as is indicated in the bill itself, we declare that for the purpose of assisting the President in arriving at these duties the Tariff Commission is given certain added powers and it is made its duty to bring to the attention of the President every fact and feature that it is necessary for him to pass upon before fixing the rate.

Mr. President, I received this morning a letter from the President of the United States concerning this feature of the bill, and indicating the President's attitude thereon. It has been so constantly urged in this argument that it would be the purpose of the President to get his information from interested sources and to fix a duty that would be in accordance with the wishes of those interested in the rates that I think it proper that the President's letter should be read, and I ask that it may be read as a part of my remarks.

The PRESIDING OFFICER. In the absence of objection, the Secretary will read as requested.

The Assistant Secretary read as follows:

THE WHITE HOUSE,
Washington, August 11, 1922.

Hon. P. J. McCUMBER,
United States Senate, Washington, D. C.

MY DEAR SENATOR McCUMBER: I need not repeat to you what I have said personally and what I have conveyed officially in a message to Congress, how deeply I am interested in the provision for flexibility in the tariff bill, which is now under consideration in the Senate. It has seemed to me that the varying conditions in the world and the unusual conditions following the World War make it extremely essential that we have this means of adapting our tariffs to meet the new conditions. Moreover, I believe it is a highly constructive and progressive step in retaining the good and eliminating the abuses which grow up under our tariff system. I think we ought to make the Tariff Commission all that it is designed to be—the agency for scientific investigation and the source of dependable information on all tariff problems.
